The Board, after the fullest consideration, and in view of the fact that under the Statute of Canada 4 and 5 George the Fifth, Chap. 20, all these lines are referred to as the Canadian Northern Railway System, cannot but feel that it would be improper and misleading to separate them by making different rules, and therefore the Board beg to say the lines under consideration are the following:

Canadian Northern Ontario Railway.

Canadian Northern Quebec Railway.

Quebec and Lake St. John Railway.

Halifax and South Western Railway.

Central Ontario Railway.

Bay of Quinte Railway.

Brockville, Westport and North Western Railway.

Irondale, Bancroft and Ottawa Railway.

When the question of wages or compensation was considered it was urged on behalf of the company that the men had agreed with the Vice-President, Mr. Hanna, some time ago, that no further change would be made in the men's pay until the road was linked up as a transcontinental road and in full operation. The men deny that any such agreement was made on their part, although they admit that it was mentioned by Mr. Hanna.

Some discussion has taken place as to whether the Parliamentary Special train now crossing the continent does not mean, as has been stated in the newspapers, the inauguration of the service over the through transcontinental route of the C. N. R. The manager, Mr. Fritch, assures the Board that such is not the case and it is not intended to mean that the line is going into operation as a transcontinental line.

In the result the Board has arrived at, probably it will be merely interesting to note the fact that this has been brought before it and the statements made on each side.

Among the statements made on behalf of the company was that a number of its engineers were earning upwards of \$150 a month and they produced the time slips to show that this was the case, and the company claimed that this amount was a very considerable wage and that the men could not reasonably ask for any higher rate of pay. The Board found, however, on an analysis of the time slips that the men earning the highest monthly pay got it by working 12 to 15 hours a day, and the Board

is unwilling to give effect to any agreement that this rate of pay based on such long hours if worked regularly is to be considered as satisfactory.

Among the efforts that the Board made to bring about a settlement was a proposition made by the representative of the company on the Board that he would recommend the company to adopt the C. P. R. eastern rules with regard to all the lines above mentioned except the Halifax and South Western line with a five per cent advance in pay to the main line enginemen being the Canadian Northern Ontario Railway west of Montreal.

The Board regarded this as rather too complicated a proposition and unsatisfactory to a large proportion of the men and made the counter-proposition that the C. P. R. rules should go into effect over the whole of the western lines with five per cent increase over all lines, and on this counter-proposition being made it was not only refused but the original proposition on behalf of the company was withdrawn.

It was also suggested that the C. N. R. might be willing to adopt the Grand Trunk Railway rates and schedule but the men declined to have anything to do with this offer as the rules are entirely different and the rates of pay are lower than those prevailing on the C. N. R. Therefore the Board does not feel under such circumstances that the Grand Trunk Railway rates and schedules should be imposed upon the men of this company.

The men, both engineers and firemen, have insistently throughout asked for the western rules and rates as existing now on the C. N. R. The company, on the other hand, have made no proposition except the two above named as to what they would be willing to do or in what way they would meet the men on their demand for the western rules and rates, except that the company has refused to assent to the western rules and rates.

The men have also requested that the schedules for the engineers and firemen

be combined so as to form one schedule with proper rates as to each, and the Board looks upon this with favour and sees no reason in principle why it should not be done.

The Board has gone very carefully into the rules for the western parts of the road and the rules now in force and found that the differences, apart from the nine-hour day prevailing in the West—which is not asked for by the men here—are not very great. But such differences exist on the very points where the men have had trouble with the company in the East and the men say the reason they ask for the western rules is that those are well known and have been interpreted so that the men understand what they mean and there will be no trouble about them.

The Board finally decided upon the schedule which is attached hereto.

This schedule may not seem materially different from the present schedule under which the men have accumulated so many grievances but it endeavours to correct the evils of which they complain and uses, wherever there is any likelihood of dispute, very largely the language of the western schedule.

The following rules in the annexed schedule, namely:

Article 1, Clauses b, d and e.

Article 11, Clauses a, b and c.

Article 12, Clause a.

have all been agreed to as a compromise to secure a unanimous report on the understanding that they are to continue during the life of this schedule and are not to be considered a precedent in future schedule negotiations.

Under existing circumstances and conditions and after the fullest consideration the Board is unable to see its way clear to recommend any increase in wages and rates at the present time except so far as the rules in the schedule hereto attached will affect the rates. Business at present is not of such a character as to justify any considerable increase and probably it will be better on

the whole to wait until in the near future the road becomes unquestionably a trans-continental road, when Mr. Hanna has promised to take up the matter of an increase with the men.

The Board recommends that the rules and rates in the schedule hereto attached go into effect on the first day of November, 1915.

All of which is respectfully submitted.

(Sgd.) E. COATSWORTH,
Chairman.

(Sgd.) F. H. MCGUIGAN,
For the company.

(Sgd.) D. CAMPBELL,
For the men.

SCHEDULE.

Rates of Pay and Rules governing service of Locomotive Engineers and Firemen on the following roads:

Canadian Northern Ontario Railway;
Canadian Northern Quebec Railway;
Quebec and Lake St. John Railway;
Halifax & South Western Railway; Central Ontario Railway; Bay of Quinte Railway; Brockville, Westport & North Western Railway; Irondale, Bancroft & Ottawa Railway.

	ENGINEERS.	
	Senior.	Junior.
Passenger trains—Consolidation engines	\$4.07	\$3.74
Mogul, Atlantic, Pacific, 10 wheeler, 110 p.c. or over	3.90	3.57
Mogul, Atlantic, Pacific, 10 wheeler, 75 to 110 p.c.	3.79	3.46
All other engines	3.74	3.35
Passenger trains, per 100 miles or per day of 10 hours, overtime <i>pro rata</i> .		
Through freight and mixed train, per 100 miles, per day of 10 hours, overtime <i>pro rata</i> .		
Consolidation engines	4.51	4.12
Mogul, Atlantic, Pacific, 10 wheeler, 110 p.c. or over	4.34	3.96
Mogul, Atlantic, Pacific, 10 wheeler, 75 to 110 p.c.	4.23	3.85
All other engines	4.12	3.74
Way freight train, per 100 miles or per day of 10 hours, overtime <i>pro rata</i> .		
Consolidation engines	4.84	4.45

ENGINEERS.

--	---------	---------

Mogul, Atlantic, Pacific, 10 wheeler, 110 p.c. or over	4.67	4.29
Mogul, Atlantic, Pacific, 10 wheeler, 75 to 110 p.c.	4.56	4.18
All other engines	4.51	4.12
Work trains, per 100 miles per day of 10 hours, overtime <i>pro rata</i>		
Consolidation engines	4.18	3.79
Mogul, Atlantic, Pacific, 10 wheeler, 110 p.c. or over	4.01	3.63
Mogul, Atlantic, Pacific, 10 wheeler, 75 to 110 p.c.	3.90	3.52
All other engines	3.79	3.41
Switching, per day of 10 hours or less	3.85	
Hostlers, per day of 12 hours or less	3.02	
Piloting, per 100 miles or 10 hours.		
Engineers, rates as per class of engine.		
Light running, freight rates.		

Special Service.

Engineers or firemen acting as pilots shall receive engineer's pay as per class of engine.

Deadheading on company's orders, 200 miles or less, minimum passenger rate actual mileage. Distance in excess of 200 miles, half minimum passenger rate.

Engineers and firemen will be paid 30 minutes preparatory time at schedule rates for getting engine ready before going out on run.

Watching and caring for engine, per hour:

Engineers	38c
Firemen	23 ½c

On inquests or legal cases for the company, time will be allowed minimum day:

Engineers	\$3.80
Firemen	2.35

for each 24 hours or a portion thereof detained from duty. When such service is done on a day upon which regular work is also performed, payment will be made *pro-rata* for time so occupied. When such service is done on a lay-off day, the full rate will be allowed. Expenses will be allowed at the rate of \$2.00 per each 24 hours away from home

terminals. The court witness fees and mileage will be assigned to the company. Engineers and firemen so held assigned to regular runs will receive not less than their regular rate.

Rates for Firemen.

	Senior.	Junior.
Passenger trains, per 100 miles, or per day of ten hours, overtime <i>pro rata</i>		
Consolidation engines	\$2.55	\$2.30
Mogul, Atlantic, Pacific, 10 wheeler, over 100 p.c.	2.45	2.25
Mogul, Atlantic, Pacific, 10 wheeler, 75 p.c. to 110 p.c.	2.35	2.15
All other engines	2.30	2.05
Freight, mixed and snow plow trains, per 100 miles, or per day of ten hours, overtime <i>pro rata</i>		
Consolidation engines	2.75	2.55
Mogul, Atlantic, Pacific, 10 wheeler, over 110 p.c.	2.60	2.40
Mogul, Atlantic, Pacific, 10 wheeler, 75 p.c. to 110 p.c.	2.55	2.30
All other engines	2.50	2.25
Way freight trains, per 100 miles, or per day of ten hours, overtime <i>pro rata</i>		
Consolidation engines	2.90	2.65
Mogul, Atlantic, Pacific, 10 wheeler, over 110 p.c.	2.80	2.55
Mogul, Atlantic, Pacific, 10 wheeler, 75 p.c. to 110 p.c.	2.70	2.40
All other engines	2.65	2.35
Work trains, per 100 miles, or per day of ten hours, overtime <i>pro rata</i>		
Consolidation engines	2.65	2.40
Mogul, Atlantic, Pacific, 10 wheeler, over 110 p.c.	2.50	2.30
Mogul, Atlantic, Pacific, 10 wheeler, 75 p.c. to 110 p.c.	2.45	2.20
All other engines	2.35	2.15
Switching, per hour	23 ½	
Watching and caring for engines, per hour	23 ½	20
Held for special service, if time lost ten hours to be allowed per day of 24 hours	23 ½	20
Attending Court at company's request, if time lost ten hours to be allowed per day of 24 hours	23 ½	20

ARTICLE 1.

(a) 100 miles or less, ten hours or less, to constitute one day, overtime *pro rata*.

(b) Detention and switching at terminals and turn-around points by road engineers and firemen will be paid on a basis of ten miles per hour, as per class of engine.

(c) A way freight rate will be paid at the rate of 25 cents for engineers and 25 'cents' for firemen, in addition to through freight rates. Engineers and firemen on trains which load or unload way freight en route will be paid for overtime at way freight rates, for time so occupied, but not in excess of way freight rates for full trip. Such time to be deducted in computing overtime. Way freight rates will be paid for the full trip if any of the following is done:

1. Load or unload way freights or company's material, at three or more points;

2. Load or unload way freight or company's material at two points and switch at three points.

3. Switch at four or more points.

This is not to be construed to apply to through trains setting out or picking up cars belonging to their trains.

(d) *Passenger service.* Terminal delay commences when train arrives at its initial terminal, as shown on time table. Outbound trains will be paid from the time due to leave shop track until departure of train. Inbound trains will be paid from time of arrival at station until 45 minutes after arrival on shop track. This in addition to actual road mileage made.

(e) *Freight service.* Road mileage commences and ends at the outer switch of terminal yard. Outbound trains will be paid from the time they leave shop track, or time called for, until arrival at outer switch. Inbound trains will be paid from time of arrival at outer switch until 45 minutes after arrival on shop track, in addition to actual road mileage made. Outer switch means the switch used in heading into yards.

(f) Home terminals mean the terminals designated by the company as the headquarters of engineers and firemen on various runs.

ARTICLE 2.

Engineers and firemen tied up between terminals will be paid full time whether engine is alive or dead, unless men are relieved and given transportation to terminal and deadhead mileage paid. Full time will be paid until dead-heading starts.

ARTICLE 3.

An engineer in charge of an engine ordered over any subdivision with which he is not familiar will be furnished with a competent man as pilot, in addition to engine crew, provided such subdivision is not under construction.

ARTICLE 4.

(a) Engineers will not be required to haul any 'cars when running light except water cars. Engineers will not be required to let engines in or out of shop track except when running light.

(b) Firemen will not be required to let engines in or out of shop track. This not to apply to engines for passenger trains or light engines.

ARTICLE 5.

Engineers and firemen in snow plough service will receive one day's pay for the first ten hours of each 24 so held. If held for less than ten hours they will be paid *pro rata* per hour. Tenders of all engines handling snow ploughs to be covered with tarpaulin, and all engines to be equipped with slide curtains on back board.

(b) Engines pushing snow ploughs will not be required to haul trains, except necessary coal for supply for engines and cabooses, or boarding cars for men in charge of plough and clearing snow.

(c) Engineers running rotary snow ploughs will be paid a minimum day, per hour 50 cents.

(d) Firemen firing rotary snow ploughs will be paid a minimum day, per hour 30 cents.

ARTICLE 6.

Engineers and firemen taken off their trains between terminals for work train service and afterwards continuing their original trip will be paid at work train rates for the time engine was taken off train until trip is continued, such time to be deducted when computing overtime.

ARTICLE 7.

Engineers and firemen taking engines out on trial trip will be paid 100 miles for such service, but must leave engine equipped for road service, and will be paid overtime if such time exceeds ten hours.

ARTICLE 8.

Engineers and firemen responding to calls for trains which are afterwards cancelled will be paid 25 miles, but in case they are held under orders for a period exceeding two hours and thirty minutes they will be paid *pro rata* from the time ordered, and will stand first out except when 100 miles or ten hours have been made, when they will stand last out.

ARTICLE 9.

Engineers and firemen will be paid actual mileage for doubling and not less than ten miles when ordered to double, or at regular doubling points, but doubling time to be deducted when computing overtime.

ARTICLE 10.

Engineers and firemen shall lose no time if held for special service.

ARTICLE 11.

(a) On short runs where the mileage of round trip is 50 miles or less, 100

miles and terminal switching will be paid, also overtime.

(b) All other short runs will be paid on the basis of 100 miles one way and mileage and terminal switching the other way, except in cases where overtime is made either way when such overtime will be paid.

(c) It is understood that engineers and firemen on short runs or runs completed within 24 hours from the time first ordered for will be paid actual mileage and terminal switching. This to apply to continuous service.

ARTICLE 12.

(a) After the expiration of 18 hours engineers and firemen on unassigned runs held away from home terminal will be paid minimum passenger rates for each hour up to ten hours, and after that the same rate for the last ten hours of each succeeding 24 hours so held. The 18 hours as above mentioned must be in excess of any time occupied in taking rest that was booked. This clause not to be operative if due to blockage, nor will it include Sundays.

(b) Engineers and firemen will not be required to make more than two turn arounds on any subdivision before being returned to their home terminal.

ARTICLE 13.

No engineer or fireman will be disciplined, suspended or dismissed upon any charge without having a fair and impartial investigation, and his responsibility established. The investigation will be held and decision given within ten days from the time the report is rendered, at which hearing he shall have the right to be present during examination of all witnesses, and also he may have a committee, if he so desires to appear with him, and shall have the right to appeal from that decision within five days, and will be furnished with a carbon copy of his evidence, if he so desires, and in case his suspension or dismissal is found to be unjust he shall

be reinstated and be paid 100 miles per day for each 20 hours so held, at schedule rates covering service in which he was at the time employed for all time lost.

ARTICLE 14.

Engineers' and firemen's time on work trains will count from the time train is ordered, ten hours or less to constitute one day overtime *pro rata*, but will be allowed 30 minutes for getting engine ready. Engine crews in work train service, when laid up away from terminal points, will be paid one day for each day so held. When work trains are required to run to and from work mileage at freight rates will be allowed. Time so occupied not to be included in time paid for at work train rates. Engine crews going on work trains will be notified 24 hours previously so they can make the necessary preparations. Suitable sleeping quarters will be furnished crews, including mattresses, blankets and pillows. Engine crews will be allowed time for meals at a reasonable hour, and will be given transportation and allowed to go home Sundays, when such leave will not interfere with work service. Work trains will be manned by the youngest engineer or fireman on assigned engines, but the oldest man on freight may have same by applying, if he consider it a preference. Engine crews will be paid at least one hour per day when tied up away from terminals for repairs to engine. Where miles exceed the hours, miles will be paid.

ARTICLE 15.

(a) Engineers and firemen will have the opportunity of having meals at a reasonable hour by previously advising despatcher.

(b) Engineers and firemen on switch engines will be allowed one hour for meals between 11.30 and 13.30 and between 23.30 and 1.30. If crews on switch engines are allowed off for meals

later than 12.30 or 24.30 they will be allowed 45 minutes for meals and will be paid for one hour, and if required to work overtime or double shift crews will be allowed reasonable time for supper or breakfast, such time not to be included when computing overtime.

(c) Switch engineers and firemen will be allowed thirty minutes after arrival on shop track on completion of shift.

(d) Switch engineers and firemen required to work over eight miles outside of station will be paid at through freight rates and rules, as per letter and understanding with company.

ARTICLE 16.

Engineers and firemen will not be required to leave terminal until they have had at least eight consecutive hours' rest, if requested; such request must be entered when booking in on register. Trains may be laid up between terminals for crews to obtain rest, after they have been 15 hours on duty, upon advice to train despatcher, but if despatcher will cut out all way work and switching, trains may be taken through to terminal. Engineer and firemen to be judge of their own condition.

ARTICLE 17.

Engines will be supplied with coal broken to a suitable size, water, sand, all firing tools, stores, oil and waste by round-house staff, but crews will see that engine is so provided. All lamps will be filled, cleaned and lit before the engine is turned out for night run, except switch engines. Engines running through terminal where round-house staff is employed, whether on round trip or over more than one subdivision, will have coal shovelled ahead and fire and ash pans cleaned by round-house staff when necessary. Engines will be supplied with water kegs and ice.

ARTICLE 18.

Engineers or firemen accepting positions in company's service or employed

by their respective organizations will retain their rights on the seniority list.

ARTICLE 19.

When an engineer or fireman resigns or is dismissed he shall receive his pay and be given a service letter within five days, upon request stating time of service and in what capacity employed.

ARTICLE 20.

Engineers will report time of firemen with their own, and when time is not allowed, as per time slip, the time slip or a copy thereof will be returned for correction. Road mileage will be computed on actual distance, as specified in Article 1, Sections D and E.

ARTICLE 21.

(a) Switch engines will be manned by the youngest man on spare board, but senior man may have same if he considers it preference, but must keep the same for the life of the time card, unless he can hold a regular road engine, or through a reduction of staff.

(b) Engineers or firemen being incapacitated in or as a result of service with the company so that they cannot perform road service will be given preference in yard service only in so far as their seniority will permit. In case of a temporary vacancy, switch engines will be manned by men first out on spare board.

ARTICLE 22.

Engineers and firemen will not be required to run tender first, except in cases of emergency; this not to apply to work or construction trains. Emergency to be defined as wrecks, engine failures or case of life or death. Enginemen refusing to back up, except as above specified, will not be considered as refusing duty.

ARTICLE 23.

Engineers and firemen will date on seniority list as follows:

(a) Hired men will stand on seniority list in relation to each other in the same order that they were engaged. The senior hired man will be placed on list on the day and hour first trip is commenced by himself or junior hired man, engagement to commence when man is first engaged and certificate of engagement issued, completion of examination not to be considered.

(b) Promoted men who pass first examination will stand on engineers' seniority list in relation to each other in the same order that they stood on the fireman's list. The senior promoted men will be placed on the engineer's or fireman's seniority list on the day and hour first trip is commenced by himself or junior promoted man, after order to promote has been issued by the chief mechanical officer.

(c) Hired or promoted engineers or firemen must send copy of first trip ticket properly certified to by locomotive foreman to master mechanic on their respective districts, and retain a copy themselves.

(d) During the month of January of each year seniority lists will be posted on which engineers and firemen will ascertain their standing and register complaints, if any. After three months no complaints will be recognized.

ARTICLE 24.

In case of meeting or conference being desired between the officials of the company and the committee of engineers or firemen, a written notice stating the nature of the matter to be considered will be forwarded to the master mechanic, who will, as early as possible, fix a day and time at which the conference may be held.

ARTICLE 25.

Engineers and firemen being incapacitated in or as a result of service with the company so that they cannot perform road or yard service will be given work as hostlers where practicable.

Hostlers will be allowed one hour for meals between the hours of 11.30 and 13.30 and 23.30 and 1.30. Vacancies for hostlers will be bulletined on regular bulletin board for a period of seven days. Where more than one hostler is employed they will work alternate weeks, day and night. Permanent hostlers now employed will retain their positions.

ARTICLE 26.

Engineers and firemen in freight service will run first in first out on their respective subdivisions. Engine crews assigned to regular run will be entitled to any engine placed on such run, except in cases of engine failure, when they will follow their own engine to terminal. Extra men will run first in first out. When a temporary vacancy occurs for over ten days in freight service, the oldest extra man will be entitled to it, for a less period the extra man catching it will retain it until the regular man returns. The oldest available engineer or fireman in freight service will fill a temporary vacancy in passenger service. Any man refusing the extra passenger work shall forfeit the same for the life of the time card. It is also understood that mixed trains are considered passenger trains, as per seniority.

ARTICLE 27.

No more engineers or firemen will be retained in the service than are necessary to handle the business with safety and despatch, master mechanic to decide after conference with committee of men.

ARTICLE 28.

The master mechanic after conference with the respective committees will de-

cide which class of engine will be considered preference out of their respective stations.

ARTICLE 29.

Engineers or firemen on regular assigned runs will not be compelled to run freight when their engine is ordered out for same, except when the time card or delayed train makes it necessary to run engine to the other end of subdivision to take opposite regular run. Engine crews who lose their regular run through interruption of traffic, or other causes, will follow their respective runs.

ARTICLE 30.

Comfortable sleeping quarters, with wash rooms in connection, will be provided at terminals, supplied with sufficient mattresses, blankets and pillows, free of charge. Locomotive foremen will be held responsible for condition of same. Said sleeping quarters to be for the accommodation of engineers and firemen only.

ARTICLE 31.

Any complaints made against engineers or firemen in work train service will not be sufficient cause for their removal until such report has been investigated by the representatives of the mechanical department; this to apply to men loaned temporarily to construction department.

ARTICLE 32.

It must be understood that all passenger and mixed runs of 50 miles or over are assigned runs.

ARTICLE 33.

(a) Engineers and firemen on assigned runs will be called between the hours of 20 o'clock and 9 o'clock.

(b) Engineers and firemen will be called two hours before departure of trains and sign call book, which will

show leaving time of train, and will be on duty 45 minutes before departure time of train. This time to be used in getting engine ready and getting on train. Crews on regular runs will have engines ready to take out train on departure time; calling distance two miles or less from round-house.

ARTICLE 34.

When engines are held in shop for six days or more for repairs, the engineer or firemen will be entitled to the youngest engineer's or fireman's assigned engine on that subdivision until their regular engine comes out. When an engine is held in shop a second time within the same year, for a period less than six days, the engineer or fireman will be entitled to the youngest engineer's or fireman's assigned engine on that subdivision at once, until their regular engine is returned to service.

ARTICLE 35.

Engineers or firemen hired by construction department if transferred to operating department will hold date on seniority list from time of such transfer. Transfers from operating department to construction department will hold original date on seniority list.

ARTICLE 36.

Engineers or firemen who are discharged and re-employed on return to duty within six months will hold their former rank, re-employed after six months will rank as new men, except in cases where by agreement senior rank is retained.

ARTICLE 37.

All time card trains will be paid all time at terminals, as per Article 1, Clauses D and E.

ARTICLE 38.

Engineers or firemen assigned to regular engines will be allowed to take their

engine, if same is not returned in four days, provided engine was lost through booking rest, sickness, or suspension. No deadhead mileage to be paid in either case. Men will be returned to home terminal at once.

ARTICLE 39.

Men assigned to regular runs of 100 miles or more, or to yard service, will not be considered on duty from time relieved at engine houses until again required for their regular run or shift.

ARTICLE 40.

At points where no hostlers are employed, engine crews will be paid five miles for turning or housing engine or both, and in lieu of preparatory time five miles for taking engine out.

ARTICLE 41.

(a) Seniority rights will be recognized east of Port Arthur on their respective seniority districts.

(b) The senior engineer or fireman regularly assigned will have choice of run out of home station at change of time card, but in case of change and time card discontinuing their runs the men so affected will have the choice of any run not occupied by a senior man. When vacancies occur and new runs are created they shall be advertised, and the senior man applying for same must take and retain same.

ARTICLE 42.

Storm windows will be kept on cab in cold weather. Also steam glands packed and kept tight. Cabs will be furnished with spring seats and suitable boxes for storing clothing, and equipped with back boards, slide curtains and side curtains. Engines to be inspected by shop force when covered with snow or frozen up if booked. Wedges to be set up on all engines, if booked, and squirt on all engines at all seasons, with suffi-

cient hose to reach both ash pans. Brakes to be kept in good working order.

ARTICLE 43.

(a) All complaints made by engineers against firemen, or vice versa, must be made in writing. Verbal complaints will not be entertained.

(b) If suitable men are available one engineer will be hired to two firemen promoted.

ARTICLE 44.

Firemen will not be required to take charge of more than two dead engines, and will be paid at freight rates for the larger engine of the two.

ARTICLE 45.

(a) Men who have three years' experience firing locomotives or two and a half years' firing and six months' hostling will be eligible for promotion.

Firemen will be examined for promotion according to seniority on firemen's seniority list, and those passing the final examination will be given certificates of qualifications, and when promoted shall hold their same standing in relation to each other in the service to which assigned, except as per Clause D.

Examinations will not be held between September 30 and February 28 unless arranged by the company.

Eligible firemen will be examined as soon as possible after March 1 each year, and all eligible men will be required to commence writing up prior to September 1.

(b) As soon as a fireman is promoted he will be notified in writing, by the proper official of the company, of the date of his promotion.

(c) A fireman not examined in his proper turn according to seniority, through no fault of his own, will retain his original seniority rights as a fire-

man, if he passes his examination when called upon.

(d) A fireman failing to pass first examination for promotion will be given another examination in his turn, after 60 days, and within 120 days, if practicable, and if he passes the second examination he will retain the seniority rights as a fireman as per Clause A, excepting that he will be junior to those firemen who pass first examination, and were actually promoted during the interval.

(e) Firemen will not be considered as having failed in their examination for promotion until their papers have been passed upon by the proper officers of the company, and those who fail will have the privilege of appealing, providing appeal is made immediately in writing, stating the grounds for such appeal. When a fireman fails in his examination for promotion he will be advised in writing.

(f) A fireman failing to pass his second final examination for promotion will be placed on the foot of the fireman's seniority list or his service dispensed with, at the discretion of the company.

(g) When a man is first employed as a fireman he will be given the first progressive examination book, containing questions and answers on which he will be examined after one year in the service; after writing the first examination he will be given the second progressive examination book, containing questions and answers on which he will be examined after two years in the service; after writing his second progressive examination he will be given the third and final set of questions and answers.

(h) Firemen will be permitted to write up all examination books at their home station, in so far as practicable. Oral examinations will also take place at home station if practicable.

(i) Examination books will be altered from time to time as conditions warrant.

(j) Firemen who have been regularly in passenger service for one year prior may fire an engine in freight service for one month, before being promoted, but will not lose any seniority standing thereby.

(k) Firemen who are set back on account of deduction and have not three years' actual experience as firemen when their turn comes for promotion may be required to complete their time as firemen before being started running, but will hold all seniority rights in regard to examinations and position on seniority list.

ARTICLE 46.

Firemen will be exempted from all cleaning of engines.

ARTICLE 47.

Above rates and accompanying schedule of engineer's and firemen's duties will not be changed, unless 30 days' notice be given.

Chairman.

(Sgd.) F. H. MCGUIGAN,
For the company.

INDUSTRIAL DISPUTES ACT DECISION.

Case before Police Magistrate Shaw of Vancouver.—Alleged Infringement of Section 57. — Case dismissed. — Appeal Entered.

INFORMATION was laid on July 29

by Mr. E. H. Morrison, of Vancouver, B.C., alleging infringement by the British Columbia Electric Railway Company, Limited, of the provisions of the Industrial Disputes Investigation Act by declaring or causing a lockout with regard to a number of its employees, being electrical workers, while a dispute between the company and that class of its employees was before a Board of Conciliation and Investigation for consideration. Mr. Morrison is secretary of Local No. 213 of the International Brotherhood of Electrical Workers of America, being one of the Vancouver locals of the Order. The case came before Police Magistrate H. C. Shaw, of Vancouver, B.C., on August 10, and was dismissed by the magistrate on August 24. Mr. J. W. de B. Farris, counsel for the prosecution, gave notice of appeal. The text of the magistrate's de-

cision, which has been furnished to the Department by the Clerk of the Police Court, was as follows:

DECISION

Given by H. C. Shaw, Esq., Police Magistrate, in the case of International Brotherhood of Electrical Workers versus British Columbia Electric Railway Company, Limited.

COURT. I have gone through the Act carefully, have read the cases cited to me, and have considerable difficulty for several reasons. One of the reasons that rather hampers me in expressing my views in giving judgment is the fact, as I understand it, that the parties have asked for a Board of Conciliation, and I do not wish to say anything that might in any way prejudice or affect that conciliation. So I must therefore content myself with disposing of it as briefly as possible.

First, I cannot agree with Mr. Farris that I have any right to invoke Section 57 of the Act. The agreement between the parties expresses in very clear language that after three years it can be put an end to by 90 days' notice in writing by one party to the other. That notice seems to have been properly given and the agreement, I suppose, as far as the company is concerned is at an end, or at all events was at an end as far as any intent on the part of the company could be inferred from the agreement, because they apparently felt perfectly sure that the agreement was at an end and they were no longer bound by it. That being so, I do not see how Section 57 of the Statute could apply to this case at all.

Now in the cases cited to me it is laid down as good law that workmen can throw up their positions or the employer can discharge them. That being so, the question is whether the discharge from employment of the several men, patrolmen and others, could in any way be construed as a lockout. This case, of course, differs very widely from the case cited in which there was an actual closing. One cannot, of course, shut one's eyes to the fact that here is to some extent rather a dispute as to a closed shop; it is the old question of the union trying to get control and the company refusing to recognize the union.

The circumstances surrounding the dismissal of these men, if taken without any explanation, would be perhaps very suspicious; there might be a strong suspicion that these men were let out with a view to compelling employees to ac-

cept terms of employment. But it does seem to me that the agreement being at an end makes a very radical difference there. It would almost be as if the company were employing men afresh, and the company having a right to dismiss employees it seems to me, and there being after all no direct evidence of a lockout, I think I have got to give effect to Mr. Fraser's positive statement on oath that the company did not dispense with these men with any intent to compel employees to accept terms of employment, with any intent whatsoever except to reduce the expenses of the company and for economic reasons.

Now, it would be going pretty far for me to practically come to the conclusion that Mr. Fraser was committing perjury, and when I also take into consideration that no men were put on in the place of these men except the two that were advertised for, it does seem that I would be interfering to a very great extent with the internal workings of the company, to a very much greater extent than I think any judicial officer would have a right to do, because it would practically mean I have got to say I am going into the whole question whether the company is working under such conditions as to render dismissal of some of their men necessary or not.

As I said before, it is rather difficult in view of this Board of Conciliation; one may say something that might be improperly construed; but, on the whole, it seems to me that I should dismiss this case, and I therefore dismiss it. I presume if I am wrong, either party can have me put right before an Appeal Court.

REPORT OF THE UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS.*

THE Report of the United States Commission on Industrial Relations which finished its work on August 23rd, contains three separate reports. The first is that of Basil M. Manly, Director of Research and Investigation for the Commission since last March. It is signed by Chairman Walsh and the labour members of the Commission: John B. Lennon, James O'Connell and Austin B. Garretson. The second report, written by

Professor John R. Commons, who served with Mrs. Harriman and Mr. Walsh as representing the general public, is signed by Professor Commons, Mrs. Harriman and also by the employer members, Richard H. Aishton, S. Thruston Ballard and Harris Weinstock, subject to certain dissenting opinions expressed in a note signed by Mr. Weinstock and in a third report signed by these three commissioners.

I. Report of Basil M. Manly, Embodying the Findings, Conclusions and Recommendations of the Staff.

In a couple of pages on the method and character of investigation Mr. Manly states that in all 740 witnesses were examined of whom 230 were affiliated with employers, 245 with labour and 265 were not affiliated with either group. Then follows a summary of conclusions and recommendations with regard to three of the eleven questions into which Congress directed the Commission to inquire, these three being those relating to industrial relations and the causes of industrial unrest which seemed fundamental in character and of broad scope. The eight more specific questions were left for later and more detailed consideration.

Under the heading "Labour Conditions in the Principal Industries including Agriculture" it is stated that the workers have not received a fair share of the enormous increase in wealth in the United States during the past quarter century. The wage earners' share of the net product in the manufacturing industry was only 40.2 per cent in 1909 as compared with 44.9 per cent in 1889, and the fact that in New York City one out of every twelve corpses is buried at

the expense of the city or turned over to physicians for dissection, is quoted as one of the most striking evidences of poverty. The children of American workers are often hungry as statistics show that in six of the largest cities from twelve to twenty per cent are noticeably underfed and ill-nourished, and the report of the Immigration Commission indicates that in the families of workers 37 per cent of the mothers are at work. The condition of the masses of agricultural workers, it is stated, is very much like that of the industrial workers. There has been an alarming growth of tenancy in American agriculture and huge estates have grown up on which extremely low wages are paid.

Discussing "Existing Conditions between Employers and Employees" it is stated that the corporate organization of industry has brought greater problems of industrial relations. The ordinary stockholder has little or no knowledge of or control over the management of the corporation. In the field of industrial relations there are "masses of workers on the one side dealing in some manner with foremen, and superintendents on the other, behind whom is an organization of executive officials, repre-

*See also page 533.

sending in turn the Board of Directors, who are the chosen representatives of the stockholders."

"The crux of the whole question of industrial relations is: Shall the workers for the protection of their interests be organized and represented collectively by their chosen delegates, even as the stockholders are represented by their directors and by the various grades of executive officials and bosses?" These commissioners feel that the evidence is conclusive of the necessity for organization and representation under modern business conditions.

The "Causes of Industrial Unrest" are found to group themselves under four main sources:

1. Unjust distribution of wealth and income.

2. Unemployment and denial of an opportunity to earn a living.

3. Denial of justice in the creation, in the adjudication and in the administration of law.

4. Denial of the right and opportunity to form effective organizations.

1. *Unjust Distribution of Wealth and Income.*—Unjust distribution of wealth and income is shown by the fact that "between one-fourth and one-third of the male workers 18 years of age and over, in factories and mines, earn less than \$10 per week; from two-thirds to three-fourths earn less than \$15, and only about one-tenth earn more than \$20 a week. This does not take into consideration lost working time for any cause." Moreover, women and children are forced to compete with men and to hold down their wages. On the other hand, "the Rich," 2 per cent of the people, own 60 per cent of the wealth. The "Middle Class," 33 per cent of the people, own 3 per cent of the wealth. The "Poor," 6 per cent of the people, own 5 per cent of the wealth.

In view of these conditions it is proposed that Congress should enact an inheritance tax, the rates of which should be so graded that not more than one million dollars may pass to the heirs,

and that the revenue from this tax should be used for the extension of education, the development of other important social services and great construction works, such as road building, irrigation and reforestation.

2. *Unemployment and Denial of Opportunity to Earn a Living.*—Unemployment is attributed to two principal causes.

"First, the inequality of the distribution of income, which leaves the great masses of the population (the true ultimate consumers) unable to purchase the products of industry which they create, while a few have such a superfluity that it cannot be normally consumed but must be invested in new machinery for production or in the further monopolization of land and natural resources. The result is that in mining and other basic industries we have an equipment in plant and developed property far in excess of the demands of any normal year, the excess being, in all probability, at least 25 per cent. Each of these mines, and industrial plants keeps around it a labour force which, on the average, can get work for only four-fifths of the year, while at the same time the people have never had enough of the products of these very industries—have never been adequately fed, clothed, housed, nor warmed—for the very simple reason that they have never been paid enough to permit their purchase." The second cause is given as "the denial of access to land and natural resources even when they are unused and unproductive, except at a price and under conditions which are practically prohibitive," a situation which is said to rest fundamentally on the unjust distribution of wealth. It is suggested, therefore, that steps should be taken to regain the natural resources secured from the Government by fraud; that the land laws should be revised so as to apply to all future land grants the doctrine of "superior use," and to provide for forfeiture in case of actual nonuse; that all unused land should be forced into use by making the tax on unproductive land the same as on pro-

ductive land of the same kind, and exempting all improvements.

3. *Denial of Justice.*—Under this head it is stated that “many witnesses, speaking for millions of workers as well as for themselves, have asserted with the greatest earnestness that the mass of the workers are convinced that laws necessary for their protection against the most grievous wrongs cannot be passed except after long and exhausting struggles; that such beneficent measures as become laws are largely nullified by the unwarranted decisions of the courts; that the laws which stand upon the statute books are not equally enforced, and that the whole machinery of government has frequently been placed at the disposal of the employers for the oppression of the workers; that the Constitution itself has been ignored in the interests of the employers; and that constitutional guaranties erected primarily for the protection of the workers have been denied to them and used as a cloak for the misdeeds of corporations.”

Twelve charges alleging injustice to the workers are given as follows:

(1) That the workers have been unable to secure legislation to protect them against grievous wrongs, except after exhausting struggles against overwhelming odds and against insidious influences. Reference is made in this connection to the contest for adequate child labour legislation, the movements for restriction of the working hours of women and the prohibition of night work for safety of life and limb in factories, work shops and upon the railroads and the struggles to secure legislation to remove such evils as company stores, payment in scrip, prison labour, arbitrary deductions from wages, “sweating,” and tenement houses.

(2) That after protective legislation has been secured it is often “in large part nullified by the courts either upon technicalities of a character which would not be held to invalidate legislation favorable to the interests of manufacturers, merchants, bankers, and other property owners, or thrown out on the

broad ground of unconstitutionality, through strained or illogical construction of constitutional provisions.” The principles of “fellow servant,” “assumption of risk” and “contributory negligence” are said to be the cause of much bitterness and a list of the labour laws declared unconstitutional is given as indicating their wide range.

(3) “It is alleged by the workers that in the administration of law, both common and statute, there is discrimination by the courts against the poor and in favour of the wealthy and powerful.” Statements of ex-President Taft and Professor Henry R. Seager are quoted as evidence.

(4) “It is charged by the representatives of labour not only that courts have neglected or refused to protect workers in the rights guaranteed by the Constitution of the United States and of the several States, but that sections of the Constitution framed primarily to protect human rights have been perverted to protect property rights only and to deprive workers of the protection of rights secured to them by statutes.”

The only sections of the Constitution protecting personal rights are: the thirteenth amendment, prohibiting involuntary servitude; the fourteenth amendment, forbidding the State to make or enforce any law which shall abridge the privileges of citizens of the United States, and depriving them of life, liberty or property, without due process of law, and the denying of equal protection of the laws; and the fifteenth amendment, protecting the right to vote. But it is claimed that these fundamental rights have been violated, “that the fourteenth amendment not only has failed to protect personal rights but has operated almost wholly for the property rights of corporations.”

(5) It is charged that the laws fail to secure redress for such wrongs as the nonpayment of wages, overcharges at company stores, exorbitant hospital and other fees, fines and deductions, the frauds of private employment offices, loan offices and installment houses, and

the "grafting" of foremen and superintendents. In this connection it is pointed out that in California where remedies are beginning to be applied, \$110,912 of unpaid wages was collected in the year ending June, 1914.

(6) That the courts have so abused their powers in the issuance of injunctions that they "have not only grievously injured the workers individually and collectively upon innumerable occasions, but have, by the contempt procedure consequent upon disobedience to such injunctions, deprived the workers of the right, fundamental to Anglo-Saxon institutions, to be tried by jury." The evidence of a former President of the American Bar Association and of the Chief Justice of the Supreme Court of North Carolina is given in support of this and it is added that while the Clayton Act will do much to relieve the situation as far as Federal courts are concerned, it does not appear to be a complete solution of these injustices.

(7) It is charged that laws for the protection of workers in workshops and mines and on railroads, are effectively enforced only in a few States. This, however, being a matter of administration, is expected to reach a satisfactory stage in the near future because of the great attention which the method of administration is now receiving from labour organizations, civic organizations, and employers' associations.

(8) It is charged that "in cases involving industrial questions, the workers are liable to great injustice by reason of the fact that in many localities they are excluded from juries either by the qualifications prescribed (usually payment of property tax) or by the method of selection." Juries are often composed only of property owners and employers and by putting aside the legal and customary methods, the jury is often chosen by the sheriff or other officers, who may be unduly influenced by either party.

(9) It is charged that innocent men are arrested or otherwise illtreated during strikes for the purpose of injuring the strikers and breaking the strike. It

is alleged that during the strike of silk workers at Paterson, N.J., men were unlawfully arrested and imprisoned and the right of trial by jury was generally denied, and that the same conditions were found in many other like strikes, and that the conditions in West Virginia and Colorado, which were almost beyond belief, had the additional feature of military rule.

(10) It is asserted that during a strike the State function of policing is virtually turned over to employers and the detective agencies employed by them, and the character and conduct of the men employed by the detective agencies at Roosevelt, N.J., Calumet, Mich., and Bayonne, N.J., is cited.

(11) It is charged that during strikes a military despotism under so-called martial law is set up in place of civil government. During the strike of coal miners in West Virginia in 1912, martial law was declared, the writ of habeas corpus denied, and persons outside the military zone were tried and sentenced under martial law. It is stated that more extreme conditions in Colorado and Idaho have occurred repeatedly, and that in Colorado martial law has been in effect ten times since 1894.

(12) It is charged that in some localities employers so control the machinery of government that the lawless acts of their agents go unpunished, while strike leaders are relentlessly prosecuted. It is admitted, however, that in cases where workers have secured control they have often used their power unjustly.

In view of these conditions the Commission is urged to make the following recommendations:

(1) "That Congress forthwith initiate an amendment to the Constitution providing in specific terms for the protection of the personal rights of every person in the United States from encroachment by the Federal and State Governments and by private individuals, associations and corporations. The principal rights

which should be thus specifically protected by the power of the Federal Government are the privilege of the writ of habeas corpus, the right to jury trial, to free speech, to peaceful assemblage, to keep and bear arms, to be free from unreasonable searches and seizures, to speedy public trial, and to freedom from excessive bail and from cruel and unusual punishments."

- (2) "That Congress immediately enact a statute, or, if deemed necessary, initiate a constitutional amendment, specifically prohibiting the courts from declaring legislative acts unconstitutional."
- (3) "That Congress enact that in all Federal cases where the trial is by jury, all qualified voters in the district shall be included in the list from which jurors are selected, and that they shall be drawn by the use of a wheel or other device designed to promote absolute impartiality."
- (4) "That Congress drastically regulate or prohibit private detective agencies doing business in more than one State, employed by a company doing an interstate business, or using the mails in connection with their business. Such regulation, if it is feasible, should include particularly the limitation of their activities to the bona fide functions of detecting crime, and adequate provision should be made for the rigid supervision of their organization and personnel."

4. *Denial of the Right of Organization.*—The Manly report next asserts that a more serious and fundamental charge is the "allegation by the workers that, in spite of the nominal legal right which has been established by a century-long struggle, almost insurmountable obstacles are placed in the way of their using the only means by which economic and political justice can be secured, namely, combined action through voluntary organization." In this connection the testimony of Mr. Louis D.

Brandeis is quoted to the effect that the one great cause of unrest is the absolutism of employers. Mr. Brandeis holds that unrest cannot be removed by mere improvement of the physical and material condition of the worker. No mere liberality in the division of the proceeds of industry will suffice "There must be a division not only of the profits but a division of the responsibilities; and the men must have the opportunity of deciding, in part, what shall be their condition and how the business shall be run. They, also, as a part of that responsibility, must learn that they must bear the results, the fatal results, of grave mistakes, just as the employer. But the right to assist in producing the results, the right, if need be, the privilege of making mistakes, is a privilege which cannot be denied to labour, just as we must insist on their sharing the responsibilities for the result of the business."

It is therefore suggested that the Commission recommend (1) incorporation, among the other constitutional rights, of the unlimited right to form associations for mutual betterment; (2) laws prohibiting the discharge of workers for belonging to labour unions; (3) laws forbidding holding the acts of a labour union to be illegal when the same act by an individual would be legal, and that (4) that the Federal Trade Commission shall be empowered and directed by Congress to investigate unfair acts involving labour, especially the refusal to permit workers to join unions or the refusal to confer with union representatives, and that the Department of Labour shall be empowered and directed to prosecute before the Federal Trade Commission all cases of unfair competition arising out of the treatment of labour, such cases to have precedence over all other cases before the Commission.

Conclusions and Recommendations.—The next division of the report is devoted to conclusions and recommendations. Section 1 deals with "Industrial Conditions of Adult Workmen in General Industries," and has recommenda-

tions with regard to wages, hours of labour, safety and sanitation and housing. Section 2, "Women and Children in Industry," includes in its recommendations increased organization of working women, that women wage earners shall receive the same compensation as men for the same service and the extension of the principle of State protection for children. Section 3, "Industrial Conditions and Relations on Public Utilities," recommends the purchase by the Federal Government of such part of the equipment of the telegraph and telephone companies as may be necessary for the efficient operation of National telegraph and telephone systems. Recommendations were also made with regard to the Pullman Company and a standard code of sanitary regulations for railroad construction camps is suggested. Measures to prevent the compelling of employees to sign releases of liability for accidents and the regulation of the employment of police on interstate railroads are also recommended. Section 4 contains recommendations with regard to "Industrial Conditions in Isolated Communities." Section 5, "The Concentration of Wealth and Influence," notes the creation of large privately managed funds or "foundations" and recommends that corporations whose present charters empower them to perform more than a single specific function and whose funds exceed one million dollars, shall be required to secure a Federal charter which charter should definitely limit the funds to be held by any organization, specify exactly its functions and powers, provide against undue accumulation of funds, for rigid inspection and complete publicity. Section 6, "The Land Question and the Condition of Agricultural Labour," has recommendations looking to increased tillage and production through the work of National and State land commissions, the development of better credit facilities, modernized rural schools, and the revision of the taxation system. The recommendations of Section 7, "Judicial Settlement of Labour Claims and Complaints," suggests in-

dustrial courts, and the prosecution of the just claims of all classes of workmen by the Commissioner of Labour or the Industrial Commissions of the several States. Section 8, "The Law Relating to Trade Unions and Industrial Disputes," recommends legislation embodying the principles of the British Trades Disputes Act. Section 9, "The Policing of Industry," has a series of eight recommendations prohibiting the transportation of men from State to State as armed guards or agents either of employers or of employees; prohibiting the shipment in interstate commerce of military materials except when consigned to the State or Federal Governments; the regulation of private detective agencies and private employment agencies; the enactment of statutes, by the States, providing a uniform code governing the militia and provision for the fullest use of schools and other public buildings for public meetings and lectures and other measures designed to remove the causes which lead to violence and to promote impartial and effectual action of police during disputes. Section 10 has recommendations on "The Conditions and Problems of Migratory Labourers." Section 11, "Unemployment," discusses the extent and character of unemployment (the two basic causes of which are given as unjust distribution of income and land monopolization), the existing conditions of employment, existing agencies for employment and public employment agencies, and recommends the establishment of a national employment system under the Department of Labour, the regulation of private employment agencies in interstate business and "the investigation and preparation of plans for the regularization of employment, the decasualization of labour, the utilization of public work to fill in periods of business depression, insurance against unemployment in such trades and industries as may seem desirable, and other measures designed to promote regularity and steadiness of employment," and the creation of a special board to devise plans for performing

the largest amount of public work during the winter and in periods of depression. Section 12 embodies conclusions as to "Organization, Methods and Policies of Trade Unions." Section 13, "Organization, Methods and Policies of Employers' Associations," recommends "the formation of strong and stable associations of employers for the purpose of negotiating joint agreements and otherwise determining, upon a democratic and equitable basis, the fundamental problems of the trade." Section 14 recommends the extension of joint agreements between associations of employers and trade unions.

Section 15, "Agencies of Mediation, Investigation and Arbitration," has a "Proposed Plan of a National System of Mediation, Investigation and Arbitration." As presented, the plan is limited to a national system, but it is recommended that the State Legislatures should legislate along the same lines. A National Mediation Commission should be appointed by the President, the members representing in proper balance the interests of employers, employees and the public and serving for terms of six years. The President should designate an equal number of leading organizations of employers and leading organizations of employees to appoint representatives to constitute an advisory body to the President, to Congress, and to the Mediation Commission. This advisory body should have an organization independent of the Commission and elect its own chairman and secretary. It should advise the Commission as to its duties, the administration of its affairs and the selection of mediators and should have power to make recommendations regarding legislation. The members should be paid travelling and other necessary expenses and such compensation as may be determined upon. The National Mediation Commission should have power to intervene in all industrial disputes involving firms or corporations in interstate commerce except public service corporations. It is pointed out that this provision dif-

ferentiates the functions of the new Commission from those of the Mediation Commission existing under the Newlands Act,* and it is recommended that both Commissions should exist at least until the proposed Commission shall have been thoroughly tested. In noting that this plan will have the effect of supplanting the mediation powers of the Department of Labour, there is no criticism of that Department which it is stated has never had the time nor the resources necessary for the proper development of this function. The permanent assurance of impartiality, however, demands this course. As the Department of Labour was created to represent the interests of labour; its duty is to act for the protection of the workers and it seems certain that it will not be entrusted with the power necessary to compel testimony for the purpose of public inquiries which are of such vital necessity in those bitter disputes in which mediation is seldom successful and where public interest strongly demands intervention.

In a dispute between employers and employees in interstate commerce other than public service corporations either party should apply to the Mediation Commission or the Commission should offer the services of its mediators. If settlement is not reached the Commission should try to induce the parties to submit to arbitration and if the parties be induced to arbitrate the Commission should have power to request both parties to consent to the creation of a Board of Mediation and Arbitration. If consent is secured, the Commission should form a Board of three members, one selected by the employers, one by the employees and a third by the members

*An Act approved by the President, July 15, 1913. It provides for the adjustment of train service disputes either by mediation, conciliation or arbitration. Provision is also made for the appointment by the President of a Commissioner of Mediation and Conciliation and of two officials of the Federal Government to act with him. The law contains no powers of compulsion, but when intervention in the form of mediation or conciliation has proved ineffective and the dispute is voluntarily submitted to arbitration, the award is binding on all concerned. For full text of the Act see *Labour Gazette* of August, 1913, page 164.

so chosen. The Commission should appoint a member if either side fails to recommend one or if the third member is not recommended within a stated time, the Commission's appointment to be made from a list prepared by the Advisory Board. If the Board of Mediation and Investigation should not be successful in settling the dispute and if the parties refuse arbitration, the Board should have power to make an investigation and should submit to the Commission a full report thereon including recommendations for settlement. The Commission should have power to give adequate publicity to such report.

Section 16, "Industrial Conditions and the Public Health—Sickness Insurance," recommends a Federal system of sickness insurance. Section 17, "Education in Relation to Industry," as presented by Commissioner John B. Lennon in a report on industrial education, recommends the creation of a Federal Board to administer funds appropriated by Congress to the several States for vocational education, each State being required to adopt certain standards established by the Board before it may receive any appropriation. The reader is referred to the report of the Special Commission on Vocational Education, which submitted its report June 1, 1914, for an exhaustive treatment of the subject. Sections 18, 19, 20, 21 and 22 deal respectively with "Scientific Management," "Prison Labour," "Immigration," "Labour Conditions in American Colonial Possessions," and "Chinese Exclusion." The section on immigration suggests the enactment of more restrictive legislation.

Supplemental Statement of Commissioners John B. Lennon and James O'Connell.

In a supplemental statement Commissioners John B. Lennon and James O'Connell, two of the labour members, state that while the employer members of the Commission contend that the Manly report is deficient in that it does not include among the fundamental

causes of industrial unrest labour's share in fostering and promoting violence in trade disputes, jurisdictional disputes accompanied by strikes, limitation of output, sympathetic strikes, contract breaking, apprenticeship rules, refusal to use non-union materials, alleged graft, etc., these things are not causes but evidences of existing industrial unrest due to the fact that labour organizations are forced by employers to fight for the mere right to exist, and that experience shows that these evils rapidly disappear as soon as the organization establishes its right to organize. The commissioners dissent from the Manly report's plan of a National system of mediation, investigation and arbitration on the grounds that such a scheme is "Bureaucracy run mad, and a subversion of Democracy dangerous to citizens." It is their opinion that the work being done by the Department of Labour and by the Board of Mediation and Conciliation is better than any that could be expected from such a Commission. They favour the extension of the Newlands Act to cover all employees engaged in interstate commerce and urge as the great remedy for unnecessary industrial unrest "more, and more, and still more organization of labour and of the employers in each industry as well." Apart from these qualifications the Commissioners concur in the Manly report, also in the supplemental statement of Chairman Walsh and in the opinion expressed therein dissenting from the report of John R. Commons and Florence J. Harriman. They also concur in that part of the Garretson statement headed "Causes Underlying Industrial Unrest" and in the addendum of George P. West on the Colorado strike.

Supplemental Statement of Commissioner Austin B. Garretson.

Commissioner Austin B. Garretson, the other labour member, in a supplemental statement expresses general agreement with the recommendations of the Manly report but dissents from the recommendations for State and Federal

Commissions and a Federal Industrial Council. Mr. Garretson favours the extension of the Newlands Act to all interstate employees who can constitutionally be brought under its provisions. He dissents entirely from the report of Commissioner J. R. Commons and renders individual opinion only on the causes underlying industrial unrest which to him appear to be (1) the inequitable distribution of the fruits of industry, (2) the lack of equality before the law as between the man who has and the man who has not, (3) irregularity of employment and the consequent restriction of opportunity and belief that toil can bring no fair recompense under present conditions, and (4) land monopoly with the resulting prohibitive price and congestion of population.

Supplemental Statement of Chairman Walsh.

Chairman Frank P. Walsh in a supplemental statement dissents from the recommendation for new administrative machinery for mediation and arbitration in the form of a special Commission, believing that the Commission created by the Newlands Act and the Department of Labour are capable of dealing with the situation if adequately supported. He also dissents from the literary test as a working method of restricting immigration and the recommendations regarding civil government in isolated industrial communities. He dissents from the report of Commissioner John R. Commons and Florence J. Harriman in that it does not set forth the underlying causes of industrial dissatisfaction, is undemocratic in its scheme of the control of labour, is impossible of performance and opens up unlimited opportunities for graft and corruption.

II. Report by John R. Commons, Florence J. Harriman, Richard H. Aishton, S. Thruston Ballard and Harris Weinstock.

John R. Commons, Florence J. Harriman and the employer members of the Commission dissent from the recommendations of the Manly report because they have not the criticism of employers, employees and others affected by them, and because "they contain few or no practicable suggestions for legislation that would be enforceable, or because they are directed to making a few individuals scapegoats where what is needed is serious attention to the system that produces the demand for scapegoats, and, with it, the breakdown of labour legislation in this country." According to these Commissioners the greatest cause of unrest is probably the fact that "our statute books are encumbered by laws that are conflicting, ambiguous, and unenforceable, or partly enforced," and they place foremost in their report methods of establishing a system designed to provide adequate and responsible administration. They recommend State and Federal Industrial Commissions to be created for

the administration of all labour laws. It is pointed out that there is a tendency in labour legislation in the States towards complete centralization of the administration of the labour laws in a single department and that the same kind of events that have led up to the establishment of State Industrial Commissions in such States as Wisconsin and Ohio are taking place in Federal legislation. Associated with the Federal Industrial Commission should be an Advisory Representative Council to be appointed by the President consisting of ten persons representing the different associations of employers and farmers in the country and ten representing organized labour, the Secretaries of Commerce and Labour to be members *ex-officio*.

This Advisory Council should serve without compensation. All the Commission's recommendations should be submitted to the Advisory Council before being formally adopted and all reports and other official documents should also

be submitted. The Advisory Council should not have veto power over the acts of the Commission but is designed to act as a check upon unwarranted action. All of the Commission's employees should be under Civil Service rules. It is proposed to separate the policy determining function from the administrative function in order that in as far as possible the problems on which capital and labour disagree may be separated from those in which they have a common interest. To this end the Industrial Commission should be purely an administrative body not intended to promote new legislation while the Department of Labour should be entrusted with investigations that would enable the President to determine upon a labour policy and should be, as it has been in the past, the educational medium through which the country may be informed on the various labour issues that need solution or that have not yet been legislated upon. Similar departments might be established in the large industrial States. The Industrial Commissions should make and publish investigations and recommendations on all subjects whose administration is entrusted to them, the Federal Commission being the agency to which the States should look for continuous investigations and publications for the entire country on all subjects involved in labour disputes. The Commission should have power to make rules and regulations for carrying into effect the provisions of the labour laws, and any person in interest should be entitled to petition the Commission for a hearing on the legality or reasonableness of any rule, regulation or order, or such person may bring a special action in court to test the legality and reasonableness of any provision of the labour laws. At the request of the Supreme Court the Commission should investigate and report upon questions of fact referred to it by the court bearing upon the constitutionality or reasonableness of any Federal or State Statute or administrative rule on the relations of employer and employee.

It is proposed that the Industrial Commission shall follow strictly "voluntary" methods of mediation and arbitration, but that in the other branches of its work the Commission shall have the ordinary coercive powers of government. The underlying principle is "that the government should not employ its coercive powers to regulate collective bargaining, but should in certain matters employ the force of law and administration to regulate the individual labour contract. It does the latter through laws on child labour, hours of labour, safety and health, workmen's compensation, sickness insurance, minimum wage, and so on." The strike and the lockout and other such weapons are essential. Their object is similar to legislation regulating the individual labour contract except that they regulate it through joint agreement. It is aimed to permit the use by either side of its weapons of closed union shop and closed non-union shop, of strike and lockout, boycott and blacklist, peaceful picketing and strikebreaking, peaceful inducement to break a contract to work or to break off allegiance with a union in an effort to win a labour dispute. To this end, therefore, it is recommended that Congress and the State Legislatures should enact laws similar to the British Trades Disputes Act of 1906, relieving employers' associations and labour unions, as well as their representatives of criminal suits, damage suits and injunctions on account solely of combination or conspiracy connected with a labour dispute, when the act would be lawful if done by one person. If the Government through compulsory arbitration steps in, it attempts to deprive both sides of all coercive weapons, or it may use its power to deprive either side of only a part of its weapons. If the Government compels the employer and employee to testify, it tries to substitute compulsion for voluntary consent at two important steps of collective bargaining. It introduces compulsory recognition and compulsory negotiation under the guise of compulsory testimony.

It is argued that mere compulsion on employers through prosecutions to compel employers to confer with unions is ineffective unless as in the Canadian and Colorado Acts there is compulsion to investigate, or, as in Australia, compulsion to arbitrate. The next step is usually a provision that both sides shall continue at work while investigation is in progress as is required by the Canadian Industrial Disputes Investigation Act latterly adopted by New Zealand and Colorado. Under these Acts the Government coerces each side to go through the same forms that they would do if they agreed voluntarily to arbitrate. "This is compulsory recognition, compulsory negotiation, compulsory testimony and compulsory labour pending investigation, but without compulsion after investigation." It is stated that arbitration cannot be voluntary when the Government throws its power to one side or the other by appointing a representative on the Board without consent of both sides. It cannot therefore be claimed that the Canadian system is "voluntary arbitration." The Canadian experience shows that public opinion is not sufficient to secure the adoption of the recommendations of the Board and the next step is the compulsory arbitration of Australasia which brings the power of fine and imprisonment to enforce an award.

The commissioners believe that compulsory methods are unsuited to American conditions, and they therefore recommend a voluntary Board of Investigation adopted from the Canadian Act, but without its compulsory features which, they believe, will prove a valuable addition to the Newlands Act which goes as far as voluntary arbitration in interstate railroad disputes. It is advised that the Newlands Act and the Department of Labour Act should be so amended that all mediation and conciliation should be consolidated under the Federal Industrial Commission.

The plan suggests that the Industrial Commission, "State or Federal," should

appoint a chief mediator, who should be wholly independent of the Commission except as to appointment and removal. He should have no power of compulsory testimony and is prohibited from arbitrating any dispute, from making any public recommendation, or revealing any information secured in any dispute. The chief mediator is to offer his services in confidence to both sides of such dispute as are of public importance. If an agreement is not secured through conciliation, the mediator should recommend arbitration, and if both consent to abide by the arbitration he shall assist them in selecting a Board consisting of any number of members that both sides may agree upon. If agreement is not reached within a specified time as to the third party to the Board the chief mediator should appoint the same. If both parties do not consent to arbitrate, the mediator should recommend the appointment of a Board of Mediation and Investigation which should have power to make public its findings which are not binding on any person. If both parties consent to such a Board the mediator should assist them in creating it and should appoint a third member if the parties cannot agree on the same. In case both parties accept either a Board of Arbitration or a Board of Mediation and Investigation, such Board should have power of compelling testimony.

In individual bargaining the case is said to be different for here the individual worker is at a disadvantage with the employer. This is especially the condition of women and child workers and for them the State, but not the Federal Commission, should create advisory minimum wage boards which should investigate and recommend the minimum wage and other conditions to the Industrial Commission. State Commissions should also give legal aid to deserving workmen. The Commission should require three shifts of eight hours each and one day of rest in seven in all industries operating continuously, and

detective agencies in interstate business should be required to take out a Federal license under the Industrial Commission. In such matters as child labour laws, workmen's compensation, safety, health, etc., the individual worker is not able to protect himself and when the Government comes to the aid of the second party it is not usually intervening in the field of collective bargaining. Such matters are not usually an issue in industrial disputes but in matters of wages, hours of labour, and shop rules where unions are strong enough to protect individuals the function of Government should as far as possible be limited to voluntary mediation. It is pointed out that compulsory systems have not abolished strikes and lockouts and that the nation must look to the enactment and enforcement of laws protecting labourers as individuals for the removal of the underlying causes of industrial unrest. The main purport of the recommendation for Industrial Commissions to regulate the individual labour contract is to provide the efficient and non-partisan administration of laws without which the removal of these abuses cannot be accomplished. In order to provide funds for the Industrial Commission and the promotion of social welfare the report recommends a Federal fund to be derived from an inheritance tax on large fortunes graduated from 1 per cent on the excess of \$25,000 fortunes to 15 per cent on fortunes above \$1,000,000 when left to direct heirs, with higher rates on fortunes left to distant heirs. It is estimated that \$200,000,000 a year could be derived from this tax, 50 cents per capita to be returned to the States in order to induce them to turn over to the Federal Government the sole right of imposing inheritance taxes. It is proposed to invest the principal of this fund in such enterprises as schemes for the housing of workpeople, workmen's hotels, hospitals, and rural credit associations.

As to immigration it is recommended that as this problem is one of the prin-

cipal issues between capital and labour, its administration should be turned over to the proposed Federal Industrial Commission where capital and labour will have an equal voice. In a section on "Farmers and Farm Labourers" it is recommended that Congress and the various States should pass rural credit acts in order that the small American farmer may enjoy the privileges which have come to farmers in European countries through the various rural credit systems they have adopted. Under the heading "Corporation Control" the report condemns the conditions found in Colorado which, it is stated, show the system of corporation control of labour and politics that has taken hold throughout the country. The commissioners state they are not in favour of public ownership as solely a matter of improving labour conditions and that there must be more complete investigation before such can be recommended. They feel that the main immediate need is legislation designed to take the control out of the hands of corporations and place it in the hands of the people, such as corrupt practices acts, direct primaries for the nomination of candidates, protected by corrupt practices acts, constitutional and legislative initiative for State and Federal Governments, the recall of elected officials, including executives and judges of the lower courts, proportional representation and woman suffrage.

Dissenting Opinion of Commissioner Weinstock.

While Commissioner Harris Weinstock signed the Commons report his signature was subject to a dissenting statement on the question of immigration, Mr. Weinstock being of the opinion that there were abundant immigration laws and that the recommendation of the Commons report that "very substantial restrictions on immigration in addition to the present restrictions, should be adopted" was necessary.

III. Report of Commissioners Weinstock, Ballard and Aishton.

The third report, that submitted by the employer members of the Commission, concurs in the Commons report in the main but dissents on two points, (1) from the recommendation that the secondary boycott should be legalized, (2) from the limitation of public inquiry in labour disputes only to cases where both sides invite such inquiry. It is recommended that in the case of public utilities the Industrial Commission shall have power to undertake a compulsory public inquiry when, in the discretion of the Commission, public interest demands it. As an addition to the Commons report it is stated that the alleged findings of fact and the comments thereon of the Manly report are manifestly partisan and unfair. The Commissioners admit that the evidence shows that some employers have been guilty of much wrongdoing but they insist that the responsibility for the causes of industrial unrest is not entirely at the doors of one side as the Manly report would indicate. They state that "there has been an abundance of testimony submitted to prove to our satisfaction that some employers have resorted to questionable methods to prevent their workers from organizing in their own self-interest; that they have attempted to defeat democracy by more or less successfully controlling courts and Legislatures; that some of them have exploited women and children and unorganized workers; that some have resorted to all sorts of methods to prevent the enactment of remedial industrial legislation; that some have employed gunmen in strikes, who were disreputable characters and who assaulted innocent people and committed other crimes most reprehensible in character; that some have paid lower wages than competitive conditions warranted, worked their people long hours, and under insanitary and dangerous conditions; that some have exploited prison labour at the expense of free labour; that some have been contract-breakers

with labour; that some have at times attempted, through the authorities, to suppress free speech and the right of peaceful assembly; and that some have deliberately, for selfish ends, bribed representatives of labour. All these things, we find, tend to produce industrial unrest, with all its consequent and far-reaching ills."

But on the other hand it is argued that there is an awakening among the enlightened employers and the general conditions of the American worker are said to be the best in the world's industrial history. Even enlightened employers object to deal with organized labour on account of such practices as:

- (a) Sympathetic strikes.
- (b) Jurisdictional disputes.
- (c) Labour union politics.
- (d) Contract breaking.
- (e) Restriction of output.
- (f) Prohibition of the use of non-union made tools and materials.
- (g) Closed shop.
- (h) Contests for supremacy between rival unions.
- (i) Acts of violence against non-union workers and the properties of employers.
- (j) Apprenticeship rules.

These objections on the part of employers to recognize and deal with organized labour are then taken up *seriatim*, and it is concluded that "these various policies have brought out their fullest share among the workers, to say nothing of the injury inflicted on employers and on society, of poverty, suffering, wretchedness, misery, discontent, and crime. Organized labour will never come into its own, and will indefinitely postpone the day when its many commendable objects will be achieved in the broadest sense, until it will cut out of its programme sympathetic strikes,

until it can prevent cessation of work in jurisdictional disputes, until it can successfully prevent labour union politics, until it can teach many in its rank and file to regard more sacredly their trade agreements, until it can penalize its members for resorting to violence in labour disputes, and until it can make it a labour union offence to limit output." Before affixing their signatures these commissioners express the hope "that employers will strive to *work* with rather than *against* intelligent labour representatives in aiding to lessen industrial unrest and to still further improve the condition of wage earners and their dependents."

Supplemental Statement of Commissioner Ballard.

Commissioner S. Thurston Ballard adds a statement in which the causes of industrial unrest are grouped under five headings:

- (1) Low wages.
- (2) Unemployment, through seasonal occupations, periods of depression, accidents and sickness.

(3) The development of large industries.

(4) Long working hours and insani-tary conditions.

(5) Unsatisfactory rural conditions.

Commissioner Ballard recommends a national minimum wage law, a national system of employment agencies, workmen's compensation laws and sickness and accident insurance, a national charter for all corporations in interstate business, a national eight-hour law for continuous labour, and federal aid to the States in improving rural schools. A non-partisan Commission in charge of industrial questions is suggested in agreement with the majority report. While the income and inheritance tax would seem to be the fairest means of securing the necessary revenue for carrying out the suggestions of the report, it is recommended that the question should be carefully studied, that care should be taken that the tax does not become confiscatory, and the opinion is expressed that every individual should pay his proportion no matter how small it may be.

LABOUR LEGISLATION IN NOVA SCOTIA.

AT the 1915 session of the Legislative Assembly of the Province of Nova Scotia, there were in all 116 measures passed, of which 45 were public acts. A number of these measures relate to matters directly affecting labour and a number of others have a bearing on agricultural and other industries. Of measures passed directly in the interests of labour or having provisions directly affecting labour may be mentioned the Workmen's Compensation Act; an Act to Consolidate and Amend the Mechanics' Lien Act; an Act to Amend the Nova Scotia Factories Act; an Act to Amend the Coal Mines Regulations Act; an Act to

Amend the Public Health Act, and an Act respecting compulsory attendance at schools in cities and towns.

Workmen's Compensation Act.

The Workmen's Compensation Act follows¹ in many respects the lines of the Ontario Workmen's Compensation Act. The compensation provided for is practically identical with that of the Ontario measure and the industries are classified in much the same manner. Part 1, which is the main portion of the Act, applies to employers and workmen in or about the industries of lumbering,

¹Chap. 1, Nova Scotia Statutes, 1915.

mining, quarrying, fishing, manufacturing, building, construction, engineering, transportation, operation of railways, telegraph, telephone, electric power lines, water works, sewers, and other public utilities, navigation, the operation of boats, ships, tugs and dredges, stevedoring, operation of grain elevators and warehouses, teaming, scavenging and street cleaning, painting, decorating and renovating; dyeing and cleaning; the operation of laundries or any occupations incidental to or immediately connected therewith. Persons engaged in office or other clerical work and not exposed to the hazards incident to the nature of the work carried on in the industry; persons whose employment is of a casual nature and who are employed otherwise than for the purposes of the employer's trade or business, "outworkers," (which is defined to mean a person to whom articles or materials are given out to be made up, cleaned, washed, altered, ornamented, finished, repaired, or adapted for sale in his own home or on other premises not under the control or management of the person who gave out the articles or materials); persons employed by a city, town or municipal corporation as members of a police force or of the fire department and members of the family of the employer, are excluded from the provisions of Part 1. Part 2 of the Act covers industries not included in Part 1, and provides for the bringing of an action for damages where the accident is caused by negligence on the part of fellow-workmen or employers.

Certain Companies Exempted.

Provision is also made for the exclusion of certain companies and their employees, where these companies already have some scheme of compensation which in the opinion of the Board, is on the whole, not less favourable to the general body of workmen and their dependents than the provisions of the Compensation Act. These exceptions, as the Act states, apply only to the employers

and workmen in the industries carried on within the Island of Cape Breton by the Dominion Steel Corporation and the Nova Scotia Steel and Coal Company, Limited. The Board may give a certificate permitting the continuation of compensation arrangements of these companies for a term of years and may also, where complaint is made by the Board by or on behalf of workmen and employers that the scheme is not so favourable to workmen and their dependents as the provisions of the Act, revoke such certificate. Provision is also made for the admission of any industries or workmen not at present within the scope of the Act. The Board may also, by regulation, exclude from the scope of the Act any industry in which not more than a stated number of workmen are usually employed.

Compensation.

Compensation is given for personal injury by accident arising out of and in the course of employment to a workman, except where the injury does not disable the workman for the period of at least seven days from earning full wages at the work in which he was employed, or is attributable solely to the serious and wilful misconduct of the workmen, unless the injury results in death or serious and permanent disablement. Compensation is to date from the time of disability. The Board may also order compensation when payable by the laws of another province and the Board may upon application grant leave to any workman or dependent resident in Nova Scotia at the time of the accident to reside out of Nova Scotia without thereby forfeiting the right to compensation payments under the Act. Provision is made for the bringing of an action in cases where a working man is entitled to recover against persons other than his employer, and in the event of the amount recovered under such action being less than the amount of compensation to which such workman or dependents would be en-

titled under the Act, he becomes entitled to compensation to the extent of the difference. This provision, however, does not give any right to an employer or to a workman within the scope of Part 1 of the Act to bring an action against any employer within the scope of Part 1 and the provisions of Part 1 are to be in lieu of all actions to which a workman or his dependents might be entitled against the employer of such workman by reason of an accident while in such employer's service. Compensation payable under the Act cannot be waived and it is not lawful for an employer to deduct from the wages of any of his workmen any part of a sum which the employer may become liable to pay into the accident fund. The compensation is not assignable or liable to attachment unless with the approval of the Board. Application for compensation must be made within one year after the occurrence of the injury.

Workmen's Compensation Board.

The Workmen's Compensation Board is composed of three members appointed by the Governor-in-Council, one of these members being chairman and another vice-chairman of the Board. Commissioners hold office during good behaviour but may be removed at any time for cause. Commissioners cease to hold office when they attain the age of seventy-five years unless otherwise directed by the Governor-in-Council. The Board is given the same powers as the Supreme Court for compelling the attendance of witnesses and of examining them under oath, and may also compel the production of books, papers and documents. The office of the Board is situated in Halifax, where sittings are to be held, except where it is expedient to hold them elsewhere, in which case sittings may be held in any part of Nova Scotia. Provision is made for the appointment by the Board of a secretary, a chief medical officer and such auditors, actuaries, inspectors, officers and clerks as may be deemed necessary.

The Board's decisions and findings upon all questions of law and fact shall be final and conclusive, except that an appeal may be made to the Supreme Court where permission for such appeal is given by a judge of the said court, and the Board may of its own motion state a case for the opinion of the Supreme Court upon any question which in the opinion of the Board is a question of law. In order, however, as the Act states, not to restrict the generality of the powers of the Board, questions such as whether an injury has arisen out of or in the course of an employment within the scope of the Act, the existence and degree of disability, the permanence of disability, the diminution of earning capacity, the amount of average earnings, the character of any employment, establishment or department and whether or not employees in any industry is within the scope of the Act, and entitled to compensation, are deemed to be questions of fact. The Board is to make a report on or before the first day of March in each year to the Provincial Secretary of its transactions during the year.

Scale of Compensation.

The scale of compensation is almost identical with that provided under the Ontario Workmen's Compensation Act. Where death results from an injury the amount of the compensation shall be, (1) the necessary expenses of the burial of the workman, not exceeding \$75; (2) where the widow or an invalid husband is the sole dependent a monthly payment of \$20; (3) where the dependents are a widow or an invalid widower and one or more children, a monthly payment of \$20 with an additional monthly payment of \$5 for each child under the age of sixteen years, not exceeding in the whole \$40; (4) where the dependents are children, a monthly payment of \$10 to each child under the age of sixteen years, not exceeding in the whole \$40, and (5) where the dependents are persons other than those before mentioned,

a sum reasonable and proportionate to the pecuniary loss to such dependents occasioned by the death to be determined by the Board, but not exceeding \$20 per month to a parent or parents and not exceeding in the whole \$30 per month. Payments in cases where the dependents are a widow or an invalid widower and one or more children shall continue only as long as in the opinion of the Board it might reasonably have been expected, had the workman lived, he would have continued to contribute to the support of the dependents. Exclusive of the expenses of burial, the compensation payable is not in any case to exceed 55 per cent of the average earnings of the workman and compensation payments in excess of this percentage shall be reduced accordingly. If a dependent widow marries, the monthly payment to her shall cease but she shall be entitled in lieu thereof to a sum equal to the monthly payments for two years, though this provision does not apply to payments to a widow in respect of a child. Payments in respect of a child shall cease when the child attains the age of sixteen years or dies. Where permanent total disability results from an injury the amount of the compensation shall be a periodical payment during the life of the workman equal to 55 per cent of his average earnings during the previous twelve months, if he has been so long employed, but if not, then for any less period during which he has been employed. Where permanent partial disability results from the injury the compensation shall be a periodical payment of 55 per cent of the difference between the average earnings of the workman before the accident and the average amount which he is able to earn in some suitable employment or business after the accident, and the compensation shall be payable during the workman's lifetime. The Board may also recognize an impairment of earning capacity and may allow a lump sum in compensation. Where temporary total or temporary partial disability results from the in-

jury, the compensation shall be 55 per cent of the workman's average earnings, but shall be payable only so long as the disability lasts. "Average earnings" and "earning capacity" are defined to mean the average earnings or earning capacity at the time of the injury, and may be calculated upon the daily, weekly or monthly wages, or other regular remuneration which the workman was receiving at the time of the injury, or upon the average yearly earnings of the workman for three years prior to the injury or upon the probable yearly earning capacity of the workman at the time of the injury, as may appear to the Board best to represent the actual loss of earnings suffered by the workman by reason of the injury, but not so as in any case to exceed the rate of \$1,200 per year. In fixing the amount of a weekly or monthly payment regard shall be had to any allowance or benefit which the workman may receive from his employer during the period of his disability, including any pension, gratuity or other allowance provided wholly at the expense of the employer, and where compensation is payable, any sum thus deducted from the compensation may be paid to the employer out of the accident fund.

Method of Obtaining Compensation.

Where any workman or dependent is entitled to compensation he shall file with the Board an application for such compensation together with a certificate of the attending physician and such other proofs of his claim as may be required by the Board. Physicians or surgeons attending cases of injury to workmen are required to furnish reports to the Board in respect of such injuries. It is also the duty of such physicians to give advice and information which will enable such workmen or dependents to make application for compensation and to furnish such proofs as may be required by the Board. Employers are required to notify the Board in writing

within three days after the happening of an accident giving particulars in regard to its nature, time of occurrence, name and address of the workman, place where the accident happened, name and address of the physician or surgeon by whom the workman was attended, and any other particulars required by regulation of the Board. Employers also are required to make further reports respecting accidents where required.

Payment of Compensation.

It is left to the Board to decide in what form and manner compensation may be paid, and the Board may either pay such compensation in a lump sum or in periodical payments; in any case where in the opinion of the Board it will conserve the accident fund to provide special medical treatment for a workman, the expense of such operation or treatment may be paid out of the accident fund. The Board is given power to reopen, review or readjust any claim or decision where the circumstances require same, and may require workmen applying for or receiving compensation payments to submit to medical examinations, and in default of such requirement being complied with, may withhold compensation payments and may also require proof from time to time of the existence and condition of any dependents in receipt of compensation payments.

Accident Fund and Assessments.

For the purpose of creating and maintaining an accident fund, all industries within the scope of the Act are divided into the following classes:

Class 1.—Lumbering, logging, saw mills, manufacture of pulp or paper.

Class 2.—Wood-working, planing mills, furniture factories, piano or organ factories, cooperage.

Class 3.—Coal mining.

Class 4.—Mining (other than coal), reduction of ores and smelting, quarrying, manufacture of brick or lime.

Class 5.—Manufacture of iron and steel, and iron and steel products.

Class 6.—Car-shops, manufacture of vehicles.

Class 7.—Manufacture of compounds, paints, chemicals, liquors or beverages.

Class 8.—Manufacture of leather, leather goods, rubber or rubber goods.

Class 9.—Flour-milling and handling of grain, canning, pork-packing, manufacture of food products, tobacco and tobacco products.

Class 10.—Manufacture of cloth, textiles and clothing.

Class 11.—Printing, lithographing, engraving, manufacture of stationery.

Class 12.—Teaming, cartage, warehousing and storage.

Class 13.—Construction of buildings and wooden ships, mason work, structural carpentry, plumbing and painting.

Class 14.—Steel erection, steel bridge building, steel ship building.

Class 15.—Road-making, sewer construction, excavation.

Class 16.—Sub-aqueous construction, dredging, pile driving.

Class 17.—Construction and operation of electric railways, electric power lines and appliances.

Class 18.—Construction and operation of telegraphs and telephones.

Class 19.—Construction and operation of steam railways.

Class 20.—Navigation and stevedoring.

The Board may re-arrange these classes where it is considered necessary. Several sections of the Act are devoted to provisions in regard to the levying of assessments, the accounts to be kept in connection therewith and general procedure in regard to the collection thereof.

Industrial Diseases.

Certain industrial diseases are deemed to be accidents and workmen suffering therefrom may claim compensation therefor. A description of these diseases and of the processes in which they are usually contracted is given in the following table:

Description of Diseases.	Description of Process.
Anthrax	Handling of wool, hair, bristles, hides and skins.
Lead poisoning or its sequelae.....	Any process involving the use of lead or its preparations or compounds.
Mercury poisoning or its sequelae.....	Any process involving the use of mercury or its preparations or compounds.
Phosphorous poisoning or its sequelae.....	Any process involving the use of phosphorous or its preparations or compounds.
Arsenic poisoning or its sequelae.....	Any process involving the use of arsenic or its preparations or compounds.
Ankylostomiasis	Mining.

Other Provisions.

Part 2 applies only to the industries to which Part 1 does not apply and to the workmen employed in such industries. A section of this part provides that where personal injury is caused to a workman by reason of any defect in the condition of machinery or plant, or by reason of the negligence of an employer, such workman or his legal personal representative may bring an action against the employer for damages and if such action is brought by the legal personal representatives of the workman or by or on behalf of persons entitled to damages under the Fatal Injuries Act, they shall be entitled to the damages recoverable under that Act. Workmen employed by a contractor or sub-contractor may bring action against the person for whom the work is being done in cases where such person owns or supplies any machinery, plant, etc., which proves defective and the defect arises from the negligence of the person for whom the work is being done as if the workman had been employed by him. The contractor or sub-contractor, however, is liable to an action but not so that double damages shall be recoverable for the same injury. A workman shall not be deemed to have voluntarily incurred the risk of the injury by reason only of his continuing in the employment of an employer with knowledge of the

defect or negligence which caused his injury. A workman also is deemed not to have undertaken the risks due to the negligence of his fellow-workmen, and contributory negligence on the part of a workman shall not be a bar to recovery by him or by any person entitled to damages under the Fatal Injuries Act. Both Parts 1 and 2 of the Act do not apply to farm labourers or domestics or menial servants or their employers. The Workmen's Compensation Act, Chapter 3, of the Acts of 1910, and amendments thereto, are repealed.

Mechanics' Lien Act.

The Mechanics' Lien Act, as amended² and consolidated, provides that any person who performs any work or service upon or places or furnishes any material to be used in construction work shall by virtue thereof have a lien for the price of such work, service or material supplied for the amount of the sum justly due to the person entitled to the lien. Work or improvements to public streets or highways, however, by a municipal corporation are exempted from the provisions of the Act. Any agreement, verbal or written, expressed or implied, on the part of any labourer, workman or mechanic or other person employed in any kind of manual labour dealt with in

²Chap. 2, Nova Scotia Statutes, 1915.

the Act, that the Act shall not apply, is declared to be null and void, although this provision does not apply to a manager, officer or foreman or to any other person whose wages are more than \$5 a day. Liens have priority over all judgments, executions, assignments, attachments, garnishments, etc., and over all payments or advances made on account of any conveyance or mortgage after notice in writing of such lien to the person making such payments or after registration, of a claim for such lien, and in cases where the work done upon a building increases the selling value of the land the lien shall attach upon such increased value in priority to a prior mortgage or other charge. When property is destroyed by fire the insurance money shall take the place of the property so destroyed and shall be subject to claims upon liens. Provision is made for the deduction and retention for a period of thirty days after the completion or abandonment of a contract of 20 per cent of the value of the work done or materials supplied by the person primarily liable upon any contract in connection with which a lien might arise. Where the contract price or actual value, however, exceeds \$15,000 the amount to be retained is 15 instead of 20 per cent. The lien shall be a charge upon the amounts directed to be retained in favour of sub-contractors, whose liens are derived of persons to whom such monies so required to be retained are respectively payable. All payments up to 80 per cent or 85 per cent where the contract price or actual value exceeds \$15,000 of such price or value made in good faith by an owner to a contractor, or by a contractor to a sub-contractor, or by one sub-contractor to another sub-contractor, before notice in writing of such lien given by the person claiming the lien to him shall operate as a discharge to that extent of the lien. Payment of the percentage required to be retained so as to discharge all liens or charges in respect thereof may be made after the expiration of thirty days unless in the meantime proceedings have

been commenced to enforce any lien or charge against such percentage. Every mechanic or labourer whose lien is for wages, shall to the extent of thirty days' service have priority over all other liens derived through the same contractor or sub-contractor to the extent of and on the 20 per cent or 15 per cent previously mentioned, to which the contractor or sub-contractor through whom such lien is derived is entitled, all such mechanics and labourers ranking thereon equally. Every wage-earner shall be entitled to enforce a lien in respect of a contract not completely fulfilled and if the contract has not been completed when the lien is claimed by a wage-earner, the percentage shall be calculated on the value of the work done or materials furnished by the contractor or sub-contractor by whom such wage-earner is employed. Where the contractor or sub-contractor makes default in completing his contract the percentage shall not as against a wage-earner claiming a lien, be applied by the owner or contractor to the completion of the contract or for any other purpose, nor to the payment of damages for the non-completion of the contract, nor in payment or in satisfaction of any claim against the contractor or sub-contractor. Every device by an owner, contractor or sub-contractor to defeat the priority given to a wage-earner for his wages, and every payment made for the purpose of defeating or impairing a lien shall be null and void. During the continuance of a lien no materials shall be removed to the prejudice of the lien and materials for building purposes shall be subject to a lien in favour of the person furnishing it until placed in the building or work, and shall not be subject to execution or other process to enforce any debt other than for the purchase thereof.

Registration of Claim.

A claim for a lien may be registered in the registry of deeds for the registration district in which the land is situated, and shall state the name and residence

of the person claiming the lien, the owner of the property to be charged or the person believed to be the owner and the person for whom the work or service was done or materials furnished and the time within which the same was to be done or furnished. The claim shall also give a short description of the work or service or materials, the sum claimed as due or to become due, a description of the land to be charged and the date of expiry of the period of the claim, if any, agreed upon by the lien holder for payment for his work or service or materials, where credit has been given. The claim, which may follow certain forms set out as a schedule to the Act, shall be verified by an affidavit of the person claiming the lien or of his agent who has a personal knowledge of the matters required to be verified. In the case of a railway company it is a sufficient description of railway lands to describe them as the lands of the railway company. Claims for liens may be united and no irregularity in the form of the lien shall invalidate it unless the owner, contractor or other persons interested might be prejudiced thereby. The registrar, upon payment of a fee of twenty-five cents shall register the claim so that the same may appear as an incumbrance against the land described. Claims for a lien for materials, services or wages may be registered at any time during the performance of the work or within thirty days after the furnishing of materials, completion of service or after the last work is done, for which the lien is claimed. Every lien for which a claim is not registered shall cease to exist on the expiration of the time limited for the registration thereof, unless in the meantime an action is commenced to realize the claim and a certificate thereof is registered in the registry office. Every lien for which a claim has been registered shall cease to exist on the expiration of ninety days after the work or service has been completed or materials have been furnished or placed (except in cases where a period of credit exists)

unless in the meantime an action is commenced to realize the claim and a certificate registered. Periods of credit mentioned in the claim for lien cease to have any effect on the expiration of six months from the registration, or any re-registration thereof, if the claim is not again registered within that period, unless in the meantime an action is commenced and a certificate thereof registered.

Discharge of Liens—Court Procedure.

Liens may be assigned and may be discharged by a receipt signed by the claimant or his agent duly authorized in writing, acknowledging payment and verified by affidavit and registered. Certain sections provide for the proceedings to be followed by registrars and judges. The taking of security in respect of any claims for wages or materials supplied is not to affect the lien. Lien holders may demand inspection of contractors to obtain information.

Liens on Mining Properties.

Workmen to whom wages are due in connection with mining operations are entitled to liens upon mining property and mining laws or licenses, such liens to be registered in the office of the Commissioner of Public Works and Mines at Halifax, as well as at the registry of deeds of the registration district in which the mine is situated. "Mine" is defined to be a mine to which the Coal Mines Regulation Act or the Metaliferous Mines Regulation Act applies. Liens granted by the Act may be enforced by an action in the County Court of the district in which the lands are situated and any number of lien holders claiming liens on the same property may join in an action. Such action brought by a lien holder shall be taken to be brought on behalf of all other lien holders on the property in question. The Act sets out in a number of sections the procedure before, and powers of the Court.

Lien on Chattels.

The Act also contains a provision whereby mechanics or other persons may secure a lien upon chattels for the amount or value of the money, skill or materials bestowed upon such chattels, and in the case of the amount due under a lien remaining unpaid for three months after the same was ordered to have been paid, have the right in addition to all other remedies provided by law to sell such chattels by auction on giving one week's notice by advertisement in a newspaper published in the county in which the work was done, or in a newspaper circulated in such county; such advertisement to state the name of the person indebted, the amount of the debt, the description of the chattel or thing to be sold, the time and place of the sale, and the name of the auctioneer. A like notice must also be left at the last known place of residence, if any, of the owner, if he is a resident of such county.

Other Provisions.

The Act also states that when in any action brought under the provisions of the Act any claimant fails for any reason to establish a valid lien he may nevertheless recover a personal judgment for the amount due him. Schedules are attached to the Act giving forms of claim of lien for registration; claim of lien for wages; for registration; affidavit verifying claim; claim of lien for wages by several claimants, and other local forms.

Nova Scotia Factories' Act.

The Nova Scotia Factories' Act is amended^a by adding some provisions in regard to brass, iron and steel foundries. All entrances to foundries must be so constructed and maintained as to minimize drafts, and all windows therein must be maintained in proper

condition and repair. Smoke, steam and gases generated in foundries shall be promptly and effectively removed therefrom, and whenever it is necessary exhaust fans of sufficient capacity and power properly equipped with piping and hoods shall be provided and operated to remove such smoke, steam and gases. The milling and cleaning of castings shall be done in rooms not otherwise used during the process of such milling and cleaning, and provision shall be made for confining and collecting the dust arising during the process. All foundries shall be properly and thoroughly lighted during working hours, and in cold weather proper and sufficient heat shall be provided and maintained. The use of heaters discharging smoke or gas into workrooms is prohibited. In every foundry employing more than five moulders there shall be provided and maintained for the use of employees therein, suitable and convenient washrooms adequately equipped with proper hot and cold water service, such washrooms shall be kept clean and sanitary and shall be properly heated during the cold weather. Lockers shall be provided for the safe-keeping of employees' clothing and proper facilities shall be provided for drying the working clothes of the employees. Water closets used by foundry employees shall be so arranged or located that such employees in passing thereto shall not be exposed to outdoor atmospheres, and such water closets shall be properly heated during cold weather. Passageways in foundries shall be constructed and maintained of sufficient width to make the use thereof by employees safe; during the process of casting such passageways shall not be obstructed in any manner. The flask moulding machines, ladles, cranes and apparatus for transporting molten metal in foundries shall be maintained in proper condition and repair and any such tools or implements that are defective shall not be used until properly repaired. There shall be in every foundry available for immediate use an ample

^aChap. 27, Nova Scotia Statutes, 1915.

supply of lime water, olive oil, vaseline, bandages and absorbent cotton to meet the demands of workmen in case of burns or other accidents; any other equally efficacious remedy for burns may, however, be substituted.

Coal Mines Regulations.

The Coal Mines Regulation Act, 1908, is amended⁴ by a change in the method of making rules and regulations under the Act. An amendment to the Act of 1913 added a section providing that the Governor-in-Council might make rules and regulations under the Act, and that such rules and regulations should after the publication thereof in the Royal Gazette have the force of law. This amendment also required such rules and regulations to be laid before the House of Assembly immediately, if the House was then in session, or if not, within ten days after the opening of the next session of the Legislature. The Act of 1915 substitutes a section which provides that the Governor-in-Council may from time to time make such further or additional rules and regulations or orders as may be deemed necessary or expedient respecting the use of electricity in any mine or mines, and may make further or additional regulations and rules or orders as may be deemed necessary and expedient in the interests of safety and make and prescribe such forms and regulations as may be deemed necessary and expedient for the purpose of properly carrying out the provisions of the Act. The new Act does not require these rules or regulations to be laid before the House of Assembly, but provides that they shall have the force of law after the first publication thereof in the Royal Gazette. In the new Act also the inspector of mines is given wider powers in the matter of deciding whether a mine is dangerous or defective and not in the interests of safety. That portion of the original Act dealing with the investigations into accidents is changed by in-

cluding amongst the causes of accidents, electricity or over-winding or any other such special cause as the commissioner specifies by order or regulation. Rule 2 of the Act of 1908, providing for the inspection of inflammable mines, is amended by providing that the person making the inspection shall inspect with a "locked" safety lamp; the former section merely used the words "safety lamp" without specifying that it should be "locked." The former rule provided for an inspection in regard to ventilation only; the new rule provides that the person making the inspection "shall also satisfy himself that no dangerous conditions exist as to roof and working faces, and make a similar report on the conditions of the same." Under the provisions of this Act the Commissioner of Public Works and Mines has since prepared further and additional rules and regulations considered necessary and expedient respecting the use of electricity in the coal mines of the province, which rules and regulations have been approved by the Lieutenant-Governor-in-Council and have been published in the Royal Gazette.

New Regulations.

The new regulations permit the use of electricity in any mine or in any part of a mine unless the conditions in regard to the risk of explosion of gas or coal dust are such that the inspector or deputy inspector of mines shall by notice in writing to the owner, agent or manager prohibit such uses. Notices are required to be sent to the inspector or deputy inspector of mines on the forms prescribed by the commissioner in regard to existing apparatus, of the intention to introduce apparatus into any mine, or into the ventilating district in any mine, and of the intention to introduce or re-introduce electricity into any mine where the use of electricity has not been permitted. An annual return giving the size and type of apparatus is also required. If the inspector or dep-

⁴Chap. 29, Nova Scotia Statutes, 1915.

uty inspector of mines does not object in writing within one calendar month from the receipt by him of the notice to the carrying out of the intention to introduce apparatus or electricity into the mine, the owner becomes entitled to carry out such intention. A proper plan must be kept in the office at the mine showing the position of all fixed apparatus in the mine other than cables, telephones, signalling apparatus, lamps and switches controlling lamps, such plan to be corrected as often as necessary to keep it reasonably up-to-date, and to be produced to an inspector or deputy inspector of mines at any time on his request. Provision is made for the putting up of notices prohibiting certain persons from handling or interfering with apparatus. Procedure in case of fire, the restoration of persons suffering from the effects of electric shock, and how to communicate with persons in control of the supply of current is also set out. Provision is made for having at hand safety lamps or other proper lights in case of failure of electric light and certain provisions in regard to the type of lamps and wiring are also given. Regulations are also established in regard to the use of telephones, fire buckets, lightning arresters, the housing of apparatus and working space, the construction of apparatus and insulation systems; in regard to grounding, use of high or extra high pressure, switch gear, control of the supply of current, the construction and use of cables and portable apparatus, the supervision and working of apparatus and the use of electricity where inflammable gas is likely to be present. Regulations are also established in regard to shot firing, signalling, electric re-lighting of safety lamps, electric fans, electric hoisting and electric locomotives.

Child Labour.

An Act respecting compulsory attendance at school in cities and towns⁵ con-

tains provisions in regard to the employment of children in any business or street trade or manufacturing establishments. No child under the age of 16 years shall be employed by any person to labour in any business whatever or street trade, nor accompany any person engaged in any street trade during the hours from nine o'clock in the morning until half past three in the afternoon of any school day, unless such child delivers to the employer or has in his possession a certificate signed by the secretary of the School Board, or a certificate signed by the principal that such child has passed a satisfactory examination in Grade Seven of common school work. Violation by any one to employ a child under this provision is punishable by a fine of not less than \$10 and not more than \$50, and in default of payment to imprisonment of not more than one month. The School Board or any person as it may appoint is required to examine into the condition of the children employed in every manufacturing or other establishment during November and May in every year and at such other times as it deems necessary, and may make an inspection at all reasonable hours by day and night, and prosecute every person violating any of the provisions of the Act. Proprietors or managers on demand are required to exhibit to the person appointed by the Board to make such examination a correct list of all children under the age of 16 years employed in such manufactory or establishment with the required certificate of attendance at school or place of instruction. Failure to supply such list or any obstruction of the person making the examination carries a penalty of not less than \$10 nor more than \$50, and in default of payment to imprisonment for not more than one month.

Agricultural Measures.

A number of measures dealing with the agricultural industry were passed, the principal of which is an Act to encourage the growing of wheat and other

⁵Chap. 4, Nova Scotia Statutes, 1915.

cereals⁶ which empowers the Governor-in-Council to expend sums of money not exceeding in the aggregate \$10,000 to encourage the erection and operation in the province of mills for grinding or milling wheat and to encourage the growing of wheat or any other cereals in the province. An amendment to the Act⁷ for the encouragement of settlement on farm lands gives power to the Governor-in-Council to defer with the consent of the mortgagor and mortgagee repayment by the farmer of all monies due on any loan made under the provisions of the Act for a period not exceeding five years. A number of measures were also passed in regard to agricultural societies and farmers' associations⁸ relating, however,

chiefly to procedure and rules in regard to membership therein.

An Act to amend the Public Health Act, 1910,⁹ gives power to local Boards of Health to make certain regulations in regard to various matters, amongst which may be mentioned as affecting labour the sanitary conduct of laundries, barber shops, meat and provision shops, bakeries and confectionery shops. Health officers are also required to render the factories inspector assistance in connection with the inspection of sanitary arrangements in factories. Local health boards are empowered to provide for the inspection of milch cows and cow byres, and all dairies, cheese factories and creameries.

TRADE UNION MEMBERSHIP IN GREAT BRITAIN IN 1914.

THE following article is reprinted from the British *Labour Gazette* for September, 1915:

Membership of Trade Unions in 1914.

As the result of inquiries made by the Department of Labour Statistics, particulars are now available respecting the membership of trade unions, both registered and unregistered, federations of trade unions, and trades councils, at the end of 1914.

Trade Unions.

At the end of 1914 the total membership of the 1,123 registered and unregistered trade unions known to the department was 3,959,863, showing an increase of 0.8 per cent on the previous year, when the figure attained (3,928,191) was greatly in excess of any previously recorded.

The membership by trades and the percentage increase or decrease in each trade compared with a year ago are shown in the following table:

Groups of Trades.	No. of Unions at end of 1914.	Membership at end of 1914	Percentage Increase (+) or Decrease (—) in Membership compared with 1913.
BUILDING:			
Carpenters and Joiners.....	2	97,030	+ 1.4
Builders' Labourers.....	16	29,343	— 23.0
Others.....	46	110,161	— 3.2
MINING AND QUARRYING:			
<i>Coal Mining:</i>			
Northumberland, Durham, and Cumberland.....	13	228,603	+ 5.2
Yorkshire.....	4	128,397	— 3.4
Lancashire and Cheshire.....	17	82,246	— 0.9
Midlands.....	26	164,960	— 1.0
Wales and Monmouthshire.....	9	176,413	— 1.5
Scotland.....	11	101,585	— 4.2
Other Mining and Quarrying.....	10	30,373	+ 0.9
METAL, ENGINEERING AND SHIPBUILDING:			
Iron and Steel Manufacture.....	13	71,457	— 10.7
Ironfounding.....	9	47,854	— 2.4
Engineering.....	63	296,796	+ 9.1
Shipbuilding.....	12	102,201	+ 3.7
Miscellaneous.....	76	39,433	+ 0.6
TEXTILE:			
<i>Cotton:</i>			
Weavers.....	43	216,146	— 3.2
Others.....	104	136,676	— 2.0
Other Textile.....	91	83,901	— 0.6
Textile Printing, Dyeing, Packing, etc.....	39	61,509	— 14.1
CLOTHING:			
Boot and Shoe.....	11	55,433	+ 1.4
Tailoring and other Clothing.....	28	46,885	— 8.6
TRANSPORT:			
Railway.....	6	336,671	+ 3.2
Tramway and other Land Transport.....	18	97,382	+ 1.5
Seamen.....	12	128,921	+ 2.7
Dock, Canal and Riverside Labour.....	23	143,263	— 6.8
Printing and Allied Trades.....	32	92,055	+ 9.0
Woodworking and Furnishing Trades.....	80	64,686	+ 0.2
Shop Assistants, Clerks, etc.....	11	105,880	— 4.9
Other Trades.....	202	167,329	+ 1.5
General Labour.....	14	366,539	+ 10.7
Employees of Public Authorities.....	82	150,295	+ 3.9
TOTALS*	1,123*	3,959,863†	+ 0.8

*Exclusive, as usual, of a few Unions (generally unimportant) from which complete returns have not been received.

†The total membership (all trades) includes 39,901 members in colonial and foreign branches, of whom 19,479 belonged to the Amalgamated Society of Carpenters and Joiners and 18,823 to the Amalgamated Society of Engineers.

In no group of trades was the rate of increase so great in 1914 as in 1913, and in several groups there was a decline in membership. The general labour group heads the list of increases with 35,000 or 10.7 per cent; but this increase was entirely due to the growth of one union—the Workers' Union—which advanced in

membership from 91,000 to 159,600; in 1910 this union had only 5,000 members. Trade unions in the engineering industry show an increase of 25,000 members, or 9.1 per cent. On the other hand, the membership of unions of builders' labourers, of iron and steel workers, and of textile dyers, etc., decreased

by 9,000 (or 23.0 per cent), 9,000 (or 10.7 per cent), and 10,000 (or 14.1 per cent) respectively.

The total membership of all trade unions in 1914 increased by 65.1 per cent compared with 1910, and by 172.7 per cent compared with 1895, when the membership was lower than in any other year of the period 1892-1914 for which the department has comparable statistics.

In the building trades group the membership in 1914 was below that recorded in 1913, but, with this exception, was higher than in any year since 1903. The membership of this group reached a maximum in 1900 (254,142), and then fell continuously to 156,985 in 1910, between which year and 1913 it recovered somewhat rapidly.

In the mining, textile, and clothing

groups, the membership in 1914 was only once exceeded—in 1913. That of the dock, canal and riverside labour group was exceeded in 1913 and in 1911, but in no other year. In the remaining groups specified in the above table the membership in 1914 was the largest recorded.

The total membership was inclusive of females, who numbered 352,944 in 1914, compared with 357,783 in 1913 (a decrease of 1.4 per cent), and with 221,915 in 1910 (an increase of 59.0 per cent). Over 70 per cent (242,022) of the total female membership were engaged in the textile trades, the cotton industry alone accounting for 205,904, or nearly 60 per cent of the whole.

The following table shows the figures in the main groups of trades for each of the five years 1910-1914:

Groups of Trades.	1910	1911	1912	1913	1914
Building.....	156,985	173,182	203,773	247,685	236,524
Mining and Quarrying.....	731,370	752,527	757,351	914,989	912,577
Metal, Engineering and Shipbuilding.....	370,093	414,896	479,308	538,751	557,741
Textile.....	380,541	437,856	479,266	518,871	498,232
Clothing.....	67,124	74,423	91,832	105,975	102,318
Railway Service.....	116,214	185,513	202,329	326,192	336,671
Tramway and other Land Transport.....	48,603	85,389	68,517	95,416	96,832

Percentage Increase (+) or Decrease (—) on the previous year.....	+3.2	+23.8	+8.6	+21.8	+0.8

Federations of Trade Unions and Trades Councils.

The number of federations of trade unions in existence at the end of 1914 was 119, with a gross membership of 4,791,950, an increase of 8.2 per cent

compared with 1913 and of 41.9 per cent compared with 1910.

The number of trades councils was 302. Their affiliated membership was 1,588,386, an increase of 5.2 per cent compared with 1913 and of 56.5 per cent compared with 1910.

ANNUAL CONVENTION OF THE CANADIAN FEDERATION OF LABOUR.

THE seventh annual convention of the Canadian Federation of Labour was held at Montreal, September 8-10, 1915.

The convention, which was presided over by Mr. Charles G. Pepper, the president, was attended by some 24 delegates representing various organizations in Quebec and Ontario affiliated with the Federation. Prior to commencing its regular business, the convention sent a cablegram to the British Trades Congress in convention at Bristol, England, conveying the fraternal greetings of the Canadian Federation of Labour in session at Montreal.

President's Address.

The president's address referred to the absence of delegates from some of the unions which had been represented every year, particularly the Provincial Workmen's Association, owing to conditions brought about by the war. While the Federation could not claim any material gain in membership since the last convention, it did not differ in this respect from almost every other organization in existence. The Federation had not made any especial efforts to establish new unions as it was realized that the thoughts of the people were centred on the great war in Europe in which Canadians were personally concerned. Advantage, however, had been taken of every opportunity that seemed to present itself to add to the organization. It was gratifying to know that a number of requests had been received during the year from unions and individuals for particulars regarding the Canadian Federation of Labour. Full information had always been gladly given and had meant additions to the ranks of the organization in some cases,

and in others every likelihood of further acquisitions. Resolutions adopted at the last convention bearing on Dominion matters had been presented by the executive to the Dominion cabinet ministers concerned, and while owing to demands on the revenue of the country at present no immediate response, it was stated, could be promised, it was admitted that the requests of the Federation were reasonable. The new label adopted at the last convention had been issued and cards and circulars had been printed and circulated drawing the attention of the several Boards of Trade to the label. It was advised that this label should be used by the unions as extensively as possible. The question of the increase in the per capita tax of the Federation was stated to be still an unsettled question, and it was felt that the unusual conditions confronting many of the unions embraced within the Federation warranted the executive in not enforcing the change which had been approved by the last convention.

The president's address also referred to the war and to the necessity of supporting the Empire in restoring peace in Europe. "We can do this," said the president, "not only by enlisting for overseas service but also by seeking to avoid all possibility of trouble between our members and their employers, especially such as would hamper in any way the success of our troops now fighting our battles."

Secretary-Treasurer's Report.

The report of the secretary-treasurer, Mr. George G. Mercure, stated that owing to a general depression in almost all branches of Canadian industry and circumstances created by the war, the revenue of the Federation was not as good since the last convention as expected. The report also referred to con-

ditions in the coal mining industry in Nova Scotia and mentioned that although a great number of the Provincial Workmen's Association had enlisted for the front, there had been a considerable number out of employment. Reference was made also to the action taken by the executive on the request of the Canadian Council of the Amalgamated Society of Engineers in regard to wages paid in the manufacture of munitions. The interested parties had been satisfied with the action of the Federation. The secretary had communicated with the Minister of Labour for the Province of Quebec in regard to the retention by the Montreal Car Foundry Company of one per cent of the wages of its men for insurance purposes. The Minister had caused an enquiry to be made through his chief inspector of factories who had reported that the company collected one per cent on the earnings of its employees which went towards covering the first week of illness not provided for by the law of compensation, and also medical attendance and medicine. The majority of the employees, it was stated, by the company's auditor, were satisfied with these shop by-laws, which it was claimed did not conflict with the law of compensation but simply covered the gap left open by the law. The Minister had expressed his willingness to help the Federation at any time. Reference was also made in the secretary-treasurer's report to the presentation by the Executive Board to the Minister of Finance and Minister of Labour of the resolutions adopted at the Federation's last convention concerning their departments. The report states that as the executive was not in possession of all the facts concerning some of the resolutions no decisive answers had been obtained. The executive promised to supply the Ministers with further information. In regard to resolutions calling for new legislation, the answer had been that the coming session would be confined especially to matters pertaining to the war.

Financial Statement.

The financial statement showed total receipts for the year of \$856.07, and expenditures \$1,232.64, a deficit of \$376.57, which deducted from the balance in hand last year of \$806.73 left a balance on hand of \$430.16. A statement in regard to the standing of unions showed 16 unions affiliated with the association, the total average number of members being 815, figures for two unions not included.

Unions Affiliated.

Since the last convention the executive had organized five unions, namely, plasterers at Ottawa, printing pressmen and assistants at Montreal, moving picture operators at Toronto, coal carters at Quebec, and tile layers and setters at Montreal. There had been no surrender or suspension of charters, but attention was drawn to the fact that negligence prevailed in many quarters and a table was given in which it was shown that a number of the organizations affiliated with the Federation were several months overdue in the payment of membership fees. The secretary's report also referred to what had been done in advertising the label of the Federation which it was stated had not received the success it merited. Reference was also made to what had been done by the executive in regard to having an inspection made by an officer of the Ontario Government of conditions in the different bakeries of Ottawa. The organization work of the secretary was also dealt with and a reference made to the change in the motto of the Federation. In the opinion of the secretary the former motto, "Canada for Canadians," was the better motto. Only one organization had paid no per capita tax to the Federation during the last year, namely, the Grand Council of the Provincial Workmen's Association at Nova Scotia. Three charters had lapsed, those of bakers at Guelph and Toronto, and blacksmiths at St. Thomas.

Vice-President's Report.

After referring to the Federation's difficulty in making progress owing to the war and trade depression, the report of Mr. M. F. Tumpane, vice-president of the Federation, urged the Federation to make increased efforts to assimilate the various local unions at the present time independent and that the Executive Board make strong efforts to induce the various central labour bodies, such as the Canadian Brotherhood of Railway Trainmen, the National Marine Engineers, the Canadian Stationary Engineers and the Retail Clerks Federation to amalgamate with the Canadian Federation of Labour. These bodies which were organized and self-supporting would be adding more strength to the Federation than by the addition of a like number of members in various crafts, and when the Federation had covered this field it would be in a position to give its attention to the unorganized field and be prepared to meet the International with a fair prospect of success.

The vice-president also recommended that a union owing three months' per capita tax be not entitled to a seat in the convention, and that a clause to this effect be added to the by-laws.

Ontario Vice-President's Report.

The report of the vice-president of Ontario also referred to the difficulty of making progress during the war and trade depression. The Ontario Labour Council, however, it was stated, had stood the test and was working in a better and more harmonious way than ever. Reference was made to the action taken by the council in regard to shell contracts and to various instances in which the efforts of the council had met with success.

Nova Scotia Vice-President's Report.

The report of the vice-president for Nova Scotia regretted it was not pos-

sible for him to attend the convention, one of the reasons stated being that the Provincial Workmen's Association had decided to curtail expenses owing to the war conditions prevailing. One of the items in retrenchment was the capitation tax to the Canadian Federation of Labour and this, it was stated, had not been paid as it should have been. Reference was also made to the efforts of the Provincial Workmen's Association to assist Great Britain and the Allies, and the association had not only given to the Patriotic Fund, the Belgian Fund, the Red Cross and the Machine Gun Funds, but fully one-third of its members had enlisted for active service.

Resolutions Passed.

Among resolutions adopted by the convention were the following:

That any union or affiliated body three months in arrears for per capita tax should not be entitled to a seat in the convention, and that the secretary notify the unions every month that the per capita tax is due, and that notices be printed for the secretary's use.

A resolution asking that the attention of the Federal Government be drawn to the fact that American contractors secure contracts in Canada and refuse to employ Canadian labour in the tile trade especially, and requesting the Government to enact laws whereby Canadian workmen be employed at least 50 per cent on the said work or contracts.

A resolution stating it had been reported that the Act regarding bakers was being violated in Ontario, especially in Ottawa and vicinity, and requesting the Ontario Government to have an inspection made in that locality, also recommending that the position of factory inspector vacant in Ottawa be filled at an early date.

That the attention of the Minister of Labour be called to the Curtis Aeroplane Company in regard to the payment of fair wages in their factory on Government work, and also the Allis-Chalmers Company on pumps made for Lauzon dry dock.

That the Quebec Government be asked to provide legislation to bring about a ten hour day, sixty hours per week, in the bake shops in the Province of Quebec, and also to have a proper inspection of bake shops in that province.

That the Federation get in touch with the Dominion Government and urge them to investigate and remedy the complaint that very low wages are paid to Canadian workers on war contracts in the Old Country and that the terms of the same are violated.

Conciliation Act.

The convention took up the question of the new Conciliation Act, drafts of which had been sent out by the Minister of Labour and referred the matter to the constitution and laws committee for report. This committee after looking over the draft of the new Act and, as it was stated, taking into consideration the short time at its disposal, suggested that the terms of the Act be fully considered by the locals and the result forwarded to the secretary of the Canadian Federation of Labour. It was decided in amendment, however, that the draft of the new Conciliation Act be referred to the executive committee to deal with.

Conscription.

The convention passed the following resolution in regard to conscription:

That the Canadian Federation of Labour express the hope that the British Cabinet will not entertain the idea of conscription in connection with the war. Let us prove to the world that Britons can be relied on to rally to the standard in time of the nation's needs. And, further, that we do earnestly trust that the men within our ranks will assist in every possible way to accomplish this high ideal of British citizenship.

Other Resolutions.

A proposal to reduce the per capita tax on local unions to 5 cents was re-

jected, and the committee on resolutions recommended that the action of the Executive Board be endorsed in deferring the collection of 10 cents per capita and that the date of enforcement of the same be left to the new Executive Board. A resolution was also passed to petition the Federal Government to compel competent men to be placed in charge of vessels in Canadian waters.

Resolutions passed at the last convention were reaffirmed.

Election of Officers.

The following officers were elected:

President—C. G. Pepper.

Vice-president—M. F. Tumpane.

Secretary-treasurer—George G. Mercure.

Executive committee—G. Marois, James Higgins.

Vice-president, Ontario—D. Sime.

Vice-president, Quebec—Edouard Pepin.

Vice-president, Nova Scotia—S. B. McNeill.

The selection of the next place of meeting was left to the Executive Board. Votes of thanks were extended to those who had assisted the convention, and also to the Honourable T. W. Crothers, Minister of Labour, who had telegraphed the convention expressing his regret at not being able to attend owing to his leaving for Vancouver, and who had wished the Federation every success.

REPORTS OF EMPLOYMENT BUREAUS.

THE report on public employment bureaus, begun in the last number of the *Labour Gazette*, has been extended to include representative philanthropic bureaus. The reports on the employment work of different branches of the Young Women's Christian Association appearing in the present issue will, it is thought, afford some indication of employment conditions for women workers in general and particularly for domestic servants.

CHANGES IN WAGES AND HOURS OF LABOUR DURING THE THIRD QUARTER OF 1915.

IN the accompanying statistical table detailed information is presented relating to changes in rates of wages and hours of labour reported to the Department of Labour during the third quarter of 1915.

General Result.

During the third quarter of the present calendar year, including the months of July, August and September, 13 changes in wages and hours were recorded, involving approximately 1,145 employees as compared with six changes involving 1,939 employees during the corresponding period of 1914. The greatest number affected by wages changes were employees in the lumbering industry, printers and metal workers.

Of the 13 changes which took place, ten were increases in wages, one a decrease in wages, one an increase in wages and a reduction in working hours, and one a reduction in working hours only.

The following table shows the approximate number of employees affected by changes which took place in the different trades:

TABLE SHOWING BY INDUSTRIES AND TRADES THE NUMBER OF EMPLOYEES AFFECTED BY CHANGES IN WAGES AND HOURS OF LABOUR IN CANADA DURING THE THIRD QUARTER OF 1915:—

Trade or Industry.	No. of Changes.	No. of Employees Affected.
Mining	1	5
Lumbering.....	3	350
Building	1	4
Metal	4	291
Printing.....	1	300
Unskilled labour.....	3	195
Total.....	13	1,145

Changes by Industries and Trades.

The following is a statement of the changes in wages and hours of labour reported to the Department of Labour as having gone into effect during the third quarter of 1915, arranged by industries and trades:

Mining.—One change affecting miners went into effect on August 21. Five fan boys in the Hillcrest Collieries, Limited, received an increase of 50 cents per day. The increase rate was arrived at by a joint conference between the commissioner of the Western Coal Operators' Association and the president of District No. 18, United Mine Workers of America. The rate per day was changed from \$1.10 to \$1.60 per day.

Lumbering.—Three changes were recorded as having gone into effect among members of the lumbering trade during the third quarter of 1915. All of these changes were reported from the Fernie district, and all took effect during the month of August. One hundred and fifty employees of Ross-Saskatoon Lumber Company, Limited, at Waldo, B.C., received an increase of 75 cents per day on August 12.

At the King Lumber Mills at Cranbrook, B.C., 150 mill and bush labourers and 50 planermen and headermen received an increase in daily wages. Mill and bush labourers received an increase of 10 cents per day; planermen and headermen an increase ranging from 25 to 50 cents per day. These changes resulted from a shortage of labour.

Building.—On August 14, bricklayers and masons in the employ of a Berlin, Ont., contractor had their wages reduced. At first 11 were affected by the change, but seven of these left and engaged with other contractors, leaving

four receiving the reduced rate. Prior to the change the weekly wages of these men amounted to \$24 per week of 48 hours, whereas after the change they received \$21.60 per week of 48 hours.

Metal.—Four changes were reported to the Department as having gone into effect in the metal trades, two occurring at Amherst, N.S., one at Galt, and the fourth at Hamilton, Ont.

All of these changes were in the nature of increases, and about 291 employees were affected. Steel workers at Hamilton to the number of 248 were granted increases of from 1 cent to 5 cents per hour. This change went into effect on July 6, and was brought about as a result of a strike. The other changes were increases of from 15 cents per day to 5 cents per hour.

Printing.—On July 1, a change went into effect among 60 printing firms in the city of Winnipeg, affecting 300 employees. Employees received an increase of 50 cents per week, the rates prior to the change being \$21.00 per week and after the change \$21.50 per week. This change was the result of an

agreement made in 1912 whereby the increased rate was to come into effect July 1, 1915.

Unskilled labour.—On July 13, 100 labourers in the employ of the Steel Company of Canada at Hamilton, Ont., received an increase in their wages of $1\frac{1}{2}$ cents per hour. These labourers struck work on July 12, demanding 20 cents per hour. After a conference with the officials of the company on July 13 the men decided to accept the offer of $1\frac{1}{2}$ cents per hour increase. Half these men were day hands working 11 hours per day, and the remainder night hands working 13 hours per night.

One hundred and five employees of the Warren Paving Company of Peterborough were also affected by changes during this quarter. On August 26 about 75 labourers had their working hours reduced from 60 to 54 per week, and on August 17 about 30 labourers had their wages increased from \$10.50 per week to \$10.80 per week and their hours reduced from 60 to 54 per week. This last change was brought about on the demand of the men.

BULLETIN OF THE UNITED STATES BUREAU OF LABOUR STATISTICS ON INDEX NUMBERS OF WHOLESALE PRICES IN THE UNITED STATES AND FOREIGN COUNTRIES.

THE Bureau of Labour Statistics of the United States Department of Labour has issued a bulletin entitled "*Index Numbers of Whole Prices in the United States and Foreign Countries*," the aim being "to make the index numbers of wholesale prices currently published in the United States and foreign countries more accessible, more intelligible, and therefore more useful.

"To this end the leading series of index numbers, compiled by official bureaus, financial journals, and private investigations both at home and abroad are described in detail. The history of each series, the source from which quo-

tations are taken, the number and description of the commodities included, the methods of averaging, the statistical results obtained, etc., are set forth as far as the facts could be learned, so that anyone wishing to use the figures in question may know how they are derived and what they mean. This systematic description of the series now being published is preceded by a critical analysis of the various methods employed to measure changes in the level of prices—an analysis which shows the advantages and the defects of these methods, the purposes for which the different index numbers may properly be employed, the reasons for the dis-

crepancies which usually appear when two or more series for the same time and country are put side by side, the safeguards which are necessary in making comparisons between different series, and the confidence which index numbers merit as measures of price fluctuations."

Part I of the bulletin is an elaborate and discriminating treatment of "The Making and Using of Index Numbers" by Wesley C. Mitchell. This section gives a short account of the earlier index numbers of prices constructed, and discusses the difficulties of measuring changes in the level of prices. To illustrate the characteristics of price fluctuations, tables and charts are given which show percentages of changes from year to year, classified in ten groups according to the magnitude of the changes in the several commodities.

The marked diversity of the fluctuations of different commodities in the same year—some rising, some falling, some remaining unchanged—the wide range covered by these fluctuations and the erratic occurrence of extremely large changes are strikingly shown; but so also are the much greater frequency of rather small variations, the dense concentration near the centre of the field, the existence of a general drift in the whole direction and the degree of this drift. . . .

Such results as these gain greatly in significance by being put beside corresponding results for other groups of statistical data. The best comparison to make, however, is one between the actual distribution of our price fluctuations about their average and a "normal distribution of the same data—that is, a distribution according perfectly with the so-called "normal law of error." This law shows how phenomena are distributed about their average when the number of phenomena observed is very large, and when each phenomenon is the resultant of numerous independent factors, none of which is of preponderating importance. It has been found that many kinds of phenomena tend to conform rather closely to this normal distribution; for example, human heights, errors of observation, shots at a target, wage rates in different occupations, etc. When it can be shown that phenomena are distributed approximately in this fashion, their average can safely be accepted as a significant measure of the whole set of variations, since even the deviations from the average are then grouped in a tolerably definite and symmetrical fashion about the average.

With such a comparison in view we may treat each recorded percentage of rise or fall in price as an observation of the degree and direction in which prices vary from one year to the next. . . .

The study of the actual distribution of price fluctuations from one year to the next will be found to throw light upon several problems presently to be faced in discussing the methods of making index numbers. For the moment we have use primarily for

the demonstration that these fluctuations are highly concentrated about a central tendency. This conclusion strengthens the hope that we may make measurements of price fluctuations that fairly represent the net resultant of all the changes, miscellaneous as they seem to be. For properly constructed averages have clearly a better chance of being representative and significant when the phenomena for which they stand have a strongly marked central tendency about which deviations are symmetrically grouped than when the phenomena are irregularly scattered over their range.

It is pointed out that the differences in the extent of the changes in price levels and even direction often shown by various index numbers of wholesale prices in the same market or country, as by the five currently calculated in the United States (including that of the Bureau of Labour Statistics) are due to the fact that they do not undertake to measure the same quantity and do not therefore employ the same methods. The steps necessary to be taken in making an index number are given:

- (1) Defining the purpose for which the final results are to be used; (2) deciding the numbers and kinds of commodities to be included; (3) determining whether these commodities shall all be treated alike or whether they shall be weighted according to their relative importance; (4) collecting the actual prices of the commodities chosen, and, in case a weighted series is to be made, collecting also data regarding their relative importance; (5) deciding whether to measure the average variations of prices or the variations of a sum of actual prices; (6) in case average variations are to be measured, choosing the base upon which relative prices shall be computed; and (7) settling upon the form of average to be struck.

The report states that most index numbers are "general-purpose" series designed with no aim more definite than that of measuring changes in the price level, but once published they are used for many ends, as to show the depreciation in the value of gold, the rise in the cost of living, that wages ought to be advanced, etc., although a single series cannot be devised that will serve all equally well. But as "the day has not yet come when the rises of index numbers are sufficiently differentiated and standardized to secure the regular publication of numerous special-purpose series" the popular general-purpose series, their construction and uses, are then dealt with.

After stating the difficulty and necessity of obtaining accurate and complete records as to price quotations, and information as to the comparative importance of the various commodities, the relative merits of market prices, contract prices and import-export values, market prices are held to be most suitable for expressing the average variation in prices.

The three types of index numbers now in general use are described: (1) averages of relative prices or average percentages of change in prices: (2) sums in dollars and cents showing changes in the aggregate cost of certain definite quantities of certain commodities; (3) relative figures or percentages made from series of the second sort. The first type is that commonly used, Dun's and Bradstreet's are examples of the second, and the official index numbers of Australia and New Zealand are on the model of the third type. In considering the questions of base periods it is pointed out that it is desirable to have as the base the period with which accurate comparisons are most significant. Hence the chain system of index numbers has much to commend it as the preceding year is the base from which percentages of changes are calculated each year. Also, the more remote the base period is, the less is the significance to be attached to the comparison. The further advantage of chain index numbers in enabling obsolescent commodities to be dropped and new ones added, in order to keep the list up to date for long periods of time, is pointed out. As comparatively few commodities are of great importance on the markets for long periods of time this is a point emphasized. This can be well illustrated in the case of Canada by the comparative unimportance of peas at the present time and the advent of flaxseed as one of the chief farm products. If the index number is weighted the weights can be revised more frequently in a chain system. It is pointed out that as the base period becomes more remote there is an increas-

ing tendency for the percentages of some commodities to become extremely high or low and so to unduly affect the average. But as it is difficult to make from a chain index number a comparison of prices for any one year with the level some years before, it is concluded that it is desirable to make from the original quotations a series of index numbers on the chain system as well as on the fixed base system. The laborious mathematical processes involved in the calculation of a chain index number are pointed out. As, however, many users of index numbers desire to make comparisons of various sorts the index number which is the sum each year or month of the prices of the various commodities, multiplied by the figure estimated to represent their respective importance in trade production, etc., is pronounced to be most suitable for general purposes.

The best form for these general-purpose series is a weighted aggregate of actual prices.

The more commodities that can be included in such an index number the better, provided that the system of weighting is sound. Certainly, each of the following classes of commodities should be represented, and represented as fully as is feasible: raw, mineral, forest, animal, and farm products, and manufactured products in various stages of elaboration, bought for family consumption and for business use.

Probably the best weights to apply are the average physical quantities of the commodities bought and sold over a period of years without reference to the number of times their ownership is changed. These weights should be applied directly to the actual prices of each commodity in making up the totals for the several groups that have been mentioned, and then if the necessary data can be secured, the totals for the several groups should be weighted again in making up the grand totals for "all commodities."

In presenting such an index number, it is well to publish the aggregate actual prices, both for the several groups and for the grand totals. But it is highly desirable to publish also relatives, made from these actual prices on a percentage scale, since comparisons can be made more easily from such figures than from the aggregates of actual prices, which are likely to run in awkward quantities. Indeed, several sets of these relatives, computed on the basis of actual prices at different times, can readily be provided for readers interested in knowing how prices have changed with reference to recent or to past years. Among the relatives of greatest significance is the set which shows the annual percentage of rise or fall as compared with prices in the preceding year. In such chain index numbers it is usually possible to include some commodities for which quotations are lacking in certain of the years covered by the whole investigation.

It is pointed out that as a result of the insistent complaints of the rising cost of living since 1900, and especially since 1910, there has been a great increase in the number of index numbers compiled and a great improvement in their quality, as well as a rapid growth in the literature upon the theoretical aspects of price changes and means of measuring them. The importance of this advance in the attempting to measure the forces affecting industry, trade and social conditions, is shown in the following extract:

If we are ever to make the money economy under which we live highly efficient in promoting social welfare we must learn how to control its workings. What wares our business enterprises produce and what goods our families consume are largely determined by existing prices, and the production and consumption of goods are altered by every price fluctuation. What we waste and what we save, how we divide the burden of labour and how we distribute its rewards, whether business enjoys prosperity or suffers depression, whether debts of long standing become easier or harder to pay—all these and many other issues turn in no small measure upon what things are cheap and what are dear, upon the main-

tenance of a due balance within the system of prices, upon the upward or downward trend of the price changes that are always taking place. But if the prices of yesterday are powerful factors in determining what we shall do and how we shall fare to-day, what we do and how we fare to-day are powerful factors in determining what prices shall be to-morrow. If prices control us, we also control them. To control them so that they shall react favourably upon our economic fortunes we need more insight than we have at present. It is, then, one of the great tasks of the future to master the complicated system of prices which we have gradually developed—to find how prices are interconnected, how and why they change, and what consequences each change entails. For when men have learned these things they will be vastly more skillful in mending what they find amiss in economic life, and in re-enforcing what they find good.

The description in detail of the important index numbers of wholesale prices in the various countries makes the report valuable as a work of reference in this respect, while the clear and scientific elucidation of the complex phases of the principles involved in the making and the use of index numbers of prices makes the work a distinct contribution to the literature of the subject.

PRICES, RETAIL AND WHOLESALE, CANADA, OCTOBER, 1915.

THE chief feature of the price movement was the continued decline in flour, bread and rolled oats as a result of large crops and lower levels for grain prices. During the month, however, a strongly upward movement in grains appeared and wheat advanced from 90c to \$1.00 by the middle of the month. Better demand for Europe and adverse reports as to crop conditions in different parts of the world accounted for the change. Prices were still, however, considerably below those of October, 1914, when an advance from \$1.07 to \$1.17 had occurred. Sugar also declined considerably and somewhat unexpectedly, supplies of raw cane sugar being large and new beet sugar coming on the market in the United States. Eggs rose considerably with the advance of the season and a good export demand. Potatoes advanced steeply, the crop being reduced by rot. Raw cotton made an important

advance to nearly twelve cents per pound, the American crop showing considerable reduction. Among commodities affecting the cost of living less, gunpowder, caustic soda and many lines of chemicals were upward.

In retail prices the cost of a weekly family budget of staple foods in terms of the average prices in sixty cities stood at \$7.815 at the middle of October, as compared with \$7.736 for September and \$7.993 for October, 1914. Beef, bread, flour, rolled oats and sugar declined during the month but eggs and potatoes advanced. As compared with a year ago, meats, bread, flour, rolled oats, evaporated apples, prunes and sugar showed declines, prices having been high after the outbreak of war. Butter, cheese and tea were still higher than a year before. Coal, wood and coal oil prices averaged slightly lower than the month before and also below October, 1914. Rents aver-

aged lower than in September in British Columbia. As compared with October, 1914, rents averaged lower, the chief decreases being in the Western Provinces, with smaller reductions in Nova Scotia and Ontario.

In wholesale prices the Department's index number stood at 148.8 as compared with 147.2 in September and 138.7 in October, 1914. The chief increase appeared in grains, dairy products, fruits and vegetables, cottons, silk, jute, fuel, drugs and chemicals. Important decreases occurred in fodder, breadstuffs and sugar. As compared with the same month a year ago the chief increases were in the groups: Dairy Products, Textiles, Hides, Leathers, Boots and Shoes, Metals and Implements, Miscellaneous Building Materials, Paints, Oils and Glass, Crockery, Drugs and Chemicals, and Sundries, the last being due to the great rise in gunpowder. Lower levels appeared in Grains and Fodder, Animals and Meats, Fish, Breadstuffs, Lumber, and Raw Furs.

More detailed information as to the price movement appears in the accompanying tables and in the following notes.

Retail Prices.

Beef.—Sirloin steak: The price of sirloin steak was higher at Sault Ste. Marie, Ont., and at Medicine Hat and Calgary, Alberta, but was lower at Moncton, N.B., at St. Hyacinthe, Montreal and Hull, Que., at Brockville, Orillia, Toronto and Cobalt, Ont., at Edmonton, Alberta, and at Fernie, New Westminster and Vancouver, B.C. Round steak was also higher at Medicine Hat, Alberta, and lower at Moncton, N.B., at Sorel, St. Hyacinthe and Montreal, Que., at Brockville, Orillia and Cobalt, Ont., at Regina, Sask., at Edmonton and Lethbridge, Alberta, and at Fernie, New Westminster and Vancouver, B.C. Rib roast was quoted lower at St. Hyacinthe and Montreal, Que., at Ottawa, Brockville, Orillia and Cobalt, Ont., at Calgary and Edmonton, Alberta, and at Fernie, Vancouver

and Nanaimo, B.C. Medium shoulder roast was reported lower at St. Hyacinthe and Montreal, Que., at Brockville and Orillia, Ont., at Edmonton, Alberta, and at Fernie, Vancouver and Nanaimo, B.C., but higher at St. Thomas, Ont. At Regina, Sask., round steak was reported to be in good supply, while at Moncton, N.B., and at Vancouver, B.C., it was stated that fresh beef was abundant and prices declining.

Veal.—The price of roasting veal was reported higher at Quebec and Sorel, Que., and at Fernie, B.C., but was lower at Truro, N.S., at Ottawa and Chatham, Ont., and at New Westminster and Vancouver, B.C.

Mutton.—Prices were lower at Halifax, N.S., at Moncton, N.B., at Montreal, Que., at Guelph and St. Thomas, Ont., and at Vancouver, B.C., but higher at Sorel, Que., at London, Ont., and at Calgary, Alberta. The supply was reported large at Moncton, N.B.

Pork.—Fresh roasting pork advanced at Hamilton, Brantford, Guelph and Woodstock, Ont., and at Calgary and Lethbridge, Alberta. Declines occurred at St. Hyacinthe, Que., at Kingston, Ont., and at Vancouver, B.C. Pork chops were higher at St. Hyacinthe and Montreal, Que., at Hamilton, Brantford, Guelph, Woodstock and St. Thomas, Ont., and at Calgary, Edmonton and Lethbridge, Alberta, but were lower at Ottawa and Brockville, Ont., and at Medicine Hat, Alberta. Salt pork, Canadian mess, was reported up at Sorel, Qué., at Brantford, Ont., at Calgary, Alberta, and at Victoria, B.C., but down at Brockville, Ont. At Hamilton, Ont., it was stated that the higher prices for hogs had caused a rise in fresh pork and all pork products, while at Brantford, Ont., it was reported that the demand for hogs for packing purposes had firmed prices.

Bacon.—Breakfast bacon was higher in price at Sorel, Que., at Niagara Falls, Hamilton, Brantford and Chatham, Ont., at Calgary and Lethbridge, Alberta, and at Vancouver, B.C., but was lower at London, Ont.

Fish.—Fresh fish were upward at Newcastle, N.B., at St. Hyacinthe and Montreal, Que., and at Woodstock and Chatham, Ont., but were reported down at Winnipeg, Man., while salt herrings were higher at Quebec, Que., and at Medicine Hat, Alberta. At Newcastle, N.B., fresh fish were reported scarce and prices were firmer, while at Winnipeg, Man., the plentiful supply of whitefish had an opposite effect. Canned salmon was reported higher at Sorel, Que., and at Stratford, Ont., and lower at London and Port Arthur, Ont.

Lard was higher at Three Rivers and Sorel, Que., at Moose Jaw, Sask., at Calgary and Edmonton, Alberta, and at Fernie and Vancouver, B.C., but lower at Ottawa and Brockville, Ont., at Medicine Hat, Alberta, and at New Westminster, B.C.

Eggs.—New laid eggs were reported higher in fifty-one of the cities, and were scarce in most localities. Similarly packed eggs advanced in twenty-two cities, and in several others came on the market for the first time this season.

Milk prices were higher at Newcastle, N.B.; and at Three Rivers, Montreal and Hull, Que. At Newcastle, N.B., it was reported that the higher price of feed was responsible for the increase in the price of milk.

Butter.—The price of dairy butter advanced in thirty-one cities of the Dominion, while creamery butter advanced in thirty-six cities and declined in one. Butter was reported scarcer in most localities and prices were much higher than a month ago. At Toronto, Ont., the export demand for all dairy products was reported to have been a big factor in raising the price.

Cheese.—Prices for old cheese were higher at Sorel, Que., and lower at St. Thomas, Ont., while new cheese advanced at Sorel and Montreal, Que., and at Orillia, Toronto and Berlin, Ont., and declined at Kingston and Guelph, Ont., and at New Westminster, B.C. Cheese was reported to be in good demand for export purposes.

Bread.—The price advanced at Amherst, N.S., and at St. John's, Que., but declined at Moncton, St. John and Newcastle, N.B., at Sorel and Hull, Que., and at Ottawa, Brockville, Niagara Falls, Galt, London, St. Thomas, Chatham, Windsor, Sault Ste. Marie, Port Arthur and Fort William, Ont. In most localities the drop in bread prices was said to be due to recent reductions in the wholesale price of flour. At Niagara Falls, Ont., the submission to the electors by the City Council of a by-law to establish a municipal bakery was said to have been a factor in lowering prices. At Brockville, Ont., it was reported that bread was being imported from Ottawa and sold to the public at a lower price than that charged by the local bakers.

Flour prices were down in twenty-eight of the cities, in sympathy with the wheat market, and following reductions in the wholesale price.

Rolled oats were reported lower in fifteen cities of the Dominion in sympathy with other grains.

Rice.—The price of medium rice, "B" brand, was lower at Edmonton, Alberta, and at Vancouver, B.C. Patna rice was also down at Edmonton, Alberta, but was higher at Charlottetown, P.E.I., and at Vancouver, B.C.

Tapioca was lower at Edmonton, Alberta, and at Vancouver, B.C., but higher at Medicine Hat, Alberta.

Canned vegetables.—Tomatoes, canned, advanced in twelve cities of the Dominion. At St. Catharines, Ont., it was reported that prices were higher owing to the curtailment of this year's pack. Canned peas advanced at Charlottetown, P.E.I., at Sorel, Que., and at Guelph, Berlin, Woodstock, London, St. Thomas and Chatham, Ont., and canned corn advanced at Sorel, Que., and at Guelph, Berlin, Woodstock, London, St. Thomas and Chatham, Ont., and declined at Vancouver, B.C.

Beans were higher at Westville and Amherst, N.S., at Charlottetown, P.E.I., at Brantford, Woodstock and London, Ont., and at Edmonton, Alberta, but

*Coal, wood and coal oil. No allowance is made for the varying extent to which these are used in the different localities and provinces.

†In the issues for September and October the figures for New Brunswick and Prince Edward Island were interchanged for the columns under 1914 and 1915.

RETAIL PRICES OF STAPLE ARTICLES

The accompanying table sets forth the retail prices prevailing on, or about, the fifteenth day of the month preceding the present issue of the *Labour Gazette*, of the more important staple commodities entering into the cost of living in the leading centres of industry throughout Canada.

The list of commodities includes thirty-two varieties of food, with fuel and coal oil. In addition a statement is given of the rental of a representative workingman's dwelling of the better class in the quarter of each locality usually occupied by workingmen.

DEPARTMENT OF LABOUR, CANADA.

RETAIL PRICES: TABLE NO. 70.

OF CONSUMPTION, CANADA, DURING OCTOBER, 1915.

The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison. Such comparisons, however, will reflect conditions better if averages over some time are taken and if the several articles are grouped together as in a family budget.

The quotations contained in the table have been furnished by the correspondents of the *Labour Gazette* in the respective localities, under detailed instruction as to sources of information, quality of goods to be quoted, etc., from the Department.

COMMODITIES, CANADA, OCTOBER, 1915.

Rice, good medium, per lb.	Beans, hand picked, per lb.	Apples, evaporated, per lb.	Prunes, medium quality, per lb.	Sugar		Tea		Coffee, medium, per lb.	Potatoes, per bag of 1½ bushels. lower at Guelph and St. Thomas, Ont., and at New Westminster and Vancouver, B.C. Some scarcity was reported at Brantford, Ont.

Apples, evaporated, were higher at Sorel, Que., and at Medicine Hat, Alberta, but lower at New Westminster, B.C.

Prunes.—The price advanced at St. Thomas, Ont., and declined at Toronto and London, Ont., at Moose Jaw, Sask., at Medicine Hat, Alberta, and at New Westminster and Vancouver, B.C.

Sugar.—Granulated sugar was reported lower in twenty-nine of the cities and higher in one, while yellow sugar declined in twenty-five cities and also advanced in one.

Tea.—Black tea advanced at St. John, N.B., at Niagara Falls, Ont., and at Medicine Hat, Alberta, and declined at Berlin, Ont. Green tea was higher at St. John, N.B., and lower at London, Ont., and New Westminster, B.C.

Coffee was down at London, Ont., at Medicine Hat, Alberta, and at Vancouver, B.C.

Potatoes.—Prices were reported down in seventeen of the cities and up in twenty-nine cities. The declines occurred mainly in the Western Provinces where the yield averaged as high as in previous years, but in the East the exceedingly poor crop caused scarcity and higher prices.

Vinegar was lower at New Westminster, B.C.

Starch was lower at New Westminster, B.C., and higher at London, Ont.

Coal.—Prices of anthracite coal advanced at St. John's, Que., and at Peterborough, Brantford, Berlin, London and Owen Sound, Ont., while bituminous coal was higher at Brantford, Ont., and at Edmonton, Alberta.

Wood.—Hard wood advanced at Sorel, Que., while soft wood declined at Sorel, Que., and at Victoria, B.C. At the latter point it was reported that soft wood was lower than it has been for many years, owing to keen competition and

to the fact that it is less expensive to cut at this time.

Coal oil prices were lower at Ottawa, Ont., and at New Westminster and Vancouver, B.C. At Ottawa, Ont., a decline in the wholesale price was reported to be responsible for the reduction, while at Vancouver, B.C., keen competition among dealers was the factor reported.

Rent.—Rates for workingmen's houses with sanitary conveniences were reported lower at Belleville, Toronto, St. Thomas and Cobalt, Ont., and at Prince Rupert, B.C., and for houses without conveniences at Belleville and Cobalt, Ont., and at Prince Rupert, B.C.

Wholesale Prices.

Grains and fodders.—Wheat, Manitoba Northern, No. 1, was down to 90¾c per bushel at the first of the month, but advanced the following week to 99c, and maintained the higher level with fluctuations. Reports as to smaller crops in different parts of the world and a stronger demand in Europe accounted for the rise. Some damage was reported to crops in Western Canada. Ontario winter wheat advanced from 88-90c to 93-95c. Western barley rose from 54c to 65c. Demand was stronger. Ontario barley advanced from 52-54c to 54-58c. Western oats rose from 39c to 42¼c. Ontario oats were also firmer. Corn declined to 67c, but during the month advanced gradually to 72½c. Flaxseed advanced further from \$1.60½ to \$1.65. Ontario peas were as high as \$1.25-1.40 at the first of the month and reached \$1.50-1.90 in the last week. Rye was up to 87c. Hay was slightly higher at \$18.50 at Montreal and \$16.00-17.50 at Toronto for No. 1 timothy. Baled straw was down \$1.00 at \$6.50. Bran declined from \$26.00 to \$23.00 per ton and shorts from \$29.00 to \$25.00.

Animals and meats.—Prices of cattle at Winnipeg rose to \$6.75-7.00 in the first week as the run of cattle was light. Prices then fell off 25c per cwt. The best grade at Toronto rose from \$8.15 to \$8.25 but declined to \$8.00 in the last

week. Beef was unchanged at the lower level of September. Hogs advanced to \$9.65-9.90 in the second week as the demand was good and supplies were not large. By the last week price had fallen to \$8.90. Dressed hogs eased off 50c the last week. Breakfast bacon was down to 20c and medium hams to 17c per lb. Lard declined $\frac{1}{4}$ c but later advanced 1c. Sheep advanced to \$5.50-6.50 but eased off 25c per cwt. Mutton and lamb were steady. Poultry was steady.

Dairy products.—Butter rose to 32 $\frac{1}{2}$ -32 $\frac{3}{4}$ c at Montreal and averaged 3c higher for the month than for September. Creamery solids at Toronto rose from 27-29c to 31-32c. Dairy butter was also firmer. Increased demand for export was reported. Cheese rose from 14 $\frac{3}{4}$ -14 $\frac{7}{8}$ c to 16 $\frac{1}{2}$ -16 $\frac{3}{4}$ c. Shortage in England was reported as the cause, there being a good export demand. The wholesale price of milk went up to winter levels in several cities. At Montreal the producers set the price for the season at 24c per gallon, the same level as last year, but lowered the price to 22c for the months of October and April. At Winnipeg the price rose to \$2.50 per cwt. as compared with \$2.00 last year in October. Fresh eggs advanced at Montreal from 35c to 40c per dozen. At Toronto new laid eggs rose from 31-32c to 35-36c, and packed eggs were up to 29-30c. A good demand from English importers continued and there was a steady demand for domestic use.

Fish.—The dry fish market was reported better than expected owing to the short supplies on the world's markets. The catch of the French fisheries has been greatly reduced and Norway has sold large quantities fresh to England and to Germany. The Italian market was lowered by the increased cost of transportation which was four times what it was before the war. Financial depression in Brazil lowered the markets for fish. A good demand was reported for salt mackerel in the United States. The catch, however, was disappointing. The price of salt mackerel rose from 6c to 6 $\frac{1}{2}$ c per lb. The lobster market im-

proved and the price advanced \$1.00 per case. Consumption in the United States was reported to be fairly large.

Fruits and vegetables.—Fall apples sold at \$1.50-3.50 per barrel according to variety, as compared with \$1.25-2.50 last year. Choice grades were quoted at \$4.00. The crop was reported much smaller. Grapes declined to 20-25c per basket. Peaches were down to 25-65c but rose later to 40-80c. Pears advanced to 30-75c. Plums were up to 25-65c for large baskets. Bananas were firmer at \$1.25-2.00 per bunch. Verdelli lemons were up to \$3.50-3.75. Valencia oranges were easier at \$5.00-5.50 per case. Evaporated apples were steady. Mediterranean dried fruits advanced steeply as a result of the extension of war operations into new districts. Valencia raisins rose to 13 $\frac{1}{2}$ -14 $\frac{1}{2}$ c. Shipments of currants were expected to be cut off. Potatoes advanced steeply as the crop had been greatly reduced in Eastern Canada by wet weather. At Montreal the price was up to \$1.05-1.10 for car lots and at Toronto some varieties were as high as \$1.15-1.20. Onions were up to \$1.15-1.25. Tomatoes advanced to 35-40c but were down to 20-25c later. Canned corn and peas advanced to 90c per dozen and canned tomatoes to \$1.00-1.10. Unfavourable weather for vegetables for the late pack caused still greater firmness in the market.

Miscellaneous groceries.—Manitoba patents declined from \$6.45 to \$5.95 per barrel at Toronto. Winter wheat patents, 90 per cent, declined 60c to \$4.90 per barrel, in sympathy with the lower levels for wheat in September. Standard oatmeal declined to \$2.40-2.50 per bag. The markets for tea showed some weakness. Sugar declined 60c per cwt. The raw sugar market was much lower and the beet sugar crop was coming on the market in the United States. Barbados molasses advanced from 49c to 51c per gallon, supplies being short. Glucose was 20c per cwt. lower, in sympathy with the price of corn. Honey was down to 10 $\frac{1}{2}$ c per lb., in sixty-pound tins. Some stocks from last year's crop were re-

TABLE SHOWING INDEX NUMBERS BY GROUPS OF COMMODITIES FOR OCTOBER, 1915, SEPTEMBER, 1915, AND OCTOBER, 1914.

	Number of commodities.	Index Numbers.		
		October, 1915.	September, 1915.	October, 1914.

*Five commodities off the market, fruit, vegetables, etc.

†Estimated, markets demoralized.

ported to be on the market but the demand showed some improvement. Pepper was firmer at 20-24c. Cream of tartar continued high.

Textiles.—Ontario wool was slightly higher, washed selling at from 39c to 44c and unwashed from 30c to 34c per lb. Raw cotton advanced from 9.75c to 11.90c per lb. Short crop and unexpectedly large consumption, unfavourable weather conditions, the improved financial situation, the damage done by boll-weevil in the Southern States were reported as the factors in the increase. Gray cottons, coloured cottons and prints averaged higher. Raw silk advanced steeply, Italian classical being up 25c per lb., and Japanese silk 20c per lb. Still further advances were made later in the month.

Hides, leather, boots and shoes.—The market for hides and leather continued steady and firm. The demand for boots and shoes showed some improvement.

Metals and implements.—Iron and steel markets were much firmer, demand being stronger. Wrought iron, old material, advanced \$1.00 per ton and prices rose in several lines of steel. Stocks of English pig iron at Montreal were exhausted. Galvanized sheets declined 5c per cwt., as a result of the lower market for zinc. Aluminum rose to 49-51c per lb. Antimony eased off from 40c to 36c per lb. Brass rose 1c to 33c per lb. Copper was $\frac{1}{2}$ c higher. Lead was easier at 6-6 $\frac{1}{4}$ c per lb. Quicksilver rose \$1.00 per flask. Bar silver was nearly one cent per ounce higher than in September. Foreign spelter declined from 19-20c to 16 $\frac{1}{2}$ -17 $\frac{1}{2}$ c. Solder rose to 22 $\frac{1}{2}$ c per lb. Tin declined 2c, to 37-39c per lb. Soldering irons rose to 33c per lb.

Fuel and lighting.—Anthracite coal, egg size, advanced to \$6.65 per ton at Montreal, compared with \$6.70 last year. Furnace coke rose 30c per ton at the ovens, being up to \$1.80-1.85. Gasoline advanced 1c to 20 $\frac{1}{2}$ c per gallon.

Building materials.—N. B. spruce deals rose from \$15.50 to \$16.00 per M. In Ontario inquiries from the United States for lumber were reported more numerous. Stocks of lumber at Ottawa were heavy, shipments to Europe have been slow owing to scarcity of vessels. Montreal reported a slight improvement, there being an extensive demand for shell boxes. Red lead declined to \$9.25 per cwt., in sympathy with the lead market. Wire nails rose from \$2.40 to \$2.50 per keg in sympathy with the higher market for steel wire rods. Sash cord rose from 25 $\frac{1}{2}$ c to 27c per lb. Copper wire rose 1c to 19 $\frac{1}{2}$ -20c. Iron wire advanced again from \$2.45 to \$2.60 per cwt. Wire cloth was easier at \$1.50 per 100 square feet. White lead declined \$1.00 in sympathy with pig lead. Linseed oil rose steeply, raw being up from 61-63c to 68-70c. Turpentine rose from 62c per gallon to 64c. Benzine advanced from 20 $\frac{1}{2}$ c to 21 $\frac{1}{2}$ c per gallon. Prepared paint was cheaper on account of the reduction in white lead, but the higher price for linseed oil, turpentine and colours caused the reduction to be only 10c per gallon.

House furnishings.—No changes were reported.

Drugs and chemicals.—Caustic soda advanced steeply, being up to \$5.90 per cwt. Opium, quinine, chloride of lime, carbolic acid, sulphuric acid, soda ash and Epsom salts were also upward.

Miscellaneous.—The market for raw furs showed some improvement. English hops were higher, the new crop coming on the market at Montreal at 35c per lb. Malt declined from \$1.00 to 95c per bushel. News-print paper rose 5c to \$1.90-1.95 per cwt. Unbleached sulphite pulp was slightly firmer. Another steep advance occurred in gunpowder, the price rising from \$6.00 to \$7.20 per keg. Before the war the price was \$3.50. Raw rubber rose from 50c to 50 $\frac{1}{2}$ -51c per lb.

Prices in Other Countries.

The accompanying table, including the latest findings of the most authoritative index numbers of wholesale prices in Great Britain, the United States and France, will enable a review to be made as to recent movements and tendencies in prices in these countries as compared with Canada.

The index number of the *Economist*, London, averaged 153 at the end of October, as compared with 151½ at the end of September and 150 at the end of August. The largest advance appeared in cereals and meat, but the group was still lower than in August, having declined steeply in September. Other foods averaged lower. Textiles, minerals and the miscellaneous group showed important advances.

The *Statist*, London, continuing the Sauerbeck index number, reported a slight rise by the end of September, minerals, textiles and sundries being higher but foods lower, as a result of the large crops in various parts of the world.

Bradstreet's, New York, October 16th, reports:

"War abroad, enormous export trade, enlarged domestic fall trade and improved employment conditions all made for high prices in September, and it is interesting to note that the high level of July this year as well as that of August 15, 1914, were both passed in the upward rush noted in commodity prices as of October 1, 1915. . . . In discussing the undercurrents agitating price movements during recent months we intimated that while transient conditions tended to make for slight slumps in the general level, the main influences, nevertheless, seemed to be toward substantial strength. These declarations have apparently been borne out by developments that came to pass in the month of September, and as a corollary the price situation just now is remarkably strong. . . . Of course, some of the advances may at once be ascribed to seasonal changes that usually operate to increase the cost of certain foodstuffs, but at the same time a multiplicity of other causes have been working for dearer market prices. Needless to say, the European war, with its play and interplay of forces, continues to exert a marked influence on prices, while at the same time the rise in wheat, as well as heavy exports thereof and the betterment in business, plus profitable prices for cotton and its products, with higher quotations for manufactured textiles, also aid in superinducing rising tendencies. In any event, the facts are that a new high point has been reached, that eleven out of thirteen groups

have contributed to bring about the advance, and that the ratio of increase over September 1 is 1.7 per cent. . . .

Dun's index number showed a rise due to higher levels for eggs, butter, vegetables, meats and provisions, cotton silk and cotton goods, iron and steel, drugs and chemicals. Lower prices for corn, oats, barley and peas offset the rises in wheat, rye and beans.

Gibson's index number, embracing 22 footstuffs, stood at 60.2 on October 30th, as compared with 57.9 at the first of October, averaging 60.0 for October, 58.5 for September, and 58.4 for October, 1914.

The index number of the *Annalist*, New York, including 25 foods stood at 148.19 at the end of October having been as high as 152.10 on October, the level for October 30, 1914, having been 140.83.

The *Labour Gazette* of the British Board of Trade for October reported that retail prices of food advanced about 3½ per cent between September 1 and October 1. Eggs advanced owing to the advance of the season, and tea and sugar as a result of increased revenue duties. Butter was 7 per cent higher, milk five per cent, fish 4 per cent, and bacon 3 per cent. Potatoes fell 3 per cent.

The general level was about 26 per cent higher than a year before, but 40 per cent higher than in July, 1914. Sugar had doubled in price, tea advanced by 50 per cent, British meat 40 per cent, and imported meat over 50 per cent. Flour and bread rose about 40 per cent, butter 34 per cent, cheese 26 per cent, bacon 27 per cent, and milk 18 per cent.

The British *Labour Gazette* also reports that according to official returns of retail food prices in Berlin, published in *Statistische Korrespondenz*, prices in August were 3.3 per cent higher than in July and 75.3 per cent higher than in July, 1914. The chief advances in August were in butter 8.7 per cent, lard

(a.) Base 1890-1899=100; 272 commodities included.

(b.) Base 1901-1905=100; prices of 44 commodities at January 1st of each year and the end of each month

(c.) Prices in 1867-1877=100; 45 commodities included.

(d.) Total cost at the first of each month or year of a certain quantity of 96 commodities.

(e.) Total cost at the first of each month or year of a certain quantity of about 200 commodities.

(f.) 22 foodstuffs; based on the Dunn index number, 1907.

(g.) Prices in 1890=100; 48 commodities included.

(h.) Index Number for August 15th, \$9.8495.

*Revised figures.

9.8 per cent, beef 6.1 per cent, mutton 6.1 per cent, pork 8.2 per cent, and bacon 7.9 per cent. Potatoes and lentils declined 6.7 per cent and 11.1 per cent respectively.

The Journal of the Italian Department of Labour for October 1 showed the price levels of seven foods, averaging 3.5 per cent higher than in July and 32.0 per cent higher than in August, 1914. Beef had risen 43.5 per cent during the year, wheat flour 21.5 per cent, and bread 32.9 per cent.

The Journal of the Department of Labour of New Zealand for September gives the results of an investigation into the rise in prices from July, 1914, to August, 1915. The level of food prices in August, 1915, was 13.36 per cent

higher than in July, 1914. Groceries were 17.13 per cent higher, dairy products 11.45, and meat 9.95 per cent. House rents changed in some localities. Auckland experienced a pronounced fall early in the year, with a partial recovery by August. Wellington was slightly higher in August. Christchurch showed declines in February and August. Dunedin was higher in February, but had declined below the average of 1914 by August. The smaller towns varied according to local conditions. A weekly budget of food showed a rise in cost from 19s 8½d in July, 1914, to 22s 11½d in August, 1915. The cost in March, 1915, was also 22s 11½d, there being a slight recession in April and May.

FAIR WAGES SCHEDULES AND CLAUSES IN GOVERNMENT CONTRACTS AWARDED DURING THE MONTH OF OCTOBER, 1915.

DURING the month of October, 1915, the Department of Labour received for insertion in the *Labour Gazette* information relating to six contracts, four of which were awarded by the Department of Railways and Canals and two by the Department of Public Works. One of the contracts awarded by the Department of Railways and Canals and one awarded by the Department of Public Works contained fair wages schedules. Of the other four contracts, three were awarded by the Department of Railways and Canals and one by the Department of Public Works. These four contracts contained the general fair wage clauses providing for the rates generally accepted as current in the locality where the work is being carried on. A statement is added for supplies given by the Post Office Department,

subject to the regulations for the suppression of the sweating system.

Fair Wages Schedules.

DEPARTMENT OF RAILWAYS AND CANALS.

Manufacture, delivery and erection complete in place in the interior of the Swift Rapids dam on the Severn Division of the Trent Canal of three sets of sluice pipes, valves and mechanical machinery complete ready for hand power operation, and one set of electrical equipment complete, including motors for the three units. Name of contractor, William Hamilton Company, Limited, Peterborough, Ont. Date of contract, October 27, 1915. Amount, \$29,480.

Class of Labour.	Rate of wages per day of 10 hours.
Carpenters.....	\$0.30 per hour.

Driver with 2 horses and wagon	6.00 " " 9 "

Fair Wages Clauses.

A number of contracts were awarded which did not include a fair wages schedule, but contained the following clauses providing for the payment of

wages current in the district where the work was to be carried on:

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His uMajesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the foregoing clauses were the following:

DEPARTMENT OF RAILWAYS AND CANALS.

Construction of a line of railway, about $\frac{3}{4}$ of a mile in length, from a point on the main line of the Intercolonial Railway, about ten miles west of Moncton, to a point on the main line of the National Transcontinental Railway. Name of contractor, John W. McManus Company, Limited, of Memramcook, County of Westmorland, N.B. Date of contract, October 7, 1915. Amount, schedule rates.

Construction of reinforced concrete culverts on the main line of the Intercolonial Railway, as follows: Bridge No. 8.88 Union, 10 ft. reinforced concrete culvert; Bridge No. 54.5 Little Gut, 14 ft. reinforced concrete culvert; Bridge No. 69.3 Grants, double 12 ft. reinforced concrete culvert; Bridge No. 69.4 Baxters, double 12 ft. reinforced concrete culvert; Bridge No. 69.8 McDonalds, double 12 ft. reinforced concrete culvert; Bridge No. 70.2 Holts, double 12 ft. reinforced concrete culvert; Bridge No. 70.7 Marshy Hope, double 10 ft. reinforced concrete culvert; Bridge No. 89.25 South River Beam, 14 ft. reinforced concrete culvert; Bridge No. 93.3 Taylors Meadow, 6 ft. reinforced concrete culvert. Name of contractor, Geo. W. Jewett & Company, Mauderville, N. B. Date of contract, October 7, 1915. Amount, schedule rates.

Construction of the substructures of four bridges with concrete abutments on the Intercolonial Railway, as follows: Fredericton Subdivision—At Boiestown Road, Mile 62.7; at Cross Creek, Mile 84.3; at McBean's Brook, Mile 92.5; at Easty's Brook, Mile 95.3. Name of contractor, R. C. Sutherland, Ottawa, County of Carleton, Ont. Date of contract, October 27, 1915. Amount, schedule rates.

DEPARTMENT OF PUBLIC WORKS.

Sixty-six foot dome for telescope, Little Saanich Mountain, Victoria, B.C. Name of contractor, Warner & Sawsey Company, Cleveland, Ohio. Date of contract, September 12, 1915. Amount, \$35,000.

POST OFFICE DEPARTMENT.

During the month of September, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages, and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount of Orders.
Making metal dating stamps and type and making other hand stamps and brass crown seals.	\$ 414.85
Making and repairing rubber dating stamps and type also other stamps.	90.08
Supplying stamping material and repairing stamping pads.	140.29
Supplying new mail bags.	1,655.20
Repairing mail bags.	2,265.67
Supplying mail bag fittings.	5,867.70
Making and repairing miscellaneous articles of postal stores.	49.10
Supplying cloth for official uniforms.	3,783.51
Making and supplying articles of official uniform.	761.59

TRADE DISPUTES DURING OCTOBER, 1915.

FOUR new disputes were reported to the Department of Labour during October, one more than during the preceding month and three more than during October, 1914.

Analysis of Trade Disputes during October.

Number and magnitude.—Seven strikes were reported in existence in October, one less than during the previous month and one less than during the corresponding month of 1914. Sixteen firms and 2,754 employees were involved in these seven disputes, including eight firms and 2,680 employees concerned in the new disputes of the month. During October, 1914, nine firms and 233 employees were involved in disputes, including one firm and 18 employees in the new disputes of the month.

Time losses.—The loss of time to employees through trade disputes during October, 1915, was approximately 11,313 working days as compared with 5,718 working days lost in the preceding month and 5,935 days lost in October, 1914. The new disputes of the month accounted for a loss of 9,394 days as compared with 396 days in October, 1914.

Trades affected.—The following table shows the trades affected by the new disputes and the number of employees in each group:

TRADES.	No. of disputes.	No. of employees
Mining.....		2,614
Textile Workers.....	1	50
Miscellaneous Trades	1	16
Total.....	3	2,680

Localities affected.—Two of the new disputes occurred in Ontario, one in Quebec and one in Alberta.

Causes.—The four new disputes were for the following causes:

For increased wages, 3.

Against a second reduction in wages, 1.

Results.—Five of the seven disputes in existence during October were settled during the month in the following manner:

Increase in wages granted, 1.

Part increase granted, 1.

Employees agreed to terms offered prior to strike, 1.

Employees returned to work pending settlement, 1.

Disputes beginning before October.

Trade disputes existing October 31, and continued from earlier months, were as follows:

- (1) Plumbers and steamfitters, Victoria, B.C.
- (2) Boilermakers, iron workers and helpers, Halifax, N.S.

DEPARTMENT OF LABOUR, CANADA,

<i>Food and Tobacco Preparation—</i> Brewery workers....	Montreal, Que.....	Demand for shorter hours, a minimum wage scale, and recognition of union.....	1	8	June 15, 1914..	Sept. 30, 1915	Strike understood to have closed though no formal settlement reported.
Cigar makers.....	Edmonton, Alta....	Against reduction in wages.....	1	5	August 6, 1915.	Oct. 29, 1915	Majority of strikers left locality and most of the others secured work elsewhere.

DISPUTES BEGINNING DURING OCTOBER.

[illegible]

*Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for the other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

Conditions remained practically the same as in the previous month in regard to the two strikes mentioned above.

Brewery workers, Montreal.—On June 15, 1914, a strike occurred in the establishment of the Frontenac Breweries, Limited, at Montreal, when 22 employees ceased work demanding shorter hours, a minimum wage scale and recognition of the union. This strike is understood to have closed, though no formal settlement appears to have been reached.

Cigarmakers, Edmonton. — Twenty employees of the H. V. Shaw Company of Edmonton ceased work on August 6 as a result of a notice issued by the company that on that date the employees' wages were to be reduced. The effectiveness of the strike seems gradually to have declined, and at the close of the month had passed away without formal arrangement.

Disputes beginning during October.

Four new disputes occurred during October: asbestos miners at Thetford Mines, Que.; coal miners, Lovettville, Alberta; weavers, Peterborough, and waiters at Toronto.

Asbestos miners, Thetford Mines, Que.—Asbestos miners to the number of about 2,500 at Thetford Mines, Que., struck work October 18 for an increase in wages. The men had been receiving \$1.75 per day prior to the war, but shortly after the war broke out their wages were reduced to \$1.50 per day. The men demanded the restoration of the higher rate, and after being out for about four days the companies affected, which included several of the largest mines in the district, conceded the strikers' demands. The men also com-

plained against the practice alleged to exist in some instances of payment in orders on merchants and in the settlement this point was satisfactorily adjusted.

Coal miners, Lovettville.—Employees of the Canadian Coal and Coke Company of Lovettville, Alberta, to the number of 114, struck work October 4 for an increase in wages. Prior to the strike the company had offered the men an increase of five per cent and other concessions, but this the men refused and sent in a petition to the company demanding an all round increase of fifteen per cent. On October 15, however, an agreement for six months was signed between the parties whereby the men received an increase equivalent to about 5 per cent.

Weavers, Peterborough.—Fifty employees of the Auburn Woollen Mills, Peterborough, went on strike October 4 for an increase in wages. The strikers were mostly piece workers and demanded a 25 per cent increase. When the company objected to this they struck work, but remained out only nine days. At the end of that time a compromise was arranged by which the men received a 10 per cent increase and returned to work on October 14.

Waiters, Toronto.—On October 1, sixteen employees of the Cafe Royal of Toronto went on strike, claiming their employers had attempted to make them agree to a second reduction in wages. Prior to the strike the men had been receiving \$30 per month; this was at first reduced to \$25, and finally they were asked to accept \$20 per month. To this last reduction the men objected. On October 25, however, the men returned to work pending a final settlement of the dispute.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF OCTOBER, 1915.

Under this heading, account is taken of such accidents only as were sustained by male and female workers in the course of their employment, and resulted in loss of life or life or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the Dominion or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Bureau of Mines of Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

DURING the month of October, 1915, according to the industrial accident record of the Department of Labour, there were 71 workers killed and 262 injured. The record for the month of September was 66 killed and 231 injured, and that for the month of October, 1914, was 62 killed and 323 injured. A comparison of the October, 1915, record with that for the month of September shows there to have been 5 more workers killed and 31 more injured during October, and further comparison with the month of October, 1914, shows that there were 9 more workers killed and 61 fewer workmen injured in October, 1915.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF OCTOBER, 1915, BY INDUSTRIES AND GROUPS OF TRADES.

Trade or Industry.	Killed.	Injured.	Total.
Agriculture.....	11	26	37

Railway & Canal Construction—				
Rly. Con. laborer.....	Elrose, Sask.....	" 1	1	Crushed between cars.
"..... (C.N.R. Tunnel)	Montreal, Que.....	" 27	1	Fell from trestle.
Building Trades—				
Carpenter.....	Merritt, B.C.....	" 7	1	Fell from snow shed.
Painter.....	Three Rivers, Que.....	" 2	1	Fell from a bridge.
Stonemasons.....	Toronto, Ont.....	" 18	2	Crushed by falling bricks—chimney collapsed.
Workman.....	Montreal, Que.....	" 9	1	Struck by a hoist.
Metal Trades—				
Boilermaker and helper.....	St. Boniface, Man.....	" 7	2	Explosion of a compressed air tank.
Blacksmith.....	Toronto, Ont.....	" 6	1	Explosion of a compressed air tank.
Metal worker.....	Montreal, Que.....	" 25	1	Struck by flying pieces of a broken emery wheel.
Electrician.....	Niagara Falls, Ont.....	" 14	1	Electrocuted.
Woodworking Trades—				
Woodenwarefactory employee	Owen Sound, Ont.....	" 22	1	Mangled by machinery.
Clothing—				
Tailor.....	Montreal, Que.....	" 18	1	Crushed by an elevator.
Leather—				
Tannery employee.....	Bracebridge, Ont.....	" 25	1	Mangled by machinery.
Steam Railway Service—				
Conductor.....	Sault Ste Marie, Ont.....	" 11	1	Rear end collision.
".....	Sydney Mines, N. S.....	" 16	1	Riding on foot-board of locomotive which struck a horse and vehicle on a crossing.
Brakeman.....	Richmond, N. S.....	" 4	1	Fell from a moving car.
".....	Radville, Sask.....	" 8	1	Crushed between cars.
".....	Beaver Brook, N. B.....	" 16	1	Struck by a locomotive.
".....	Walkerville Jct., Ont.....	" ..	1	Fell from top of cars.
".....	Chatham, Ont.....	" 26	1	Run over by cars.
".....	Montreal, Que.....	" 25	1	" "
".....	Ft. Erie, Ont.....	" 5	1	" "
".....	(M.P. 81 Magpie Br. Michipicoten Dis.)	" ..	1	Collision.
".....	Regina, Sask.....	" 17	1	Run over by cars.
Car repairer.....	Brandon, Man.....	" 14	1	Crushed between cars.
Sectionman.....	Pickering, Ont.....	" 20	1	Hand-car struck by a train.
Electric Railway Service—				
Motorman.....	Niagara-on-the-Lake, ..	" 5	1	Head-on collision.
Navigation—				
Deckhand.....	Port Arthur, Ont.....	" 21	1	Drowned—fell from scaffold while scrubbing side [of vessel.
Ferry deckhand.....	Windsor, Ont.....	" 27	1	Drowned—fell overboard.
Longshoreman.....	Montreal, Que.....	" 2	1	Drowned—fell from gang plank.
Harbour Commission Empl.	Montreal, Que.....	" 20	1	Drowned—fell from a float.
Miscellaneous Transport—				
Teamster.....	Winnipeg, Man.....	" 8	1	Crushed between wagon and pole.
".....	St. John, N. B.....	" 8	1	Fell down elevator shaft.
Driver.....	Winnipeg, Man.....	" 14	1	Crushed by an elevator.
".....	Berlin, Ont.....	" 22	1	Thrown from vehicle—horses ran away.
Public and Civic Employees—				
Civic fireman.....	Sydney, N. S.....	" 24	1	Fatally burned.
Miscellaneous Skilled Trades—				
Laundry worker.....	Montreal, Que.....	" 20	1	Mangled by machinery.
Unskilled Labour—				
Laborers (St. Lawrence river)	Coudres Island, Que.....	" 10	2	Buried in cave-in of earth.
".....	Montreal, Que.....	" 7	1	" " " "
".....	Moncton, N. B.....	" 20	1	Electrocuted.
".....	Toronto, Ont.....	" 26	2	Asphyxiated by sewage gas—sewer caved-in.
".....	Ft. William, Ont.....	" 22	1	Struck by falling counterweight of hoist.
".....	Longue Point, Que.....	" 29	1	Buried under falling mass of coal.

IMMIGRATION AND COLONIZATION.

THE official statements given below except where otherwise indicated, by with regard to British emigration, the number of homestead entries made, the number of land patents issued, etc., are published, courtesy of the Department of the Interior.

BRITISH EMIGRATION.

During the month of September, 1915, the number of passengers leaving the United Kingdom for British North America, according to official returns of the British Board of Trade, was as follows:—

Month.	NATIONALITY

RECENT INDUSTRIAL AGREEMENTS.

COPIES of agreements recently signed between the Canadian Pacific Railway Company, the Victoria and Vancouver Stevedoring Company and the Empire Stevedoring and Contracting Company and the British Columbia District of the International Longshoremen's Association have been received in the Department. These agreements were entered into for the purpose of reaching a definite understanding in respect of wages paid and conditions of employment in the ports of Vancouver and Victoria for the handling of what is known as "longshoremen's work, and are in settlement of questions between the Longshoremen's Association and steamship and stevedoring companies which commenced in August last.

The agreement between the Canadian Pacific Railway Company and the Longshoremen's Association is mainly for the purpose of authorizing the Empire Stevedoring and Contracting Company, which has the contract for handling the stevedoring work of the Canadian Pacific Railway Company, to enter into an agreement with the Longshoremen's Association in regard to rates of wages and conditions of employment and to guarantee that the terms of such agreement will be carried out. The agreement between the Victoria and Vancouver Stevedoring Company and the Empire Stevedoring and Contracting Company and the Longshoremen's Association is made by these companies on behalf of the various deep sea companies with which they have or may have contracts, and covers wages and general conditions. The agreement between the Empire Stevedoring and Contracting Company and the Longshoremen's Association covers wages and conditions in regard to the coast steamship service of the Canadian Pacific Railway Company, except in regard to Victoria rates for handling and trucking which are stated in

the Canadian Pacific Railway agreement to be 50 cents per hour for day work and 60 cents per hour for night work or overtime, in lieu of rates fixed for Vancouver.

Wages on Deep Sea Work.

The agreement between the Victoria and Vancouver Stevedoring Company, the Empire Stevedoring and Contracting Company and the Longshoremen's Association covers general longshore work from and to deep sea vessels. The companies agree to employ exclusively members of the Longshoremen's Association but that should the association be unable to furnish all the men required the companies reserve the right to select the additional longshoremen required.

For handling lumber day work is paid 50 cents per hour; overtime 75 cents per hour. Side runners, hatch tenders, double winch and donkey drivers and boom men are to be paid 60 cents per hour day work and 90 cents per hour overtime. Donkey drivers to be allowed one hour each day for getting up steam.

On creosoted lumber, the rates are 60 cents per hour day work, 90 cents per hour overtime. Double winch and donkey drivers, slingers, boom men, side runners, hatch tenders are paid 70 cents per hour day work and \$1.05 overtime. Donkey drivers to be allowed one hour each day for getting up steam.

On general cargo the rate is 50 cents per hour for day work and 60 cents per hour overtime. For wheat, oats, barley, three-in-one (flour) if loaded by conveyor, the rate is 50 cents per hour day work and 75 cents per hour overtime. If these commodities are hoisted as general cargo the rate is to be 50 cents per hour day work and 60 cents per hour overtime. Cement, ore, plaster, lime, sulphur, fertilizer, nitrate, creosote, coal, dynamite and explosives, 50 cents per

hour day work and 75 cents per hour overtime. On unloading lumber up to 100,000 feet, regular cargo rates to apply.

Wages on Coast Service Work.

The agreement in regard to work on vessels engaged in coast service is similar to that in regard to deep sea vessels. The wages are the same except in the case of general cargo on which the rate is 40 cents per hour day work and 50 cents per hour overtime, and a number of the general clauses are identical.

Other Conditions.

Both agreements contain clauses defining overtime to mean all work performed between the hours of 6 p.m. and 8 a.m., Sundays, legal holidays and the noon hour when working to a finish, except that in case it is more convenient on account of shifting or waiting cargo for the vessel to knock off work at 11 a.m. and turn to at 12 noon, or to knock off at 1 p.m. for the meal hour and turn to at 2 p.m. no overtime shall be paid between 12 noon and 1 p.m.

Another clause common to both agreements provides that whenever any controversy arises between the companies and the longshoremen, the men shall

continue to work and the controversy shall be adjusted between representatives of the two parties, a standing committee of three representatives of both parties to be appointed who shall act jointly on all questions of difference between them. If the controversy cannot be adjusted in this way it is to be submitted to arbitration, the arbitration board to consist of one representative selected by the companies and one to be selected by the Longshoremen's Association, the two so selected to select a disinterested third person, and the decision of any two to be final and binding. The arbitration board is required to meet three days after request has been made.

A number of other provisions are inserted having to do with matters in regard to special or outside work and providing for no discrimination on either side. Also that any member of a local union who violates any part of the agreement or agitates a stoppage of work shall be discharged and given no future employment.

Both agreements are dated September 16 and are to remain in force until December 31, 1915, and continue thereafter until either party shall give sixty days' notice of cancellation, at the end of which time the agreements shall terminate.

NOTES ON OFFICIAL REPORTS.

Canadian Government Annuities.

A Study of their Relation to the Problem of Poverty in Old Age. Francis A. Carman, Political Science Quarterly, Vol. XXX. No. 3 September, 1915. New York.

THIS study of Canadian Government annuities reviews the origin of the system, its aims and methods, the various annuity plans, their cost and the scope and the success of the scheme after six years' experience. It also compares the Canadian annuities with those of Massachusetts and with the old-age pensions of other countries.

The system of Canadian Government annuities, it is stated, is an attempt to solve the problem of poverty in old age, not by gratuitous pensions, but by the beneficiary making direct contributions to the fund. Four main principles underlie the Canadian annuities. They have a state guarantee; there is no forfeiture in case payments cease or are interrupted; the annuity cannot be mortgaged or seized for debt, and the annuity cannot be anticipated.

The rates for Canadian Government annuities are the lowest to be found.

Nearest to them come the annuities of Massachusetts. The two systems do not admit of direct comparison for the Canadian scheme is limited to annuities, while the Massachusetts scheme is primarily a system of industrial insurance with the annuities as a minor part. The difference in rates is due to the fact that in Massachusetts the rates cover expenses with a small contribution from the state, while in Canada the expenses of administration are borne entirely by the Government. In Massachusetts policies are issued by the insurance departments of saving banks, but the supervision is so strict that it amounts practically to a state guarantee as in Canada.

The combination of insurance and annuity has a threefold advantage. It insures the applicant until the age when the annuity matures; it provides for an annuity for life from that age; in case of death before annuity reaches the amount of the insurance provided the heirs will be paid the difference between the annuity already received and the amount of the insurance. This combination policy is not included in Canadian annuities. A comparison of deferred annuities shows that the cost of the annuity in Canada with returns is very little more than the cost of the annuity in Massachusetts without returns. In Canada payments are returned with interest compounded at three per cent, while in Massachusetts the payments only without interest are returned.

Canadian Government annuities do not reach the class benefited by old-age pension schemes of other countries. Under old-age pension schemes the state contributes largely as in Germany or gives the whole pension outright as in Great Britain and New Zealand. In Germany the yearly pension begins at the age of 70 and benefit varies from 110 marks to 230 marks; or from \$26.18 to \$54.74. To secure this the workers and employer must make equal payments weekly for 25 years and the state makes a flat addition to the pension of 50 marks annually. The British old-age

pension begins at the age of 70 and is approximately \$62.50. The New Zealand pension is double the British and begins at the age of 65. The workman does not pay in any direct way for his pension, but the workman does contribute by every purchase he makes, and his wages are undoubtedly affected by this system. Old-age pensions tend also to lessen thrift and economy among the working classes.

In closing his review of the problem, Mr. Carman states that "Canadian Government annuities have not reached the poor, but they have been purchased in large proportions by persons of moderate income, by members of the employee classes, by persons whose incomes fall clearly below the standard of what is usually known as 'the middle class'." . . . Given a proper method of propaganda a much wider response might be expected to its appeal than has been obtained in the last few years."

Forest, Fishery, Fur and Mineral Production.

Fifth Census of Canada, 1911. Volume V.

The total value of forest products of occupied farm lands was \$35,024,429 in 1910. A comparison with 1900 is not possible as the inquiry in the 1911 census had reference only to the quantities and values of forest products cut on occupied farm lands, while the 1901 census inquiry included all forest products cut in the polling subdivision whether on Crown lands, limits or farms.

According to the report the fishery production increased from \$19,768,449 in 1900 to \$29,965,433 in 1910, or nearly 52.6 per cent. It may be pointed out, however, that the Department of Labour's index number of prices based on ten principal fish products shows a rise of 32 per cent in 1910, as compared with 1900. This would indicate that the increase in the value of the catch is very largely a matter of rise in prices.

The total valuation of the fur production was \$1,927,550 in 1910 as against

\$899,645 in 1900. The Department of Labour's index number for furs (including mink, muskrat, raccoon and skunk) shows a rise in price of 59 per cent for this period.

The value of the mineral production for 1900 and 1910 is given as \$47,956,862 and \$122,004,932 respectively, a gain of 154 per cent. The largest share of this increase has taken place in the eastern provinces, especially in Ontario, where the production of \$10,417,576 was increased to \$49,727,400 chiefly through developments at Cobalt. This rise has given the eastern provinces first place (64.6 per cent of the whole), a reversal of the position at the beginning of the century when the western provinces contributed more than one-half of the mineral production. On the whole the price of minerals has been steady, or, if anything, has tended to decline during the period 1900-1911, so that the figures for 1910 are a more accurate index of actual production in the case of minerals than in the other groups.

Lighting of Workshops.

Great Britain.—First Report of the Departmental Committee on Lighting in Factories and Workshops. Volume 1. Report and Appendices. Presented to both Houses of Parliament by Command of His Majesty, London, Aug., 1915. Report, pages xix. Appendices, pages 67.

In January, 1913, a committee was appointed "to inquire and report as to the conditions necessary for the adequate and suitable lighting (natural and artificial) of factories and workshops, having regard to the nature of the work carried on, the protection of the eyesight of the persons employed, and the various forms of illumination."

This committee met in London on February 11, 1913, and since that time held thirty-eight meetings, received evidence from fifty witnesses including factory inspectors, representatives of trade associations and scientific and technical societies. Inquiries were limited to textile, engineering and clothing trades since they employed the largest number and as such afforded the greatest diver-

sity in methods of illumination. Visits were paid to eighty-five works, about 4,000 measurements were made, and experiments bearing on standards of lighting carried out at the National Physical Laboratory.

The factors in good lighting considered by the committee and upon which their investigations were based were (1) adequacy, (2) a reasonable degree of constancy and uniformity of illumination over the necessary areas of work, (3) the placing or shading of lamps so that the light from them does not fall directly in the eyes of an operator when engaged on his work, or when looking horizontally across the workroom, and (4) the placing of light so as to avoid the casting of extraneous shadows on the work.

In the Factory Acts of the United Kingdom there are no general provisions for lighting as for heating and ventilation. In most of the European countries, in the United States and India legislation was more advanced along this line. The only references to lighting were in the Factory Act of 1901 specifying adequate lighting for underground bakehouses and for certain dangerous trades. The London Building Act of 1894 limited the window space of laterally lighted rooms to one-half of the total wall space.

The inquiry showed that bad or inadequate lighting was the cause of many accidents, that it made conditions unsanitary, affected the eyesight of workers and greatly diminished the output of factories. It was pointed out that most of the causes of unsatisfactory lighting could be removed without great expense or drastic measures. The committee recommended that there should be a statutory provision requiring adequate and suitable lighting for all factories and workshops and giving power to the Secretary of State to make orders defining adequate and suitable illumination for factories and workshops or for any parts thereof or for any processes carried on therein.

Further recommendations were made stating the specific amount of lighting over working areas of workrooms, in passages and on stairways and approaches.

In conclusion the committee point out that the standards of general lighting were in most of the factories visited much higher than they had prescribed but that their recommendations provide a practical legal minimum without causing hardship.

The Appendices contain data collected by the committee with regard to the requirements as to the lighting of factories in the United Kingdom and foreign countries and other cognate matters, the whole constituting a valuable contribution to the meagre amount of literature on this important subject.

Rural Schools in Ontario.

United States.—Bureau of Education. The School System of Ontario, with special reference to rural schools. Harold W. Foght, Washington, 1915. Pages 58.

This interesting bulletin is the result of a study made in Ontario in the fall of 1914, the main purpose being to find some fair basis for comparison of the schools of old Ontario and those in the adjacent commonwealths of the United States. Emphasis is placed on such phases of rural school life in Ontario as might be of special interest to American readers such as (1) the successful efforts of the Provincial Department of Education to make the most of its small one-teacher schools by introducing into them agriculture in the form of school gardening and home projects; (2) the practical system for school maintenance and school inspection, and (3) the preparation of rural teachers in model schools, normal schools and at the provincial agricultural college.

It is found that the problems of rural life in Ontario and in the United States differ. There has been the same disproportionate growth of urban and rural communities, but in Ontario there has been scarcely any loss in actual occupants of the land, the decrease in

rural population being due mainly to the disappearance of rural craftsman, of hired helpers on the farms, and the gradual decrease in the size of rural families. Then, again, while tenancy appears to be gaining ground rapidly in the United States, the contrary is true in Ontario, as there were 32,360 renters on the land in 1901 and 30,634 in 1911. The number of land owners increased in the same period from 179,791 to 183,843.

Rural school administration, maintenance and management in Ontario are described in some detail and the passing of the Agricultural Instruction Act (1913) by the Dominion Government, which voted ten million dollars for distribution among the several provinces on a *pro rata* of population basis is described in the words of Prof. S. B. McCready as "the most momentous event that has occurred in the history of agricultural education in Canada in recent years." The progress in Ontario rural schools is explained through the increasing efficiency of the teachers which has come about chiefly (1) by offering better remuneration as an inducement for teaching in the country through the system of special grants, and (2) by increasing the professional requirements of the teachers. While the salaries of Ontario teachers have scarcely kept pace with the scale of remuneration in other professions, the writer states that Ontario teachers are better paid than members of the profession in the United States.

According to this report leading educators of the province realize that despite the improvement through the introduction of elementary agriculture, the one-teacher school cannot solve the problem of modern education in the country, and the fact remains that Ontario does not offer rural children secondary school facilities without going away from home to secure them. The small school district is a barrier to progress in the consolidation movement and the township is suggested as a new unit of organization. The conservatism of the

population has also hindered progress in this direction, but it is probable that "the next step for the near future will be to reorganize all of these schools as genuine community schools through some form of consolidation."

Wider Use of School Buildings.

United States.—Bureau of Education. Extension of Public Education. Clarence Arthur Perry. Washington, 1915. Pages 67.

In this bulletin the author of "The Wider Use of the School Plant" again emphasizes the fact that the essential function of public education is "to take a common but vital human activity that may be well performed by the few, but is carried on imperfectly by the many, and lift it universally to a higher plane" and traces the progress of the movement for the wider use of school buildings. The information in the hands of the Bureau of Education and the Department of Recreation of the Russell Sage Foundation indicates that in its superficial aspects at least the extension movement has spread evenly over the whole country. The number of cities of 5,000 population and over reporting extension activities in 1914 was 603, and of these 345 reported playgrounds, 294 miscellaneous activities, 289 lectures, 207 parent-teacher associations, 129 social centres, and 39 vacation schools. The estimated aggregate attendance at 16,492 "group-occasions" in 45 cities during the month of March, 1914, was 847,935. The three most prevalent activities were found to be some form of athletics, clubs for young people, and lectures, while the least common are the civic and the general social occasions. The author sums up the opportunity which society possesses by reason of a vast equipment of school accommodations unemployed for their original purpose during the periods of popular leisure, as follows:

1. Purveying beneficial amusements to those who are prevented by fatigue from engaging in active play and who otherwise might receive their satisfac-

tion at the hands of unscrupulous vendors.

2. Stimulating the growth of those groups which are capable of self-organization and government by furnishing them with meeting places.

3. Promoting the formation and vigour of groups which might be incited to self-expression by furnishing both quarters and leadership.

"In these ways," he concludes, "public education is extending its distinctive function of improving human society. That this work will undergo still greater and more systematic extension is clearly foreshadowed by the trend of present developments and the persistency of the forces behind them."

Remedial Loans.

United States.—Bulletin of the National Federation of Remedial Loan Associations. July, 1915. Pages 95.

The Bulletin gives the proceedings of the seventh annual convention of the association held at Baltimore May 13-15, 1915. Representatives from twenty societies were present and all aspects of the remedial loan problem were reviewed and discussed by the various speakers. The fact was emphasized that the Remedial Loan Association was not a charitable institution but a business organization with a social purpose, that purpose being to meet an existing need at the lowest possible cost, with justice both to the borrower and the lender. The society has endeavoured to ruin the loan shark's profitable trade by making the rate of interest low yet consistent with sound business principles.

The year's report showed that there were forty societies enrolled. The funds employed amounted to \$16,496,365; 849,387 loans were made amounting to \$28,144,841. The rates charged on these loans as compared with the rates charged by pawnbrokers and loan sharks, represented a saving of over \$5,000,000 to the borrower. The total loss incurred amounted to \$22,290 on about 8/100 of 1 per cent of the total amount loaned.

Mr. W. P. Morgan of Toronto reviewed the work of the Toronto Municipal Loan Association, started in November, 1914, due to the prevalence of unemployment and the stress of money conditions. The capital of the company is \$250,000 in 5 per cent bonds guaranteed by the city. Securities are taken on chattels, real estate and endorsed notes, with interest of 1 per cent per month. Up to April 30, 1915, 434 loans had been made amounting to \$29,426. As the society was organized to relieve pressing need a sum was set aside for loaning solely to the unemployed.

It was felt that the greatest problem confronting the remedial loan association was unemployment. Borrowers with seasonal employment might be benefited by loans, but to fulfil its social purpose the association could not loan indiscriminately to the unemployed; it must make constructive loans, that is, aide the borrower in more than a temporary way, which is the work of charitable associations. The object of the society was not alone to secure the return of a loan but always to make the borrower reconstruct his standards of living so that he would keep within his income. Loans to the unemployed where there was no definite assurance that the loan would be safe constituted the greatest source of trouble but gave the greatest opportunity for social service.

Wages in Shoe Factories.

United States.—Department of Labour, Bureau of Labour Statistics. Wages and Hours of Labour in the Boot and Shoe Industry, 1907 to 1914. August, 1915. Pages 89.

This report gives numerous tables showing the full-time weekly earnings, the full-time hours of labour per week and the rates of wages per hour in the principal occupations of the boot and shoe industry of the United States. In addition the report presents material relating to the variations in the amount of employment for the year ended February, 1914. In some tables index numbers are given as an aid to comparison.

The average full-time weekly earnings of the employees in 1914 were the same as in 1913, 8 per cent higher than in 1912, 6 per cent higher than in 1911, and 9 per cent higher than in 1910. The average full-time hours of labour per week in 1914 were 1 per cent lower than in 1913, 2 per cent lower than in 1912 and 3 per cent lower than in 1911 or 1910. The average rates of wages per hour in 1914 were 1 per cent higher than in 1913, 9 per cent higher than in 1912, 10 per cent higher than in 1911, and 12 per cent higher than in 1910. In 1914 the average full-time weekly earnings of men in 27 specific occupations varied from \$15.37 to \$27.68; that of women in 10 specific occupations from \$9.12 to \$13.14.

A study of the tables of unemployment shows that the industry had not an especially dull or inactive season for the year ended February, 1914. Almost all establishments closed during part of December or July due to the general inactivity of the holiday season rather than to any so-called dull season of the industry.

Trade Union Statistics.

State of New York.—Department of Labour Bulletin. Statistics of Trade Unions in 1914. Whole No. 74. Pages 146.

The labour organizations of New York State showed a loss of 26 in the number of organizations and of more than 69,000 in membership during the year 1914. This is the first year since 1908 in which a decrease has been reported. Of this decrease in membership 86 per cent was in New York City. New York, however, had 29 per cent of the organizations and 73 per cent of the membership of the entire state. In building, clothing and textiles there were slight gains in the number of organizations. The membership of women's unions declined slightly as the number of organizations fell from 24 to 22. It is interesting in this connection to note that in Canada also there was a falling off in the membership of labour organizations during 1914 of nearly 10,000.

Railway Statistics.

United States.—Bureau of Railway Economics. Statistics of Railways, 1904-1914. Washington, D.C., September, 1915. Pages 67.

This bulletin presents for convenient reference aspects of railway operation in the United States for the years 1904-1914. All the railway tabulations are based upon official data published by the Interstate Commerce for each fiscal year. In 1911 the ten territorial areas under which the statistics were formerly

grouped were superseded by three districts representing the three great traffic areas, namely, the Eastern, Western and Southern Districts. A map is given showing that the boundaries of the new districts coincide almost exactly with the old divisions. All the former tabulations were revised under the new groups. The seventy-six tables include statistics of mileage, capital, revenues, number of employees, freight and passenger traffic, accidents and compensation for the years indicated.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

Contract.—Dismissal for Cause.

IN a case recently heard in Montreal, the plaintiff sued a machinery company for alleged illegal dismissal, claiming that he had been dismissed for economical reasons only, and without notice.

The plaintiff was the manager of part of the works of the defendant company and his contract was to last until February 4, 1912. On April 22, 1911, he was discharged from the company's service and a letter from the Board of Directors was sent to him, informing him that he was discharged for having, "without any authorization, illegally collected divers sums of money due to the company for a total amount of \$975.56, according to statement filed, and appropriated this sum to his own personal use and ends."

Upon the evidence, the Superior Court dismissed the action, and this judgment was subsequently confirmed by the Court of Review. (*Provost v. The Standard Foundry & Machinery Company.*)

Railway Accident.—Duty of the Engineer.—Responsibility of the Company.

On December 3, 1912, a young boy was killed by a train near a crossing. The boy's father took an action against the railway company, claiming that at

the time the accident happened the engineer and fireman of the locomotive were making certain repairs to the machine, that they were not looking on the track and that the train was going at a speed of 40 miles an hour. He also alleged that the engineer gave none of the signals indicated by the law. The defendant company admitted the accident, but denied any negligence on its part. It also claimed that the train which killed the child belonged to the Intercolonial Railway, this railway being alone responsible. Judgment was rendered in the Superior Court for \$1,100, but this was set aside and the action dismissed by the Court of Review.

In giving the decision, Mr. Justice Bruneau noted that nobody saw the accident and that the Superior Court attributed the immediate cause of the accident to the fact that the engineer, instead of stopping the train *immediately*, had lost control of the locomotive in order to repair the regulator, which fact prevented him from looking over the track as the train was approaching the crossing where the accident occurred. The engineer swore, and his statement remained uncontradicted, that when the regulator broke the track was perfectly clear, so that there was no necessity of stopping the train to make the repairs. The engineer had given the signals required by law when passing the signal post, which is situated at about 80 yards from the crossing, and there was nothing

to prevent the child from hearing the whistle and the bell except his own carelessness.

As to the speed of the train, it could not be held to be the cause of the accident. St. Bruno, where the child was killed, is a small place, and there is no statutory provision ordering railway companies to reduce the speed of their trains at an ordinary crossing.

Taking all the facts into consideration, the Court of Review set aside the judgment of the Superior Court and dismissed the action with costs. (*Collin v. Grand Trunk Railway Company of Canada.*)

ALBERTA CASE.

Damages.—Pecuniary Loss.—Pain and Suffering.

A locomotive engineer, who had been engaged in that capacity since 1906, previous to which time he had for three years been a foreman, was injured while running his train, being struck on the forehead by the lock of a mail bag suspended from a mail crane, and brought action to recover damages. The wound was a compound fracture extending into the hair three or four inches. He was promptly taken to a hospital and placed under the care of the defendant company's divisional surgeon. The plaintiff remained in an unconscious condition for a long time; it was about two months before he became at all natural.

The doctor had known the plaintiff for two years or more. He claimed the plaintiff was, before the accident, a very strong man, above the average, and very bright mentally. Since the accident his memory was not good; he remembered nothing of the accident, his mental processes were slow and there was a certain amount of confusion. The plaintiff's condition generally had improved, but the improvement was more noticeable during the first six months. In the doctor's opinion he would never be able to do work that would require quick thinking or automatic action, and would not be able to resume his work as an

engineer. Another medical practitioner called on the plaintiff's behalf, did not expect he would ever be able to do anything, and thought it was likely the plaintiff's condition would become worse.

In view of all of the evidence gathered at the trial, the jury assessed the damages at \$27,000. The defendants appealed from this decision but the appeal was dismissed. (*Jackson v. Canadian Pacific Railway.*)

BRITISH COLUMBIA CASE.

Alleged Conspiracy in Restraint of Trade.—Trade Union Act.—Action Dismissed.

In an action for damages through alleged unlawful conspiracy in restraint of trade, at Victoria, B.C., it was claimed that the plaintiff in 1913 joined with certain other printers and bookbinders in the city of Victoria for the purpose of regulating prices so that reasonable rates could be demanded to secure reasonable profits. The plaintiff being of the opinion that the combination was an unlawful one, meant to enhance the cost of printing to the public, withdrew from the association. He alleged that the other members then conspired to compel him to rejoin, and in that connection passed a resolution not to do work for him at any price, whereby he was injured in his business as a publisher.

The defence was a denial generally, and also a plea of the Act Relating to Trade Unions, Chapter 228 of the Revised Statutes of British Columbia, which exempts trade unions from liability in damages for communicating certain information and employing fair arguments to induce workmen not to renew contracts or to refuse to become the employee or customer of employers. The plaintiff claimed \$250 damages. It was stated by counsel for plaintiff that the alleged association had virtually disbanded by becoming inactive after writ was issued. The action was dismissed with costs, the judge deciding that no conspiracy existed. (*Lane v. Acme Press et al.*)

THE LABOUR GAZETTE

DECEMBER, 1915.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

MENTION was made last month in these pages of the Dominion Military Hospitals Commission and the duties placed on that body with reference to the return to civil life, at the close of the war, of Canadian soldiers, and the finding of employment for them, whether able-bodied or partially disabled. Senator Lougheed, a member of the Government without portfolio, is chairman of the Commission. The extraordinary conditions created by the war are understood to have been the occasion also of the appointment of a body known generally as the Dominion Economic Commission, which will investigate and report upon various economic problems, such as railway and water transportation, marketing, immigration, increased production, co-operative systems, farmers' credits, etc. The Commission is composed of the following gentlemen: Senator Lougheed, chairman; St. J. B. Rowland, of Montreal; Wm. Smith, M.P. for South Ontario; Dr. J. G. Rutherford, formerly Dominion veterinary general and lately with the Canadian Pacific Railway Company; J. C. Watters, president of the Trades and Labour Congress; William Warrell, of Victoria; G. A. Hopkins, of Moose Jaw; J. W. Flavelle, of Toronto, and Senator W. B. Ross, of Nova Scotia. W. J. Black, formerly principal of the Manitoba Agricultural College, has been appointed secretary to the Commission. The Commission held its first meeting early in the month of November and planned the lines on which its work will proceed.

THE Department of Labour began during the past month the distribution of the separation allowances granted by the British Government to Canadian workmen who, by arrangements made with the British Munitions Mission which visited Canada during the summer, have been working now for some months in British munitions concerns. The separation allowance is fixed in most instances at 17s 6d, this amount being paid to the dependant named by the workman, subject to certain regulations laid down by the British authorities having the matter in hand. The classes of men chiefly concerned are machinists, moulders, shipwrights, blacksmiths, etc. At the close of the month separation claims had reached the Department in about 600 cases and the allowances were paid accordingly, the necessary steps being taken for verification. The Department has not been informed as to the exact number of allowances which will be granted. In a number of cases, however, the workmen were unmarried and without dependants in Canada and there will be no claims in such cases.

* * *

IT is satisfactory to be able to note that the record of industrial disputes in Canada continues to fall, and at the end of November showed no more than two trivial strikes in the Dominion, these troubles existing at the widely separated points of Halifax, N.S., and Victoria, B.C., in which fortunately not more

than about two score of workers were concerned; both these disputes originated some months ago, and, while the strike has not been in either case formally called off, the disputes can be no longer regarded as factors in the industrial situation. A strike of some importance, however, began and ended during the month, namely that of the electric workers of the Hydro Electric System, Toronto, foreshadowed in the Notes of last month. It will be remembered that this dispute had been before a Conciliation Board, whose findings the Hydro Electric management had refused to accept. The strike lasted about three weeks, when the Hydro Electric management and its employees reached a working agreement, involving concessions to the employees considerably less than those which had been recommended by the Conciliation Board. Two other small disputes began and ended during the month, one in New Glasgow, N.S., and one in Fredericton, N.B. The troubles were not of a serious nature and work was resumed in each case at the expiration of a few days, compromises being effected.

* * *

IN a review of Alberta legislation in 1915 published in the October number of the *Labour Gazette*, reference was made to the passing of a Public Utilities Act, which provided for the establishment of a Board of Public Utilities Commissioners, and for the fixing of a date at which the measure should become law by proclamation. This proclamation has recently been published in the *Alberta Gazette*, and provides for the coming into force of the measure on October 7, 1915. The same issue of the *Alberta Gazette* also contains an announcement of the constitution of the Board of Public Utilities Commissioners, which is composed of Hon. George Hedley Vicars Bulyea, formerly Lieutenant Governor of the province, chairman; Mr. John Stocks, formerly Deputy Minister

of Public Works, Edmonton, and His Honour Arthur A. Carpenter, formerly judge of the District Court, Calgary. Mr. J. E. Riley, of Calgary, has been appointed secretary of the Board.

* * *

THE Civil Service Savings and Loan Society, Ottawa, held its annual meeting during the month and despite the unsettled condition of the money market showed the most successful year in the history of the society. The usual dividend of five per cent was declared and additions were made to the reserve and provident fund. A substantial increase was reported in the number of members and the number of shares held by members was shown to have increased 57 per cent. Loans increased 78 per cent and deposits 130 per cent. The Civil Service Savings and Loan Society is a co-operative association, organized some years ago on the lines of the *Caisses Populaires*, or *People's Banks*, which have been successfully organized and carried on in the province of Quebec.

* * *

EMPLOYMENT in November showed comparatively little change from the high level noted in October. The conclusion of threshing in a number of western localities left a number of men out of work, some of whom returned East, while others hired with lumbering companies or secured other outside work rendered possible by the fine open weather which prevailed during the greater part of the month. There was some falling off in employment for longshoremen owing to the practical cessation towards the end of the month of lake and river navigation, but numbers of men in St. Lawrence River ports expected to find work at the winter ports. Activity in manufacturing was on the whole well maintained, particularly in some lines of the metal trades. Both coal and metal

mining were active, with a demand for coal miners in Nova Scotia fields.

* * *

PRICES were higher in October in some staple lines, such as eggs, butter, cheese, and coal, with the advances of the season. Beans and lard were also up-

ward. Rent averaged slightly lower in Saskatchewan and was lower than a year before in nearly all provinces. The Department's index number of wholesale prices advanced nearly ten points, steep rises in chemicals and raw furs accounting for five points, but upward changes occurred in many classes of commodities.

INDUSTRIAL CONDITIONS DURING NOVEMBER, 1915.

GENERAL SUMMARY.

DURING November employment on the whole maintained the high level noted for October. Fine open weather for the most part of the month in nearly all parts of the Dominion facilitated the continuation of outside building and general construction work, and also prolonged activity in threshing and other agricultural operations. Although war orders continued to furnish the bulk of activity in large industrial centres the effect of movement and marketing of the large Western grain crop was also beginning to be felt, and a number of industries which depend for business chiefly on Western orders were resuming operations on practically a normal basis.

Threshing continued in many localities of the West, though in a number of districts outfits were being taken out and employees discharged. These men were either returning to their homes in the East or were finding employment in the lumbering districts of Northern Saskatchewan. Fishing on the Atlantic coast was poor, owing chiefly to rough weather. Activity was noticeable at some points on the Lakes, but in British Columbia conditions were quieter. The lumbering industry also was not so active on account of many sawmills closing down for the winter, but this condition was offset in many localities by the engagement of men for the woods. Coal mining continued very active in all coal

producing fields of the Dominion. Metal mining also showed no falling off from the activity of the previous month. There was little change in manufacturing conditions—a marked activity being evident in a great number of lines, with dullness in some others. Railway construction continued quiet on the whole, but railway traffic owing to heavy shipments of grain and, in some localities, to the shipment of war orders was very active. Water transportation showed a falling off towards the end of the month, traffic on the Lakes and the St. Lawrence having practically ceased. Commercial conditions were improved with the movement and marketing of the crops.

The Department's index number of wholesale prices stood at 157.8 for November, as compared with 148.8 for the previous month and 137.5 for November last year. If steep advances in quinine, alum, glycerine and raw furs were not included, the index number would stand at 152.8 for November. There were, however, important advances in grain, dairy products, dried fruits, potatoes, flour, cream of tartar, iron and steel, other metals, coke, matches, copper wire, linseed oil, turpentine, carbolic acid, opium, sulphite pulp, and raw rubber. Decreases occurred in bran, shorts, cattle, beef, hogs and poultry, but hogs recovered later. In retail prices the cost

of a weekly budget of certain staple foods stood at \$8.016, as compared with \$7.815 in October, and \$7.993 in October, 1914. Eggs, butter, cheese, lard, potatoes and beans were higher. Rents averaged lower in Saskatchewan. Anthracite coal averaged slightly higher.

Changes in Wages and Hours of Labour.

There were comparatively few changes in wages in November. Surface and underground labour at the collieries of the Nova Scotia Steel and Coal Company at Sydney Mines to the number of 480 received an increase of 5 cents per day on November 1, and shiftmen, timbermen, tracklayers, landing tenders and other classes to the number of 630 received a like increase. Under the arrangement the classes mentioned will receive another increase of 5 cents per day on April 1, 1916. Early closing rules which went into effect under provincial liquor law changes had the effect of reducing the number of hours worked per day by bartenders in Ontario. At Hamilton, cigarmakers had the limit of piece work raised from 1,000 per week to 1,350 on November 1, which meant a difference of \$5 per week in wages. Teamsters in the employ of the city of Calgary had wages reduced from 60 to 55 cents per hour.

Agriculture.

Open weather during November in nearly all parts of Canada not only enabled farmers to do a lot of fall ploughing, but permitted the grazing of livestock, considerably shortening the period of stall feeding. Threshing in the Western provinces continued in some localities, though in others threshing outfits were closing down and Eastern harvest hands were leaving for home. Numbers of men who had been engaged in agricultural operations were seeking employment in lumbering operations. There continued, however, to be a demand for farm help in many sections, both in the East and West.

In the Maritime Provinces fine weather prevailed and much fall ploughing was done. The taking in of crops was completed with about average results except in the case of potatoes which were about half the usual crop. According to the November report of the Prince Edward Island Department of Agriculture there was a gain in the wheat crop, but a slight falling off in oats. Mixed grain also showed a falling off and potatoes were a little over half the crop of 1914.

In Quebec, also, farmers took advantage of the fine weather to do considerable fall ploughing. Crops for the most part were good.

In Ontario, in many district farm help was reported in demand, and this demand was not being met in some instances. In the Cobalt district a favourable potato crop was reported, which were selling in the district at \$1 per bag. At Chatham, farmers were active in preparing for a large sugar beet yield next season and were signing up contracts for large acreage. The acreage of wheat in consequence was expected to be considerably less in 1916.

With most of the harvest threshed, a record-breaking crop was reported in almost all Western districts. Car shortage was reported from several localities, and in others railway men were heavily taxed to supply the accommodation required. In the Saskatoon district, 40 and 50 bushels per acre was a common yield. About 6 per cent of the grain in Manitoba had yet to be threshed. At Moose Jaw, threshing operations were carried on for the first three weeks of the month and a great deal of employment was given in consequence. The last week of the month a number of outfits closed down, which resulted in the release of a number of hands. Many harvesters from the Eastern provinces started home. At the end of the month threshing operations in this district were practically completed, with some work still to be done in outlying districts. Considerable grain was marketed, but there was still a large amount in the

farmers' hands. Elevators were blocked and the movement of grain was slow. At Medicine Hat, business at the local Dominion Lands Office was reported brisk and there was a large increase in the number of entries compared with the same period last year. From Regina the best crop in years was reported and nearly all threshing was done and a large amount of fall ploughing. At Calgary, favourable weather for threshing prevailed. It was estimated that about 50 per cent of the grain still remained in stock. A shortage of cars was reported in this district also.

Fishing.

Poor fishing returns were reported on the Atlantic coast, due chiefly to rough weather. At Digby, a scarcity of fish, especially haddock, was reported, and both off-shore and in-shore fleets experienced poor catches. On the Bay of Fundy shore of Nova Scotia little fishing was being done, fishermen in this district generally hauling up their boats in the fall, though there are a few who try to make catches all through the season. When the weather was favourable some fair catches were made, but heavy gales throughout the month seriously interfered with operations. At Yarmouth, the month was reported as disappointing owing to rough weather. There were a few good days, however, and some good fares were landed. A great scarcity of bait was reported. Preparations for the lobster season in this district were under way.

At Charlottetown, the fishing season was practically closed. The catch of lobsters was reported as exceeding that of the previous year. At Sydney, the fall mackerel season was reported a failure, being the worst in many years.

At Newcastle, N.B., active preparations were being made by fishermen for the opening of the smelt season, and at St. John local fishermen made good catches of sardines. The prices paid were from \$8 to \$9.50 per hogshead as against \$3 per hogshead in September.

Considerable activity was reported at Port Arthur, Ont. The herring season began about ten days before the end of the month and was expected to continue until the middle of December. From 13 to 15 tugs were engaged on the fishing grounds. Herring were plentiful and some big catches were reported.

On the Pacific coast fishing was quieter than in the previous month. At New Westminster fishing conditions were fair during the first part of the month, co-hoes being caught in fair numbers. On December 15 the canneries ceased work and most of the hands were idle. A few fishermen continued work to supply the local markets, but about 95 per cent of the fishermen on the river were idle. At Prince Rupert fishing returns showed a slight falling off owing to rough weather.

Lumbering.

Lumbering operations, on account of the further closing down of a number of sawmills, were quieter than in the previous month, though there was greater activity in the woods in some districts.

Nova Scotia logging operations were reported somewhat quieter than in the previous year. At Amherst indications were that little would be done in the woods, as a large percentage of last year's cut was still in the yards owing to want of vessels for shipment. At Westville, also, lumbering was reported dull, though active preparations were being made for a big winter's cut of logs.

In New Brunswick more active conditions were reported. While at Newcastle most of the sawmills had closed, large crews were going into the woods. At this port a number of steamers loaded lumber for shipment across the Atlantic during the month. From Fredericton it was reported that nearly all sawmills in the vicinity were closed down for the winter, but in most instances the men employed in the sawmills went into the logging camps. From Moncton it was reported that the indications were the cut of lumber would be small and the demand for men and teams light. Re-

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favourable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

CANADA DURING THE MONTH OF NOVEMBER, 1915.

present issue and is intended to present, in brief and accessible form, a generalized statement as to the state the amount of employment prevailing, no account being taken as to wage changes, trade disputes and kindred terms employed are divided into two groups, the order indicating in each the degree to which general condition.

ports from Miramichi, the Upper St. John River waters and Albert county all agreed that the lumber cut this year would be much smaller than last year, owing to the conditions of the lumber market, high ocean freights and scarcity of available ships. Wages in the woods were from \$5 to \$10 a month less than last season.

All the big mills in the vicinity of Quebec city had finished their season's cut, most of the mills running until the middle of the month. Large quantities of sawn lumber were in the piling grounds, shipments not having kept up to the output. At Three Rivers mills worked until a few days after November 15. Several shipments were made to Great Britain.

In a number of Ontario districts prospects for the winter were reported fair. In others, however, there was little activity. At Peterborough difficulty was experienced in getting men. Most of the companies had gangs of men in the woods and were sending in others as they could be procured. In the Cobalt region the disappearance of the first fall of snow was of great benefit to lumbermen principally because there had previously been no frost in the ground, lack of which interfered with logging roads. There was more activity during November than during the same month last year, but the wages paid were below the average, running from \$18 to \$20 per month. Lumbermen claimed they could not secure the number of men required, but it was also claimed that there was a certain number of men who would sign up were the wages better. Rather than take the wages offered many men who formerly followed work in the woods, secured other employment. At Port Arthur, however, practically no logging operations were reported to be under way in the district and yards were reported to be full of unsold lumber from previous cuts.

In the lumbering districts of Saskatchewan activity in logging operations continued and many men were being sent into the bush. Alberta and British

Columbia districts, also, were on the whole busy. At Fernie, activity, owing to the winter season having set in and the exceptionally heavy snowfall, was confined to logging and nearly all the mills were forced to close down. At New Westminster, however, lumbering was going on as usual, although orders from the Western Provinces were reported not coming in very briskly. The shingle business was very busy with a heavy demand. Difficulty was experienced in some cases in procuring cedar. Sawmills were nearly all running full time. At Vancouver, also, mills reported substantial orders for lumber to be shipped to Europe, with the result that a number of mills were running full time and a few were running double shift. In the Nanaimo district sawmills were working steadily, but not to full capacity. Logging camps lost a good deal of time on account of bad weather.

Mining.

Activity in coal and metal mines continued. In the Sydney district the coal trade was reported brisk, though this was said to be due as much to the shortage of labour caused by the war as to any demand in the trade, and that as a matter of fact the railways had taken less than usual. This, however, was offset by the increased business of bunker and steel trade. The output of the Dominion Coal Company was 120,000 tons larger than in November last year. By the end of December the increase over 1914 was expected to be 250,000 tons. At Westville the output failed to supply the demand owing to the scarcity of labour. As the result of an accident in the Drummond mines, which resulted in fire, some 850 men and boys were thrown out of employment. At Springhill, Joggins, River Hebert and Minudie a shortage of labour was reported.

In the lignite fields of Alberta increased activity was reported. At Redcliffe an improvement was noticeable and in the Edmonton district also mining operations were carried on actively. In

the Southwestern Alberta and South-eastern British Columbia fields continued activity prevailed. At Lethbridge coal mining was very active, with a demand for more miners. The Coalhurst mines were working nearly to capacity. At Fernie conditions, in view of the heavy demand for coal and coke, were very satisfactory. At practically all the camps in the district the mines were working steadily and the few idle days which occurred were caused by car shortage and not by lack of orders. At Nanaimo mines in the city worked steadily; mines in the district, however, lost a good deal of time.

Metal mining also showed continued activity. It was reported from Moncton, N.B., that interest in copper mining in Albert county was reviving and that the indications were the mines at Dorchester, which have been closed down for over five years, would be reopened. Prospecting was also being carried on in the county. In the Sherbrooke, Que., district asbestos mines were all working, also copper and chrome iron mines. At Cobalt it was reported that the rise in silver was expected to cause a speeding up in mining operations throughout the camp and the employment of a greater number of men was looked for should the existing price of silver be maintained. Owing to the putting into force at the mines and smelter of the Canadian Copper Company at Copper Cliff of an eight-hour day, more men were being taken on. Active conditions prevailed. It was reported that the Moose Mountain iron ore mines at Sellwood were closed down indefinitely owing to failure to commercialize the smelting of the large ore bodies, and inability to compete with the ores of the United States.

In British Columbia, active conditions continued. Rossland was producing 40 per cent more than last year. The smelters at Trail, Grand Forks, Greenwood, Anyox and Britannia were all actively engaged. At Trail, a considerable amount of building was in progress and a number of the hotels were putting additions to their buildings to

accommodate the men working in Trail, a number of whom were still sleeping in tents.

Manufacturing.

Manufacturing in many lines continued active. In Nova Scotia, the steel industry was busy. At Sydney, all the large industries were working full time with the prospect of being busy all winter. In the steel plant unskilled labour was scarce and much needed. Shipments of iron ore from Wabanna, Newfoundland, were 600,000 tons as against 320,000 last year, and the steel companies were taking measures to insure a plentiful supply of iron ore next summer. An additional blast furnace was expected to be blown in at the Sydney steel plant. At Sydney Mines, also, great activity prevailed. Like conditions obtained at Westville and Amherst. At Halifax, clothing and biscuit and confectionery manufacturers were very busy.

New Brunswick conditions also continued busy in manufacturing centres. At Moncton, activity was reported in the various manufacturing plants, and at Newcastle and Fredericton fair conditions prevailed.

At Three Rivers, Que., factories were running full time with orders ahead for some time. Shoe manufacturers at Montreal and in other shoe manufacturing centres of Quebec were busy owing to large army orders. A better demand from Western Canada also improved business. Cotton mills were running to full capacity and manufacturers of woollens in many instances were working day and night shifts. Owing to the war the manufacture of a number of important products not hertofore manufactured in Canada has been commenced.

In Ontario, industrial establishments in the main manufacturing centres continued active. At Toronto, leather manufacturing establishments were active and clothing and boot and shoe factories were fairly well engaged. Brew-

eries and cigar factories and piano manufacturers were quiet. At Berlin, trunk and bag factories were busy on war orders. At the sugar factory day and night shifts were engaged. Several furniture factories were working overtime, as well as some foundries. Shoe factories were all busy, several working overtime. Felt factories and button factories were working full time. Glove factories were very busy. Biscuit and confectionery manufacturers and wholesale meat and sausage factories were busy. In fact, all manufacturing establishments in Berlin with the exception of cigar factories and breweries were busy. At Niagara Falls, manufacturing establishments with only one or two exceptions were all busy and some were very busy. A hat factory which had been idle for a long time was again in operation. At Hamilton, manufacturing was reported about the same as during the preceding month—not quite back to normal, but considerably better than during the corresponding month of last year. The National Steel Car Company has installed additional equipment and machinery for the manufacture of fire department apparatus. The opening of this new department will mean the employment of additional help. At Stratford, iron foundries, machine shops, knitting and woollen factories were busy on war orders, and in most cases were running day and night shifts. At St. Mary's, near Stratford, a large cement company was busy, the year despite the war being the best in the history of the plant. At Woodstock, the furniture trade continued slack. Manufacturers of organs and pianos reported some improvement in business. Manufacturers of wagons and sleighs were busy filling orders for the West. Reports from the various factories showed there were very few inquiries for work and practically none at all from skilled mechanics. At Brantford, manufacturing establishments continued about the same as during the previous month. Some factories were working extra time during the month, but in others short

time prevailed. The Massey-Harris Company was closed for stock-taking, but was expected to resume operations early in December. At Kingston, factories and foundries were working full time. The Canadian Locomotive Company had taken back employees who were temporarily laid off and was taking on new hands every day. At Port Colborne, the iron smelter plant was closed down for heavy repairs. A large number of men were employed in renewing the linings of the furnaces and other repairs. At Chatham, flour mills and woollen mills were running day and night. Other factories were busy. One company which had received an order for \$20,000 worth of machinery for the new sugar factory was advertising for machinists; a bridge company was also advertising for the same class of mechanics. At Guelph, Peterborough, Windsor, Brockville and Owen Sound, nearly all factories were either busy or fairly well engaged.

In the West, also, manufacturing in some lines was active. Machine shops were exceptionally busy and flour mills were running 24 hours per day. Some other lines, however, showed dullness.

Railway Construction.

Railway construction continued fairly quiet. At Halifax, work on the new ocean terminals showed much progress. The spur line to the Intercolonial Railway at Bathurst, N.B., was well advanced and expected to be completed at an early date. From Montreal it was reported that the Southern Counties Railway was expected to be ready for operation between Montreal and Abbotsford by December 1. The Canadian Northern Railway had its line from Ottawa to within a short distance of the western end of the tunnel under the mountain completed, and it was announced that freight would be carried from Montreal about December 1. Work on the tunnel itself was nearly completed.

At St. Thomas, Ont., a number of

gangs working on road maintenance and repairs were laid off. From Brantford it was reported that on the Lake Erie and Northern Railway work was progressing satisfactorily. On sections west of Saskatoon the Canadian Pacific Railway increased the number of men on section crews. Work on railways being constructed north of Edmonton was being continued. On the Government line from The Pas to Hudson Bay grading was completed to mileage 378, leaving 46 miles more to be completed to the Port Nelson terminus of the railway. Ballasting was completed to mileage 150 and surfacing to mileage 220. The telegraph line was completed to mileage 223 and water tanks to mileage 214.

General Transport.

General transport conditions so far as railway traffic was concerned continued active owing to the movement of grain and shipment of war orders. Water transportation, however, was quieter, and at the end of the month the practical closing of lake and river navigation resulted in a heavy falling off in the amount of employment available from this source. Ocean transportation, however, from winter ports continued fairly active. Sydney reported transportation both by water and rail fairly heavy. At Halifax, along the water front, conditions were only fair. The addition of 100 'longshoremens who returned from Hudson's Bay at a time when conditions are usually dull, caused a surplus of labour on the docks. With the closing of navigation on the St. Lawrence, however, conditions were expected to improve. St. John, N.B., also experienced an improvement on this account. At Westville, railway traffic was very heavy and much larger than for the same time in the previous year. At Moncton, active conditions were reported in the railway shops.

Night navigation on the St. Lawrence ended on November 29, and vessels of the Department of Marine and Fisheries had practically completed taking up the

gas buoys on the river by the end of the month, and practically all vessels, whether for lake or ocean trips, were cleared from Montreal. Most of the 'longshoremens left for winter ports. Railway business showed a large increase in earnings for the last two months. At Quebec, river steamers, tugboats and coasting vessels were beginning to lay up for the season and paying off their crews. The amount of grain which came through the Lachine canal to Montreal for export to the end of November, 1915, was 26,679,853 bushels less than last year, the total for this year's season being 40,664,099 bushels. For November alone the grain was only half a million bushels under the same month last year, and the total tonnage coming to the port was greater. The ocean and coasting vessels which came to Montreal were 811 as against 916 last year.

At Toronto the practical cessation of navigation threw a number of employees out of work. Railway employees had a fair month. At St. Thomas traffic employees reported conditions fair. A few reductions were made in the traffic department of the Michigan Central Railway. Regular men were working so steadily that it was found necessary to reduce the spare list. The Pere Marquette Railway made an increase in its traffic staff during the month. The Michigan Central Railway has completed an agreement with the city of London to have the city carry Michigan Central Railway cars over the London and Port Stanley line from London to St. Thomas at a rental of not less than \$25,000 per year on a mileage basis. At Chatham, owing to the Cleveland Coal Company changing its port of entry from Port Stanley to Rondeau a greatly increased traffic on the Pere Marquette was noticeable, and it was expected that the company would double-track its line to Chatham.

At Winnipeg those engaged in transportation work were steadily employed. The amount of grain which passed through Winnipeg during November

was as follows: Wheat, 53,188,800 bushels; oats, 15,581,900 bushels; barley, 2,219,400 bushels; and flax, 816,250 bushels.

At Regina railway employees were exceptionally busy in the moving of grain. Railway workers at Saskatoon were busy for the same season. At Calgary, Canadian Pacific Railway shops were working full time. At Lethbridge the transportation of wheat and coal continued to make railway traffic active.

Active conditions were also reported from points in British Columbia. At Vancouver the shops of the Canadian Pacific Railway were working nine hours per day, five days per week and five hours on Saturday, after a protracted period of short time.

The Trades.

Building.—Open weather during November permitted the continuation of outside building operations longer than usual and in some parts, notably in the Maritime Provinces and in localities in Quebec and Ontario building trades were fairly busy. In the West, however, extremely quiet conditions prevailed.

Metal.—Metal workers, particularly machinists, were actively engaged in practically all industrial centres of the Dominion.

Woodworking.—Wood workers on the whole were fairly well engaged. Some dullness existed in furniture factories engaged on regular lines, but in the case of others having special work activity was noticeable.

Printing.—Printing trades on the whole were fairly well engaged in Eastern Canada. Dullness was marked in some localities in the West.

Textile.—Textile trades in both cotton and woollen industries were in nearly all cases actively engaged.

Clothing.—Tailors were fairly well employed in the Maritime Provinces and in some localities in Quebec and Ontario. Dullness was apparent in the West. Garment workers were on the whole fairly well engaged, with special activity in centres where war orders were being

executed. Boot and shoe workers were fairly well engaged.

Food and tobacco preparation.—Trades engaged in food preparation were busy, the approach of the Christmas season accounting in part for the increase in activity. Tobacco workers, except in a few instances, were quiet.

Leather.—Leather workers were fairly well engaged, with marked activity in localities where war orders were being executed.

Transport.—Railway workers were in practically all localities actively engaged. The movement of grain kept both traffic and mechanical departments busy. Longshoremen were fairly well engaged the fore part of the month but the practical cessation of navigation on the Lakes and the St. Lawrence left a number of men out of work. Many of these, however, expected to find employment at winter ports.

Unskilled.—Unskilled labour on the whole was fairly well engaged and there was little in the way of unemployment. The continuation of threshing operations in many parts of the West and the employment of men for the woods absorbed most of the reserve labour and fine open weather in most parts of the Dominion during November was also an important factor in assisting employment in building and general outside construction work.

Canadian Trade.

During October, 1915, there was an increase of \$4,381,414 in total imports of merchandise entered for consumption as compared with October, 1914, the amounts being \$39,515,144 for October, 1915, and \$35,113,730 for October, 1914. Domestic exports of merchandise showed an increase of \$34,155,160 for October as compared with the same month in 1914. These exports amounted to \$80,038,582 for October, 1915, compared with \$45,883,422 for October, 1914. Products of the mines, fisheries, forest, animals and their produce, agriculture, manufactures and miscellaneous showed an increase over October, 1914.

The following table gives the latest official summary of the Canadian foreign trade:

IMPORTS AND EXPORTS, OCTOBER, 1915.

Imports entered for consumption.	October.		Exports. (Domestic.)	October.	
	1914	1915		1914	1915
Dutiable goods.....	\$21,061,440	\$22,801,957	Mines.....	\$5,014,440	\$6,669,776
Free Goods.....	14,052,290	16,713,187	The Fisheries.....	2,166,972	2,527,616
			The Forest.....	5,935,715	5,503,343
			Animals and their products...	8,537,247	12,081,545
			Agriculture.....	17,953,959	39,833,353
			Manufactures.....	7,131,445	12,880,731
			Miscellaneous.....	53,644	542,218
Total.....	\$35,113,730	\$39,515,144	Total Merchandise.....	\$45,883,422	\$80,038,582
Coin and bullion.....	\$52,578,669	1,924,605	Coin and bullion.....
Grand Total.....	\$87,692,399	\$41,439,749	Grand Total Exports....	\$45,883,422	\$80,038,582
Duty collected.....	\$5,657,871	\$8,201,830			

The following are the returns of the Canadian bank clearing houses for October, 1915, with comparative figures for October, 1914:

	October, 1915	October, 1914	Changes.
Montreal.....	\$253,982,655	\$226,518,262	+ \$27,464,393
Toronto.....	176,073,958	162,831,368	+ 13,242,590
Winnipeg.....	209,012,586	166,490,234	+ 42,522,352
Vancouver.....	24,596,929	31,165,702	- 6,568,773
Ottawa.....	17,804,649	17,822,601	- 17,952
Calgary.....	17,185,475	17,666,193	- 480,718
Quebec.....	14,987,168	15,536,943	- 549,775

Peterboro.....	1,769,968	1,787,488	- 17,520
Totals.....	\$799,764,253	\$728,221,180	+ \$71,543,073

Canadian revenue for October, 1915, amounted to \$14,440,333.90 as compared with \$10,641,254.82 in October, 1914. The expenditure on capital account during October, 1915, amounted to \$12,051,152.12 compared with \$4,479,119.80 in October, 1914. The expenditure on capital account for October, 1915, comprised \$2,874,997.36 for public works, including railways and canals, \$244,889.57 on railway subsidies, and \$8,931,265.19 for war purposes.

The bank statement for October, 1915, showed the paid-up capital of the chartered banks of Canada to be \$113,-

986,106, an increase of \$1,236, as compared with the previous month. Deposits payable on demand for October amounted to \$392,042,193 compared with \$359,315,280 for September, an increase of \$32,726,913. Notes in circulation amounted to \$123,204,784 in October, 1915, compared with \$108,917,398 for September, an increase of \$14,287,386. Loans to cities, towns, municipalities and school districts during October, 1915, amounted to \$45,682,230 compared with \$43,682,230 in September, an increase of \$1,753,899.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA:

Amherst.

There was no change in the labour market during the month just past; all the industries were well supplied with labour, excepting the coal mines, which were short at Springhill, Joggins, River Hebert and Minudie, and had been for some months past. In wholesale and retail trade there was little or no change.

Indications at the end of the month were that very little would be done in the lumber industry this season, as a large percentage of last season's cut was still in the yards, owing to want of vessels for shipping.

Halifax.

Building and construction work was fairly active during the month of November. In fact, the first three weeks of the month carpenters and labourers were very actively employed. This was due mainly to the erection of winter quarters for soldiers. All available carpenters were given employment, and work was carried on every day until 10 o'clock in the evening, to provide proper accommodation before the cold weather set in.

In addition to this work, business in the building line has been very good, very much better than for the same period a year ago.

Along the waterfront, conditions have been only fair. The homecoming of over 100 longshoremen from Hudson Bay at a time when things are usually quiet, caused a surplus of labour on the docks. With the closing of navigation in the St. Lawrence, conditions were expected to improve.

Sydney.

Labour conditions continued active, and labour generally was well employed. All the large industries were working full time with prospects of being busy all winter. Some of the trades were still adversely affected, but all tradesmen could find work of some kind. In the limestone quarries and the steel plants unskilled labour was scarce and much needed.

The steel industry continued active both at Sydney and Sydney Mines. The coal trade also was brisk. This condition is as much due to the shortage of labour caused by the war, as to any demand in the trade. The railways have taken less than usual, but this has

been greatly offset by the increased business of the bunker and steel trade.

Truro.

There was little unemployment, except in the lumbering industry, where dullness, caused by the excessive ocean freight rates, curtailed preparations for winter operations and quite a few men seeking employment in the woods were about.

Builders and builders' labourers were well employed and the outlook for painters was bright, promising full winter employment.

The industries were running full time. Railway transportation was good and prospects very bright.

Westville.

Labour conditions continued fully as active as the preceding month and decidedly greater than the corresponding month of last year. These conditions were largely due to the manufacture of war supplies.

Railway traffic, like last month, was very heavy, and much greater than a year ago.

Wholesale and retail trades reported a great volume of business, probably larger than any former month for some years.

Lumbering was somewhat dull, but active preparations were being made for a big winter's work.

The coal output failed to supply the demand, and there was almost a famine for coal in this vicinity. The scarcity of labour largely accounted for this condition.

On November 28 a slight explosion occurred in the Drummond mine at Westville, and the pit at the end of the month was on fire. The mine was being flooded with water and it was hoped that it might be saved eventually. Some 850 men and boys were thrown out of employment.

PRINCE EDWARD ISLAND.

Charlottetown.

This district found the month of November equally as brisk in all the different trades as before the war broke out. Carpenters and other trades were well employed.

Notwithstanding the misgivings about the prospects of the lobster fishing season last spring the total output for the province exceeds that of last year by 5,512 cases. The total number of hundredweights caught exceeded the catch of 1913-14 by 11,111. Prince Edward Island does not engage extensively in the shipment of live lobsters. Last season, however, the shipments in this class exceeded those of the previous year by 86 cwt.

NEW BRUNSWICK.

Fredericton.

There was little change in the general industrial situation from that of the previous month during November, but if anything the outlook was not quite so favourable. Skilled labour, such as masons, carpenters and outside trades, were rather quiet, and many of these have gone to the lumber woods, as have a considerable proportion of those engaged in unskilled labour. Manufacturing, on the whole, was good and the various factories and workshops have been keeping their help well employed.

Nearly all the sawmills in this vicinity have been closed down for the winter, but in most instances the men have gone into the logging camps and have not increased the number of unemployed.

Moncton.

Labour conditions were very satisfactory during November and showed but little falling off in volume of employment from the preceding month. The weather being mild and open proved very favourable to the prosecution of

outdoor labour and so enabled contractors in most instances to make sufficient advance upon their contracts as to place them in good position to meet winter conditions.

Active conditions prevailed in the Government railway shops and in the various local manufacturing plants and the outlook for a continuance of these conditions appeared good. Though about 80 new dwelling houses have been erected in the city during the past season, rents still continued firm and the demand active with but very few vacant houses to be found.

Newcastle.

The labour market was not quite so busy during the past month as the previous one, but compared favourably with the corresponding month of last year. Skilled labour was in the usual demand, especially in building trades, but there was considerable falling off in the demand for unskilled labour, this being due to the closing for the season of most of the lumber mills in this locality.

There was exceptional activity in shipping circles for the period of the year and a number of steamers loaded lumber for shipment across the Atlantic. It has been a number of years since steamers loaded at this port so late in the season.

Active preparations were being made by fishermen for the opening of the smelt season.

There were practically no lumber mills in operation, but large crews were in the woods.

All local industries were working steadily.

St. John.

With the opening of the winter port, business assumed a more encouraging appearance, and many men were employed around the docks—a great improvement over the same period last year. Work

in the building line also improved since October.

Through the efforts of the grocers' section of the Retail Merchants' Association, a soap factory, which had been closed for about two years, was again put into operation. The building and machinery has received an overhauling. This plant has been taken over by the Asepto Manufacturing Company, and arrangements have been made with them by the grocers' section of the association to manufacture and place on the market soap and soap powder to be known as the "R.M.A." Label.

Inland revenue receipts for October were \$21,171.11, and for the corresponding period last year \$17,837.18, an increase of \$3,333.93.

The customs receipts for October were \$248,447.38, and for the same period last year \$92,730.17, an increase of \$155,717.21.

The harbour revenues for the month of October were \$4,519.22 as compared with \$4,447.19 last year, an increase of \$71.32.

QUEBEC.

Hull.

Labour conditions showed much improvement as compared with November of last year. The demand for shanty-men was 50 per cent better than last year. The city also employed quite a number of men at sewer construction.

On account of the recruiting for overseas service, the number of unemployed was 75 per cent lower than at the same time last year.

Montreal.

Because railway earnings and bank clearings were averaging at close to the level of the most active years in the Canadian trade, and because the great activity in munitions manufacture continued unabated, November's business statistics were encouraging. If this activity were equably distributed

through all the trades and businesses of the community the situation could be regarded as better than normal. Construction, however, was in just as quiescent a state as it has been since the spring of 1914 except that the building of new plants for munitions and other purposes has drawn from the city a number of building tradesmen, who would otherwise have found it difficult to get employment. The wood-working trades were, with few exceptions, still doing a business far under the average.

The Canadian Government has given large army shoe orders aggregating 640,000 pairs to manufacturers, who are mainly in this district. Orders have been not only for regular boots but for rest or hospital shoes and larigans for trench work. Manufacturers in Montreal, Quebec, St. Hyacinthe, Sherbrooke, Plessisville and elsewhere participated in this order. Mr. D. Lorne McGibbon, president and general manager of the Ames-Holden-McCready Company, stated on November 11 that the company had closed an order for more than \$1,000,000. This may be included wholly or partly in the business above reported, but Mr. McGibbon also added that this was the forerunner of larger business for export account. The company is negotiating with several of the belligerent countries. The local business of the company is improving noticeably, the demand from Western Canada being much better.

Most of the cotton mills are busy to capacity and domestic manufacturers of woollens were working day and night shifts. The Montreal Cotton Company and the Canadian Cotton Company, both producing dyed and colored goods, have issued new advanced price lists. The Dominion Textile Company mills have been working to capacity on orders for Canada and to fill a good export demand.

Good orders were reported from pipe foundries, but business was slack with general foundrymen and the movement in pig iron has been small. The iron

and steel concerns have utilized as a rule their own iron for the manufacture of the steel billets, blanks and bars so much in demand just now.

The war has had an important effect in developing the Canadian chemical industry. Among new industries started here, Dr. R. F. Ruttan, director of the Department of Chemistry at McGill University, mentioned to the Canadian section of the Society of Chemical Industry the manufacture of the important drugs, aspirin, salol, salicylic acid and oil of wintergreen. Novocain and other synthetic drugs are also being made commercially or under experimental conditions. Dr. Ruttan stated that after the war the country would possess a new and valuable class of operatives in the country, namely, those skilled in chemical manufacturing methods, and the various companies will possess plants and equipment for chemical manufacture which will have been paid for by the remunerative contracts now available.

Paint and oil men reported good business in orders for shipment by the last river boats as well as from ear manufacturing companies and others.

Night navigation ended on November 29, and vessels of the Department of Marine and Fisheries practically completed taking up all the gas buoys on the river by December 1. On that date only one vessel remained to go down the river to the ocean. The last lake vessel is expected to go up the lakes from this port on December 4. Very few were moving. Most of the long-shoremen have left Montreal for winter ports and some of them have enlisted.

Customs receipts for last month showed a greater percentage of increase than any month in the port's history. The \$800,000 addition to Elevator No. 1 was being covered and inside work will go on all winter.

All railway companies show a great leap in earnings for the last two months, the Canadian Pacific especially

almost doubling what it received in the depression of the same months of 1914.

The Trades and Labour Council executive is considering a proposal to start a weekly labour paper. It is to be printed in both languages and to have eight pages. Mr. J. R. Brunet has been appointed fair wage officer for the province of Quebec. International Organizer Corcoran announces that the Brewery Workers have come to an agreement with the Independent Brewery under its new management so that they will have a fifty-hour week, an increase of wages, and the use of the union label. The International Barbers' Union are trying to bring about the closing of all barber shops between 8 p.m. and 7.30 a.m. except on Saturdays. The Trades and Labour Council has endorsed the movement.

The Soldiers' Employment Commission, province of Quebec, started work on November 26, organizing and preparing to cover the province in a way that will enable them to find work for the returned soldiers and help for the totally disabled. According to Mr. Clarence F. Smith, honorary secretary of the Montreal branch, Canadian Patriotic Fund, three hundred of these men were looking for work and only an occasional one finding employment. The commission mentioned above is to co-operate with hospital commissions and every other organization and person trying to meet this need so as to remedy matters as quickly as possible.

To meet a deficit of more than \$2,000,000 the controllers have agreed to recommend the reduction by 25 per cent of the salaries of all the regular municipal employees, but when the Legislature passes an amendment to the city charter allowing an increase of one-tenth of one per cent in the realty tax, Mayor Martin says that the amount will be reimbursed. By the end of the current year the city will have 200 miles of paved streets, of which 40 miles were laid this season. The corporation is even yet laying 5,000 yards a day of asphalt.

Local bank clearings for November totalled \$282,437,024, the second largest monthly total ever reported by the city. The month was also the most active of the year on the Montreal Stock Exchange, the heaviest trading centring in Steel of Canada, Cement, Iron, Scotia and Bridge.

Quebec.

The month was a good one for labour. The construction of a number of dwellings and other building operations helped materially to make the demand for building trades brisk.

River steamers, tugboats and coasting vessels were just beginning to lay up for the season, paying off their crews.

The George T. Davie Company of Levis has secured the contract for the building of a large car ferry and this, added to the other ordinary dock work, will make an exceptionally busy winter for iron ship building trades.

In the lumbering industry all of the big mills had finished their season's cut. The most of them ran until the middle of the month. Large quantities of sawn lumber were in the piling grounds, the shipments not having kept pace with the output.

Sherbrooke.

Conditions in the labour market were the same as during last month.

Metal manufacturing establishments and cotton and woollen mills were busy.

The asbestos mines were all working, also the copper mines and the chrome iron mines.

Sorel.

The condition of labour has been somewhat better than during the previous month.

Industrial activity in the district has been as good as in the previous month, if not a little better.

Lumbering has been satisfactory but fishing poor.

St. Hyacinthe.

The general condition of labour was much better than during the preceding month. Building operations were quiet, as usual at this season of the year, but all the other industries were active, and civic works gave employment to a large number of labourers and will continue until late in the winter.

Farmers were busy threshing and work on the farm was good. Farm and dairy products sold well and there was a good demand for such products for export.

St. John's and Iberville.

Labour conditions were about the same as during the preceding month. There was much unemployment among the building trades, and the manufacturing industries were about the same as last month.

Wholesale and retail business was more active than during October and banks reported a good month.

Three Rivers.

Labour conditions showed little change from those of the preceding month. Exceptionally fine weather prevailed and there was a lot of outdoor work going on such as street paving and sidewalk making. Saw mills also continued until a few days after November 15.

The Three Rivers Traction Company's cars were expected to run on December 1.

There were several shipments of lumber for the Old Country and several steamship loads of bituminous coal unloaded in this port, besides several canal boat loads of American anthracite coal.

Factories were running full time with orders ahead for some time.

Labour conditions in the district were particularly good, especially at Grand Mére and Shawinigan Falls, Que.

ONTARIO.**Belleville.**

During November labour generally was good considering the circumstances. In the various industries of the city there has been no decrease of hours of labour or employees. A few manufacturing concerns were working day and night. The number of employees in the various manufacturing concerns shows scarcely any decrease from a year ago for the same month.

During the past season building operations in the city have been considerable and have given employment to mechanics of various trades.

Berlin.

Labour conditions for Berlin and Waterloo for the month of November showed a decided improvement over the corresponding month of last year and even a little better than last month. Many factories were working overtime.

Some of the building trades were not so busy, but these men were getting into the factories.

Wholesale and retail trade was reported better than last month.

Customs returns for Berlin for October, 1915, were \$59,172.09, and for October, 1914, \$32,075.81, an increase of \$27,096.28.

Outside labourers were still well employed, while farmers in the district were still busy hauling sugar beets to the factory.

Brantford.

Labour conditions were about the same as last month, comparatively few men being unemployed and those mostly unskilled labourers. Some bricklayers and carpenters were unemployed but the majority of mechanics have secured work in the factories. Very few building permits were issued during the month.

During the month the Massey-Harris Company's plant was closed for stock-taking, but will resume operations on December 1. In some departments of a number of factories extra time has been worked. In other factories, however, short time prevailed. The approach of Christmas has given an impetus to retail trade and store clerks and others affected were busier.

A noticeable feature in the local press advertisements has been the number of boys being advertised for, to serve in various capacities.

Expressmen and delivery employees have had a better month than they have had for some time, while teamsters and carters report improvement.

Brockville.

The month of November has been one of unusual activity in many lines of work. Labour conditions were better than October and far exceeded the month of November, 1914. The supply was equal to the demand and there was employment for all who wanted work.

Railway traffic has been very brisk during the month, there being much grain on the move and a fair amount of passenger traffic.

Manufacturing was brisk in most lines. Several factories were running day and night shifts and others were working overtime.

Chatham.

With the exception of one or two factories, labour conditions were greatly improved over the preceding month. A large number of men and teams were very active at the railway spur and on the new sugar refinery. All available labourers were given employment.

The building trades were particularly active. Bricklayers reported November the best month of the year.

Flour mills and woollen mills were running night and day.

The sugar factory and other prospective buildings will help to supply suffi-

cient work for all classes during the coming winter.

Farmers generally were very active with fall work. Many were signing large contracts to grow sugar beets for the new company; 8,000 acres were asked for, and the amount has been more than doubled, but the acreage of fall wheat will be considerably less for 1916.

Cobalt.

Labour conditions, taken upon the whole, were very satisfactory, and there could not be said to be any unemployment problem in any part of the district. The old rate of pay still prevailed at all of the mines, although lumbermen were paying lower wages than usual and found it difficult to get sufficient help at the existing scale of from \$18 to \$20 a month with board. Common labourers were offered \$1.50 a day with board or \$2.00 without, and very few men have been agreeable to accept this scale of wages to go out of town.

Practically the only seekers after work at local employment offices were men who change places from one job to another, or miners who keep changing from one mine to the other, and this condition prevails during good times or bad. Employment agents reckon about 5 per cent of the total employed labour temporarily idle in this way.

The rise in silver was expected to cause a speeding up of mining operations throughout the camp in order to take advantage of the high market prices and the employment of a greater number of men was looked for, should the existing price of silver be maintained.

Galt.

The big machine shops were still running day and night shifts and knitting mills were still busy working overtime. Labour was scarce, and, in fact, mechanics were being advertised for daily.

Although the building season was nearly over there were still some building operations being carried on.

Factories of all kinds were busy. There has been a new cigar factory opened up here by a London firm, and, although employing only a few hands as yet, the firm expects to put on more men as soon as the demand warrants it.

Looking at the situation from all sides, everything looked bright for a busy and prosperous winter in this district.

Guelph.

The labour situation continued satisfactory during November, labour generally being well employed.

Weather conditions were very favourable for outdoor work and builders took advantage of it to finish contracts, while civic works were nearing completion.

The outlook for manufacturers was much brighter than it has been for months past.

Customs returns for the month of October amounted to \$22,708.22, an increase of \$11,687.64 over the corresponding month last year.

Wholesale and retail merchants reported trade fair.

Hamilton.

Labour conditions during November were better than during the same month of last year and were just as satisfactory, if not a little more so, than during the previous month, the supply and demand in most trades being about equal.

All branches of the building trades, with the exception of bricklayers, were fairly active.

The Hamilton branch of the Canadian Manufacturers' Association have a special representative at its office in the Sun Life building, to register returned soldiers and get first hand information regarding the class of work they are physically able to perform. Already a number of returned soldiers have been placed in positions.

The Hamilton District Trades and Labour Council has brought to the attention of the Board of Control the fact that 6 cents per loaf is being charged for bread here when nearby cities are getting it for 5 cents per loaf. If the price of bread continues at 6 cents per loaf here it is the intention of local labour men to start a bakery along co-operative lines.

Customs receipts for the month of October amounted to \$323,278.71, as compared with \$148,943.51 for the corresponding period of last year.

Manufacturing remained about the same as during the preceding month, not quite back to normal, but considerably better than during the corresponding month of last year.

Kingston.

The condition of the labour market was very encouraging and prospects were far brighter than for the corresponding month of last year, unskilled labour particularly being greatly in demand. While the building trades were very dull, other trades were fairly active and factories, foundries, etc., were working full time. The Canadian Locomotive Company have taken back the employees who were laid off temporarily and were taking on new hands every day.

The customs returns for this port amounted to \$68,325.35 for the month of October as compared with \$15,887.85 for the same month last year. The increase is largely due to the immense importations for the Locomotive Works.

The Inland Revenue collections for October totalled \$10,206.71.

London.

Industrial conditions continued to improve throughout the year, until at the end of the month unemployed persons were very scarce. Advertisements were appearing in the daily papers for machinists, cigar makers, clothing salesmen, press feeders and other lines—something

that has not occurred before for over a year.

The city will vote at the municipal elections on the question of guaranteeing bonds amounting to \$1,000,000 in the construction of a network of hydro-electric radial railways, a section of which is to connect London and Stratford. A vote will also be taken for \$50,000 on the question of extending the London and Port Stanley Electric tracks (owned by the city) to some of the manufacturing concerns within the city limits.

The Michigan Central Railway has just completed an agreement with the city to have the city carry the Michigan Central Railway cars over the London and Port Stanley electric line from London to St. Thomas, at a rental of not less than \$25,000 a year, on a mileage basis.

Niagara Falls.

November was a prosperous month for practically all classes of working people. There was an improvement over October and a very marked gain over the depressed conditions of last autumn. Financial and commercial conditions were very good.

The electors of the city voted to bring the municipal electric light and power system into the organization of the Ontario Hydro-Electric Commission. At the same election a proposition to establish a municipal library was defeated by a large majority.

Though there were some vacant dwellings and rents have been generally reduced, the erection of new houses continues. A number were commenced during the month.

Manufacturing concerns were all busy, with only one or two exceptions, and several were very busy.

Fenwick.—The price of natural gas was reduced from 75 cents to 25 cents per thousand feet.

Port Colborne.—The smelting plant was closed down for heavy repairs. A large number of men were employed in renewing the linings of the furnaces and in other improvements.

Orillia.

During the latter half of the month there was a noticeable falling off in the demand for unskilled labour, due to the closing down of outside work. The factories continued busy.

The customs receipts of the Orillia office for the first six months of the fiscal year increased from \$41,419 for 1914 to \$234,086.

Saw mills were shutting down and work in the bush was beginning.

Ottawa.

The labour situation in November was marked by some improvement in several trades while steady enlistment and a considerable demand for workmen outside the city prevented an increase in the unemployed.

Printers and allied trades were busier than in October as were sheet metal workers, carpenters and retail clerks, the improvement in the latter instance being due to Christmas business.

Work maintained on several civic enterprises improved the unskilled labour situation considerably and several other civic undertakings were expected to be started in the near future.

Trades engaged in the manufacture of war supplies continued busy and in this connection a demand from the United States for skilled leather workers was reported.

Relief organizations reported an improved condition as far as unemployment was concerned. A decrease of 75 per cent in the number of applicants for employment during the month as compared with November, 1914, was shown by the Union Mission.

A movement for the registration of women who are willing to perform men's work as far as possible and thus fill the places of men going to the front has been inaugurated by the Ottawa Women's Canadian Club.

Following difficulty through an alleged "patronage system" in the ap-

portionment of work on civic enterprises which led to this work being awarded by contract, the day labour system is to be given another test by the City Council.

A number of local carpenters have found employment in United States centres where building is reported active.

Improvement in labour conditions was reported in the leading Ottawa Valley centres.

Forty per cent of the members of the Bricklayers' Union have enlisted.

Owen Sound.

Labour conditions were very satisfactory during November. There seemed to be employment for all and employers on the other hand had little difficulty in securing labourers or mechanics.

Metal working establishments were busy and other factories were doing fairly well.

Money seemed fairly plentiful and retail business was good. Conditions were much better than in the corresponding month last year.

Building was quiet and practically confined to repair work.

During the month the Eugenia section of the Hydro-Electric began operations and Owen Sound is now receiving hydro current. The steam plant is kept in readiness to supplant or replace the Eugenia current should anything go wrong with the power there.

Peterborough.

Labour conditions during November showed some improvement over the previous month and were much better than the corresponding month of last year. The building trades were better employed than they have been for some months. Manufacturing establishments were all working full time, with the outlook for the winter better than the corresponding period of last year.

Female help was in good demand, but unskilled labour was not so active this month as through the summer months.

The cheese factories have just closed their season and the report shows that the cheese production in this district brought the farmer over \$350,000. Merchants reported business better than a year ago, due to a big country trade.

Port Arthur and Fort William.

The situation in the labour market was very similar to that of last month, with the addition that, with the advent of the herring fishing during the last ten days of November, the fishing industry has employed some scores of extra men.

All transport workers were busy, especially on grain elevation, coal docks, railway transport, steamship navigation, railway workshops and machine shops. Conditions in the building trades were worse even than for the same period last year.

The herring fishing season began about ten days before the end of the month and will last till the middle of December.

There was practically no lumbering in the district this year, as lumber yards are full of unsold stock from previous cuts.

With the exception of blocking out claims in the Kowkash district there was little being done in the mining industry.

Sault Ste. Marie.

The steel and paper mills were working full handed and full time, but in all other business there was a general standstill. The discontinuance of operations in sawmills was expected to throw about 300 men out of employment.

Stratford.

Labour conditions during November were about the same as the previous month. Owing to the mild weather all

outdoor workers and the building trades were very active. Iron factories, machine shops, knitting and woollen factories were busy on war contracts and in most cases running day and night gangs.

The customs returns at the local port for the month of October were \$18,681.29. For the corresponding month of last year they amounted to \$16,450.96.

The excise returns for October were \$5,561.85; the same month of last year they amounted to \$4,173.06.

St. Catharines.

Labour conditions during November showed little change as compared with the previous month. Manufacturing industries were fairly busy. The building trades showed an increase in activity owing to the work being rushed to completion before the end of the season.

Conditions at Thorold, Merriton and Port Dalhousie continued fair.

St. Thomas.

Labour was generally well employed in the city and district during November. Unemployment was not in evidence, and the month compared favourably with the preceding month.

Local industries were fairly well employed, while conditions in the railway shops were good. Night shifts were employed in some industries.

Fine weather made outdoor work possible, and the building trades were as well employed as during the previous month.

Railway traffic employees reported a fair month. A few reductions were made in the traffic department of the Michigan Central Railway, five brakemen being affected. Business was as good as usual, but the regular men were working so steadily that it was found necessary to reduce the spare list. The Pere Marquette Railway made an increase in its traffic staff during the month.

Women workers were well employed.

Business with merchants was slightly better than during the previous month, though still below normal.

Toronto.

Labour conditions during November were generally satisfactory and continued to show improvement. Skilled mechanics as a rule had plenty of work excepting in the building trade which was still slack, though improving. Carpenters and painters were better employed than the other branches. The mild, open weather which prevailed during the month was favourable to outdoor labour, so that unskilled workers were better employed than usual at this season.

The motor manufacturing business of the Russell Motor Car Company, Limited, will be taken over by the Willys-Overland Limited, capitalized at \$6,000,000, which will make extensive additions to the plant.

The number of jitneys engaged in carrying passengers has latterly shown a great decrease, the business having in many cases proved unprofitable. There were only 11 jitneys in operation on Yonge street at the close of the month, as compared with several hundreds six months previous.

The metal and engineering trades were active with the exception of shipbuilding, which was quiet owing to the great advance in the price of steel and delays in its delivery. The local union of the International Machinists' Association have asked for a conference with the employers to consider a proposed new schedule of wages and hours, the principal points of which are as follows: 50 hours to be considered a week's work, all hours in excess to be paid for as overtime; double time for work on Sundays and specified holidays; an increase of 10 per cent over day wages where night shifts are employed; minimum wages for tool-makers, 42½ cents per hour; machinists, 37½ cents; specialists, 33 cents, and machin-

ists' helpers, 27½ cents, the agreement to remain in force for one year.

Windsor.

Labour conditions have been fairly good. There was little unemployment in this vicinity, although there was no exceptional demand for labour as there has been an influx of men from other cities who have found employment here. Fine weather favoured the building trades and outside work.

The automobile industry has been exceptionally active, many of the firms having received large foreign orders for cars of all classes. The manufacturers of automobile parts also have been active.

Woodstock.

Labour of all kinds was pretty fully employed. There were a good many men with broken time, but practically nobody without work of some kind. It has been a very dull season in the building trades, for instance, but practically all the men employed in these trades were finding employment of some kind though not all were working full time.

The furniture trade continued slack. Manufacturers of organs and pianos reported some improvement in business. Manufacturers of wagons and sleighs were busy filling orders for the West.

Reports from the various factories showed there were very few inquiries for work and practically none at all from skilled mechanics.

MANITOBA.

Brandon.

During the past month labour was employed to about the same extent as during October. There has been no pronounced activity, excepting in the case of machinists, in any of the skilled trades, yet all who desire it seemed able to obtain employment.

Wholesale and retail business was quite up to normal.

The majority of the threshing in the district has been completed, with a splendid yield of good quality.

Winnipeg.

The skilled trades were fairly well employed during the month, the noticeable exception being the building trades. Retail firms were busy and engaged much extra help toward the latter part of November.

Those engaged in transportation work were very busy. The movement of late grain was steady. About six per cent of the grain in Manitoba has yet to be threshed and this will be done wherever possible during the winter. The City Free Employment Bureau found work for 779 men during November.

SASKATCHEWAN.

Moose Jaw.

November was a splendid month and threshing operations were carried on continuously for the first three weeks, a great amount of employment being given in consequence. The last week of the month, however, some outfits closed down and this resulted in the release of a number of hands. Harvesters from the eastern provinces started homeward and daily large numbers were to be seen taking the trains for their homes in the east.

Retail business improved considerably and a big difference was felt. A big demand was being made on eastern wholesale houses and in many lines it was hard to obtain a supply of goods.

Threshing operations were practically completed. There was some work still to be done in the outlying districts. Considerable grain has been marketed but there was a great amount still in the farmers' hands. Elevators were blocked and transportation was slow.

Prince Albert.

Little variation has taken place in regard to the general condition of employment. The lumber camps operating in the district have taken all the available labour suited to their needs, and few cases of unemployment were to be found.

The fishing industry in the northern lakes was about commencing, but with the general prosperity of the farmer and the rise in the value of fur it was expected there would not be so many men engaged in fishing this year.

Some 15 lumber camps were operating this year throughout the district, and the merchants of the city have enjoyed a trade revival owing to the presence of men passing through to their respective camps.

Regina.

Labour conditions continued favourable. The building trades were fairly well employed, though unskilled labour was not so well employed as last month. Railway employees were exceptionally busy moving grain to the head of the lakes.

The stores were reporting a good increase in business, much better than a year ago, with the result that clerks were fully employed.

Agricultural implement firms report collections extraordinarily good, far better than expected, and renewals were very seldom requested.

The financial statement of the city of Regina for the first ten months of 1915 has been issued and shows a loss by the Municipal Street Railway of \$104,358.21, with a surplus of \$30,879.18 from the Electric Light and Power Department and also a surplus from the Waterworks Department of \$19,107.72, showing a net loss on the three public utilities of \$54,371.31.

Farmers have had one of the best years ever known in this province. Mostly all the threshing was done, also a large amount of fall ploughing in

readiness for the spring crop, and with more snow on the ground at the end of the month than fell all last winter, there should be an abundance of moisture in the ground to start the crops.

Saskatoon.

There were little signs of any approaching unemployed problem. However, there will be very little doing in the city during the winter as far as could be learned, but the rural districts showed much more activity than usual at the time of year. Men were leaving for work in the bush and farms were taking on men for the winter months. Most of the harvesters brought in from outside points have returned to their former place of residence.

The Canadian Pacific Railway placed two men per section on its section crews west of Saskatoon during the month. Humboldt also engaged men from Saskatoon for sewer work.

Retail business has been exceptionally brisk during the past month. Many lines of work are showing signs of renewing activity.

Transport workers were very busy on account of the heavy movement of grain and also by the increasing incoming shipments in various lines.

With threshing over for the most part a record-breaking crop was reported for most localities. Forty to 45 bushels of wheat was a common yield westward of the city, and there were authentic records of 55 to 60 bushels of good hard wheat.

ALBERTA.

Calgary.

Unemployment in Calgary remained about the same. There was every indication that employment for the winter would be about normal. While there was little building activity in the city, there has been a demand for carpenters and others for elevator construction and houses and buildings for farmers.

The Canadian Pacific Railway shops with an increased staff were working full time.

The weather was still favourable for threshing operations. It was estimated that about 50 per cent still remained in the stack. A shortage of cars to handle the crops was reported from all quarters.

During the month the Associated Charities have given relief to 69 British families and nine foreign families.

The Civic Labour Bureau reported giving employment to 50 men during the month.

Edmonton.

The local demand for labour was less than the previous month and for the corresponding month last year. Many men who were engaged at threshing work returned to the city at the end of the month, and the closing down of outdoor city work increased the number of unemployed. A number of carpenters were engaged fitting up winter quarters for the soldiers but the balance of the building trades had a very quiet month.

On November 22 the City Council approved a by-law authorizing the execution of an agreement with the Edmonton Power Company for the supply of electric energy to the city for a term of thirty years. The company agree to take over the present city power plant on January 1, 1916, and to erect a hydro-electric plant some sixty-five miles up the Saskatchewan river at an outlay of \$6,000,000; also an inter-urban railway to the same point at a cost of \$1,500,000, the whole to be completed and in operation within seven years.

Railways were active handling grain during the month.

While wholesale business remained about the same as the previous month, retailers reported a slight improvement with the mild weather of the past month as a reason for the slow movement of some lines of winter merchandise.

Lethbridge.

Labour conditions remained about the same as during last month. The weather stopped threshing at times, and there was still a great deal to be done at the end of the month.

Business in all lines was improving, and many were coming in to visit the district owing to the record crop. The hotels were generally filled to full capacity.

There was practically no unemployment. The building trades were dull, but the men were taking work in other lines. Coal mining was very active, with a constant demand for more miners.

Medicine Hat.

Labour conditions showed little change from last month. There were very few unemployed in the city, and prospects looked good for the winter. Flour mills were working 24 hours a day.

Wholesale and retail trade was improving. Retail merchants reported business far ahead of the same time last year.

Customs receipts for October were lower than the average, amounting only to \$4,643.17, compared with \$7,066.96 for the month of September and \$8,259.29 for October, 1914.

Owing no doubt to the splendid crops this year, business at the local Dominion Lands Office was becoming brisker. During October there was a total of 92 entries made up as follows: 48 homesteads, 40 pre-emptions, and four purchased homesteads. For the same month last year there were very few entries.

The Dominion glass plant of Redcliff reports that it is its intention to start its plant with a full force at the beginning of the coming year. When everything is in readiness, the plant will have a full complement of at least 110 men, who will have steady employment all through the winter.

BRITISH COLUMBIA.

Fernie.

The employment of labour throughout the district has maintained the improved status which became particularly noticeable during October, and conditions generally were far more favourable than during the same period last year. There was no increased demand for labour, but nevertheless there was practically no surplus of labour, as the principal industries continued to give steady employment.

Commercial activity in the wholesale and retail trades continued to be brisk, while the freight shipments have considerably increased, particularly in the exports.

Conditions in the coal mining industry in view of the heavy demand for coal and coke, have been very satisfactory. At the Fernie camp as well as in practically all camps in the district the mines were working steadily and the few idle days which occurred during the month were caused through car shortage and not from lack of orders.

Nanaimo.

While there has been very little change in the different branches of labour in the district the number of idle men has shown a marked decrease, large numbers of men having gone to the Old Country and the other western provinces to work in the mines. There were, however, numbers of men, principally foreigners, coming around looking for work.

The fishermen of the district have been quiet during the month, the herrings not having been very numerous as yet.

Saw mills of the district have been working fairly steady but not to their full capacity. The logging camps lost a good deal of time on account of bad weather. The demand for logs was quiet.

Coal mines in this city worked steadily but other companies in the district lost a good deal of time.

Nelson.

Labour conditions for the past month have been fairly good, on account of the mines being active and the lumbering industry having improved. The city was employing quite a number of men making and getting a road in fit condition to have the wood that was cut by the relief committee last winter hauled out. The relief committees are thoroughly organized and there was no one in the city in need, as far as known.

This has been a record year for ore shipments for British Columbia, and the present year should constitute a record in mineral production of the province. Rossland is producing about 40 per cent more ore than last year. The Slocan mines are shipping about 2,000 tons per month, and there are the zinc shipments also to be taken into consideration. Trail smelter alone has treated about 4,000 tons of ore; the Grandby has treated 800,000 tons of ore at the Grand Forks plant. The Anyax has handled about 300,000 tons. The British Columbia Copper Company are handling about 25,000 tons per month, and the Britannia Company a similar amount. The mineral production of British Columbia at the present time is about 11,000 tons per day, and the completion of new plants under construction will bring this output up to 25,000 tons per day. The Lucky Jim mines were shipping about 100 tons daily to the Rosebury mill near New Denver, B.C., and the production was showing a satisfactory profit.

The British Columbia Electric Company's new sub-station at Trail, B.C., was about completed and they were also rushing work on the improvements at Bonnington, B.C. The Smelter Company were also rushing improvements at their plant on the works being done. A large number of the hotels were having additions made to their buildings to accommodate the men working in

Trail. A number of the men were still sleeping in tents.

New Westminster.

The conditions of employment during November were not on the whole as good as during the previous month. The work of paving, etc., being done by the city nearing completion during the latter part of the month let out a number of men, and the fishing season practically closing so far as the canneries were concerned on December 15 left another lot of men idle.

There was not much being done in the woodworking factories, but machine shops were becoming active.

Prince Rupert.

Conditions were not so bright as they were last month owing to the approach of winter. Many small works were closed to remain so until spring. There has been no new work started and the prospects for the winter were not very good. Fishing returns showed a slight falling off owing to rough weather at sea. About 1,700,000 lbs. were landed during October.

Mining around the Anyax district and on Princess Royal Island was fairly busy. In other parts of the district, however, conditions were quieter owing to winter commencing to set in.

Vancouver.

There were not so many men unemployed as there were at the same season of the years 1914 and 1913. This was due to a large number having left the city. Industrial conditions generally were very slack and the supply of labour still exceeds by far the demand for it.

The city, through its relief department, was giving aid to 474 families; and to 122 single men who are aged or infirm. The monthly cost of this is approximately \$5,250. In addition, there are 547 registered applicants for work at the civic relief bureau. The

dispute between the Great Northern and Canadian Northern Railway Companies regarding running facilities into Vancouver was officially reported to be settled, and the Canadian Northern Railway Company was proceeding with its terminal work which was suspended for a while.

The harbour commissioners were doing a good deal of reclamation work on tide flats which was finding employment for a number of men. When completed, the reclaimed area is to be leased for industrial sites.

New industrial enterprises started recently are a toy manufacturing concern, capitalized at \$25,000, and the Port Moody Steel Works, \$150,000.

Machine shops generally were busy and the Canadian Pacific Railway shop was working nine hours per day for five days of the week and five hours on Saturdays after a protracted period of short time.

The City Council has decided that next year the number of its members shall be eight aldermen, instead of 16 as at present.

The commission appointed by the Provincial Government to visit various cities in the United States and Canada, to inquire into the operation of workmen's compensation acts, has returned. Its report will shortly be in the hands of the Government for use in the drafting of a new Workmen's Compensation Act for British Columbia.

A big scheme of joint sewer work is being undertaken by the city and municipal councils. About 900 men are now employed on it and in order to relieve the unemployed situation the men are given two weeks' work and two weeks off.

Investigation based on conditions prevailing in Vancouver and the surrounding district on November 15 estimates the number of unemployed in that area at approximately 3,000. The coming winter does not present any prospects of improvement in this condition.

Victoria.

Labour conditions were very quiet during November, more particularly for outside workers, owing to uncertain weather conditions, which made employment more irregular than usual. The building trades were poorly employed, with prospects far from bright for the winter months.

The Civic Labour Bureau Committee has decided to abolish the register in use for some months past at the Labour Bureau and the superintendent has been instructed to open a new register, as the old one had become obsolete, owing to so many of the men who had registered on the old list having left the city. During the first five days the new registry was opened 217 unemployed men registered.

Several retail merchants have been fined for violating the provisions of the Shops Early Closing By-law.

Eight operators of moving picture theatres have passed the examination prescribed by the city by-laws and have been granted certificates.

The City Council has refused the request of the Master Bakers' Association to be allowed the right to manufacture loaves of bread of a less weight than 16 ounces.

Some three months ago, owing to a misunderstanding, the Brewery Workmen's Union of this city withdrew from their International. A special committee of the Trades and Labour Council took the matter in hand, with the result that all differences were amicably adjusted between the local union and their International.

REPORTS OF WOMEN CORRESPONDENTS.

Montreal.

The month of November has offered fair opportunities of employment for women. Conditions have been more favourable than during the corresponding month of 1914.

Many workmen's families will profit by the plans of the Department of Public Works to employ about 5,000 local men during the winter months in the construction of 94 sewers in the city.

Social Service Work.—The Montreal branch of the Patriotic Fund has organized various means of improvement for those under its care. Some 786 women workers are interested in its work. With the new year will begin lectures by a visiting housekeeper who will address groups of women in different wards. For the first three months this will be done at the expense of the Montreal Women's Club. The ward heads of the Patriotic Fund were addressed by Miss Laura Woodberry of Boston. She spoke of the Confidential Exchange

which was described as a clearing house for relief work—a system which does away with overlapping and indiscriminate charity.

People's Forum.—Under the auspices of the University Settlement, the Montreal People's Forum has been started. This means has already been taken in other cities for reaching all classes. Encouragement is to be given to the public expression of opinions for the sake of the mutual help resulting therefrom. Liberty, fraternity and helpfulness is the threefold ideal of the promoters of this scheme.

The Society for the Protection of Women and Children is to have a country home capable of accommodating from 60 to 75 children. This home is destined for the Protestant children who have been given into the society's keeping either by the courts or otherwise.

Child Welfare.—The Association for the Welfare of Youth (*du Bien être de la Jeunesse*) has taken up its activities for the present season. Its entertain-

ments given at regular intervals in different parts of the city are planned so as to give pleasing and profitable recreation to the youthful audiences; such questions are treated as alcoholism, the necessity of acquiring a good education, honesty, respect for authority, bad language, useless expenses, cigarette smoking. It is hoped that by extending such opportunities to the young the numbers of delinquents will gradually decrease. Such means are taken to reach the class of child that often appears at the Juvenile Court. Since the creation of the Juvenile Court in January, 1912, some 10,000 boys and girls have passed through the court; 90 per cent of this number did not return for correction or advice.

Milk Stations.—The Board of Control has been requested to recognize the great value of the city milk stations by voting a generous sum for their upkeep. In the last five years the number of milk stations has increased from three to 29. During the first eight months of the present year the following figures give some idea of the numbers who avail themselves of the advantages of these organizations: 2,610 entries were made, 9,996 free consultations, 98,958 pints of milk distributed, a great proportion of which were given free.

Dr. Boucher, superintendent of the Department of Hygiene, has made a recent appeal to the Board of Control recommending that the city give its support to the requests made by the Co-operative Union of Milk Dealers before the Railway Commission. Two requests in particular are made: 1st, that the railway companies put special trains at the disposal of milk dealers for the transportation of milk, leaving the stations at fixed times; 2nd, that a greater number of refrigerating cars be supplied.

Y. W. C. A.—The usual advantages are being offered by the Young Women's Christian Association during this season. Classes are held at its various branches giving business girls and others every

opportunity of perfecting themselves in their respective branches.

The committee of l'Assistance par le Travail reopened its workroom on November 15th, all information concerning which can be procured at the headquarters of la Fédération, Room 14, Monument National, Boulevard St-Laurent, between the hours of 9 and 12 and 2 and 4 p.m.

Mutual Benefit Associations for Women.—The Society of "Artisans Canadiens Français" and of "l'Alliance Nationale" are both continuing the formation of women's sections. The former has recently founded a centre in St. John's, P.Q., and the latter, one at Shawinigan Falls.

Toronto.

The improvement in amount of work in factories employing women and girls reported last month continued with but slight change. Boot and shoe factories were busy and advertising for more girls than they could obtain. There was also a tendency towards an increase in wages, and the outlook was brighter than it has been in the past three years. Paper box factories, which have been quiet since the beginning of the war, were busy, especially those manufacturing Christmas boxes. Carpet factories were working night and day, which is unusual, and ladies' wear establishments were still open three nights a week. This is perhaps explained by the fact that there was a greater demand for ready-to-wear garments, and this has caused a depression in business for dressmakers.

The Christmas orders for candy have been fairly well filled so that some of the night work has ceased. This is also the case in one of the knitting mills and one overall factory, where work on soldiers' water bottle covers has been finished.

Glove and mitt firms have been busy, and a new glove factory was being opened, where work on soldiers' gloves was expected to start at once. Five

forewomen have come from an American firm to commence operations.

The outlook for those working at the bookbinding trade has been brighter than for some time past.

The recent investigation and inspection of the Joseph Simpson Knitting Mills has resulted in the installation of additional ventilating fans. A minimum rate of pay of \$1 per day has been established and this rate is applicable to piece-work also.

First class stenographers were well employed at \$12 to \$15 a week and an exceptionally good girl gets \$18 a week. In this department business was almost as good as three years ago.

Nurses have not been well employed during the past month, the waiting list numbering about 70.

There was still a great lack of work for tailoresses, 20 per cent of whom were said to be unemployed. Many of those working were on short time, from one to six days a week or from one to four weeks a month.

Winnipeg.

The situation as regards women's and girls' employment has continued to improve, now that money from the crop is in circulation. This is especially noticeable in store help, which will continue to be better employed until the Christmas trade is over. But agencies express the opinion that the general situation is very much better than a year ago, demand being much more brisk. An estimate of unemployment made during the month places the total as 461.

The demand for domestics has continued very brisk; nearly all agencies report not being able to fill half the places offered. This refers especially to the general servant, although cooks, housekeepers and nurse girls are also in this class.

In the factories garment makers were reported to be busiest, war orders being the cause. Establishments having these orders were working overtime, and required additional help. In fact an ad-

ditional union has been organized in this trade. The laundries and confection factories were quite busy and larger staffs were said to be employed than a year ago. Bookbinders were not working with full staffs, but members of the union have found other employment.

Several hundred store hands have been taken on during the month. In addition to saleswomen, writers and copiers, bookkeepers and stenographers are included in this class. It is worthy of note that many married women have sought and found work during the month.

Teachers and nurses were well employed. New Normal classes will graduate in December, which it is expected will amply meet the needs of the province.

In the estimate of unemployment above referred to, it is worthy of note that of the 461 unemployed, 345 are estimated as being unskilled or with some training but no experience, the latter being inexperienced stenographers.

Vancouver.

A slight improvement in labour conditions for women was noted during the past month, due no doubt to the approach of Christmas trade and the placing of several Government contracts for military supplies of various kinds with local manufacturers. A small but steady demand for domestic help was also maintained. Compared with the month of November of last year labour conditions for women during the past month showed a decided improvement, the number of women seeking employment being 75 per cent less, with an increase in the demand along the lines of domestic work and some lines of factory employment.

The School Teachers' Association have again started relief work but not on such an extensive scale as during last winter. When the schools opened this fall the Teachers' Association discovered a surplus of \$4,000 in the treasury and decided to devote the money to purchasing clothes and boots for the children whose parents were in distress.

The City Relief Association have still some 400 families on the books dependent on relief through the unemployment of the head of the family, who in several instances is a widow unable to work, also several deserted wives with families to support.

The wage for domestic help averaged about \$12.50 per month in the city. Out of town a slightly higher wage was offered, from \$15 to \$20 per month being the average.

The demand for domestic help continued to be chiefly for "general" help, very few calls being made for cooks, housemaids or nursemaids.

Stenographers and bookkeepers were seeking employment during the past month, but the demand for their services was very slight. Sales clerks were more fully employed than during the previous

month, the Christmas trade beginning. Garment workers, while not fully employed during the past month, some of them being on three-quarter time, were in a better position than the month of November of last year, the report of their union showing no members unemployed at present.

Manufacturers of overalls and ready-made garments, who last year were closed down entirely, or only employing two or three people, this year have from ten to thirty girls working in each factory.

Confectioners and biscuit workers were working full time, the rush of the Christmas trade being at hand.

Tailoresses, milliners, dressmakers and seamstresses were fully occupied at the beginning of the month but towards the end trade slackened off, the end of the season being at hand.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—PROCEEDINGS DURING NOVEMBER, 1915,

THERE were two applications received under the Industrial Disputes Investigation Act during the month of November, the one from the street railway employees in Edmonton, Alta., and the other from certain employees of the Acadia Coal Company of Stellarton, N.S. Boards were established by the Minister of Labour during the month in both of these cases.

Applications Received.

On November 11 an application was received from the street railway employees of the Corporation of Edmonton, Alta., members of Division No. 569 of the Amalgamated Association of Street and Electric Railway Employees of America, to the number of six directly and 220 indirectly. The application gave as the cause of the dispute the dismissal by the Corporation of six men

in contravention of the existing agreement and the employees' consequent demand for their reinstatement and payment for all time lost.

A Board was established by the Minister on November 17, Messrs. Jas. E. Wallbridge and Wm. McAdams, both of Edmonton, Alta., being appointed members thereof on the recommendation of the Corporation of Edmonton and the employees respectively. The Board was completed on December 4 by the appointment by the Minister of Honourable Mr. Justice McCarthy, Edmonton, Alta., as chairman, this appointment being made on the recommendation of the other members.

On November 20 an application was received from certain employees of the Acadia Coal Company, Limited, engaged in the company's mines at Stellarton, N.S. The application stated that the dispute grew out of the employees' de-

mand for an increase of 10 per cent in their wages. The number affected was given as 430.

A Board was established by the Minister on November 24 and was composed as follows: His Honour Judge W. B. Wallace, Halifax, N.S., chairman, ap-

pointed on the recommendation of the other members of the Board; Mr. Wm. H. Chase, Wolfville, N.S., appointed on the recommendation of the employing company; and Mr. Simon Lott, Pietou, N.S., appointed on the recommendation of the employees concerned.

WESTERN COAL OPERATORS' ASSOCIATION AND DISTRICT No. 18, U. M. W. A.—SETTLEMENT OF DISPUTE AT KIPP MINES.

A DISPUTE which arose during the month of November between the Western Coal Operators' Association and District 18, United Mine Workers of America, respecting prices payable for certain classes of work at the Kipp Mines, was referred for settlement, under the terms of the existing agreement, to a committee consisting of three representatives of each party and an independent chairman. The miners' representatives on the committee were Messrs. William Graham, acting president; A. F. Carter and F. Barringham, and the operators were represented by Messrs. W. F. McNeill, commissioner of the Western Coal Operators' Association, N. C. Pitcher and J. B. de Hart. The Minister of Labour, being requested to name an independent chairman, appointed Mr. James Muir, K.C., of Calgary. The following is the text of the committee's report, signed under date of November 27, 1915, by the chairman and by Mr. W. F. McNeill, the representative of the employer.

Re Kipp Mines Dispute.

This dispute on the twenty-fifth of November, 1915, came before the undersigned independent chairman and Mr. William Graham, acting president of the U.M.W. of A.; A. F. Carter and F. Barringham, representing the miners; and Mr. McNeill, commissioner of the Western Coal Operators' Association, and N. C. Pitcher and J. B. de Hart, representing the mine operators.

It appears that in this mine some time prior to the dispute in question, a change was made by the operators in the method of working the mine, the working face or room, as it is called, being widened from 18 feet to 30 feet, this change necessitating the use of two railway tracks, besides some extra length of the room neck, and also extra width of the bone, and also that the cog work required by this change occasioned extra labour and cost to the miners.

This dispute covered five points in which this extra labour occurred, namely: (1) extra length of room neck, (2) extra width of bone, (3) extra propping, tracks to be laid, etc., (4) cog work, (5) brushing, and it was admitted by all parties that these different items of dispute went through the course provided by the agreement under the heading of "Settlement of Local and General Disputes," until it reached the president and commissioner above mentioned, all of the points in dispute prior to that time having been settled, except room necks, bone and cog work.

The findings of Mr. McNeill, the commissioner, and Mr. Phillips, the then president of the Mine Workers, dated October 27, 1915, and signed by both parties, is as follows:

"WIDE ROOM WORK."

Room necks—30 feet, \$6.00.

Bone—To be paid in proportion to width of room, using "Old Room Rate" as a base.

Other rates for "Room Work" as in present agreement to apply.

Since the making of the above findings, Mr. Phillips has ceased to be president of the U.M.W. of A., District No. 18, and Mr. Graham; above referred to, appeared as the head of that association, being, I understand, its acting president.

It is not denied that this question respecting an increased price on account of the cog work was one of the matters in dispute when the above findings were made, and from Mr. McNeill's statement, who is the only one now present who took part in that finding, this cog work was discussed and settled and no extra allowance was made for that work, both he and Mr. Phillips agreeing to this. The only two items in which any change was made being "room necks" and "bone," all other items to remain as at present under the agreement respecting "Kipp Mines" found on page 46. According to the terms of the agreement it is only in the case of the president and the commissioner not agreeing to a settlement that any further proceedings are to be taken, and if they agreed the decision is to be binding upon both parties, so that there is no appeal from that decision either to the joint committee of six or from them to the same committee and the independent chairman, and from what appears before me, in-

cluding the findings of the commissioner and president, I have no power to set aside or to vary these findings and have the dispute opened up for further consideration.

The contention of the miners is, that according to the finding referred to, the cog work has not been disposed of, but I am of the opinion that where anything extra was to be allowed as in the case of the "room necks" and the "bone," these were mentioned and the same would have been done in the case of the cog work if any increase was to be allowed for that work, and the final clause "other rates for room work as in present agreement to apply," I am of the opinion includes everything in dispute, and I so find.

Dated November 27, 1915.

(Sgd.) JAMES MUIR,
Independent Chairman.

I concur:

(Sgd.) W. F. MCNEILL,
Commissioner W.C.O.A.

I do not agree:

(Sgd.) WM. GRAHAM,
Acting President,
District No 18, U.M.W. of A.

INDUSTRIAL DISPUTES LAWS.

Summary of Interesting Report issued by the State of Victoria, Australia.

THE Government of Victoria, Australia, has published recently an interesting report by the Chief Inspector of Factories on an enquiry into anti-strike legislation, undertaken for the purpose of making recommendations as to the best means of lessening lockouts and strikes. The State of Victoria has as yet enacted no anti-strike legislation, but in 1913 and again in 1914 bills were presented in the Legislative Assembly which were designed to prohibit strikes

and lockouts, and although these measures did not pass, the Government promised a full enquiry into the working of strike laws in other countries, with a view to the adoption of the best.

The report deals with the industrial disputes legislation in effect in each State of the Australian Commonwealth and in the Dominion of New Zealand, and contains also a condensed description of the strike laws of the world. Compulsory arbitration is apparently the principle

followed in New South Wales, South Australia and Western Australia. In Tasmania the law forbids strikes in any trade in which a Wages Board has been established. The laws of Queensland and New Zealand, which, like the Canadian statute, are based on the principle of compulsory investigation only, do not forbid strikes and lockouts if the conditions imposed have been duly observed. Queensland's Industrial Peace Act of 1912 resembles the Industrial Disputes Investigation Act of Canada in prohibiting strikes and lockouts in public utilities unless a conference has been held before an industrial judge and proved abortive; but requires in addition that after the termination of a conference fourteen days' notice must be given and a secret ballot taken. While strikes are not forbidden in other industries, yet the law requires in these cases also fourteen days' notice and a secret ballot before a strike can be declared. Queensland, it is said, was the first country in the world to provide by law for the secret ballot, taken by state officials. In New Zealand strikes and lockouts are absolutely prohibited only in cases where an award or industrial agreement is in force. All other cases are governed by the Labour Disputes Investigation Act, 1913, which requires that notice of the dispute shall be given to the Minister of Labour, who must refer the matter to an industrial commissioner or committee, and that if no settlement is effected within fourteen days from the delivery of the notice to the Minister, the Labour Department shall conduct a secret ballot and seven days must elapse before a strike may be declared. "The Canadian Act," says the report, "was admittedly the model on which the Queensland Act of 1912 and the New Zealand Act of 1913 were founded."

The report contains comparative statistics and diagrams showing the prevalence of strikes and lockouts in the different states of Australia. In New South Wales, South Australia and Western Australia, for instance, the three

states in which all strikes and lockouts are forbidden by law, the percentages of disputes per 100,000 wage earners during the years 1913 and 1914 were eighty-three, twenty-two and twenty-nine respectively, while in Queensland, where strikes are prohibited only in public utilities until an investigation is held, and in Victoria, which has no anti-strike legislation, the proportion of disputes per 100,000 wage earners was twenty-two per cent.

The Chief Inspector of Factories points out that in spite of the absence of anti-strike legislation in Victoria, the statistics show that in the matter of industrial peace Victoria compares favourably with other countries. This he ascribes to the Wages Board system of regulating wages and conditions, claiming that a greater measure of justice for the workers is afforded by this means than by any other and the necessity or desire for strikes is thereby removed.

As a result of the investigation several important recommendations are made:

(1) It is urged that the Wages Board system now in existence in Victoria should be extended, the power to grant Boards to be vested in the Minister of Labour rather than in Parliament, as at present; that the Boards should be made larger and more representative, the area of selection of members being widened by no longer requiring that a member shall be actually engaged, as employer, manager or worker, in the trade concerned; that the powers of each Board should be definitely restricted and that a Super Board should be appointed for each trade group, to regulate working conditions.

(2) As a means of discouraging strikes it is recommended that whenever employees have recourse to a strike the Determination of the Wages Board in their case should be automatically suspended, the employees thus losing the protection afforded them by law, on the ground that, as the report states, "a striker cannot properly have his Wages Board and his strike at the same time."

(3) Laws should be enacted, applicable only to trades regulated by Wages Boards and to all public utilities, declaring strikes and lockouts illegal unless notice has been given of intention to lockout or strike, a secret ballot has been taken, in which the majority of voters have declared in the affirmative, and a period of seven days has elapsed from

the declaration of the result of the ballot.

(4) It is finally recommended that in order to prevent the needless or useless prolongation of a strike, provision should be made, as in the New Zealand Act of 1913, for the taking of a secret ballot in any trade whatever, at any time during a strike, whenever ordered by the Minister of Labour.

RECENT WORKMEN'S COMPENSATION LEGISLATION IN THE UNION OF SOUTH AFRICA AND VICTORIA, AUSTRALIA.

IN view of the recent enactment of workmen's compensation legislation in this country it may be of interest to give a brief review of the legislation on this subject in South Africa and in Victoria, Australia, in the year 1914. In this connection it may be noted that the enactment of this statute by Victoria leaves no Australasian territory without legislation of this kind, all the other commonwealths, including Tasmania and New Zealand, having previously adopted some form of workmen's compensation. In the year 1914 the province of Ontario also passed a workmen's compensation Act* and in the present year an Act** modelled in many respects on the Ontario measure was passed in the province of Nova Scotia. A workmen's compensation law which was introduced in the last session of the British Columbia legislature was not passed, but, as noted in the October number of the *Labour Gazette*, a Commission has recently been appointed in that province to investigate the subject.

It is noteworthy that in all this legislation the doctrines of "assumed risk" and "fellow-service" have been abandoned and that the "contributory negligence" of the employee is not considered except where it constitutes "wilful misconduct," and even in this event when the injury results in serious dis-

ablement or death, the workman or his heirs are entitled to compensation according to each of these Acts with the single exception of the South African measure.

It is somewhat difficult to compare the compensation schedules as in general the South African and Victorian Acts provide that compensation shall be paid in a lump sum while in the Ontario and Nova Scotia legislation the method of periodical payments is adopted, but on the whole it may be said that the compensation schedules of these Canadian Acts are more favourable to the employees. For example, where total disability results from the injury, the workman, according to the Ontario and Nova Scotia schedules, receives a weekly payment during life equal to 55 per cent of his average weekly earnings during the previous year; the corresponding payment is, in the case of the Act of South Africa, a sum not exceeding three years' wages, in no instance more than £750, and in the case of the Victoria statute a weekly payment not exceeding 50 per cent of the weekly earnings and not more than £1 10s, the employer's total liability not exceeding £500. In this connection, however, it should be noted that neither of these Canadian Acts includes agricultural workers, domestic servants and clerical workers as do the South African and Victorian statutes.

**Labour Gazette*, July, 1914, page 68.

***Labour Gazette*, November, 1915, page 599.

Another point of difference is that these latter measures provide for the settlement of disputes by the courts, while in the two Canadian Acts administration is in the hands of a Workmen's Compensation Board. It is noteworthy that this Commission-plan has been adopted by such leading commonwealths of the United States as California, Massachusetts, New York, Ohio, Washington and Wisconsin. Both the Canadian statutes and the Victorian Act provide for state accident funds, but the South African legislation makes no such provision for the security of payments, and it also differs from the other statutes in that the industrially diseased worker is not included.

Union of South Africa.—Workmen's Compensation Act, 1914.

This Act is "to consolidate, amend and extend throughout the Union the law with respect to compensation for injuries suffered by workmen in the course of their employment or for death resulting from such injuries." This new statute repeals in their entirety the Workman's Compensation Act, 1905, and the Workman's Compensation Act Amendment Act, 1906, of the Cape of Good Hope; the Employers' Liability Act, 1896, and the Act to amend the Employers' Liability Act, 1896, of Natal, and the Workmen's Compensation Act, 1910, of the Transvaal. Section 66 of the Public Service and Pensions' Act, 1912, of the Union of South Africa is also repealed.

Persons Compensated.

The Act includes all workpeople except—

- (1) Persons of the naval or military service or members of a service mentioned in Sections 46 or 47 of Act No. 29 of 1912.*

- (2) Persons receiving a remuneration at a rate exceeding £500 a year.
- (3) Casual workers and outworkers.

Persons and their dependants whose rights to compensation are governed by Act No. 15 of 1911** are not included, but the compensation payable to dependants of any person under that Act in the event of his death is to be assessed as if such person's injury had not resulted in death but in permanent total incapacity.

The Act applies to workmen in the employ of the Crown, but in the assessment of compensation in respect of injuries to any member of the public service the amount payable to such member from the public funds under any other law or regulation is to be deducted from the amount he otherwise should have received under this Act.

The Act also applies in respect of accidents to seamen employed in Union ships even if such accidents occur outside the territorial waters of the Union, the ordinary procedure being modified to meet the exigencies of such cases.

Procedure.

Time for notice and claim.—Application for compensation in case of incapacity must be made within six months after the date of the accident or in case of death within six months after the date of death or within twelve months after the date of the accident, whichever date is the earlier. The workman first serves notice of the accident on the employer "as soon as reasonably possible after the happening of the accident," and if the employer does not within two weeks after receipt of the notice agree in writing with the workman as to the amount of compensation the workman may under the Act make application to the magistrate of the district in which the acci-

*These sections regulate the amount of annuities or gratuities due members and their dependants of the Union defence, police and prisons' services in case of ill-health or death due to injury received in discharge of duty.

**This Act regulates the employment of native labourers and provides compensation in respect of partial incapacity of not less than £1 or not more than £20, in respect of permanent total incapacity of not less than £30 or more than £50, and in respect of death of £10.

dent occurred who has authority to determine all questions in dispute in accordance with the Act. The employer also may apply for the determination of any question arising out of an accident.

Compensation.

Compensation is not payable if the disability continue less than one week, or if the accident is proved to be attributable to the workman's serious or wilful misconduct, or if it would not have occurred but for a pre-existing diseased condition of the workman unknown to the employer.

The employer's liability at common law is not affected, but it is stipulated that he shall not be liable to pay in respect of the same incapacity or death both compensation under the Act and damages at common law. Suits for damages are not permitted after election under the Act.

Costs.—The costs of any application for the settlement of a dispute are at the discretion of the magistrate. Costs awarded against a workman on an issue on which he has been unsuccessful may be set off by the employer in paying any compensation awarded to the workman.

Agreements whereby rights to compensation or damages are relinquished are made null and void.

Scale of compensation.

Temporary incapacity. — Periodical payments of a maximum of 50 per cent of the wages, but in no case are such payments to continue for a period exceeding twelve months after the date of the accident nor are they to exceed £3 per week after the expiration of three months. The magistrate may, however, make an order for periodical payments exceeding 50 per cent of the wages, but not exceeding a payment at the rate of those wages, or 30 shillings per week, whichever may be the less in cases in which the workman was under 20 years of age, or, though above that age, was

earning wages so low that it would be impossible to maintain himself and his dependants on 50 per cent of his ordinary wage.

Permanent incapacity.—

- (a) Partial. A sum not exceeding the probable deficiency in wages for three years, but in no case more than half of the three years' wages or £375, whichever may be the less.
- (b) Total. A sum not exceeding three years' wages, but in no case more than £750. (If disability continues for more than twelve months the burden of showing that it is not permanent rests upon the employer.)

The sum payable to a workman under 21 years of age whose earning capacity would probably have increased during the next three years may be increased if it is less than £150 to a sum not exceeding £150 in respect of permanent partial incapacity or to £300 in respect of permanent total incapacity. If it is uncertain whether the incapacity is temporary or permanent the magistrate, if he is satisfied that the workman is entitled to compensation, may adjourn the hearing for a period not exceeding twelve months after the date of the accident and may make an interim order that the employer shall in the meantime pay such compensation as is provided for in the Act.

Death.—

- (a) A sum not exceeding two years' wages if the workman leave dependants entirely dependent upon his wages.
- (b) If there are none entirely dependent, then to those partially dependent a sum not exceeding three times the benefits received from the workman during the twelve months preceding the accident.

- (c) If there are no dependants, the reasonable expenses of medical attendance and burial not exceeding £40.

If any benefit is paid to a workman or his dependants as an allowance or benefit in respect of an accident by a society of which he is a member, and if the employer has contributed to the funds of such society, there shall be deducted from the amount of compensation a sum representing the employer's contribution towards the amount paid to the workman by the society.

Persons specially liable.—Persons certified by a district surgeon as "specially liable" to accident on account of old age or any other reason may agree with an employer that in case of accident the employer shall pay less than the amount payable under the Act, but in no case shall the amount thus payable be less than half the compensation required by the Act.

Security of payments.—In case of the employer's insolvency, if he has entered into a contract with any insurer in respect of any liability under this Act to any workman, the rights of the employer against the insurer are transferred to and vested in the workman.

Revision of compensation.—Appeal may be made from the magistrate's decision to the provincial or local division to which an appeal would lie from the judgment of the magistrate's court in a civil action and the provincial or local division may remit the matter to the magistrate for further hearing or may give judgment. Appeal from this judgment may be made to the appellate division only by leave of the provincial or local division. If the workman refuses to submit himself to a medical examination or without the consent of the employer so absent himself that notice cannot be served upon him or resumes work at the rate of wages he was earning at the time of accident his right to periodical payments is suspended. If a

workman having received compensation for incapacity subsequently dies from the injury the dependants are entitled to recover the difference between the sum paid and the sum payable to the dependants in respect of the workman's death.

In cases where employer and workman have reached an agreement as to the amount, variation, suspension or cessation of compensation, or where any other matter has been determined by agreement, if application is made by any interested person within six months after the date of the agreement, the magistrate may cancel the agreement and may make such order as in the circumstances he may think just.

Victoria.—Workers' Compensation Act, 1914.

This Act provides for "compensation to workers for injuries occurring in the course of their employment and the appointment of an insurance commissioner to grant and issue accident insurance policies for purposes of the Act."

Persons Compensated.

The Act includes all workers except—

- (1) Persons employed otherwise than by manual labour whose remuneration exceeds £250.
- (2) Casual workers and outworkers.
- (3) Members of the police force appointed before Nov. 25, 1902.
- (4) Members of the employer's family dwelling in his house.

This Act applies to all workers employed by or under the Crown or any Government Department; to domestic servants and the industrially diseased worker. The Act also applies in respect of accidents happening to seamen employed on a Victorian ship if the accident occurs within the state or within the jurisdiction of the state.

Procedure.

Time for notice and claim.—Written notice of the accident must be served on the employer as soon as practicable and claim for compensation must be made within four months from the occurrence of accident or in case of death within four months from the time of death.

An action may be brought against the employer by the workman independently of the Act if the injury is due to the personal negligence of the employer or the right to compensation comes under Section 148 of the Mines Act of 1897.* Questions as to liability to pay compensation or as to the amount or duration of compensation if not settled by agreement are to be settled by arbitration before a judge of county courts or a police magistrate as the worker may elect. If a claim for compensation has been made under any other law or compensation is allowed under this Act, and a worker having a claim under any other law is forbidden to claim under the Act unless he makes a statutory declaration that he has not claimed under any other law and covenants with the employer that he will not claim under any such law.

Compensation.

Compensation is not payable if the disability continue less than one week or if the accident be the result of wilful misconduct on the part of the worker unless the injury results in death or serious and permanent disability.

Costs are at the discretion of the court. The judge or magistrate may increase the amount of compensation when the employer causes unreasonable delay, and may, in default of agreement,

award the compensation either as a lump sum or as a weekly payment during the period of incapacity.

It is provided that if within the time limited by this Act action is brought independently of this Act and it is determined in such action that the employer is not liable but that he would have been liable under this Act, the action shall be dismissed; the court, however, is required to assess the compensation, but may deduct such a proportion of the costs as in its opinion have been caused by the plaintiff taking this action instead of proceeding under the Act. If, on the other hand, it has been determined in any proceedings under this Act that the employer is not liable, such determination shall not prevent action independently of this Act and the court in which such action is tried may deduct from any damages awarded such proportion of the costs as in its opinion have been caused by the plaintiff having proceeded under this Act instead of bringing the action.

Agreements.—If a judge, after ascertaining the views of the employer and workers and the opinion of the Government statist, find that any other scheme provides scales of compensation not less favourable to the workers than the corresponding scales of this Act and that a majority of the workers are in favour of the scheme, he may give a certificate permitting the employer to contract with his workers that the provisions of such scheme shall be substituted for the provisions of this Act. The certificate shall expire at the end of a limited period of not less than five years, and it may be renewed to expire at the end of the period for which it is renewed. Schemes obliging the worker to join as a condition of his being engaged or which do not enable the worker to withdraw are not to be certified, and if complaints are made that the provisions are being violated the judge is directed to examine into the complaint, and to revoke the certificate if good cause exists. Agreements whereby rights to compen-

*This section provides that in case of accidents due to the non-observance of the provisions for the regulation and inspection of mines and mining machinery in which such non-observance was not solely due to the negligence of the person injured, compensation may be recovered from the owner as for a tort committed by such owner, the amount with costs constituting a charge on the mine.

sation are relinquished shall not be deemed to continue after the time at which the worker's contract of service would determine if notice of the determination thereof were given at the commencement of this Act. However, persons specially liable to accident may enter into special agreements.

Scale of Compensation.

Death.—

- (a) If the workman leave dependants entirely dependent upon him, a sum equal to three years' earnings or £200, whichever is the greater, but in no case exceeding £500.
- (b) If the workman leave any partially dependent, a sum not exceeding the amount payable under (a) or as may be agreed upon or settled by arbitration.
- (c) If there are no dependants, the reasonable expenses of medical attendance and burial, not exceeding £50.

Incapacity.—

Where total or partial incapacity results—

- (a) A weekly payment not exceeding 50 per cent of the weekly wages and not more than £1 10s. The total liability of the employer shall not exceed £500.

If the worker is under 21 and earns less than 20s a week, 100 per cent of the earnings shall be paid,—in no case more than 10s a week.

Persons specially liable.—If the worker is physically or mentally infirm or incapacitated so that he is specially liable to accident, he may enter into agreement with the employer as to maximum amount of compensation. Where injury results in

- (a) death—amount not less than £50.
- (b) total or partial incapacity not less than 5s a week or one-quarter of his average weekly earnings—total liability of £50.

In the case of special injuries compensation is assessed at a certain ratio to the full compensation for total incapacity. Full compensation is given for injuries resulting in loss of both eyes, hands, feet, etc., and varying ratios for other injuries.

Security of payments.—In case of the employer's insolvency if he has entered into a contract with an insurer in respect of any liability under this Act to any workman, the rights of the employer against the insurer are transferred to and vested in the workman. If the insurer's liability to the worker is less than the employer's liability to the worker, the worker may prove for the balance. It is further stipulated that among the debts to be paid in priority to all other debts under the Insolvency Acts and under any Act relating to companies or mining companies and the Miners' Act, there shall be included the amount due in respect of any compensation awarded under this Act not exceeding in any individual case £200.

A State Accident Insurance Office is established to enable employers to obtain state policies of accident insurance against their liability in relation to workers' compensation under this or other Acts. The premiums received are to be paid into the State Accident Insurance Fund, the surplus of which at the end of any year is to be carried to a reserve fund which is to be invested in securities of the Government of Victoria. Every employer is required to obtain from the State Accident Insurance Office or from an insurer approved by the Governor-in-Council, a policy of accident insurance for the full amount of his liability to pay compensation to his workers.

Revision of compensation.—The decision of the judge or police magistrate is final as to any question of fact and also as to any question of law unless within the time allowed either party appeals to the full court, in which case the full court may either dismiss the appeal or revise or vary the decision or may make such order as it thinks proper, and the orders of the full court are final.

Industrial Diseases.

Where a worker is incapacitated through disease due to the nature of any employment in which he has been en-

gaged within the twelve months previous to the date of disablement, or if the death of the worker is caused by such disease, compensation is recoverable from the employer who last employed the worker during the said twelve months in the employment to the nature of which the disease was due. If the disease was contracted by a gradual process, other employers who employed the worker in such employment during the said twelve months are liable to make such contributions to the employer from whom compensation is recoverable, and in default of agreement may be determined in arbitration under this Act.

MANITOBA LEGISLATION AFFECTING LABOUR, 1915.

AT the last session of the Manitoba Legislature, begun February 9, 1915, and prorogued April 1, 1915, 111 measures in all were passed, of which 95 were public Acts. Some of these measures have a direct bearing on matters affecting labour; others relate to the agricultural industry, and a few have an indirect bearing on matters of interest to labour and industry. The Legislature also held an extra session in the fall of 1914, which commenced September 15 and ended September 18. Four measures in all were passed at this session, one of which was in the nature of moratorium legislation.

Labour Measures.

The following measures may be said to be of direct interest to labour: An Act respecting a Bureau of Labour; an Act to amend the Manitoba Factories Act; an Act to amend the Manitoba Railways Act; and an Act respecting Stationary Engineers.

Bureau of Labour.

The Bureau of Labour Act¹ makes provision for the attaching to the De-

partment of Public Works of a bureau to be styled "The Bureau of Labour." The Lieutenant-Governor-in-Council may appoint a secretary of the bureau and may also appoint such other officers as may be deemed necessary for the proper conduct of the bureau. It shall be the duty of the bureau to collect, assort, systematize and publish information and statistics relating to employment, wages and hours of labour, co-operation, strikes, lockouts, or other labour difficulties, trades unions, labour organizations, the relations between labour and capital and other subjects of interest to workmen throughout Manitoba, with such information relating to the commercial, industrial and sanitary condition of workmen, and the permanent prosperity of the industries of Manitoba as the bureau may be able to gather.

Factories Act.

An Act to amend "The Manitoba Factories Act"² makes a number of changes in the original measure. A clause is added to the section dealing with definitions stating that the expression "boy" means a boy of the age of fourteen years or upwards and under the age of seven-

¹Chap. 6, Manitoba Statutes, 1915.

²Chap. 24, Manitoba Statutes, 1915.

teen years. That section of the old measure which deals with hours of employment of young girls and women is amended by making the section apply as well to boys. The provisions respecting employees are amended by the addition of a section which provides that where in a factory an accident takes place, as the result of which any person is injured and death follows within thirty days from the date of and as a result of the said accident, written notice of the death shall be sent to the inspector within twenty-four hours after the said death, and if such notice is not so sent the employer shall be liable to a fine not exceeding \$30. To that portion of the old measure dealing with the powers and duties of inspectors a clause is added providing that an inspector during his tenure of office shall not be competent to give testimony in any civil cause with regard to anything which he has seen or done, or with regard to any information he has obtained, opinion he has formed or investigation he has made in the discharge of his duties as inspector, and during his tenure of office is not competent to give testimony in any civil cause as an expert witness with regard to any subject. Anyone employed in or connected with the office of the inspector is put under the same disability in regard to giving testimony. The original Act is also amended by the addition of a section providing that at least fifteen days before a factory shall be operated for the first time the owner shall give notice to the inspector that he wishes the inspector to inspect the same, and no operations shall be commenced in such factory until the owner, proprietor or manager has received from the inspector a certificate of inspection of the factory and a permit to operate the same. That part of the old measure providing for the keeping of a register of female employees in every factory is changed by the addition of a clause providing that the registration of women may be dispensed with where the inspector deems such registration not necessary.

Railway Act.

An amendment to the Manitoba Railway Act³ adds a section which provides that no person shall serve or be employed by a railway or company as a locomotive engineer of a railway operated by steam unless such person shall have previously served as a locomotive fireman for at least three years upon a railway coming within or outside of the provisions of the Act, and who prior to such service or employment fails to produce his certificate or certificates evidencing his length of service as aforesaid, and further indicating that such person is a fit and proper person having regard to his habits, intelligence and physical ability to safely and satisfactorily perform the duties of a locomotive engineer. Violation of this provision is punishable by a penalty of not less than \$10 nor more than \$50, the onus of proof of violation being on the person, railway or company charged with the offence.

Stationary Engineers.

An Act respecting Stationary Engineers⁴ provides general regulations for the examination and granting of certificates to stationary engineers. The Act applies to "steam plants" which term is defined to mean and include a steam boiler, a boiler and steam engine and every part thereof and things connected therewith. The provisions of the Act do not apply to the operation of any steam heating plants operating at a pressure of 75 pounds or under, nor to the operation of a locomotive engine or a steamboat or steamship engine. Traction and threshing engines used for farm purposes only are also exempted.

Provision is made for the appointment of a Board of Examiners consisting of competent and independent engineers practically conversant with the construction of boilers and the operation of steam

³Chap. 58, Manitoba Statutes, 1915.

⁴Chap. 77, Manitoba Statutes, 1915.

plants, who shall prescribe the subjects in which candidates for certificates of qualification as stationary engineers shall be examined, and conduct or provide for and supervise the examination of candidates. The Government may make regulations in regard to examinations and certificates and the evidence to be furnished by candidates as to previous training, experience or sobriety or good character, the fixing of fees, cancellation of certificates, etc. No person is eligible for examination unless he is a British subject or has resided in Canada for at least one year. Any person over the age of eighteen years claiming to be qualified to perform the duties of a steam engineer may apply for a certificate to the Board, who shall examine the application and the proofs that the applicant produces in support of his claim and upon being satisfied with the character, habits, knowledge and experience of the applicant may upon payment of the required fees grant a certificate, such certificate to be renewed yearly. Applicants are required to fill in a form which may be obtained from the Board of Examiners. Candidates for examination are required to answer correctly at least 60 per cent of the questions presented. In the event of the candidate failing in his examination, ninety days must elapse before he shall become eligible for re-examination. Examinations may be held at outside points before a justice of the peace in cases where the Board of Examiners deem such a course expedient.

Certificates.

Certificates are issued by the Minister of Public Works, who has power to revoke, cancel or suspend the same on the recommendation of the Board of Examiners. Every stationary engineer is required to register on or before the first day of February in each year and in default of this registry shall not continue in charge of a steam plant unless by special permission of the Board. Certificates are signed by the Minister

and follow the form prescribed by the Act. The Minister may in special cases, on recommendation of the Board and the payment of the proper fees, issue a special certificate to be good for a period not exceeding ninety days, and may on the recommendation of the Board grant a permit to operate a steam plant for the same period. Certificates may be revoked or cancelled upon proof of negligence, unskilfulness or intemperance, or upon the finding of a coroner's inquest, or for insanity or physical incapacity, misrepresentation or fraud and for transfer of certificate, and no cancelled certificate may be renewed unless it be shown to the satisfaction of the Board that the disability for which it was cancelled no longer exists.

A first-class certificate is required where the horse-power of an engine is 200 or over; a second-class certificate where the horse-power is from 50 to 200 horse-power; a third-class certificate is required in cases where a steam plant is not over 50 horse-power. Persons in charge of fire engines, portable or semi-portable engines are required to hold not less than a fourth-class certificate. Assistant engineers must hold a certificate not more than one grade lower than the engineer in charge. Unqualified persons are not to act as engineers except in case of emergency when they may be employed for a period not exceeding thirty days at any one time until a competent engineer can be secured. The Board may grant provisional certificates, good for a period not exceeding one year, to persons holding a stationary engineer's certificate from the Board or other duly constituted authority of any other province of Canada.

Certificates are required to be displayed in a conspicuous place, and engineers in charge of portable engines or boilers must produce their certificates when required to do so by any boiler inspector or authorized official. The Act does not apply to firemen and other workmen acting under the personal direction and supervision of any engineer holding a certificate under the Act actu-

ally in charge of a steam plant, or to the employees of engine builders or steam plant contractors engaged in installing, setting up or testing boilers or steam plants.

The Board of Examiners is required to make an annual report to the Minister giving the number of certificates granted and the persons to whom granted, the number of applications for certificates refused and the causes for refusal, the number of certificates revoked, cancelled or suspended and the causes for the same, the amount of fees received and such other matters as may be required by the regulations. Members of the Board, on presentation of authority in writing from the Minister, may enter steam plants and make inspections. Interference with or obstruction of any member of the Board making such inspection is punishable by a fine of not more than \$100. A person who operates a steam plant as the engineer in charge thereof without the certificate required by the Act and every person employing him or permitting him to do so is liable to a penalty of not less than \$10 and not more than \$25. The Inspector of Factories is required to assist in enforcing the provisions of the Act. The Act of 1913 relating to steam engineers is repealed, all certificates granted or renewed under the repealed Act coming under the operation of the new measure.

Agricultural Measures.

Amongst a number of measures which have a bearing on the agricultural industry may be mentioned The Crop Payments Act; The Dairy Act; An Act to Enable Municipalities to Borrow a Limited Amount of Money for Seed Grain Purposes; An Act to Make Further Provision for the Distribution of Seed Grain; and An Act respecting Seed Grain in Unorganized Districts.

"The Crop Payments Act"⁵ provides that where there is a bona fide share of lease the lessor without registration is to

have the right to his share of the crop in priority to the lessees and those claiming under the lease, the intention of the Act being to prevent the lessor's share being alienated voluntarily or otherwise by the lessee. Where there is a valid share crop agreement of sale the vendor without registration is to have the right to his share of crop in priority to the purchaser and those claiming under the purchaser, the intention in this regard also being to prevent the vendor's share being alienated by the purchaser. The same provisions apply where a mortgagee is to be paid a debt by a share of the crop.

"The Dairy Act"⁶ makes general provisions regarding dairies and cheese factories, providing for their incorporation under methods set out in the Act, their powers when so incorporated and the rules and regulations which shall govern meetings, the keeping of records and in regard to membership and shares. Provisions are also enacted in regard to sanitation and operation, the testing of milk, inspection, and fraud and adulteration. Persons supplying any creamery or cheese factory with milk diluted with water or in any way adulterated are liable to a fine of not less than \$10 nor more than \$50, and in cases where fines are not paid imprisonment is provided for.

Every proprietor, person, firm or corporation operating any creamery in Manitoba is required to make use of one or more stencils, stamps or brands on all products of the creamery offered for sale, such stencils or brands to be registered with the Department of Agriculture and Immigration and bear a number furnished by that Department. Dairy butter must not be branded as creamery butter and no maker of dairy cheese may brand his cheese as factory cheese. Regulations governing the Manitoba Dairy Association are provided and the Act concludes with forms of schedules to be used in connection with the formation of dairy associations and a list of the

⁵Chap. 13, Manitoba Statutes, 1915.

⁶Chap. 14, Manitoba Statutes, 1915.

creameries and cheese factories in Manitoba.

Seed Grain Measures.

An Act to Enable Municipalities to Borrow Limited Amounts of Money for Seed Grain Purposes⁷ states in the preamble that there are certain localities in the province of Manitoba in which damage has been sustained by persons engaged in agricultural pursuits to such an extent as to render them unable to procure seed grain and seed potatoes for use in the season of the year 1915, and provides means whereby such persons may obtain seed grain and seed potatoes. Councils of rural municipalities are empowered to borrow up to \$30,000 for purchasing seed grain and potatoes by giving promissory notes and by the issue and sale of debentures, such debentures to be for a term not exceeding five years with interest not to exceed six per cent. The Act provides for the distribution by the municipality of seed grain and seed potatoes to persons unable to procure the same, to an amount not exceeding in value \$450 to any one individual.

An Act to Make Further Provision for Distribution of Seed Grain⁸ extends the provisions of the previously mentioned Act to cover the case of wives or other representatives of persons who are serving or have volunteered to serve in aid of the allied forces in the present war, promissory notes to be taken for the amounts advanced.

An Act respecting Grain Seed in Unorganized Districts of the Province⁹ sets aside a sum of \$100,000 for relief in 1915 in unorganized districts of Manitoba, seed grain to be purchased and distributed to resident owners of patented lands to the extent of not more than \$250 to any one individual, and promissory notes given for the amount advanced. Certificates in writing as additional security are required to be regis-

tered in land titles or registry offices, and various provisions are enacted to ensure the repayment of the amount of the loan. Schedules setting out the form of application for seed grain, declaration, promissory note and lien certificate are included in the Act.

Moratorium Measures.

A number of measures are in the nature of moratoria. An Act respecting contracts relating to land, which was passed at a short session held in September, 1914,¹⁰ provided for the stay of proceedings in connection with the sale of land for six months from August 1, 1914. An amending Act passed in the session of 1915¹¹ makes a number of changes, chiefly to provide for the extension of the period within which no action can be taken. The amending measure provides that no action may be taken until after some interest or taxes or premium of fire insurance or money paid for such taxes or premium is unpaid and in arrears for one year, or in case no interest is payable, then until some instalment of principal is overdue for one year. The previous measure is held to apply to registered judgments and to proceedings to realize the same by sales of land. In the amending measure, also, a provision is inserted stating that nothing in the original or amending Act shall apply in proceedings to realize a lien under "The Mechanics' and Wage Earners' Lien Act" to prevent a registered judgment creditor or an unpaid vendor or a subsequent encumbrancee from proving his claim in such proceedings and have the same paid out of the proceeds of the sale of the land charged with the lien, or from issuing or registering a renewal certificate of judgment. A clause in the amending Act states that the same may be repealed at a date to be published in the Manitoba Gazette.

"The War Relief Act"¹² states in the

⁷Chap. 70, Manitoba Statutes, 1915.

⁸Chap. 71, Manitoba Statutes, 1915.

⁹Chap. 72, Manitoba Statutes, 1915.

¹⁰Chap. 1, Manitoba Statutes, 1914. (Special session).

¹¹Chap. 10, Manitoba Statutes, 1915.

¹²Chap. 88, Manitoba Statutes, 1915.

preamble that on account of a great many residents of Manitoba having volunteered to serve in the forces raised by the Government of Canada for overseas service in the war, it is desirable to pass an Act for the protection and relief of all such persons and their families from proceedings for the enforcement of payment by all such persons of debts, liabilities and obligations existing or future, however arising, and for the enforcement of all liens, encumbrances or other securities, whether created before or after the coming into force of the Act, and for depriving them of the possession of any or all goods and chattels, lands and tenements during the continuance of the war; and the measure enacts provisions which stay any such proceedings until the end of the war. The Act also applies in the case of volunteers enlisting after the commencement of an action, but does not apply to debts for necessities for themselves and families after the coming into force of the Act. The running of statutes of limitations or proceedings in favour of all persons for whose benefit the Act is passed is suspended during the period from August 1, 1914, to the termination of the war or from the time of the first accruing of the rights of the action respectively to the termination of the war, whichever shall be the shorter period. The Act does not preclude a mortgagee, or person having a charge or security on land, from the right to collect the rents or rentable value of such land over and

above an amount equal to \$2,000 per annum.

Miscellaneous Measures.

Among other measures having a more or less indirect bearing on questions affecting labour and industry may be mentioned An Act to Amend the Public Health Act,¹³ by which provisions are added to the original measure providing for the inspection of the plumbing, heating, lighting, ventilation and sanitary equipment and condition of all hotels, lodging and boarding houses and of the natural and artificial lighting, the heating, plumbing, ventilation and general hygienic and sanitary conditions in cities of portions of buildings contained below the street level used or designed to be used for the purpose of conducting therein the businesses of a barber shop, restaurant, cafe, billiard and pool room, bowling alley, shooting gallery or other purpose of a public character.

An Act to amend "The Lien Notes Act"¹⁴ provides that where any machinery affected by a lien note has been affixed to realty it shall remain subject to the rights of the manufacturer or vendor. The owner of such realty, however, is given the right to retain the machinery upon paying the amount owing on it. The Act does not apply to machinery affixed to realty and contained in any residence, tenement or apartment block.

¹³Chap. 56, Manitoba Statutes, 1915.

¹⁴Chap. 38, Manitoba Statutes, 1915.

ONTARIO LABOUR LEGISLATION, 1915.

AT the last session of the Ontario Legislature, begun at Toronto February 16 and prorogued April 8, 1915, 99 measures in all were passed, some of which have a direct bearing on labour and others touch on matters indirectly affecting labour and industry.

Labour Measures.

Two measures may be said to be directly in the interests of labour—An Act to amend the Workmen's Compensation Act, and The Workmen's Compensation Insurance Act.

Workmen's Compensation Act.

A number of amendments¹ are made in the Workmen's Compensation Act assented to May 1, 1914, and printed in full in the July, 1914, issue of the *Labour Gazette*. That part of the original measure dealing with compensation for accidents occurring outside of Ontario is amended by the addition of a section providing that compensation payable in respect of an accident happening elsewhere than in Ontario shall, except where the employer has fully contributed to the accident fund in respect of all the wages of workmen in his employ who are engaged in the business or work in which the accident happens, be paid by the employer individually, and the business or work carried on elsewhere than in Ontario by an employer who has not so contributed to the accident fund shall be deemed to be in Schedule 2 (which covers the industries the employers in which are individually liable to pay the compensation). Section 8 of the Act, which makes provision for the payment of compensation to persons not resident in Ontario in cases where the laws of the province in which he resides provide for compensation, is changed by amend-

ing subsection 2 of section 8 by changing the words "make such allowance" to "award such compensation or sum" in lieu of compensation, and by the addition of the words "or order it to be paid by the employer as the case may be." Section 9 of the Act, which gives power to a workman injured under circumstances which entitle him or his dependants to an action against some person other than his employer to claim compensation or bring such action, is amended by the addition of a subsection which makes it clear that no right of action exists under this section as between persons in Schedule 1 of the Act (industries the employees in which are liable to contribute to the accident fund). In cases, however, where it appears to the satisfaction of the Board that a workman of an employer in any class in Schedule 1 is injured or killed owing to the negligence of an employer or workman of an employer in another class in the schedule, the Board may direct that the compensation awarded in any such cases shall be charged against the class to which such last mentioned employer belongs.

Section 10 of the Act, which fixes the liability of principal and contractor respectively, is changed by repealing some of the subsections and by the substitution of others, the effect of which is to render the principal liable, not only for compensation but to make it the duty of the principal to see that any sum which the contractor or any sub-contractor is liable to contribute to the accident fund is paid, and in the event of failure on the part of the principal to see that this is done, to render him personally liable to pay it to the Board; the Board to have the same powers for enforcing payment as it possesses in respect of assessments. Changes are also made in the wording of the sections to provide for

¹Chap. 24, Ontario Statutes, 1915.

the substitution of the principal for employer where necessary.

Section 11 and 12 of the Act, which deal with the payment of compensation to an employer or to a member of the family of an employer when carried on the pay-roll of the employer under certain conditions, is amended by extending the provisions to include the dependants of the employer or of such members of the family.

Section 15 of the Act, which provides that the provisions of Part I of the Act are in lieu of rights of action against an employer, is amended by the addition of a section which provides that any party to an action may apply to the Board for adjudication and determination of the plaintiff's right to bring an action, the decision of the Board to be final and conclusive.

Subsection 2 of Section 17 of the Act, which permits an employer and workman or dependant to make an arrangement in regard to payment for compensation for injuries where approved by the Board in cases of temporary disability lasting for less than four weeks, is amended by adding to the provision that the Board may on application of the workman or dependant set aside such an agreement, a clause which gives the Board power to set aside such an agreement on its own motion.

Subsection 2 of Section 22, providing for a certificate by a medical referee in regard to the condition of a workman and his fitness for employment, is amended by the addition of a clause which states that the medical examiner in cases where a workman is found unfit for employment must state the cause of such unfitness.

Following Section 22 an additional section is added to the Act which provides that where in any case in the opinion of the Board, it will be in the interest of the accident fund to provide a special surgical operation or other special medical treatment for a work-

man, and the furnishing of the same by the Board is, in the opinion of the Board, the only means of avoiding heavy payment for permanent disability, the expense of such operation or treatment may be paid out of the accident fund.

Section 28 of the Act, providing for payment over to the Board of a lump sum by an employer in certain cases to meet weekly or periodical payments "payable to a workman during his life or to his widow during her widowhood," is amended by striking out the clause quoted and leaving the reference simply to payments which are payable "by the employer."

Section 29 of the Act, which provides that the Board may require an employer who is individually liable to pay compensation to insure his workmen and gives the Board power to insure such workmen in case of default by the employer and collect the expense from the employer, is amended by stipulating that the expense may be recovered "in the same way as payment of assessments may be enforced."

Changes in Compensation.

Section 33 of the Act, which sets out the scale of compensation to be paid, is amended by the repeal of the section which makes provision for the payment to dependants (when parents) of a workman who was under the age of 21 years of a monthly payment of \$20 until the time at which the workman would have attained the age of 21 years, and by providing in the general provision relating to the payment of compensation in cases where the dependants are persons other than a widow, an invalid husband or children, that compensation to parents shall not exceed \$20 per month. The amending Act also reduces the total amount which may be paid to dependants other than a widow, invalid husband or children from \$40 to \$30 per month.

In Subsection 5 of Section 33 of the Act a clause is inserted to make it clear that the compensation provided by the section is exclusive of the expenses of burial of the workman.

Section 36 of the Act, providing that the Board may in the case of a workman leaving no dependants pay a reasonable sum for medical attendance, is amended by extending the provision to include "nursing, care and maintenance."

Section 41 of the Act, providing for the computation of average earnings, is amended by the addition of a subsection which gives the Board power to award compensation on the basis of the earnings of the workman at the time of the accident.

Section 43, which gives power to the Board to make payments of compensation fortnightly or weekly instead of monthly, is amended by striking out the provision that this may be done "where the compensation is payable out of the accident fund," and by adding the words "or where the workman or dependant is not a resident of Ontario or ceases to reside therein may otherwise fix the periods of payment or commute the compensation as the Board may deem proper."

Section 78 of the Act is amended by providing that statements of wages earned may be required by the Board at any time the Board may direct as well as yearly, and by providing that such statement shall also give particulars not only in regard to the wages earned by employees during the year and an estimate of wages likely to be expended during the current year, but also in regard to any part thereof which may be specified by the Board.

Section 79, which gives power to the Board to examine with all the powers of a commissioner appointed under the Public Inquiries Act, is amended by giving the Board power also to examine for the purpose of ascertaining whether

any industry or person is under the operation of Part I, and whether in Schedule 1 or Schedule 2. A subsection is also added which authorizes officers of the Board to take declarations and affidavits in conducting inquiries.

Levying of Assessments.

Section 3 of Section 84, providing for a special assessment on employers in order to bring up the amount of the special reserve to the estimated expenditure of the Board for the current year, is repealed.

Subsection 1 of Section 85 is amended by changes in the method of levying assessments. In the old section the Board was given power to levy and assess "a sum sufficient to pay the compensation which was paid in the next preceding calendar year" . . . in respect of injuries to workmen. The amended section uses the words, "such percentage of pay-roll or such other rate or such specific sum as allowing for any surplus or deficit in the class, it shall deem sufficient to pay the compensation during the current year" in respect of injuries to workmen. The Board is also given power to levy the assessments on an estimate of the pay-roll, such estimate afterwards to be adjusted when the actual pay-roll becomes known. The Board may also divide the payment of assessments into instalments.

Section 86 of the original measure, providing for the fixing of the rate of assessment, is amended by changing the words "proportion or part of the sum for which a class is assessed" in subsection 1 to "percentage, rate or sum for which each employer is assessed," and by making changes necessary in the wording of the section to cover the provision for payment in instalments. Subsection 2 is amended by providing that notices to employers may be sent by post, instead of by "registered" post as in the old subsection. A further subsection is added providing that wher-

ever it appears that a statement or estimate of pay-roll upon which an assessment is based is too low, the employer shall upon demand pay to the Board such sum to be fixed by the Board as shall be sufficient to bring the payment of assessment up to the proper amount; payment of any such sum to be enforced in the same manner as the payment of assessments.

Some changes are made in Sections 87 and 88 which have to do with the powers of the Board in making up the deficiency which may be caused by the failure of employers to pay assessments or other causes, the effect of which is to increase the range of matters to be taken into consideration in arriving at a decision in regard to supplementary assessments. Provision is also made for the creation of a special fund where the Board considers it necessary to meet the loss arising from any disaster or other circumstances which in the opinion of the Board would unfairly burden the employers in any class.

That part of the Act which provides for the levying of a percentage of any amount in default as a penalty for non-payment is amended by adding a section which provides for additional liability in the case of any employer who refuses or neglects to make or transmit any pay-roll, return or other statement required, or refuses to pay assessments. Such employer is liable to pay the Board the full amount or capitalized value as determined by the Board, of the compensation payable in respect of any accident to a workman in his employ which happens during the period of such default. The Board may, however, relieve such employer from liability when satisfied that such default is excusable.

Other Changes.

A section is added to that part of the measure which makes it the duty of the owner of any building or construction to which the Mechanics' Lien and Wage

Earners' Lien Act applies, to see that the employer contributes to the accident fund created under the Workmen's Compensation Act, which gives priority to assessments and compensation in the distribution of assets of any establishment or estate which may come under the Assignments and Preferences Act, the Trustee Act, and the Ontario Companies' Act, the sum to rank for priority on such assets to be taken to be the amount of the lump sum for which periodical payments may be commuted. Priority, however, in respect of any individual claim for compensation is not to exceed \$500.

Section 99 has to do with the procedure to be followed by employers in giving the Board notice of accidents is changed by providing that notice may be given "in writing" instead of "by registered post," as formerly, and providing for the furnishing of additional information when required by the Board.

That part of the Act which has to do with the formation of associations for accident prevention is amended by the addition of sections which provide that the Board may make a grant towards the expenses of such associations and that such grants may be charged against the class represented by the association and levied as part of the assessment against such class. "Class" in this connection is defined to include sub-class or such parts or numbers of a class in Schedule 1 as may be approved by the Board.

Section 105 of Part 2 of the Act, which provides that, subject to certain sections in Part 1, Part 2 of the Act shall apply to industries not covered by Part 1, is amended by the addition of a clause which provides that outworkers and persons engaged in clerical work and not exposed to the hazards of the work carried on in the employment, and persons whose employment is of a casual nature and who are employed in industries under the operation of Part 1, but who are excluded from the benefits of Part 1, are not to be excluded

from the right to recover damages in a legal action as provided for in Part 2 of the Act.

Section 25 of the Act, which provides for the payment of compensation in a lump sum, is amended by the addition of a section which gives the Board power to advance to a workman or dependant such lump sum as the Board may determine.

Schedule 2 of the Act is amended by adding to Section 6 providing for the inclusion in Part 2 of vessels, etc., the words "and all other navigation, towing, operation of vessels and marine wrecking," and Schedule 1 is amended by the removal from the list of industries, of Class 43—navigation.

The amending Act, with the exception of a few sections, is deemed to have had and to have effect from the commencement of the Workmen's Compensation Act.

Workmen's Compensation Insurance Act.

"An Act for the Better Protection of Workmen Having Certain Claims for Compensation Against Their Employers"² provides that where an employer is insured against his liability for damages to a workman, the insurance shall be deemed to be for the benefit of the workman, and where a workman suffers injuries for which he is entitled to recover damages from his employer, the insurer shall not, without the consent of the workman, pay to the employer the amount due the insurance unless the claim of the workman has been satisfied. The workman is given the right to recover from the insurer the amount of damages and costs to the extent to which the employer is entitled to recover the same from the insurer. The

Act does not apply to workmen entitled to compensation under Part 1 of the Workmen's Compensation Act.

Miscellaneous Measures.

An Act to amend the Power Commissions Act³ contains a provision that the Commission may order the installation, removal or alteration of any works, plant, machinery, etc., as in the opinion of the Commission may be necessary for the safety of the public or of workmen.

The Fire Accidents' Act, 1915,⁴ provides that where under any law or regulation any proprietor, lessor, occupant, manager or other person owning or having control or management of any building is required to provide fire escapes, means of exit or other appliances for the safety of inmates or the public in case of fire, and it is shown in any action brought against such person for damages for death caused by fire in such building, that such requirements were not complied with, it shall be presumed that the non-compliance was the cause of death.

The School Land Amendments Act⁵ makes provision for agricultural training in schools and provides for grants by county councils for the purpose of such training.

The Mortgages and Purchasers Relief Act⁶ is in the nature of moratorium legislation and provides mainly that no proceedings for foreclosure in respect of lands held under mortgage or agreement for sale under contract entered into prior to August 4, 1914, shall be taken except by leave of a judge, granted upon application as provided in the Act.

REPORTS OF EMPLOYMENT BUREAUS.

THE seven public employment bureaus co-operating with the Department reported a total of 4,117 vacancies notified and 2,448 individuals placed for the month ended October 31. Fourteen employment bureaus of the Young Women's Christian Association reported 1,299 vacancies notified and 333 women and girls placed. The individual returns are given in the following tables:

PRICES, RETAIL AND WHOLESALE, CANADA, NOVEMBER, 1915.

THE chief features of the prices movement in November were the seasonal advances in butter, eggs and potatoes. Wheat and barley rose substantially but were lower than a year before. Flaxseed, peas and rye were also higher. Flour advanced in wholesale prices but too late to affect the reports on retail prices. Currants and raisins were further advanced owing to war conditions in the Mediterranean Sea. Iron and steel markets experienced strong demand and prices advanced. Coke and gasoline similarly rose. Quinine rose very steeply, from 40c to \$2.25 per ounce. Alum, glycerine, and raw furs were also steeply upward.

In retail prices the cost of a weekly budget of certain staple foods in terms of the average prices in sixty cities stood at \$8.016, as compared with \$7.815 in October and \$7.955 in November, 1914. The chief advances during the month were in eggs, butter and potatoes, but cheese, lard and beans were also upward. Rents averaged lower in Saskatchewan. Anthracite coal showed a slight rise in the average. The total weekly expenditure, therefore, was \$13.857, as compared with \$13.660 in October. As compared with November last year eggs, butter, cheese, beans and potatoes were higher but flour, rolled oats, rice and sugar were lower. Coal, wood, coal oil and rent were also lower. The weekly cost of food was therefore almost the same as a year before, but the total for November, 1914, was \$14.254, as compared with \$13.857 this year.

In wholesale prices very steep advances in quinine, alum, glycerine and in raw furs, together with important advances in grain, dairy products, dried fruits, potatoes, flour, cream of tartar, iron and steel, other metals, coke, matches, copper wire, linseed oil, turpentine, carbolic acid, opium, sulphite pulp, and raw rubber, caused a rise in

the index number from 148.8 for October, to 157.8 for November. Excluding the rises in quinine, alum, glycerine and raw furs the index number would stand at 152.8. Decreases occurred in bran, shorts, cattle, beef, hogs, and poultry, but hogs recovered later.

Under abnormal conditions, such as during war, prices of materials, especially those used for war materials, are subject to such violent fluctuations that an index number of wholesale prices not weighted according to household consumption does not reflect changes in cost of living. The most important actual conditions in cost of living are shown by the course of retail prices of food, fuel and rentals. The cost of clothing, boots, etc., varies according to quality and other standards so that accurate measurement of changes is most difficult, especially in terms of the retail prices of the finished goods. The more important tendencies, however, may be seen in wholesale prices of materials and of some staple lines.

As compared with November last year, wholesale prices averaged higher in Ontario grains, but lower in Western grains and in fodder. Cattle and beef and poultry averaged lower, but hogs and hog products, sheep and mutton higher. Fish were on lower levels. Fruits and vegetables were considerably higher. Miscellaneous groceries were lower except in tea, pepper and cream of tartar. All textile groups showed steep advances except silks which had fallen considerably, but have risen the last two months. Hides, leather, and boots were considerably higher. Metals were comparatively low in 1914, but advanced in 1915, very steeply in some lines. Fuel and lighting groups were higher owing to rises in coke and matches. Lumber was somewhat lower, but many other building materials advanced. House furnishings were higher in crockery and table

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT
IN TERMS OF THE AVERAGE PRICES IN SOME SIXTY CITIES IN CANADA.

*Coal, wood and coal oil. No allowance is made for the varying extent to which these are used in the different localities and provinces.

knives. Drugs and chemicals showed further very steep advances over those which had occurred last year after the outbreak of war. Raw furs had declined greatly in 1914, markets being demoralized, but showed considerable recovery last month. The Liquors and Tobacco group showed a lower level on account of lower prices for malt and hops. Rubber and gunpowder raised the level for the Sundries group.

Retail Prices.

Beef.—Prices of sirloin steak were higher at Hull, Que., but lower at Guelph, Ont., and at Fernie, B.C. The price of round steak also declined at Guelph, Ont., and at Fernie, B.C. Rib roast rose at Hull, Que., and at Berlin, Ont., but was down at Guelph, Ont., at Medicine Hat and Lethbridge, Alberta, and at Fernie, B.C. Prices of medium shoulder roast similarly rose at Hull, Que., but declined at St. Hyacinthe, Que., at Guelph, Ont., at Lethbridge, Alberta, and at Fernie and Vancouver, B.C. At Lethbridge, Alberta, beef was reported lower owing to lower cost of feed.

Veal.—The price was reported higher at Quebec and Hull, Que., at London and Port Arthur, Ont., and at Medicine Hat, Alberta, but was lower at Cobalt, Ont. It was reported at Quebec city that veal was scarce and hard to obtain.

Mutton advanced at St. John's, Que., at Cobalt, Ont., and at Medicine Hat, Alberta, and declined at Hull, Que.

Pork.—Fresh roasting pork was reported higher at Port Arthur, Ont., and at Saskatoon, Sask., but lower at Halifax, N.S., and at Ottawa and St. Thomas, Ont. Pork chops declined at Halifax, N.S., at Montreal and Hull, Que., at Ottawa, Guelph and St. Thomas, Ont., and at Lethbridge, Alberta, but advanced at London, Ont., at Saskatoon, Sask., and at Medicine Hat, Alberta. Salt pork was reported higher at London, Ont., and at Edmonton, Alberta. It was reported at Saskatoon, Sask., that supplies of fresh pork were not coming from the country

very freely and prices were consequently upward. At Montreal, Que., fresh pork chops were in good supply and prices were somewhat lower.

Bacon.—Breakfast bacon was higher at Sydney, N.S., at Fredericton, N.B., at Guelph, London, Port Arthur and Fort William, Ont., and at Medicine Hat, Alberta.

Fish.—Prices of fresh fish were reported lower at Peterborough, Orillia, St. Catharines, Woodstock and Owen Sound, Ont., and at Brandon, Man., and higher at Chatham, Ont., and at Victoria, B.C. Salt herring were cheaper at Medicine Hat, Alberta, and higher at Quebec, Que.; while canned salmon was reported down at Cobalt, Ont., but up at St. John, N.B., and at St. John's, Que. Supplies of fresh fish at Victoria, B.C., were reported short.

Lard.—Lard was dearer at St. Hyacinthe, Que., at Peterborough, St. Catharines, Owen Sound and Cobalt, Ont., at Medicine Hat and Edmonton, Alberta, and at Nanaimo, B.C.

Eggs.—Fresh eggs declined in fifty of the cities while packed eggs advanced in twenty-six cities, and were reported on the market in a number of localities for the first time this season. Both fresh and packed eggs were in good demand throughout the Dominion and supplies were scarce.

Milk prices advanced at St. Hyacinthe, Que., at Kingston, Ont., and at Edmonton, Alberta.

Butter.—Both dairy and creamery butter were reported higher in twenty-nine cities, creamery butter alone advanced in seven cities and dairy rose in two. Butter was reported scarce in most localities and prices were upward.

Cheese.—Old cheese was higher in price at Quebec and Montreal, Que., at Ottawa and Brockville, Ont., and at Regina, Sask., and new cheese rose at Quebec, Three Rivers, St. John's and Montreal, Que., and at Ottawa, Orillia and St. Catharines, Ont., but declined at Berlin, Ont., and at Fernie, B.C. At St. Catharines, Ont., the demand for

RETAIL PRICES OF STAPLE ARTICLES

The accompanying table sets forth the retail prices prevailing on, or about, the fifteenth day of the month preceding the present issue of the *Labour Gazette*, of the more important staple commodities entering into the cost of living in the leading centres of industry throughout Canada.

The list of commodities includes thirty-two varieties of food, with fuel and coal oil. In addition a statement is given of the rental of a representative workingman's dwelling of the better class in the quarter of each locality usually occupied by workmen.

DEPARTMENT OF LABOUR, CANADA.

OF CONSUMPTION, CANADA, DURING NOVEMBER, 1915.

The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison. Such comparisons, however, will reflect conditions better if averages over some time are taken and if the several articles are grouped together as in a family budget.

The quotations contained in the table have been furnished by the correspondents of the *Labour Gazette* in the respective localities, under detailed instruction as to sources of information, quality of goods to be quoted, etc., from the Department.

COMMODITIES, CANADA, NOVEMBER, 1915.

Ri	um, per lb.		Beans, hand picked, per lb.	Apples, evaporated, per lb.	Prunes, medium quality, per lb.	Sugar		Tea		Coffee, medium, per lb.	Potatoes, per bag of 1½ bushels. export to Europe was reported as the leading factor in firming the market.

Bread.—The price was higher at Sault Ste. Marie, Ont., and lower at Fredericton, N.B., at St. John's and Hull, Que., at Belleville, Brantford and St. Thomas, Ont., and at Moose Jaw, Sask. At Brantford, Ont., and at Moose Jaw, Sask., it was stated that reductions occurred owing to keen competition.

Flour prices were lower at Halifax, N.S., at Charlottetown, P.E.I., at Three Rivers and St. Hyacinthe, Que., at Guelph and St. Thomas, Ont., at Calgary, Alberta, and at Vancouver and Nanaimo, B.C., but were higher at Newcastle, N.B., at Sorel, Que., and at Peterborough, Brantford, Cobalt and Sault Ste. Marie, Ont.

Rolled oats declined at St. John, N.B., at St. Thomas, Woodstock and Port Arthur, Ont., at Regina, Sask., at Calgary, Alberta, and at Vancouver, B.C., in sympathy with the oat market.

Rice.—Good medium rice was reported lower at Port Arthur and Fort William, Ont., and at Medicine Hat, Alberta, and higher at Cobalt, Ont., and at Edmonton, Alberta. Patna rice also declined at Port Arthur, Ont., but rose at Fort William, Ont., and at Edmonton, Alberta.

Tapioca advanced at Vancouver, B.C.

Canned tomatoes, peas and corn.—The price of canned tomatoes advanced at Sydney, N.S., and at St. Catharines, Guelph and Port Arthur, Ont. Both canned peas and corn advanced at St. Catharines, Ont., but declined at Berlin and Woodstock, Ont., and at Medicine Hat, Alberta, while canned corn alone advanced at Vancouver, B.C.

Beans.—Prices advanced in fifteen cities and declined in one. It was stated that owing to wet weather, in Eastern Canada the crop was not large. A good demand for export to Europe was also reported.

Evaporated apples rose at Victoria, B.C., owing to an increase in the wholesale price.

Prunes advanced at St. John, N.B., and declined at St. Thomas, Ont., and at Medicine Hat, Alberta.

Sugar.—Granulated sugar was reported higher in twelve cities and lower in nine, while yellow sugar advanced in eleven cities and declined in six.

Tea.—Black tea was quoted higher at Kingston and Cobalt, Ont., but lower at Medicine Hat, Alberta, and at Vancouver, B.C. Green tea similarly declined at Medicine Hat, Alberta, and at Vancouver, B.C., but advanced at Kingston, Cobalt, Port Arthur and Fort William, Ont.

Coffee was higher at Cobalt, Ont., and at Vancouver, B.C.

Potatoes declined in four of the cities but advanced in thirty, owing to scarcity, following poor crops. It was stated at Halifax, N.S., that the price was higher than for years.

Vinegar.—Prices declined at Vancouver, B.C., and advanced at Medicine Hat, Alberta.

Starch was higher at St. Thomas, Ont., and at Vancouver, B.C.

Coal.—Hard coal was reported higher at Fredericton, N.B., at Quebec, Three Rivers, Sherbrooke and Montreal, Que., and at Orillia and Windsor, Ont. The price was lower at Sault Ste. Marie, Ont., at Winnipeg, Man., and at Moose Jaw, Sask. Bituminous coal was lower at Hull, Que.

Wood.—Hard wood advanced at Orillia, Ont., and at Regina, Sask., while soft wood was higher at Newcastle, N.B., and at Orillia, Ont.

Coal oil was lower at Lethbridge, Alberta. At Vancouver, B.C., the price advanced owing to the seasonal demand.

Rentals.—Rates for houses without sanitary conveniences declined at Edmonton, Alberta, following the decline in houses with sanitary conveniences last month, many houses being reported vacant. Rents for houses both with and without sanitary conveniences were lower at Moose Jaw, Sask., as a number of houses were vacant.

Wholesale Prices.

Grains and fodder.—Manitoba Northern wheat advanced from 97½¢ to \$1.05¼ per bushel by the middle of the month, demand being good and Liverpool market higher, but declined to \$1.01 later. The average price for the month was \$1.03 as compared with 96.8¢ for October. The commandeering of wheat in elevators east of Fort William by the Dominion Government on Saturday, Nov. 27, was followed by reports of firmness and advances in prices on some markets and in some options. On Tuesday, Nov. 30, however, the cash price for Manitoba Northern No. 1 on the Winnipeg Grain Exchange was \$1.03½ at the close as compared with \$1.01¾ on Saturday. Ontario winter wheat rose from 93-95¢ per bushel to 96-98¢, but declined to 94-95¢ later. Western barley rose from 65½¢ to 69¢ under a good demand but declined to the former level. Ontario barley rose from 54-58¢ to 56-60¢ and eased off slightly. Western oats declined from 43¼¢ to 39¢, demand being light and stocks heavy. Ontario oats were also lower. American corn was steady, averaging 73¢, which was 2¢ higher than a month ago. Flaxseed rose from \$1.65 to \$1.87, as a result of buying for linseed oil factories and reports of a small crop. Later it was reported that supplies were being obtained in South America. The price fell to \$1.82½. Peas, No. 2, were quoted nominally on the market at Toronto at \$1.90 and rose to \$2.25. Rye advanced from 83-84¢ to 88-90¢, but afterwards declined 3¢. Hay was slightly higher at Montreal at \$19.00 per ton. Dealers from the United States were reported to be buying supplies in Eastern Canada, on account of shortage in the United States. Bran and shorts declined \$2.00 per ton to \$21.00 and \$23.00 respectively.

Animals and meats.—Choice butcher cattle at Winnipeg declined from \$6.50-6.85 to \$6.35-6.50. The top price for butcher cattle at Toronto rose from \$8.00 to \$8.60 but fell back to \$8.00. Trade was reported to be slow and receipts of

inferior quality were heavy. The demand was strongest for canners. Dressed beef, hindquarters, declined from \$14.00-15.50 to \$13.00-14.00. Forequarters eased off 50¢ per cwt. Prime veal was \$1.00 per hundredweight lower at Toronto. Hogs advanced from \$8.85-8.90 to \$9.50-9.80, fed and watered, supplies being scarce. Lard rose from 12½-13¢ to 14¢ per lb. Sheep advanced from \$5.50-6.25 to \$5.75-7.00. Dressed lamb advanced 50¢ per cwt., but mutton declined \$1.00. Frozen fowl declined from 13-16¢ to 12-13¢ per lb. Turkeys fell from 19-20¢ to 17-18¢.

Dairy products.—Finest creamery butter declined at Montreal from 32-32½¢ to 31½-32¢. The export demand fell off as prices were lower in England. Later, however, the market was firmer as stocks in Canada were light. Dairy butter rose from 26-28¢ to 28-30¢ at Toronto. Cheese advanced from 16-16¼¢ to 17½-17¾¢. The production was falling off both in England and in Canada and stocks were light. At Montreal milk advanced to winter prices on the same level as last year. Fresh eggs advanced at Montreal from 40¢ per dozen to 42¢, and later to 42-45¢. Storage eggs at Toronto rose from 29-30¢ to 30-31¢.

Fish.—Salt mackerel advanced from 6½¢ per lb. to 7¢. Fresh whitefish rose from 13¢ to 14¢ at Toronto. The dried fish market was firm, owing to the advances at St. John's, Newfoundland, and shortage of supplies. The West Indian market was improving. Good prices were also obtained in Southern Europe. Stocks of salt fish were reported low, as a result of heavy shipments to the United States. The late catch of herring was short on the Nova Scotia coast.

Fruits and vegetables.—Apples advanced to \$3.00-4.00 per barrel for early winter varieties as compared with \$1.50-2.75 last year. Bananas advanced from \$1.25-2.00 to \$1.50-1.90 per bunch. New lemons came on at \$4.00-4.50 per box. Valencia oranges were slightly firmer. Currants advanced from 10½-11½¢ to 13-14¢ per lb., and raisins rose from

13¼-14½c to 15-16c, owing to war conditions in the Mediterranean Sea. Potatoes rose from \$1.05-1.10 at Montreal to \$1.15-1.20. At Toronto, Ontario potatoes rose to \$1.25-1.35. Supplies from British Columbia were afterwards sold at \$1.30-1.35. Onions were easier at \$1.00-1.15 per bag at Toronto. Turnips came on the market at 45-50c per bag. Beans were reported scarce and advanced later. Canned corn and peas rose from 90c to 95c per dozen and canned tomatoes from \$1.00-1.10 to \$1.10-1.15.

Miscellaneous groceries.—Winter wheat flour advanced 40c per barrel, patents rising from \$5.40 to \$5.80 and later to \$6.00. Spring wheat patents rose from \$5.85 to \$5.95 and later to \$6.10. Rolled oats were also upward. The tea market showed firmness in some grades. Better demand for coffee was reported. Chocolate and cocoa advanced 2c and 3c per lb. Sugar rose 35c per cwt. later in the month in sympathy with the market for raw sugar. Glucose advanced 10c per cwt. Cream of tartar advanced 5c per pound, to 55-65c.

Textiles.—Crossbreds and good merino wool were five per cent higher at the London sales. Russia, Italy and the United States were heavy buyers. Yarn prices were very high. Raw cotton was slightly higher in the United States, following bad news of the crop, good demand from the mills and expectations of a very small yield. Dyestuffs were also scarce and high. Prices of cotton goods were therefore advanced by manufacturers. Raw silk continued to advance, Italian classical rising from \$3.60 per lb. to \$3.90. Japan filatures, Kansai, No. 1, rose to \$3.90 per lb. Jute was slightly easier at 6.16c. per lb. at Montreal, and hessians at 10.15c per yard. Flax sewing twine advanced 1c per lb. Floor oilcloth advanced 1c per square yard.

Hides, leather, boots and shoes.—The market for leather continued firm with good export and home demand. The demand for hides was also good. A better demand was reported in Western Can-

ada for boots and shoes, as the retailers and jobbers were increasing their stocks.

Metals and implements.—Nova Scotia pig iron advanced from \$20.00 to \$21.00 per ton. Steel billets also advanced \$1.00 per ton. Iron bar rose 10c to \$2.25 per cwt. Charcoal tin plates rose from \$7.00 to \$8.00 per box. Nickel, quicksilver, and aluminum showed steep advances at New York. Copper was slightly easier at 19½c per lb. Lead was ¼c higher at 6¼-6½c per lb. Spelter was slightly firmer at 17½c. Tin rosé 2c to 39-40c per lb.

Fuel and lighting.—Connellsville furnace coke advanced from \$1.80-1.85 to \$2.50-2.75 per ton at the ovens and foundry coke rose to \$3.00-3.25, in sympathy with the stronger market for iron and steel. Gasoline advanced 1c to 21½c per gallon. Telegraph matches rose from \$5.20 to \$5.80 per gross.

Building materials.—New Brunswick spruce deals declined from \$16.00 to \$15.50 per M which was the price in September. Stocks in England were reported larger and freights were very high. Improved trade was reported at Montreal, Ottawa and Toronto, due to the demand for shell boxes. A better demand in Ontario was expected owing to indications for increased building. Pitch advanced 50c per barrel. Wire nails advanced further by 5c per keg, to \$2.55. Sash cord rose ½c per lb. to 27½c. Copper wire rose to 23½c per lb. Barb wire fencing advanced from \$3.00 to \$3.45. Raw linseed oil advanced from 68-70c to 72-73c in sympathy with the flaxseed market. Turpentine rose from 64c to 76-82c per gallon. Benzine advanced 1c to 22½c per gallon. Putty was reported 10c per cwt. lower.

House furnishings.—No changes were reported.

Drugs and chemicals.—Carbolic acid, caustic soda, indigo, and opium continued to advance. Quinine, glycerine and alum showed steep advances.

Miscellaneous.—The raw fur market showed great improvement. Mink advanced from \$2.50 to \$3.00 per skin.

TABLE SHOWING INDEX NUMBERS BY GROUPS OF COMMODITIES FOR NOVEMBER, 1915,
OCTOBER, 1915, AND NOVEMBER, 1914.

	Number of commodities.	Index Numbers.		
		November, 1915.	October, 1915.	November, 1914.
I. <i>Grains and Fodders:</i>				
Grains, Ontario.....	6	183.8	165.9	150.8
Grains, Western.....	4	161.3	149.4	167.1
Fodder.....	5	161.8	166.8	177.1

XIII. <i>Miscellaneous:</i>				
Raw furs.....	4	257.8	153.1	137.5†
Liquors and tobacco.....	6	134.8	135.6	138.7
Sundries.....	7	122.8	122.0	110.0
All.....	17	158.8	134.1	126.6
All commodities.....	263*	157.8§	148.8	137.5

*Five commodities off the market, fruit, vegetables, etc. †Estimated, markets demoralized. §Excluding the steep rises in quinine, alum, glycerine, and raw furs the index number would be 152.8. (a) Apples only. (b) Five commodities, peaches, pears, etc.

Muskrat rose from 18-20c to 20-25c, racoon from \$1.00 to \$2.00-2.50 and skunk from \$2.00 to \$3.50-4.00. Canadian hops were easier at 15-15½c per pound, but English hops were firmer at 35-37c. Sulphite pulp, bleached, rose \$4.00 per ton to \$58.00-62.00. Unbleached pulp advanced \$1.00 and \$2.00 per ton. Raw rubber rose from 50½-51c to 54½-55c per pound.

Prices in Other Countries.

The accompanying table, including the latest findings of the most authoritative index numbers of wholesale prices in Great Britain, the United States and France, will enable a review to be made as to recent movements and tendencies in prices in these countries as compared with Canada.

The *Economist*, London, Nov. 6, 1915, reporting on the index number for the end of October, states:

This advance is slightly less than that which took place in September, but it indicates a dangerous tendency, suggests, like the exchanges, a certain inflation of credit. Foodstuffs in the aggregate are much the same as last month, but in individual articles of human diet there have been sharp movements, which counterbalance one another. . . .

Since the war began—or, to be precise, since July 31, 1914,—the change in our percentage figure is from 116.6 to 153.2, that is, 36.6 per cent. Our reckoning, therefore, shows an advance during the war of the general level of wholesale prices amounting to just under 31.2. Considering the enormous rise in freights, the scarcity of tonnage, wage increases, trade dislocation, and the destruction wrought by the war, that advance does not exceed reasonable expectations. It may be admitted that retail prices have risen more than that, and the course of retail prices follows the course of wholesale prices even less closely in war time than in normal periods. Nevertheless, quite apart from the sensational reports of famine prices and bread riots in Germany, sufficient official information has been collected from time to time by the Board of Trade to show that the rise of prices in Germany and Austria has been on a much greater scale than here. The question how much further prices will rise in this country depends to a great extent upon steps being taken to increase available tonnage and restrict freights. This important subject is now being considered by Mr. Runciman in conference with shipping interests.

The *Statist*, London, Nov. 13, 1915, continuing the Sauerbeck index number, reports on the figure for the end of October:

At the end of last year and early this year the prices of commodities steadily advanced until from 81.2—the index number for June, 1914,—107.2 was reached in May, 1915. In June and July last there was a setback in prices due to heavy sales by the Government of produce bought in previous months. The Government's purchases were largely responsible for the great rise in prices that took place up to May, and the world's great consumption prevented any appreciable decline in prices when the Government became a seller of foodstuffs instead of a buyer. But since July prices have again risen, and from 106.4 the index number rose to 107.8 in September, and it has now further advanced to 110, the highest figure reached since 1873, when the number was 111.

The advance last month was due to a further rise in prices of cereal foods, of minerals, textiles, and sundry materials. In some measure these advances were counteracted by a substantial fall in animal food and a slight fall in sugar and tea.

Since war began the advance in vegetable food has been 66 per cent, in animal food rather less than 27 per cent, in sugar, coffee and tea 30 per cent, in minerals 28 per cent, in textiles 24 per cent, and in sundries 39 per cent.

Bradstreet's, New York, Nov. 13, 1915, reports on the index number for Nov. 1 as follows, in part:

Commodity prices, speaking of them collectively, continue to mount upward, thus verifying a prognostication made in these columns some few months ago. As a matter of course, the influences of the European war were bound to be felt in the markets of the United States. These influences are as strong, in some respects stronger than ever, and in addition domestic conditions have undergone such marked improvement that the policy of buying on a hand-to-mouth basis, so long a concomitant of uncertainty or its twin factor, depression, has been superseded by the necessity of filling up shelves. As manufacturers have kept stocks close to requirements, the situation as a whole—and disregarding a few eddies outside of the main currents—is one in which the producer rather than the buyer predominates. But after all allowances are made for the uplift in domestic economic trends, the antecedent influences arising from the European conflict stand out most prominently. On the one hand Europe requires our food commodities; it must have materials with which to prosecute the war; neutral countries with the doors of their former European purveyors closed, must come to the United States for some of their wants, and we in our turn are compelled to pay high prices for certain articles wholly of foreign origin, or in the output of which foreigners predominated. Thus are the war's effects felt in America, and it is not astonishing to find that the level of commodity prices is higher than ever.

Dun's index number for Nov. 1 advanced as a result of increases in eggs, butter, cheese, potatoes and other vegetables, sugar, coffee, rice, salt fish, breadstuffs, raw cotton, silk, rubber, hides, leather, iron, steel, lumber, drugs and chemicals. In meats and provisions beef,

(a.) Base 1890-1899=100; 272 commodities included.

(b.) Base 1901-1905=100; prices of 44 commodities at January 1st of each year and the end of each month

(c.) Prices in 1867-1877=100; 45 commodities included.

(d.) Total cost at the first of each month or year of a certain quantity of 96 commodities.

(e.) Total cost at the first of each month or year of a certain quantity of about 200 commodities.

(f.) 22 foodstuffs; based on the Dunn index number, 1907.

(g.) Prices in 1890=100; 48 commodities included.

(h.) Index Number for August 15th. \$9.8495.

*Revised figures.

hogs and bacon were lower but ham, sheep, tallow and lard were higher.

Gibson's index number, including 22 foods, averaged 60.6 for November, as compared with 60.0 for October, and 63.1 for November last year.

The New York *Annalist's* index number, including 25 foods, stood at 145.82 on November 27, as compared with 140.83 on October 30, and 150.44 on November 28, 1914.

In the United Kingdom, the November number of the *Labour Gazette* of the British Board of Trade reported retail food prices higher on November 1 than on October 1 by less than one per cent. Eggs advanced about ten per cent, milk six per cent or $\frac{1}{4}$ d. per quart. Fish, bacon and butter were slightly higher than a month before. As compared with the same date in 1914 the level was 26 per cent higher, tea and fish by 50 per cent, beef 30 to 35 per cent, and mutton by a slightly smaller percentage, bread, flour and butter by about 25 per cent, eggs, bacon, milk and cheese by 20 per cent, potatoes 14 per cent, and sugar 13 per cent, while margarine was substantially the same as a year before. As compared with July, 1914, sugar prices had doubled, imported meat advanced by 50 per cent, British meat by 40 per cent, flour by rather more than 40 per cent, and bread by rather less, bacon, milk, butter and cheese by from 24 to 33 per cent. Margarine was changed but little. The general advance in the cost of food supplies was estimated at 41 per cent, allowing for the household consumption of each commodity.

Prices of food in Berlin, Germany, in September, as published in the *Statistische Korrespondenz*, and reported in the British *Labour Gazette*, showed advances over August in eleven out of nineteen commodities averaging 31 per cent, the general advance over July, 1914, being 78 per cent, while in August it was 75 per cent. Rice and split peas were more than three times as dear. Bread and flour were 27 to 60 per cent higher

but changes in quality had been made as a result of orders of the Federal Council requiring the uses of substitutes.

Food prices in Vienna, Austria, in August appeared 4.3 per cent higher than in July and 86.3 per cent higher than in July, 1914, in tables published in the British *Labour Gazette* based on official returns issued by the Austrian Ministries of Commerce and Agriculture in *Warenpreisberichte*. Beef advanced 17.4 per cent for the month, pork 18 per cent and potatoes 25 per cent. Lesser increases occurred in flour and bread, while onions, split peas, lard and veal declined and bacon, milk, margarine, rice and eggs, lentels, beans and sugar showed no change. As compared with July, 1914, beef, pork, eggs, lentels, split peas, and haricot beans had risen by from 100 to over 200 per cent, while all had risen by 50 per cent or more, except sugar, potatoes and milk. Food prices for September in Vienna were also shown in a report issued by the mayor, all commodities in the list being considerably higher than a year before, the greatest advance being in peas, 108 per cent, onions 125, margarine 141, beef 164, pork 165, rice 224, lard 256, bacon 272. Potatoes alone were unchanged and sugar was only 8.9 per cent higher. Allowing for importance in consumption the general level was 98 per cent higher.

The cost of seven foods in Italy in September, as shown by official figures in *Bollettino dell'ufficio del Lavoro* for November 1, 1915, was higher than a year before, the index number standing at 118.8 as compared with 96.0 in September, 1914, an advance of 22.8 per cent. Wheat bread was higher by 20.2 per cent, wheat flour by 28.7 per cent, macaroni by 25.6 per cent, beef by 44.8 per cent, bacon by 27.9 per cent, table oil by 8.5 per cent and milk by 4.3 per cent.

The cost of living in Christiania, Norway, during the first six months of the year, as compared with the same period in 1914, is shown in a report by the

Municipal Statistical Office. The British *Labour Gazette* for November gives tables showing the percentage changes. Food was higher by 23.6 per cent, light and fuel by 28 per cent, clothing by 6.7 per cent, rent by 3.2 per cent, taxes by 0.5 per cent and various expenditures were estimated to have risen by 16.2 per cent. The greatest advances were in rye flour at 110.5 per cent and peas at 105.2 per cent. Bread was up by 57.4 per cent, wheat flour by 45.2 per cent and potato flour by 28.3 per cent. Beef advanced only 3.2 per cent, fresh mutton 9.4 per cent, pork 11.6 per cent, butter 19.1 per cent, cheese 0.3, 11.0 and 2.9 per cent, according to variety. Coal rose by 69.2 per cent, coke 39.5 per cent, wood 12 per cent, and petroleum 4.5 per cent.

The Journal of the Statistical Office of the Netherlands for October 30 gives index numbers of retail prices of twenty-nine foods for September, 1915, based on the year 1893. The average for September was 147, the same as in August, and 148 for July, as compared with 114 for the year 1913, 113 for the period January to July, 1914, 121 for the last five months of 1914, 137 for the first six months of 1915. Wheat flour declined in September to the level of the first six months of the year. All commodities showed considerable advances over the first half of 1914.

The August number of the *Monthly Summary of Australian Statistics* gives index numbers of retail prices of foods and other groceries calculated from prices in thirty towns, the base being 1,000 in the year 1912. In July, 1914, the index number stood at 1,021 and rose to 1,334 by July, 1915, and to 1,423 by August, an increase of 39.4 per cent. Bread, flour, tea, oatmeal, potatoes, kero-

sene, milk, butter, cheese, bacon, beef, mutton and pork showed important advances. The purchasing power of money was shown in a table showing that what would have cost 20s in 1911 on the average in the six capital towns, in retail prices of foods and groceries, including starch, candles, blue, kerosene, and house rent, would have cost 23s 6d in the first quarter of the current year, and 24s 11d in the second quarter, as compared with 22s 4d and 23s 1d in 1914.

The New South Wales *Monthly Statistical Bulletin* for August gives index numbers of prices of exports at Sydney from August, 1914, to August, 1915, the base being 1,000 for the year 1901. For August the number was 1,648 as compared with 1,573 for July, 1,484 for May and 1,320 for August, 1914. Pastoral products, wool, tallow, hides, etc., stood at 1,838 for August, as compared with 1,648 for July and 1,454 for August, 1914. Metals, silver, copper, lead and tin stood at 1,414 for August, 1,514 for July and 1,020 for August, 1914. In September, 1914, these had declined to 884, but by November had recovered to the August level.

The New Zealand Department of Labour's Journal for October gives index numbers of retail prices of food and rent for the quarter ending September, the base being the average prices for 1909-13, equal to 1,000. The index number for the September quarter stood at 1,112, as compared with 1,105 for the June quarter and 1,056 for the September quarter of 1914, showing a rise of 12.42 per cent for the twelve months. Meats had reached a record level in September but the falling price of butter had lowered the dairy produce group. Bread and flour were also lower.

**FAIR WAGES SCHEDULES AND CLAUSES IN GOVERNMENT
CONTRACTS AWARDED DURING THE MONTH
OF NOVEMBER, 1915.**

DURING the month of November the Department of Labour received for insertion in the *Labour Gazette* information relating to eight contracts awarded by the Department of Public Works. Two of these contracts contained fair wage schedules and the other six contained the general fair wage clauses providing for the rates generally accepted as current in the locality where the work is being carried on. A statement is added for supplies given by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System.

Fair Wages Schedules.

DEPARTMENT OF PUBLIC WORKS.

Construction of extensions "A" and "B" to present wooden shed at berth 15 and construction of wooden shed "C" between Rodney slip and Sand Point slip, West St. John, N.B. Name of contractor, Rhodes, Curry Co., Ltd., Amherst, N.S. Date of contract, November 2, 1915. Amount, \$19,100.

Cereal and agrostology building, Experimental Farm, Ottawa, Ont. Name of contractors, T. H. Cathcart and E. Webster, Ottawa, Ont. Date of contract, November 19, 1915. Amount, \$11,232.

Trade or Class of Labour.	Rate of wages. Not less than the following:
Stonecutters.....	55c per hr., 8 hrs. per day
Masons.....	55c " 8 " "
Bricklayers.....	55c " 8 " "
Sheet metal workers.....	40c " 9 " "
Carpenters.....	35c " 9 " "
Metal lathers.....	45c " 9 " "
Plasterers.....	50c " 9 " "
Electrical workers.....	35c " 9 " "
Plumbers and steamfitters....	44c " 8 " "
Painters and glaziers.....	33c " 9 " "
Plasterers' labourers.....	30c " 9 " "
Builders' labourers.....	30c " 9 " "
Ordinary labourers.....	25c " 9 " "
Hoisting engineers.....	40c " 9 " "
Structural steel workers.....	35c " 9 " "
Driver, 1 horse and cart.....	\$3.00 p. day, 9 " "
Driver, 2 horses and wagon....	5.30 p. day, 9 " "

(All, Saturday afternoons off.)

Fair Wages Clauses.

A number of contracts were awarded which did not include a fair wage schedule, but contained the following clauses providing for the payment of wages current in the district where the work was to be carried on:

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required

Trade or Class of Labour.	Rate of wages. Not less than:—
Foreman carpenter.....	\$3.50 per day, 8 hrs. p. day
Carpenters.....	3.00 " 8 "
Blacksmiths.....	2.50 " 9 "
Blacksmiths' helpers.....	1.80 " 9 "
Joiners.....	3.00 " 8 "
Ordinary labourers.....	22½c. per hr. 9 "
Driver with 1 horse and cart..	\$3.00 per day, 9 "
Driver with 2 horses & wagon	5.00 " 9 "

to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the foregoing clauses were the following:

DEPARTMENT OF PUBLIC WORKS.

Supply of motor generator set, transformers, motor and switch board apparatus, Government Printing Bureau, Ottawa, Ont. Name of contractor, Canadian Westinghouse Co., Ltd., Montreal, Que. Date of contract, October 27, 1915. Amount, \$9,934.

Alterations and additions to fittings, Post Office, Moncton, N.B. Name of contractor, P. N. Leblanc, Moncton, N.B. Date of contract, Nov. 1, 1915. Amount, \$1,130.

Post Office fittings, Jonquieres, Que. Name of contractor, R. A. Sproule, Ottawa, Ont. Date of contract, November 9, 1915. Amount, \$1,119.

Renewal of boiler, dredge "P.W.D. No. 2 St. Lawrence." Name of contractor, Union Foundry and Machine Works,

Ltd., St. John West, N.B. Date of contract, November 10, 1915. Amount, \$10,650.

Fittings in examining warehouse, Fort William, Ont. Name of contractor, The Berlin Interior Hardwood Co., Ltd., Berlin, Ont. Date of contract, November 12, 1915. Amount, \$4,973.

Postal Parcel fittings in Customs examining warehouse, Calgary, Alta. Name of contractor, The Riverside Lumber Co., Ltd., Calgary, Alta. Date of contract, November 22, 1915. Amount, \$1,200.

POST OFFICE DEPARTMENT.

During the month of October, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages, and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount of Orders.
Making metal dating stamps and type and making other hand stamps and brass crown seals.....	\$ 377.79
Making and repairing rubber dating stamps and type; also other stamps.....	94.30
Supplying stamping material and repairing stamping pads.....	1,603.27
Supplying new mail bags.....	627.25
Repairing mail bags.....	2,773.80
Supplying mail bag fittings.....	6,579.50
Making and repairing miscellaneous articles of postal stores.....	22.40
Repairing pillar boxes, letter boxes, steel portable boxes and railway mail clerks tin travelling boxes.....	67.45

TRADE DISPUTES DURING NOVEMBER, 1915.

During November the Department of Labour recorded three new trade disputes. Two disputes were carried over from October, making a total of five trade disputes in existence during November; the October record showed seven trade disputes in existence, while that of November, 1914, showed six disputes. In the three new disputes of November, 1915, there were four firms and 281 employees directly involved; while in the two disputes carried over from October there were seven firms and 69 employees directly involved, making a total of 11 firms and 350 employees involved in the trade disputes in existence during November.

Duration of trade disputes.—The loss in working-days to employees concerned in the three new disputes of the month was approximately 3,521. These when added to the 1,846 working-days lost by employees involved in the two disputes carried over from October give a total loss of 5,367 working-days through disputes in existence during November. The number of working-days lost through disputes in existence during October was approximately 11,313 and through disputes in existence during November, 1914, approximately 4,344 working-days.

Trades affected.—The following table shows the trades affected and the number of employees involved in the three new disputes of the month:

TRADES.	No. of disputes.	No. of Employés.
Metal trades.....	2	2,921
Clothing trades	1	600
Total.....	3	3,521

Localities affected.—The localities affected by the three new disputes were New Glasgow, N.S., Fredericton, N.B., and Toronto, Ont.

Causes.—The causes of the three new disputes were as follows: Against a reduction in wages, 1; for increased wages, 1; protest against employment of female labour and unsatisfactory shop conditions, 1.

Results. — During November settlements were effected in the following manner in the case of the three new disputes of the month: Compromise, 1; in favour of employers, 1; in favour of employees, 1.

Disputes beginning before November.

The trade disputes carried over from the month of October were as follows:

- (1) Plumbers and steamfitters, Victoria, B.C., commenced February 16, 1915.

- (2) Boilermakers, iron workers and helpers, Halifax, N.S., commenced August 2, 1915.

Disputes beginning during November.

The three disputes which came into existence during November and which also were terminated during the month were as follows:

Electrical workers, Toronto, Ont.—On November 2, 126 electrical workers, employees of the Toronto Hydro-Electric Commission and members of Local No. 353 of the International Brotherhood of Electrical Workers, went on strike owing to the refusal of the Commission to abide by the award made by the Board of Conciliation appointed under the Industrial Disputes Investigation Act granting the employees a ten per cent increase in wages from May 1, 1916, with a three-year agreement from May 1, 1915. The Commission instead offered to put into effect the scale of wages as set forth in the minority report of the Board. The strike terminated on November 23 through the employees accepting the

Commission's offer with a few amendments.

Boot and shoe workers, Fredericton, N.B.—On November 6, 100 boot and shoe workers in the employ of two firms, namely, the Palmer-McLellan Shoepack Company and the John Palmer Company, both of Fredericton, N.B., went on strike, the cause being the refusal of the employees (sewers) to accept the rate offered by the firms for sewing larrigans. The sewers demanded the current rate of wages for this class of work but owing as it was stated to having taken the contract at a reduced price the company wished the men to also take a reduction in piece-work rates. The dispute was satisfactorily terminated by both parties compromising on a specified rate.

Machinists, New Glasgow, N.S.—On November 1, 55 machinists, employees of the Canada Tool and Specialty Company of New Glasgow, N.S., went on strike as a protest against the employment of female labour and unsatisfactory shop conditions. The dispute was settled on November 6 by the company acceding to the demands of their employees.

TABLE OF TRADE DISPUTES IN EXISTENCE DURING NOVEMBER, 1915.

Occupation.	Locality.	Alleged Cause or Object.	No. of Firms or Establishments affected.	Employees affected.		Date of Commencement.	Date of termination.	Result.
				Male.	Female.			
DISPUTES BEGINNING PRIOR TO NOVEMBER.								
<i>Building—</i> Plumbers and steam-fitters	Victoria, B.C.	Against reduction in wages.	5	28		Feb. 16, 1915.		Unsettled at end of month.
<i>Metal—</i> Boilermakers, iron-workers & helpers.	Halifax, N.S.	Demand for minimum wage scale.	2	41		August 2, 1915.		" " "
DISPUTES BEGINNING DURING NOVEMBER.								
<i>Metal—</i> Machinists.	New Glasgow, N.S.	Protest against employment of female labour and unsatisfactory shop conditions	1	55		Nov. 1, 1915.	Nov. 6, 1915.	In favour of employees.
Electrical workers.	Toronto, Ont.	Refusal of Toronto Hydro-Electric Commission to abide by award of Conciliation Board in favour of employees	1	126		Nov. 2, 1915.	Nov. 23, 1915.	In favour of employees.
<i>Clothing—</i> Boot & shoe workers	Fredericton, N.B.	Against reduction in wages.	2	100		Nov. 6, 1915.	Nov. 12, 1915.	Compromise.

* Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where, after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF NOVEMBER, 1915.

Under this heading, account is taken of such accidents only as were sustained by male and female workers in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the Dominion or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Department of Mines of Nova Scotia, Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

ACCORDING to the industrial accident record of the Department of Labour there were 50 workpeople killed and 273 injured during November, 1915. The record for the month of October was 71 killed and 262 injured, while that for November, 1914, was 88 killed and 362 injured. A comparison of the November and October, 1915, records shows that there were 21 fewer killed in November while there were 11 more injured. There were 38 fewer workpeople killed and 89 fewer injured dur-

ing November, 1915, than in the corresponding month of 1914.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF NOVEMBER, 1915, BY INDUSTRIES AND GROUPS OF TRADES.

Trade or Industry.	Killed.	Injured.	Total.
Agriculture.....	8	16	24
Lumbering.....	3	3	6
Mining.....	5	13	18
Railway Construction.....	1	1
Building Trades.....	1	12	13
Metal Trades.....	6	101	107
Woodworking Trades.....	6	6
Printing and allied trades.....	1	1
Textile.....	6	6
Food and Tobacco Preparation.....	5	9	14
<i>Transportation:—</i>			
Steam Railway Service....	10	69	79
Electric Railway Service.....	3	3
Navigation.....	4	6	10
Miscellaneous.....	1	14	15
Public Employees.....	2	3	5
Miscellaneous Skilled Trades	3	11	14
Unskilled Labour.....	1	1
Total.....	50	273	323

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING NOVEMBER, 1915.

Trade or Industry.	Locality.	Date.	Number.	Cause of Fatality.
<i>Agriculture—</i>				
Farmer.....	Stanchel, Que.....	Nov. 3	1	Fell from barn loft.
".....	Charlottetown, P.E.I..	" 12	1	" " "
".....	Uxbridge, Ont.....	" 22	1	Fell from and run over by wagon.
".....	Prince Albert, Sask...	" 6	1	" " " "
".....	Emerson, Man.....	" 20	1	Kicked by a horse.
".....	Port Colborne, Ont....	" 26	1	Run over by wagon.
Farmhand.....	Wroxton, Sask.....	" 3	1	Mangled in a separator.
Fireman (threshing engine)..	Granum, Alta.....	" 20	1	Mangled by threshing machine.

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING NOVEMBER, 1915—Continued.

Trade or Industry.	Locality.	Date.	Number.	Cause of Fatality.
<i>Lumbering—</i>				
Chopper.....	Clarendon, N.B.....	Nov. 11	1	Struck by a falling tree.
".....	Metapedia, Que.....	" 11	1	" " " "
Lumber yard employee.....	Sherbrooke, Que.....	" 10	1	Crushed between cars.
<i>Mining—</i>				
Miner.....	River Hebert, N.S....	" 26	1	Fall of coal.
Quarry worker.....	Rivière a Pi rre, Que..	" 4	1	Explosion of dynamite.
Asbestos miner.....	Thetford Mines, Que..	" 20	1	Struck by falling rock.
Quarry worker.....	Granby Point, B.C....	" 3	1	Crushed by falling rock.
Miner.....	Kmslo, B.C.....	" 7	1	Fall of rock.
<i>Railway & Canal Construction—</i>				
Brakeman (canal construction).....	Port Weller, Ont.....	" 20	1	Run over by cars.
<i>Building Trades—</i>				
Stonemason.....	Halifax, N.S.....	" 4	1	Fell from a building.
<i>Metal Trades—</i>				
Electric power house employee.....	Sydney, N.S.....	" 11	1	Electrocuted.
Structural steel worker.....	Hope, B.C.....	" ..	1	Fell from a bridge.
Metal worker.....	Sherbrooke, Que.....	" 2	1	Mangled by machinery.
Steel worker.....	Sault Ste Marie, Ont..	" 15	1	Falling piece of metal.
Foundryman.....	Longue Point, Que....	" 20	1	Electrocuted.
Lin man.....	Montreal, Que.....	" 18	1	" " "
<i>Food and Tobacco Preparation—</i>				
Engineer (packing plant)....	Edmonton, Alta.....	" 5	1	Mangled by machinery.
Brewery worker.....	Cornwall, Ont.....	" 3	1	Electrocuted.
".....	Cornwall, Ont.....	" 4	1	" " "
Grist mill employee.....	Montague, P.E.I.....	" 3	1	Mangled by machinery.
Flour mill employee.....	Montreal, Que.....	" 27	1	" " "
<i>Steam Railway Service—</i>				
Conductor.....	Wainwright, Sask.....	" 7	1	Fell from moving train.
Engineer.....	Vandreuil, Que.....	" 16	1	Run over by a locomotive.
".....	M.P. 1, Shuswap, S.D., B.C.	" 21	1	Fell from a bridge.
Fireman.....	Moose Jaw, Sask.....	" 7	1	Collision of locomotives.
".....	Point St. Charles, Que.	" 27	1	Run over by a locomotive.
Brakeman.....	Point Edward, Ont....	" 16	1	Crushed between cars.
".....	Angler, Ont.....	" 17	1	Fell from and run over by cars.
Shophand.....	Saskatoon, Sask.....	" 10	1	Run over by a locomotive.
Employee.....	Thompson's Crossing (C.N.R.), Alta.....	" 18	1	Struck by a falling metal pipe.
".....	M.P. 22, Kamloops, S.D., B.C.	" 14	1	Derailement of boarding car.
<i>Navigation—</i>				
Canal pilot.....	St. Catherines, Ont....	" 7	1	Crushed between vessel and canal lock wall.
Deckhand.....	Lachine, Que.....	" 16	1	Crushed between vessel and wharf.
".....	Toronto, Ont.....	" 4	1	Fell overboard.
Longshoreman.....	Port Colborne, Ont....	" 26	1	Fell into hold of steamer.
<i>Miscellaneous Transport—</i>				
Stevedore.....	Quebec, Que.....	" 1	1	Struck by a descending clam.
<i>Public and Civic Employees—</i>				
Civic fireman.....	Port Arthur, Ont.....	" 18	1	Fell from and run over by a motor fire truck.
Mail collector.....	Hamilton, Ont.....	" 3	1	Run over by a motor truck.
<i>Miscellaneous Skilled Trades—</i>				
Employee (cynamid plant) ..	Niagara Falls, Ont....	" 26	1	Crushed by a revolving crane.
Employee (cement plant)....	Longue Pointe, Que....	" 29	1	Mangled by machinery
".....	Longue Pointe, Que....	" 9	1	Burned—ignition of gasoline.
<i>Unskilled Labour—</i>				
Labourer.....	Longue Pointe, Que....	" 20	1	Electrocuted.

IMMIGRATION—EMIGRATION—COLONISATION.

Immigration to British North America from the United Kingdom.—During October 8,928 British subjects previously resident in the United Kingdom left to take up permanent residence in places out of Europe as compared with 18,903 in October, 1914. British subjects leaving for foreign countries numbered 4,128, of whom 1,826 were destined for the United States, as compared with 9,305 and 8,484 respectively in October, 1914. Those leaving for parts of the British Empire numbered 4,800, of whom 1,307 were destined for British North America as compared with 9,598 and 3,204 respectively in October of last year.

During the ten months ending October, 67,465 British subjects left the United Kingdom to take up permanent residence out of Europe as compared with 200,978 in the corresponding period of last year. British subjects leaving for foreign countries numbered 28,683, of whom 25,866 were destined for the United States, as compared with 70,365 and 64,614 respectively for the corresponding period of 1914. Those leaving for parts of the British Empire numbered 38,782, of whom 15,402 were destined for British North America, as compared with 130,613 and 76,235 respectively in the same ten months of last year.

Emigration from British North America to the United Kingdom.—During October 8,624 British subjects previously resident in places out of Europe arrived to take up permanent residence in

the United Kingdom as compared with 9,300 in October, 1914. British subjects arriving from foreign countries numbered 1,735, of whom 1,367 were from the United States, as compared with 2,681 and 1,722 respectively in October, 1914. Those arriving from parts of the British Empire numbered 6,889, of whom 4,006 were from British North America, as compared with 6,619 and 4,644 respectively in October of last year.

During the ten months ending October 76,635 British subjects previously resident in places out of Europe arrived to take up permanent residence in the United Kingdom as compared with 83,004 in the corresponding period of last year. British subjects arriving from foreign countries numbered 19,713, of whom 13,303 were from the United States, as compared with 24,209 and 16,987 respectively in the corresponding period of 1914. Those arriving from parts of the British Empire numbered 56,922, of whom 30,684 were from British North America, as compared with 58,795 and 23,584 respectively in the same ten months of last year.

Balance.—It appears from the above that as 4,006 British subjects arrived from British North America to take up residence in the United Kingdom during October and 1,307 left the United Kingdom to reside in British North America, the latter had an outward balance of 2,699. These numbers compare with 4,644, 3,204 and 1,440 respectively for October of last year.

It appears also that as 30,684 British subjects arrived from British North America to take up residence in the United Kingdom during the ten months ending October and 15,402 left the United Kingdom to reside in British North America, the latter had an outward balance of 15,282 for this period. These numbers compare with 23,584, 76,235, and an inward balance of 52,561 respectively for British North America for the corresponding period of 1914.

On September 30 a Dominion order-prohibition of all classes of artisans and in-council was passed continuing the labourers from entering British Columbia for a period of six months from October 1, 1915, until after March 31, 1916. The order-in-council sets out the various ports of entry in British Columbia to which the order shall apply, and is a renewal merely of an order put into effect in December, 1913, and renewed from time to time.

Lands Patented.—According to the Department of the Interior's statement of letters patent covering Dominion lands in Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory for the month of October, 1915, the number of patents was 1,607 and the number of acres 252,028.81.

These numbers compared with 2,717 and 470,807.88 respectively in October, 1914. For the ten months ended October 31, 1915, the number of patents was 16,926 and the acreage 2,740,602.04 as compared with 26,356 patents and an acreage of 4,352,941.97 for the corresponding period of 1914.

Homestead Entries.—In October there were 434 homestead entries in Manitoba, 484 in Saskatchewan, 479 in Alberta, and 39 in British Columbia, a total of 1,436, as compared with 2,394 in October, 1914, a decrease of 958. The numbers for the ten months ending October were: Manitoba, 3,470; Saskatchewan, 5,089; Alberta, 5,569, and British Columbia, 421, a total of 14,549, as compared with a total of 22,248 for the corresponding period of 1914, a decrease of 7,699.

Of the 1,436 entries in October, 216 were made by persons who had previous entry, 205 by citizens of the United States, and 275 by persons from the United Kingdom. Canadians from Ontario and Quebec made 226 entries; from the Maritime Provinces 17, and from the Western Provinces 191. The remaining entries were made by persons of other nationality.

BUILDING PERMITS DURING NOVEMBER, 1915.

THE total of building permits in November was \$3,444,250, an increase of \$873,857 as compared with October and a decrease of \$1,016,687 as compared with November of last year. The total for the 11 months ending November was \$30,419,393 as compared with \$97,-

236,334 for the corresponding period of 1914. Only one province, Nova Scotia, showed an increase in the total value of building permits issued in 11 months as compared with the same period of 1914. The greatest decline in building during the 11 months was in Ontario, Quebec and Manitoba.

RECENT INDUSTRIAL AGREEMENTS.

AS the outcome of a strike at the mines of the Canadian Coal and Coke Company at Lovettville, Alberta, an agreement has been arranged between the company and its employees by which it is agreed that no strike shall be called for at least the period of six months from the date of the agreement (October 15, 1915) and that any grievance arising during that time shall be decided finally by the management and a committee of the employees. The company reserves the right to make any further advance in wages as they may see fit, but undertakes not to reduce the rates agreed upon by the agreement.

The following is a copy of the wages schedule adopted, which dates from October 1, 1915:

Occupation.	New rate.
Drivers.....	\$2.90
Rope riders.....	3.00
Bratticeman.....	3.00
Tracklayers.....	3.20
Tracklayers' helpers.....	2.50
Timbermen.....	3.00
Contract miners off the face.....	3.00
Mine labourers and pumpmen.....	2.50
Bank and tippie men.....	2.45
Slate pickers (men).....	2.45
Trimmers.....	2.80
Hoisting enginemen..... (per hour)	.34
Power house enginemen..... (per hour)	.34
Firemen.....	3.25
Machinist.....	3.35
Smiths.....	3.50
Tubmen.....	3.25
Tubmen's helper.....	2.90
Labourers.....	2.25
Powder men.....	2.30

CONTRACT.

Pillars.....	.43
Rooms.....	.56
Narrow work, 10 feet levels save as previous yardage rate.....	2.10
Small shacks, free rent.	
Houses and large shacks, \$1.00 per month less.	

Drumheller Agreement.

Negotiations which had been in progress for several weeks between the representatives of the Western Coal Operators' Association and the United Mine Workers of America with a view to effecting a working agreement between the recently organized mine workers in the lignite coal fields known as the Drumheller District, resulted in an agreement being reached at the end of October, in respect to one of the mines in the district—the Midland Collieries—by which the terms of the general agreement between the Western Coal Operators' Association and District 18, of April 1, 1915, are made applicable to the Midland mines. The full text of the agreement is given herewith.

To The Western Coal Operators' Association and District No. 18, United Mine Workers of America.

Specifications for the Midland Collieries, Ltd., of Drumheller, Alberta.

(1) That the general provisions outside and inside day wage scale, that are now in effect between the United Mine Workers of America, District No. 18, and The Western Coal Operators' Association, in accordance with a certain agreement between these parties dated April 1st, 1915, be in effect at these collieries during the life of this agreement.

CONTRACT RATES.

No. 1 Mine—No. 3 Seam.

All coal paid for—one ton to be considered 2,000 pounds:

PICK MINING.

Pillars and stumps—90 cents per ton for screened coal.

Pillars and stumps—75 cents per ton run-of-mine.

Rooms—90 cents per ton for screened coal.

Rooms—75 cents per ton run-of-mine.

Yardage—\$1.50 per lineal yard.

Narrow work — 90 cents per ton for screened coal.

Narrow work—75 cents per ton run-of-mine.

Yardage—\$2.00 per lineal yard.

Bone—10 cents per inch per lineal yard.

Timbering—Square sets notched and lagged (in entries), \$1.00 per set.
Bridge sticks, \$1.50.

Tracklaying and lifting clay—(If done by miner), 25 cents per lineal yard.

All coal to be forked if required.

Slack loaded after forking, 25 cents per car.

Where the company requires the miner to shovel coal over 12 feet, the miner to be paid at the rate of 50 cents per lineal yard.

All narrow places, such as entries, room necks and cross-cuts, must be mined a suitable depth from rib to rib before shots are fired. All rooms must be mined half way across before shots are fired.

Clay in entries will be taken up by the miner from rib to rib and also in room necks. Clay in rooms will be taken up by miner at least 5 feet wide from the rib the track is on.

All timber in entries and room necks to be lagged securely. All posts in rooms to be placed not more than five feet from post to post, and such post to have a suitable cap. All cross-cuts to be posted.

The above prices are based on the present screening facility.

LOCAL CONDITIONS.

Dockage. — Present dockage system to prevail.

Powder—Caps and other supplies as per present practice.

Wash house—\$1.00 per month.

Blacksmithing—50 cents per month.

Dated at Calgary, October 28th, 1915.

W. L. PHILLIPS,

President,

District No. 18, United Mine Workers of America.

W. F. McNEILL,

Commissioner,

Western Coal Operators' Association.

Blairmore Agreement.

On July 25, 1915, a supplementary agreement was entered into between the Western Coal Operators' Association, on behalf of the West Canadian Colliery, Limited, of Blairmore, Alta., and District 18 of the United Mine Workers of America, covering the Greenhill mine at Blairmore. The full text of this agreement, which was only recently received in the Department, is printed herewith.

To the Western Coal Operators' Association and District No. 18, United Mine Workers of America.

Application having been made by the Local, and specifications having been furnished by the company, for prices for No. 1 seam, Greenhill Mine of the West Canadian Collieries, we find that the following schedule shall be the rates to apply:

Specifications No. 1 Seam, Greenhill Mine of the West Canadian Collieries, Ltd., Blairmore, Alta.

Gangway—8 ft. collar between notches, 11 ft. spread, 7 ft. clear above rail, including all timbering, tight lagging, tracklaying, ditching and loading coal and rock in separate cars, \$11.00 per lineal yard.

Raises—6 ft. by 6 ft. or 6 ft. by 8 ft., including timbering, bratticing and chute building, 75 cents per cubic yard.

First length of chute (12 ft.) to be \$5.00 if built by miner.

Counter gangway—6 ft. by 6 ft., including timbering, bratticing and handling coal, 87½ cents per cubic yard.

Rooms up pitch and angles—To be not less than 12 ft. wide, to include timbering, chute building, air-tight brattice, laying sheet iron and manway, 50 cents per cubic yard.

Rooms across pitch—To be not less than 12½ ft. wide, to include timbering, bratticing, laying track, handling coal and gobbing rock, 54 cents per cubic yard.

Cross-cuts—6 ft. by 6 ft., including timbering, bratticing, handling coal, 75 cents per cubic yard.

Pillars—Including all work necessary to deliver coal in a clean manner and keep the place in a safe condition, 43 cents per cubic yard.

Dated at Frank, Alberta, July 24, 1915.

W. L. PHILLIPS,
President,

District No. 18, United Mine Workers of America.

W. F. McNEILL,
Commissioner,

Western Coal Operators' Association.

REVIEWS.

Workmen's Compensation.

Great Britain.—Statistics of Compensation and of Proceedings under the Workmen's Compensation Act, 1906, and the Employers' Liability Act, 1880, during the year 1914.

THESE statistics of compensation paid in 1914 under the Act of 1906 and under the Employers' Liability Act of 1880 were presented to the Home Department September 23, 1915. The statistics of compensation appearing in Part I of the tables relate to the seven great groups of industries—shipping; factories; docks; mines; quarries; construction work; and railways. Part II contains tables relating to the legal proceedings under the Acts.

The aggregate number of persons coming within the provisions of the Act who

were employed in the seven industries was more than seven millions, which is less than in the preceding year owing to enlistment. The total payments for compensation in 1914 amounted to £3,465,361, and the number of cases totalled 442,116, of these 4,216 cases were fatal and 437,900 disablements. The disablement cases included 41,494 continued from 1913. During the year 398,343 of these cases were terminated, leaving 39,557 cases outstanding. Out of the 437,900 cases 28,213 were settled by the payment of the lump sum of \$795,270.

The tables in Part I also include compensation for various industrial diseases under the Act. In the 43 fatal cases of industrial diseases compensation was paid to the amount of £7,099, and in

9,622 disablement cases to the amount of £182,551. The number of continued cases was 3,593, and they accounted for £105,742. The majority of these cases, 8,932 or 92.4, occurred in the mining industry; of the remainder, 544 or 5.6 per cent, were cases of lead poisoning.

The statistics in Part II relating to proceedings in the court are grouped in nine tables and are given separately for England and Wales, Scotland and Ireland. The total number of applications for arbitration in 1914 was 9,746; many of these dealt with allowances already granted, others were settled out of court, so that the number of claims finally settled in court was 5,531. The decisions in 4,440 cases, or 80 per cent, were in favour of the applicants. There were 31,195 memoranda of agreements registered in the courts. The number of cases carried to Courts of Appeal was 189, and 69 were allowed. The appeals to the House of Lords were 20, of which seven were allowed. There were 139 cases under the Employers' Liability Act, 1880, and only one appeal under this Act was dismissed. The figures have steadily decreased since 1907, and clearly indicate that the older Act is falling into disuse since the Act of 1906 has come into full operation.

Conservation of Canada's Resources.

Sixth Annual Report of the Commission of Conservation, Canada, 1915. Pages, 333.

The report of the sixth annual meeting of the Commission of Conservation has recently been issued. Although the Commission has worked under the shadow of the war, a glance at the contents reveals that the ever-widening scope of the Commission's activities has

not been seriously affected. The volume contains interesting discussions on Canada's wealth in forest, field, mine and stream, and instructive papers on town planning, technical education and agricultural surveys.

The opening address of the chairman, Sir Clifford Sifton, is a comprehensive review of the work of the year and an outline of plans for the future. The chairman stated that the outstanding feature of the year's work was in connection with town planning and the appointment of Mr. Thomas Adams as their adviser in this matter.

Mr. Adams gave the history and progress of the housing movement in Canada since 1911. He sketched the legislation passed in Nova Scotia, New Brunswick and Alberta along this line and the action taken by various municipalities. He emphasized the economic rather than the aesthetic side of town planning and showed the need for legislation in every province. In conclusion he urged that determined efforts be made to ensure the future development of cities along lines conducive to the health, comfort and happiness of their citizens.

In view of the present industrial conditions the papers on mineral resources and the problem of their conservation formed topics of general interest. The forestry branch reported most satisfactory progress. The situation in Quebec showed greatest improvement owing to the support of the Provincial Government and the practical training in forestry at Laval. Reports of the work on agricultural surveys and illustration farms showed the benefits that had accrued from such a system and suggest-

ed an illustration county as a larger field for this important work. The Department of Agriculture has taken over this branch of the Commission's activity. A paper on the Canadian Fresh Sea Fish Trade by Mr. Allan Donnell affords a valuable resumé of the work of the Department of Marine and Fisheries in encouraging the sale of fresh sea fish.

The appendices contain a report of the National Conference on Town Planning, held in Toronto in May, 1914, which includes the discussion on a Town Planning Act for Canada; there is also a statement of Recent Town Planning Progress in the Maritime Provinces, and a paper by Mr. P. A. Taverner recommending the creation of three new national parks as bird sanctuaries at Bonaventure Island, Percé Rock and Point Pelée.

Employment in Winnipeg.

Annual Report of the Winnipeg Free Employment Bureau.

The second annual report of the Winnipeg Free Employment Bureau for the year ended September 30, 1915, indicates increased service to employers and

workpeople as compared with the previous year. The total number of positions filled during the year was 15,542, while the number of positions offered was 17,862. In the preceding year the number of positions filled was 12,282, and the number offered 13,883. The greater number of applicants, about 80 per cent, comes from the unskilled labour class. 10,242 British subjects were placed in positions and 5,300 foreigners.

The following table gives the record of business for two years in some of the unskilled labour classes:

Character of positions.	1914-15.		1913-14.	
	Offered.	Filled.	Offered.	Filled.
Labourers	7,816	7,618	4,222	4,158
Handy men	524	511	944	921
Bushmen.....	421	392	115	79
Farmhands.....	365	233	304	228
Carpenters	167	157	230	217
Teamsters.....	116	91	170	146
Day workers.....	4,038	3,956	3,689	3,596
Domestics.....	2,260	993	1,445	749

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

Workmen's Compensation Act. — Indemnity.—Permanent and partial disability.

THE plaintiff sued under the Workmen's Compensation Act for an accident while working for the defendant, alleging the following facts: He was the operator of a tin cutting machine, at a salary of \$6 a week. On the third day of September, 1914, the first joints of the second and third fingers and a part of the first joint of the first finger of his right hand were amputated by the knives of the machine. He alleged inexcusable fault on the part of the defendant, and claimed half his salary from the date of the accident and an indemnity equivalent to one-half the permanent partial reduction of his earning capacity.

The defendant pleaded that by the accident the plaintiff had only a small piece of flesh cut from the first finger of his right hand; that the plaintiff only lost his salary during three weeks from the date of the accident, after which he continued his work at the same salary he was receiving at the time of the accident; that for these three weeks the defendant paid him more than one-half of his wages and that the plaintiff does not suffer any permanent partial incapacity.

In the Superior Court at Montreal judgment was rendered in the following terms:

"Considering that the law in the case of partial permanent incapacity gives an indemnity equal to one-half of the reduction of salary, which obliges the judge to seek to ascertain the corresponding decrease of salary which would normally follow therefrom; that it is impossible to give a greater extension to the law without violating both the letter and the spirit; that according to the proof the plaintiff will sustain for some time a slight incapacity, but he is not exposed to suffer a normal diminution of his salary on account of this accident, for these reasons doth dismiss plaintiff's action with costs." (*Stack v. Whittall.*)

Workmen's Compensation Act.—Application of the Act.—Absence from the work without leave.

The plaintiff's husband was in the employ of the defendant company as a working foreman carpenter. He was at work at the round-house of the company at Turoot, which is surrounded with tracks which are used as a shunting yard for the making up of trains. The eleventh day of January, 1914, was pay day. The men were paid about eight o'clock in the morning. About eleven o'clock the foreman started to have his cheque cashed at a nearby branch of the Molsons Bank. He could have reached the bank without crossing the tracks, but

he would have had to pass before the office, and could easily be seen, and it was forbidden by the rules of the company to go and have cheques cashed during working hours. He accordingly started to cross the tracks, where a train was being made up, and was caught between two cars and killed. His widow sued the company for \$2,025. The defence was that the accident did not happen in the course or on the occasion of his work, and that his death was due, if not to the intentional, to the inexcusable fault of the deceased.

The Superior Court maintained the action, but held that the deceased was guilty of inexcusable fault and reduced the claim by one-half.

Both parties appealed from this judgment, which was reversed by the Court of Review, Mr. Justice Greenshields summing up the case as follows: "The deceased left his employment against his instructions; he went, for no reason connected with his work, into a dangerous locality for his own private purposes. He exposed himself to a danger which was not incident to his employment and in no way connected with it; he met with an accident, because he left his work and placed himself in a dangerous position; and for that reason, I should say, his widow must be denied the relief sought under the Act." (*Dame Lavery v. Grand Trunk Railway Company*.)

**Industrial accident. — Wood-cutter. —
Application of the Act.**

On February 18, 1913, a wood-cutter, while felling trees in the woods for the defendants, who are lumber dealers and contractors, cut his right foot with his

axe, and sued for an annuity for partial permanent disability. The defendants answered the action by claiming that the accident did not fall under the Workmen's Compensation Act, as the lumbering operation in the course of which the plaintiff was injured was not an industrial operation.

The Court maintained the defense, holding that "it was shown that when the plaintiff was working at Van Bruysse, at the time of the accident, as a wood-cutter, cutting pulp wood for them on account and for the benefit of the defendants, he himself inflicted with his own axe the injury of which he complains in his action"; that "the mere felling of trees in the woods and cutting them into pulp wood are a lumbering operation which is part of agricultural exploitation"; that "no industrial character can attach to the mere cutting of timber in the woods, which constitutes the initial and indispensable operation for the conversion of the timber into an article to be tarred"; that the accident was caused by the axe the plaintiff himself was handling and that "consequently, the tool which caused the accident being handled by the plaintiff himself, there is no reason to apply the Workmen's Compensation Act, even if the accident were held to be an industrial accident," and dismissed the case with costs. (*Michaud v. Tremblay et al.*)

BRITISH COLUMBIA CASE.

Master and Servant.— Negligence.

An employee of a smelter was seriously injured and sought damages from the company on the ground of negligence.

The plaintiff's duty consisted in looking after the machinery used in the briquetting department of the defendant company's smelter at Grand Forks. He had been foreman of this department since it was started in the spring of 1902, and was a skilled mechanic. The briquetting machine was running as usual on the day of the accident, and when it was shut down at the noon hour, plaintiff suspected that the bearings were getting hot, and in order to investigate the trouble he climbed a ladder to where the shaft and fly wheels were located. He found the bearings heated, and, as part of his duty, endeavoured to remedy the defect. According to the plaintiff's statement he unscrewed the bolts of the cap holding the shaft and when he had released such cap and was taking it down to hand to his assistant the whole machinery, to which the poles, fly wheel and shaft and timbers were

attached, fell down and injured him. His leg was broken above the knee and he sustained other injuries which confined him to the hospital for a great period of time, and which appeared to be permanent. The plaintiff contended that the injury arose through the original negligence and defective installation of construction of the timbers supporting the machinery and that the defendant company had allowed such condition to continue so that the place afforded the plaintiff for work was dangerous. It was decided that no legal liability had been shown enabling the plaintiff to recover damages from the defendant, and the action was dismissed. The judge, however, stated that counsel for the plaintiff could apply for compensation under the Workman's Compensation Act. (*Meagher v. Granby Consolidated.*)

THE LABOUR GAZETTE

JANUARY, 1916.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

IT is satisfactory to be able to state that the remarkable freedom of Canada from industrial disputes continued at the end of the year to be a marked feature of the industrial situation. Three minor strikes only appear in the statistical record as actually existing on December 31, the total number of employees directly concerned being considerably under two hundred. In two of the three cases the strikes concerned, though technically unsettled, were no longer regarded as effective. The three strikes are (1) boilermakers in Halifax, N.S., (2) plumbers in Victoria, B.C., and (3) boilermakers in Yarrow, B.C. The last named dispute was actually the only effective strike in existence in Canada at the end of the calendar year. The strike at Yarrow began during the last week in December, and, from the information received, did not promise to be specially difficult in arrangement. One or two other small industrial troubles began and ended during December. About 60 girls employed in the printing room of the American Bank Note Company were out for a week, the dispute relating to the question of discipline. The settlement included an arrangement looking to the avoidance of future strikes by the establishment of a permanent conciliation committee representing the company and employees.

* * *

PRICES continued to advance in December, particularly in iron and steel, also in grain, dairy products, fruits

and vegetables, flour and sugar. The cost of a weekly budget of commodities used by the average family showed a slight increase. Butter, cheese, potatoes, beans and tea showed the chief increases as compared with a year ago, but meats were slightly lower.

* * *

THE Department publishes in the present issue a review of the prices situation in Canada for the year 1915. This review shows a steep advance in the early part of the year in both foods and materials and a very steep advance in the last three months of the year in materials, particularly metals and chemicals. The index number of wholesale prices including 272 commodities averaged 148.7 for the year as compared with 136.1 for 1914. In retail food prices the rise was not so steep. The cost of a week's supply of 30 staple foods rose from \$7.97 to \$8.13. Flour and bread declined from the very high levels reached early in the year, but prices for butter, cheese and eggs continued high, while potatoes rose steeply in the last few months owing to a short crop. Coal and wood were slightly lower and rent declined considerably in the Western Provinces.

* * *

EMPLOYMENT during December, while showing a falling off from the level of November, was fairly well maintained. The conclusion or discontinuance of threshing in parts of the West left a number of men out of work,

and in Eastern Canada severe winter weather adversely affected civic and other outside construction work. On the other hand, ice-cutting and snow-shovelling gave employment to large numbers of men at many points, and in some parts lumbering operations continued to absorb considerable labour. Demands upon charity societies and employment agencies were light as compared with the same month last year, and very little in the way of distress was reported. A general review of industrial conditions during 1915, published in the present issue of the *Labour Gazette*, shows a marked improvement over the previous year.

* * *

WITH respect to the matter of separation allowances to dependants of munition workers, the Department, which in this matter is acting as the agent of the British authorities and is distributing the grant to dependants in Canada, had at the end of the month received 823 claims and the allowance was being paid in all cases where the regulations had been met. In view of the misunderstanding yet prevailing in some quarters, as correspondence reaching the Department suggests, it seems desirable again to point out that the separation allowance, amounting in most cases to 17s. 6d. (\$4.25) per week, is granted by the British Government in addition to the wages received by the workman concerned, on account of the workman's dependants in Canada, and the allowance is being paid through the Department of Labour in all cases where the conditions laid down by the British authorities have been met. In so far as the Department has been instructed, the separation allowance is limited to the case of those workmen who removed to Great Britain by arrangements made with the Barnes-Windham Mission of Enquiry, which visited Canada during the summer of 1915, and is not being

paid in cases where arrangements were made through private parties.

It was noted last month that there was a tendency on the part of the families receiving this allowance to remove to Great Britain and the number of removals during December was marked, the initial instalment on account of the separation allowance, covering back payments extending over several months, often providing funds conveniently for the journey. Many of the workers originally resided in Great Britain and their wives are themselves sometimes returning to other relatives in that country. The separation allowance, it may be noted, ceases where the dependants remove to Great Britain.

* * *

ANNUAL or semi-annual elections of officers take place during December or early in January in the case of the great majority of the trades union locals of Canada, numbering somewhat over two thousand, and the officials of the Department of Labour charged with the preparation of the annual report on Labour Organization in Canada started accordingly their enquiry for the purposes of that publication. The secretary of every trades union organization in Canada should receive from the Department a communication covering forms to be filled in with particulars requested, and the forms should be filled in as soon as possible and mailed to the Deputy Minister. The importance of this feature of the annual volume on labour organization has been freely recognized by union workers, and prompt and careful attention on their part to the communication received from the Department will further increase the value of the report.

The Department is at the same time endeavouring to secure reliable statistics as to the extent of recruiting among trades unionists during the calendar year. The figures collected by the Department on this subject at the end of

the year 1914 showed that considerable numbers were recruited during the early months of the war, but the returns which at the close of last month were beginning to reach the Department suggest unexpected increases in this direction, reports indicating that here and there practically the whole membership of a union has gone to the front, the local unit being disbanded accordingly. Full returns on this point will be awaited with considerable interest.

* * *

THE barbers of St. Thomas, Ontario, have succeeded in reducing their working hours. A recent civic by-law provides that the working hours for the barber shops of the city shall be as fol-

lows: (1) ordinary working day—5 a.m. to 8 p.m.; (2) Wednesdays—5 a.m. to 7 p.m.; (3) Saturdays—5 a.m. to 11 p.m.; (4) on the day immediately preceding a public statutory holiday and on civic holiday—5 a.m. to 10 p.m. When, however, a holiday falls on a Monday, then the working hours shall be from 5 a.m. to 12 noon. The municipal proclamation states that the application for the by-law was signed by not less than three-fourths of the occupiers of barber shops in the city. The union barbers had, it is said, endeavoured to arrange with others of the trade as to the matter of shorter hours, but failing agreement in this way requested a by-law, under the provisions of The Factory, Shop and Office Building Act (Sec. 84, ss. 4).

INDUSTRIAL CONDITIONS DURING DECEMBER, 1915.

GENERAL SUMMARY.

LABOUR conditions during December showed little change from those of November, though in some localities the last few weeks of the month were quiet owing to a number of factories closing down for the usual year-end repairs and stock-taking. On the whole, labour was well employed. Whilst there was a falling off in opportunities of employment in some districts due to the interruption of certain outside operations by cold weather and the conclusion of threshing in parts of the West, this falling off was offset in some districts by other opportunities of employment, such as snow shovelling and ice-cutting. There was little in the way of unemployment except in some parts of the West and in British Columbia, and even in localities where unemployment was reported, the number out of work was much lower than at the same time last year. Charity organizations reported very little in the

way of relief cases, and towns and cities which last year had to make provision for distress had very few calls upon them up to the end of the month. Trade during the Christmas season was very good and had the effect of improving employment for clerks; also some lines of manufacture. In parts of the country the weather continued fairly mild and building operations were proceeded with to a considerable extent, and even in parts where severe winter weather set in some outside building and interior work was carried on. A fair amount of building activity was reported from some country districts in the West where farmers were erecting houses and barns.

Agricultural operations were practically over except in a few parts of the West where threshing was still in progress. Fishing on the whole was quiet during December. Lumbering operations continued fairly brisk, with dull-

ness in a few quarters. Activity in mining, both coal and metaliferous, continued. Manufacturing establishments were fairly busy in general lines. In some special branches exceptional activity prevailed. Railway construction was quiet. Conditions in general transport were fairly active, particularly in railway traffic. Water transportation also was fairly busy until the middle of the month when lake and river navigation ceased. No wages changes were reported during the month and relations between employers and employees were on the whole harmonious.

The Department's index number of wholesale prices rose to 162.4, as compared with 158.6 for the previous month and 137.6 for December, 1914. The rise for the month was due chiefly to advances in metals and metal products, but grain and fodder, sheep and mutton, poultry, dairy products, fresh fish, fruits and vegetables, sugar, flour, raw cotton, raw silk, bituminous coal, gasoline, benzine, linseed oil, turpentine, brooms, some chemicals and raw rubber were also up. Hogs were somewhat lower, while lemons, oranges, cream of tartar, and Canadian hops receded slightly. In retail prices the average cost of a weekly budget of staple foods rose to \$8.128, as compared with \$8.016 for the preceding month, and \$7.951 for December, 1914. Butter, cheese, potatoes, beans and tea showed the chief increases, as compared with a year ago, but meats were slightly lower.

Agriculture.

In Eastern Canada there was little in the way of agricultural operations outside of the usual work of looking after stock, getting out wood and making repairs. In some parts of the West threshing was still being carried on when weather permitted. From Saskatoon it was reported there was a greater demand for choremen on farms than there was a year ago. At Regina there was a good demand for farm help, though the supply was equal to the demand.

At Calgary it was reported that in some districts threshing was finished or discontinued and that a number of men were out of employment in consequence. There was, however, a large amount of threshing still to be done in the district and many men were still employed in the fields.

Fishing.

Fishing was quiet. The season was reported practically over at Charlotte-town and at Sydney. At Newcastle, N.B., it was reported that the smelt fishing industry was badly handicapped owing to the fact that the Miramichi river was not frozen over, and only a few fishermen operated nets from scows. These, however, reported the run of fish good. At Three Rivers there was a fair amount of activity in the fishing of tom-cods, which made their first appearance on the market on December 28.

Fishing on the Lakes was fairly good. At Hamilton it was reported that the catches were exceptionally good, the number of herring taken during the season being the largest for some years past. At Port Arthur fishing was active up to the middle of the month, many tons of herring being shipped. Some 877 fishermen were engaged in fishing in the Lake Winnipeg district during December. The catch of whitefish and pickerel was not expected to be very good this season, which began in November and will close in February. In the warehouses at Selkirk 75 men were working full time, and 175 teams were required to haul the fish.

Quiet conditions also prevailed on the Pacific coast. Only a few fishermen were engaged on the Fraser river securing small catches for the local markets. At Prince Rupert conditions showed but little change from those of the previous month. Some 1,900,000 pounds of fish were landed, about the same amount as was taken last month. The British Columbia salmon pack for 1915 was 1,133,381 cases as compared with 1,111,039 cases in 1914.

Lumbering.

Logging operations continued fairly brisk in most of the largest lumbering districts in Canada, though a few localities were marked by dullness. At Westville, N.S., lumbering was reported quiet owing to the low price of deals and was not so active as was anticipated earlier in the season. At Newcastle, N.B., operations in the woods were being pushed vigorously, a good depth of snow greatly assisting yarding and other work. It was expected the cut on the Miramichi river would exceed that of last year by several million feet. From Fredericton lumbering operations were reported fairly active, though a good fall of snow was required. During the month the New Brunswick Minister of Lands and Mines sent out a letter to lumbermen and mill owners throughout the province asking their opinion as to the practicability of carrying out a scheme to send portable houses to France. From Quebec it was reported that lack of snow retarded the drawing of logs to the rivers, the amount of snow in the woods at the end of the month being hardly sufficient to make good roads. At Three Rivers logging operations were reported brisk. At Sherbrooke logging operations had commenced, but were not so extensive as last year.

From some Ontario districts favourable conditions were reported. Throughout the Northern Ontario woods there was considerable activity in the taking out of pulpwood and railroad ties, while in the lumber shanties the various companies were operating on a large scale, and some complained of a shortage of help. Wages were reported lower than the rates paid two years ago, but slightly higher in some instances than the rate paid last year. At Peterborough lumbering was reported brisk with a good demand for men for the camps. At Port Arthur, however, lumbering was very quiet. Quiet conditions were also reported in the Sault Ste. Marie district.

At Edmonton there was very little demand for men to work in the woods in any capacity. Tie making, which usually furnishes work for a large number of men, was not very active.

At Fernie activity was confined entirely to logging operations, which were being carried on on a more or less extensive scale throughout the entire district. At New Westminster lumbering was somewhat improved. The mills were all running full time and some logging camps were opened up. There was still a good demand for shingles in the United States market, and the output was only limited by the available supply of cedar. At Victoria also there was a noticeable improvement and a general revival of the industry was reported at different points on the Island.

Mining.

Coal mining continued active. In the Sydney district fairly good outputs were obtained. The Dominion Coal Company with a reduced force of workmen was expected to show an increased output of 250,000 tons over that of last year. The collieries at Sydney Mines were also busy. One colliery was closed down as the coal does not stand banking in the winter and also suffers by transportation. Men employed at this colliery were, however, being given work at other mines. At Westville the coal output still failed to supply the demand. The Drummond colliery which was closed by fire for some weeks was again entered and the fire extinguished. Operations were expected to be resumed shortly. The Acadia Coal Company was raising nearly 2,000 tons per day. In the West the coal mines in the Drumheller field north of Calgary were busy, with a fair demand for qualified miners. At Lethbridge the mines were active and working at full capacity. At Edmonton owing to mild weather the demand for coal was reported much lighter than usual at the season, though the price was higher than a year ago. At Fernie

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trades and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favourable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

coal mining was still enjoying the improvement which commenced in October, and no falling off in activity was expected within the next two months. At Nanaimo miners were well engaged, especially those in the city.

Metal mining also continued active. In New Brunswick, at the Lake George antimony mines, which had been closed for many years, the entire plant was running full blast. The smelter had been at work for several weeks and several shipments of metal were made. The daily output of ore amounted to about 15 tons, and the price of the metal was 32 cents a pound. Mining operations in the Sherbrooke district were good. Copper mines and asbestos mines were running full time, and chrome iron miners were also busy. In the Sudbury district some activity was reported at Bruce Mines, owing to the purchase of some old properties by Cobalt parties. Some other mining properties along the line of the Algoma Central Railway were busy. In the Cobalt district active conditions prevailed and there were few idle miners. Gold mining throughout the Porcupine and Kirkland Lake camps was at its maximum. Hollinger had a force of 1,100 men employed, and the Dome Mines were employing as many men as they could place to advantage. In the Kootenay district in British Columbia active conditions were reported. There was also continued activity in the Anox district.

Manufacturing.

Manufacturing on the whole was fairly well maintained, though some quiet prevailed on account of year-end shut-downs for repairs and stock-taking in some localities. The steel industry at Sydney and Sydney Mines was working to full capacity, and the Nova Scotia Steel Company was rushing work on a new open hearth furnace to enable a larger output of steel. Other foundries and factories in the Sydney district were fairly busy. At Westville the

woollen industry was quiet. Other industries also at this point were quiet on account of usual repairs. Clothing and biscuit and confectionery manufacturers at Halifax were very busy.

New Brunswick industries were also busily employed. At Newcastle local industries were all working full time and with full staffs. At Fredericton factories and workshops were running full time and in some cases overtime. At Moncton, also, industries were active.

In the Province of Quebec manufacturing was active. Industries at Three Rivers were reported busy, and at Sherbrooke factories were running night and day. Shoe manufacturers in Quebec City were operating to full capacity, one concern working overtime. Cotton factories also were working to full capacity. At Montreal boot and shoe manufacturers were busy, though no special activity was apparent in the leather trade. Fur and clothing manufacturers were fairly busy.

In most of the large industrial centres of Ontario manufacturing establishments continued busy. At Toronto, electrical, sheet metal and structural steel establishments were fairly active; also leather manufacturing concerns. Boot and shoe factories and clothing factories were fairly busy. At Berlin, foundries, furniture factories, clothing factories, button factories and shoe factories were very busy, several of these establishments working overtime. Rubber factories also were active. Shirt and collar factories were running full time, with a shortage of female machine operators in some establishments. At Galt manufacturing concerns were busy. At Hamilton manufacturing was considerably more active than in the corresponding month of last year, and it was expected this activity would continue during the winter months. At Niagara Falls ten of the leading manufacturing concerns reported conditions busy, and those which reported quiet are usually so at this season. At Chippewa, near Niagara Falls, the

plant of the Standard Smelting Company, which had been closed for a long time, resumed operation. Iron ore was the only metal being treated, but it was expected that nickel would be handled later. At Woodstock conditions were about the same as in the previous month. Wagon and piano factories reported conditions fair. Furniture factories reported little change. Industrial establishments at Stratford were busy, with no idle men. At Chatham foundries and machine shops were busy on supplies for the new sugar factory to be established at this point. Flour mills were running overtime, also woollen mills. Carriage factories were on short time. At Peterborough manufacturing was very active. A number of the factories were working overtime and reported more orders than for some years past. At Brockville, Brantford, Belleville, Kingston, Owen Sound, Windsor, St. Catharines and St. Thomas industrial establishments were on the whole fairly busy.

Western manufacturing conditions were fair. At Medicine Hat exceptional activity prevailed in flour mills which were working day and night, turning out over 3,300 barrels of flour a day. Almost all local industries were working and there was practically no unemployment in the city. At Calgary saddle companies were busy, and the Canadian Pacific Railway shops at Ogden were working full time. At Lethbridge flour mills were reported adding to their warehouse accommodation so as to allow the mills to run more steadily. Quite a number of men were given work in the construction of buildings.

Railway Construction.

Railway construction continued quiet. On lines north of Edmonton railway contractors were doing some track laying, and work was also continued on the Hudson Bay line.

The Fredericton-Gagetown section of the St. John Valley Railway has been

completed between Centreville and Gagetown, and tenders have been asked for the unfinished parts, which consist of 26 miles from Andover to Centreville and 33 miles from Gagetown to Rothesay.

During the month the Three Rivers Traction Company opened its electric line, with new equipment and modern cars.

Some construction work was continued on the Lake Erie and Northern Railway.

Work was continued on the new union station at Toronto. The foundation work was expected to be finished by March 1. Work was also carried on on the new station at North Toronto, to be used jointly by the Canadian Pacific and the Canadian Northern Railway.

General Transport.

Railway transportation, both passenger and freight, was on the whole brisk. Water transportation, however, was affected by the closing of lake and river navigation about the middle of the month, though there was a fair amount of traffic until then from some parts. The last ship of the season passed down the Welland canal on December 22.

At Sydney transportation by rail and water was fairly heavy, the open weather being favourable to shipping. At Halifax, along the water front, longshoremen were kept fairly busy, and the outlook for active conditions during the winter months was good. Coal handlers also were busy, and the latter part of the month operators were unable to secure sufficient help to handle the work offering. At Westville railway traffic continued exceptionally heavy, and the facilities of the railway companies were taxed to handle it. At Newcastle, N.B., while navigation on the Miramichi river was practically closed for freight, the river was still open at the end of the month, and a passenger service between Newcastle and Chatham was still oper-

ating for the first time in the history of the river. At Moncton both passenger and freight traffic was very large, and many special crews were required for the movement of trains. At Sherbrooke, Que., railways were carrying a lot of freight, but passenger traffic was quiet. At Quebec the shipping season was prolonged to a late date, vessels coming and going until the middle of the month.

At St. Thomas, Ont., passenger and freight traffic was heavy, and extra men were added to working forces. Railroad shopmen, also, were well employed. At Brockville railroad traffic was reported very brisk, the Grand Trunk Railway finding it difficult at times to procure help, especially firemen. At London an exceptionally heavy passenger traffic was reported, due in great part to the large number of soldiers returning home to spend Christmas. At Port Arthur work in the elevators and in the transport of grain was very active up to the close of navigation, about the middle of the month.

The Trades.

Building.—There was a fair amount of work for building trades during December in those parts where open weather continued, and interior work in other localities also provided employment. On the whole, however, building trades were dull.

Metal.—Metal workers continued very active.

Woodworking. — Woodworkers continued fairly well employed, though employees of furniture factories engaged on regular work were dull.

Printing.—Printing trades continued fairly well engaged.

Textile.—Textile trades continued active.

Clothing.—Tailors were only fairly well employed. Garment workers on

regular lines were generally dull, though some exceptional activity was apparent in the case of employees engaged on special orders. Boot and shoe workers in the large shoe manufacturing centres were active.

Food and tobacco preparation. — Trades engaged in food preparation were busy and improvement was noticeable in the case of cigarmakers and tobacco workers.

Leather.—Leather workers continued fairly well engaged, with quiet reported in some quarters.

Transport.—Railway workers continued actively engaged both in traffic and mechanical departments.

Unskilled. — Unskilled labour was quiet, with a fair amount of activity in some localities where outside building and civic construction work was still being carried on. Ice cutting and snow shovelling also afforded opportunities of employment in a number of districts.

Canadian Trade.

During November, 1915, the total imports of merchandise entered for consumption amounted to \$45,217,559 as compared with \$31,552,190 for November, 1914, an increase of \$13,665,369. Domestic exports of merchandise for November, 1915, amounted to \$92,931,916 as compared with \$42,782,109 for the same month of 1914, being an increase of \$50,059,807. Increases in the exports of the products of the mines, fisheries, forest, animals and their products, agriculture, manufactures and miscellaneous are shown, these being exceptionally heavy in the case of animals and their products, agriculture and manufactures.

The following table gives the latest official summary of the Canadian foreign trade:

IMPORTS AND EXPORTS, NOVEMBER, 1915.

Imports entered for consumption.	November.		Exports. (Domestic.)	November.	
	1914	1915		1914	1915
Dutiable goods.....	\$18,697,737	\$26,079,686	Mines.....	\$3,655,475	\$6,634,887
Free Goods.....	12,854,453	19,137,873	The Fisheries.....	2,056,055	2,075,877

Brandon.....	4,081,203	2,842,055	+ 1,239,148
Lethbridge.....	2,823,286	1,614,260	+ 1,209,026
New Westminster.....	1,067,874	1,244,550	— 176,676
Medicine Hat.....	1,906,437	1,301,697	+ 604,740
Peterboro.....	2,097,648	1,689,176	+ 408,472
Totals.....	\$909,581,503	\$657,173,958	+ \$252,407,545

Canadian revenue for November, 1915, amounted to \$17,072,456.76 as compared with \$9,495,536.30 for November, 1914, an increase of \$7,576,920.46. The expenditure on capital account during November, 1915, was \$17,461,977.23 as compared with \$4,601,077.68 in November, 1914. This expenditure comprised \$4,306,180.15 for public works, including railways and canals, and \$13,155,797.08 for war purposes.

The bank statement for November, 1915, showed the paid-up capital stock

of the chartered banks of Canada to be \$113,987,275 as compared with \$113,986,106 for the month of October, 1915. Deposits payable on demand for November amounted to \$406,735,171 as compared with \$392,042,193 for October. Notes in circulation amounted to \$124,153,685 for November as compared with \$122,782,233 for October. Loans to cities, towns, municipalities and school districts during November amounted to \$41,064,550 as compared with \$45,682,230 for October, 1915.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Halifax.

The condition of labour in Halifax during December was fully up to the average of a normal year. The weather was exceptionally mild during the entire month, and very favourable to outside work. There has been a falling off in some branches of the building trades, as is usual at this season of the year, but on the whole more men were at work than for the same month a year ago.

Along the waterfront 'longshoremen have been kept fairly busy, and the outlook for active conditions during the winter months was good. Coal handlers also have been kept busy, and the latter part of the month operators were unable to secure sufficient help to handle the work offering.

Work on the new ocean terminals showed much progress, and the new Furness-Withy pier was well under way.

Clothing and biscuit and confectionery manufacturers have been very busy.

The retail trade reported Christmas business very good.

Sydney.

Labour conditions continued active over the entire district, and with the exceptions of the building trades, all classes of workmen were well employed. The larger industries were all working up to full capacity, and giving employment to as many men as they could get. Business was good for the month, and there was a marked change over industrial conditions of December, 1914. All reports pointed to a continuation of this activity throughout the winter.

The steel industry at Sydney and Sydney Mines worked up to full capacity. The coal trade was active, and fairly good outputs were obtained. The Dominion Coal Company, with a reduced force of workmen, will show an increased output of 250,000 tons over that of last year.

The building and allied trades were quiet, although not without employment.

The wood factories kept up a fair though not a full organization. Other foundries and factories were fairly busy.

Transportation by rail and water was fairly heavy. The open season was favourable to shipping.

Truro.

The year end month in respect to employment was as satisfactory as the other months of the year, but few seeking work and these because of quietness in lumbering operations; as the year drew to a close, however, there were signs of improvement in this respect.

All classes of the building trades were well employed. There was a brisk demand for carpenters right up to the end of the year, so much so that men were brought from other places.

Printers, painters and iron workers were well employed.

All industries ran full time.

Customs receipts showed an increase of 33 per cent over 1914.

Railway receipts, both passenger and freight, showed a good increase.

Both wholesale and retail merchants reported a satisfactory year.

The chair works at Bass River were fairly busy, but the peg and ribbon works at Stewiacke closed down owing to interruption of the foreign trade.

On the whole, the outlook for the new year was bright.

Westville.

Owing to the usual year end repairs, etc., at the different manufacturing plants, the last two weeks of the year as respects labour were somewhat quiet, but a summing up of labour conditions for the whole year will show a period of activity in excess of anything heretofore known in the history of the locality.

Railway traffic continued exceedingly heavy and the facilities of the transportation companies were taxed to handle it.

Wholesale and retail trades reported the largest month in a busy year.

Lumbering, owing to the low price of deals, was not as active as anticipated earlier in the season.

The woollen industries were quiet.

PRINCE EDWARD ISLAND.**Charlottetown.**

The past year was one of the best that the province has experienced, and at the end of the year normal conditions prevailed. Notwithstanding that the winter season had fairly set in, carpenters were well employed.

Freight shipments were large and the export of fowl, geese, etc., continued in large lots.

Fishing was quiet, the season having practically closed.

NEW BRUNSWICK.**Fredericton.**

The labour situation during December was fairly satisfactory. There was a slight decrease in activity compared with the preceding month, but viewed as a whole, conditions were normal for this season of the year and fully up to the standard of one year ago. The building trades were fairly well employed, while factories and workshops were running full time and in some cases overtime. The local stores reported that the Christmas trade was fully equal to that of last year and that money appeared quite plentiful.

Lumbering operations were fairly active, but a good fall of snow was required to assure a good cut.

Moncton.

Labour conditions continued fairly good during December. Outside employment naturally fell off as is usual at this season, but in all manufacturing plants, in railway circles, and in business concerns, a steady activity prevailed. In building operations much interior work remained to be done both on private construction and on large public contracts, and consequently steady employment was assured to a large number of mechanics and labourers throughout the winter.

Woodworking plants were all actively running to fill current trade and to renew supply of stock for next season's operations. Railway business has been especially active; traffic, both passenger and-freight, being very large and many special crews required for movement of trains. With the closing down of many outdoor operations a large number of labourers were set free, but as the greater number of these were from outside points and have left for their homes the number of unemployed labourers in Moncton was small and it was not considered necessary by the civic authorities to make any special provision to relieve distress through lack of employment.

Christmas trade was active and up to the standard of previous seasons in volume, and a large amount of special help found employment during the holiday season.

Newcastle.

The labour situation remained unchanged during December. There was still a good demand for all classes of skilled labour and a fair demand for unskilled labour.

While navigation was practically closed on the Miramichi, the river still remained open, and the passenger service between Newcastle and Chatham was still operating for the first time in the history of the river.

The volume of wholesale and retail trade during the Christmas season was the largest for years. Local industries were all working full time and all employing full crews.

St. John.

Business improved during December, but the building trades reported work dull. All other branches of industry were well employed. Merchants generally expressed satisfaction with the business outlook, and the Christmas trade was reported better than last year.

Two new rest houses have been erected at West St. John for the benefit of the winter port workers, which will provide comfortable quarters at meal times and during the hours when the men are off duty.

Savings bank transactions for the month of November were: deposits, \$65,130.80; withdrawals, \$89,843.12.

Inland revenue receipts for November were \$20,168.97, and for the corresponding period last year \$18,581.63, an increase of \$1,587.34.

The customs receipts for November were \$242,173.82, and for the same period last year \$92,292.38, an increase of \$149,881.44.

QUEBEC.

Montreal.

Nearly every relief society reported a considerable falling off in the demands made upon its funds during December as compared with previous months and with the same period a year ago, and this in spite of the fact that December is the period when navigation closes, when building stops in great deal of its street work. Owing to the falling off of building operations as compared with more prosperous years there was not the usual contrast between the active and the dull seasons in 1915. The falls of snow, which occurred during the month, have given work to some of the men taken off public works.

The holidays interfered to the usual extent with the amount of work during December. General trade conditions were fair during the first part of the month, and rather quiet towards Christmas and New Year's Day. The railroads were well patronized for the holiday season, and there was as much purchasing of holiday goods as in other years. Boot and shoe manufacturers were fairly busy, but there was no special activity in the leather trade. Some orders for boots for military purposes were received. The lumber market was a little

better, and the larger firms were putting a fair number of men into the woods under the spur of a renewed inquiry from the United States. Most manufacturers in the fur and clothing trades reported returns ahead of expectations. More contracts have also been awarded for military clothing from Ottawa. Paint and oil men reported business much better than usual at this season.

The Canadian Electro-Produets Company, which has been incorporated with a capital of half a million dollars, expects to have a new electric furnace plant for the manufacture of high-grade steel here. The plant is being designed on the basis of two units, each with a capacity of 25 tons of steel a day, and one is expected to be in operation before January ends. The electric furnace idea has already been applied to the aluminium and carbide industries in the Shawinigan district on a large scale. Although similar plants are in operation in Welland and Sherbrooke, it is a new venture here as applied to steel on the lines proposed.

The Canadian Car and Foundry Company closed an export order on December 27 for nearly 2,000 freight cars, valued at \$2,000,000. Work is being started at once. This is one of the largest equipment contracts entered into by a Canadian firm for export. The Imperial Oil Company has also given an order for 100 forty-ton tank cars, and the Michigan Central Railroad has ordered the steel under-frames of 150 fifty-ton flat cars. An order for 100 twenty-ton end-tipping coal wagons has been closed as well. Local buying is much stronger than for some time. Cars have advanced 25 per cent in price owing to the enhanced value of raw material.

The annual statement of Dominion Bridge Company shows earnings of 20.7 per cent on stock, the bridge and structural business of the company having been much better than expected, and it was stated that the shops at Lachine, Toronto and Winnipeg would be kept reasonably busy and at satisfactory prices.

The Canadian Pacific purchases for the British Government have already exceeded five million dollars, and they cover almost everything than can be manufactured on this side of the Atlantic for use in the field.

On December 16 a conference was held of representatives of many Montreal district municipalities and societies to organize a deputation to co-operate with others throughout Canada to urge the Government to adopt a national labour bureau system for Canada endorsed the scheme practically unanimously. Representatives of the Montreal City Council and the Trades and Labour Council were, however, not present.

The Protestant House of Industry and Refuge has decided to abandon the field of outdoor relief. It will in future leave this part of its work to the Charity Organization Society. There was a falling off in the latter society's records of those applying for assistance through unemployment or insufficient wages. In the one matter of Christmas relief it was ascertained from five of the principal societies taking part in this work that fewer families availed themselves this year of their bounty than last year.

At the close of the season of navigation during December the exports of flour totalled 1,613,214 sacks, a decrease of 1,150,000 sacks, and the shipments of oatmeal and rolled oats were also much smaller than in 1914. In dairy produce cheese exports increased by 369,193 boxes and butter by 47,195 packages. Egg exports more than doubled. Owing to lack of ocean grain room the total decrease in all kinds of grain exports amounted to more than thirty million bushels. Because of the demand for army supplies the export business in cured meats has been the largest on record, amounting to 360,641 cases, or nearly seven times as much as in 1914, and at much better prices. The lumber exports were equal to those of last year.

Through the Lachine canal there was a drop of a million tons in the amount

of cargo carried for the season. The last boat passed down through the canal on December 13.

The city proposes to spend \$1,000,000 this winter in constructing sewers in 22 wards, three-fourths of the work to be in the north end of the city. Another sum of \$2,000,000 was authorized by the City Council on December 28 for carrying on improvements to the city aqueduct for which about \$6,000,000 has already been spent. At the beginning of the month 4,000 men were laid off from public works finished for the season by the city.

Mr. J. E. Hutchison, general manager of the Montreal Tramways Company, stated on December 14 that \$500,000 had been spent by the company in track-laying through the summer season, and about 1,000 men were employed through the city at these works.

Railroad net earnings for December achieved almost a record figure. Banking profits have been sufficient, although less than for 1914. December bank clearings at Montreal were \$299,162,549, a new high record, and \$101,171,362 above the corresponding month in 1914.

Quebec.

December was a good month for labour. The demand for men in the building trades, particularly skilled labour, was well maintained. In the shoe factories there was also a very marked increase in demand and the most of the shoe factories were working to their full capacity, with one working overtime to fill war orders. Cotton factories also were working to full capacity. Unskilled labour, however, was not busy. The numbers of these have naturally been increased by the close of navigation, which throws out of employment stevedores, ship labourers, longshoremen, bargemen, tug boat employees, etc. There is always a certain amount of poverty in the city that needs relief. In most of the wards occupied by the skilled class of labour the conditions were normal; in those where the num-

ber of unskilled amongst the residents is higher the reports of the charitable organisations show a slight increase.

In the lumbering industry the lack of snow for roads retarded operations in one section of this work, that of drawing to the rivers, the amount of snow in the bush being scarcely sufficient to make good roads.

The Christmas shopping season in Quebec was a very heavy one, merchants all agreeing that not only was it far in excess of last year but equal if not superior to the best year made. The shipping season was also prolonged this year to a very late date, vessels coming and going to the middle of the month.

Sherbrooke.

Labour conditions were about the same as last month.

Reports from merchants and storekeepers in the city indicated that the Christmas trade this year was in excess of any previous year.

With factories running night and day and with the workmen earning larger wages than ever was known before, the commercial and industrial situation was most satisfactory.

Lumbering has commenced, but will not be so extensive as last year.

Railroads were carrying a lot of freight, but passenger traffic was quiet.

The ice men have commenced to get their ice fields ready.

Sorel.

Industrial conditions were good, comparing very well with the situation in the two last years during the same month.

In the various manufactures, shops, foundries, etc., work has been carried on actively.

St. Hyacinthe.

The general condition of the labour market was very good during the month and all those who wanted to work were

able to find employment. In spite of the advanced season the building trades were well employed.

Local industries were active, some working overtime.

Trade, wholesale and retail, was much more active than during the preceding month. With fair winter roads, the country people came in great numbers during the holiday season and traders were busy.

St. John's and Iberville.

Labour conditions in this district showed a slight improvement as compared with the preceding month, but there still was quite a number of unemployed among ship labourers and unskilled labour.

Manufacturing improved in several branches and business in general was fair.

During the past season 2,377 boats carrying freight to and from the United States passed through Chambly canal as against 2,480 in 1914, but the total tonnage was larger than during last year.

Three Rivers.

The general condition of the labour market during December was good in Three Rivers and throughout the district, comparing favourably with the same month of last year. A steady demand for labour was a feature of the month, especially for workers in the different factories in the city.

Early in the month the Three Rivers Traction Company started the operation of its electric tramway in the streets of the city.

The famous tommy cod fish of the St. Maurice river made its first appearance on the market on December 28.

Lumber firms had their men busy in the bush cutting logs.

All factories were kept busy full time this month.

ONTARIO.

Belleville.

Conditions remained about the same during December as compared with the month previous. Whilst in one or two concerns in the city which employ only a limited number of hands the hours of labour have been shortened, in the remaining manufacturing establishments there has been no curtailment of hours or lessening of employees. Two local establishments were running day and night with considerable staffs.

Merchants generally reported an excellent Christmas trade, not only amongst the farming community but in the city as well.

In the northern part of Hastings county lumbering was being carried on to some extent, but not nearly as extensively as it was a few years ago.

Berlin.

There was very little difference in labour conditions from last month. The factories that worked overtime in November were still rushed during December. The Dominion Sugar Company finished slicing beets the last week in December, about 200 men being out of work at the end of the month in consequence.

The foundries, furniture factories, robe and clothing factory, button factories and shoe factories, as well as felt factories were still very busy, several working overtime. There was still a number of carpenters employed finishing up jobs. The only ones that were not busy were outside labourers, cigar-makers, painters and the building trades.

Both the large rubber factories were working overtime during the month, while bakeries and confectioneries were very busy.

Breweries in Berlin and Waterloo worked full time, but report trade less than last year.

Shirt and collar factories were running full time with a shortage of female machine operators in some.

Wholesale and retail trade was very good during the month; in fact, the latter report trade away ahead of the same month last year.

Customs returns for Berlin for November were \$66,719.70; November, 1914, \$40,058.60, an increase of \$26,661.10. Customs returns for Waterloo were \$5,911.04, an increase of \$2,594.17 over same month last year.

Farmers in this district were still busy hauling sugar beets to the factory, hauling beet pulp from the factory, caring for stock and marketing dairy products, etc.

Railway traffic was very heavy over the holiday season in passenger and in freight.

Brantford.

No change has taken place in the general state of labour during the month. There was practically no unemployment, although in some branches of industry full time was not being worked. The supply and demand of labour was about equal. This is accounted for by the fact that conditions were generally better than they were last year, and fewer men were in the city to offer their services.

The building trades continued quiet, but men working at those trades find employment in the factories. Machinists continued very busy, in many instances working overtime.

During the month retail trade improved and by Christmas had greatly exceeded the volume done last year for the same month.

While many people are poor, yet there has not been the want that was in evidence last year, and charitable organizations have not had the call upon their funds and services to anything like the extent experienced in some winters. The total customs receipts for the month of November were \$43,855.49, and the inland revenue was \$8,165.76, nearly \$1,400.00 in excess of November, 1914.

Manufacturing was fair. In special industries conditions were brisk, overtime being worked. In other lines satisfaction seemed to prevail and manufacturers were generally optimistic.

Railroad construction was continued slowly. The Lake Erie and Northern had some of their new cars on the tracks and people were awaiting the decision of the voters on the question of selling the portion of the route from Paris to Galt owned by the municipality of Brantford to the Lake Erie and Northern Railway Company.

Building construction and other outside work was quiet.

Brockville.

December was a month of unusual activity, and the year 1915 was generally fair.

The supply of labour has been equal to the demand in almost every instance, with opportunity for employment to all that wanted work.

Railway traffic was very brisk, the Grand Trunk Railway finding it difficult at times to procure help, especially firemen.

Manufacturing was very active in some industries, active in others, and quiet in some lines.

Chatham.

Labour conditions for December were about the same as in the preceding month, the continued mild weather being advantageous for outside building trades, quite a number of whom were employed on the construction of factories and dwellings.

Foundries and machine shops were particularly active on contracts for supplies for equipping the new sugar factory. Flour mills were running overtime, as were woollen mills. Carriage factories were on short time. Planing mills were active.

Corporation work was finished for the year about the middle of the month, and a few hands were dispensed with.

The balance were given work on street cleaning and other necessary work.

Cobalt.

Gold mining throughout both the Porcupine and Kirkland Lake camp was at its maximum. The Hollinger had a force of 1,100 men employed, and the Dome Mines were employing as many men as they could place to advantage, while at the other mines similar conditions existed. In the Cobalt camp the silver mines were working at normal, since the improvement in the price of silver, and there were no idle miners around the town. There was no occasion for miners being out of work for the gold mines continued to absorb all the men available.

Through the Northern Ontario woods there was considerable activity in taking out pulp wood, lumber, railroad ties and cedar poles, while in the lumber shanties the various companies were operating on a large scale and some of them still complained of a shortage of labour. Wages, however, were lower than the rate paid two years ago, but slightly higher than the rate paid last year.

Owing to the fact that there was considerable building going on around the various mines there were few, if any, carpenters out of employment, and in the case of unskilled labour conditions were good. There were practically no men idle through inability to secure employment.

Galt.

Notwithstanding that work for bricklayers and masons, stonecutters and builders' labourers at their regular occupation was scarce, there were very few of these trades unemployed in the city, they having found employment at something else.

The big machine shops were still working day and night shifts. In fact all shops and factories continued very busy.

The merchants of Galt all did a very good business during the Christmas season.

Guelph.

Labour conditions for the month of December were on the whole very satisfactory, there being a marked improvement as compared with the corresponding month of last year.

The building trades were quiet, as is usual at this season.

Manufacturing industries were for the most part very active. Textile plants were working overtime, also stove foundries.

Quite a staff of men were still engaged on sewerage construction work.

The Guelph Radial Railway Board has paid \$10,100 into the civic treasury, this being at the rate of 6 per cent on the amount the city has invested in the road.

Customs returns for the month of November were \$22,541.24, an increase of \$12,195.85 over the same month last year.

Wholesale and retail merchants reported a very satisfactory Christmas trade.

Hamilton.

The general condition of the labour market during December was satisfactory and showed a marked improvement over the conditions existing during the corresponding period of last year. Fairly open weather permitted outside work to continue longer than is customary at this season of the year.

The reclamation work at the foot of Wellington street, which has been carried on by the Harbour Commission during the present year, was completed, and as a result over 15 acres of factory sites, with facilities for shipping by boat or rail, were available.

Customs collections in Hamilton during November were more than 150 per cent greater than for November, 1914,

and far in excess of previous years. The comparative statement is: November, 1915, \$403,839.13; November, 1914, \$155,560.26, an increase of \$248,278.87.

Fishermen report the catches made during the season just closed to have been exceptionally good, the number of herring taken being larger than for some years past.

Many of the wholesale and retail merchants report Christmas trade to have been better than it was in 1912, which was a banner year.

Manufacturers were considerably more active than during the corresponding month a year ago, and it was expected that most of the local manufacturing concerns would be kept busy during the winter.

Kingston.

Labour conditions during December were exceptionally active and prospects were bright for the winter months.

The Kingston Shipbuilding Company's dry dock and the Canadian Locomotive Works were busy, with orders ahead sufficient to keep them engaged for some time.

Although the building operations for 1915 have not been what they might have been, still there has been considerable work done in that line.

Customs receipts for November totalled \$57,443 as compared with \$19,080 for the same month in 1914.

London.

Industrial conditions for December were the best known for years. The usual lay-offs of two weeks were not in force this Christmas season, but on the contrary overtime was being worked in a number of cases. At the headquarters of the different relief associations it was stated that cases of destitution were unknown. Retail business with the merchants for Christmas goods was never better. Many Italian labourers returned to Italy, and as the city continued to employ a large number of labourers

on storm sewers there were few out-of-works in this line.

Railway transportation was exceptionally heavy in passenger traffic, helped greatly by the number of soldiers returning home to spend Christmas.

Shoemakers and tanners were exceptionally busy, and working seven days a week. Cigarmakers also have been extra busy, and nearly all working a ten hour day to get goods out.

Niagara Falls.*

Conditions during December were very similar to those of November, and excellent for the time of year. There were practically no idle men who really wanted to work.

The Standard Smelting Company's plant at Chippawa, which has been closed for a long time, resumed operations. At present iron is the only metal treated, but when a new building is completed, nickel ore will also be smelted there.

Large sand pits at St. David's, which have been supplying material for the new Welland canal, were shut down.

About \$224,000 was spent on the Welland county good roads construction this year. Forty-one miles of road were built, making 82 miles now completed.

Financial and commercial conditions were very good and there was renewed activity in real estate.

Ten leading manufacturing concerns were busy. Those which were quiet are normally so at this season.

Welland. — The Plymouth Cordage Company started a night shift in its binder twine mill, thereby employing 300 more hands. The Canada Forge Company and the zinc smelter were contracting for large extra supplies of electric power to be ready for use in February, indicating further expansion

*In the December issue of the *Labour Gazette* at page 686 it was stated that "a proposition to establish a municipal library was defeated by a large majority." The word "library" should have read "bakery."

of plants. The last ship of the season passed down the canal on December 22.

Ottawa.

But little change was marked in the labour situation during December. Several trades—iron workers, leather workers and wood workers, in particular—remained for the most part busy on war contracts. Unskilled labour was dull, but not more so than in November. Tailors were slack as far as “custom” work was concerned, but were in many cases busy in the manufacture of military uniforms. Printers and bookbinders were slack, and the depression was if anything more marked in the building trades. On the whole the situation compared favourably with the previous month and was much improved as compared with December, 1914.

During the month the W. C. Edwards Company, Limited, laid off its night staff composed of about 60 workmen.

Applications for assistance at the Union Mission during the previous month totalled less than one third the number applying in November, 1914.

Unskilled labour is to be materially aided by the inauguration of the Ottawa South sewer construction—a big civic project.

At the request of a deputation of teamsters, the City Council has decided to pass a by-law setting the rate of pay for teamsters at \$5.30 a day. The city has been paying this rate for some time, but the old by-law requiring \$5.20 a day has never been changed.

Owen Sound.

Labour conditions were very satisfactory. There were few if any idle, and those requiring workmen have been very well supplied. The majority of factories were quite busy. Building was quiet.

Excellent roads have helped to make the Christmas trade even better than usual, and business men generally reported the month very satisfactory.

The Canadian Pacific Railway steamers—five in number—are wintering at Owen Sound this winter instead of at Port McNicoll.

Peterborough.

During December conditions steadily improved in all lines of business except the building trades. A number of the factories were working overtime and reported they had more orders than for some years past.

Manufacturing was very active, most of the factories working overtime.

Unskilled labour has been fairly well employed, a good number in cutting ice and storing it. Female help was in good demand and wages were better than they have been for some time.

Lumbering was brisk and there was a good demand for men for the camps.

Port Arthur and Fort William.

The month of December has not varied much from that of November, conditions in all lines remaining much the same.

Work in all the elevators and in the transport of grain was very active up till the close of navigation in the middle of the month, many of the employees at the elevators working long hours.

Fishing was active up to the middle of the month, about 12 to 15 tugs being busy in the herring fishery, tons of which have been exported from Port Arthur.

Lumbering is very quiet this year, practically nothing doing. The Pigeon River Lumber Company had to shut down their mill in the summer for want of orders, so that many logs are on hand from last year's cut.

Sault Ste. Marie.

Industrial conditions were little changed from those of the previous month. There was some activity in a few special lines, but generally the situation was quiet.

Building operations for the year were greatly below those of previous years. Lake traffic was light. Lumbering operations were expected to be quiet during the winter.

Some activity was apparent in mining operations at Bruce Mines owing to the purchase of a couple of properties by Cobalt parties. Some other mining properties along the line of the Algoma Central Railway was quite active throughout the summer and fall.

Stratford.

Labour conditions continued active and prosperous, showing no decrease from the previous month and exceeding the corresponding month of last year. Manufacturing improved in several branches, and the continuation of war orders kept the factories busy. There were no idle men.

Wholesale and retail trades were busy and reported more business this month than the corresponding month of last year.

The building trades were quiet part of the month, with a falling off in work, but there was considerable jobbing work for carpenters.

The excise returns in Stratford for the month of November show an increase in the amount from war stamps of \$600. The total returns were \$6,669.23.

The customs returns for the port of Stratford for November totalled \$19,000.14. For the same month last year the figure was \$10,685.19, an increase of over 80 per cent.

St. Catharines.

Labour conditions showed little change during December. Building trades showed a little falling off, but carpenters were all very busy on work outside of their regular occupation. The factories continued fairly busy.

The Chemical Refinery Company, Limited, a new industry for St. Catha-

rines, has begun work on the foundation for a factory building.

Customs returns for November showed an increase of \$59,785.08 over the same period of last year.

Navigation on the canal was closed about the middle of the month for the winter season. Operations on the new Welland canal were steadily progressing.

The Maple Leaf Milling Company suffered a heavy loss by fire during the early part of the month when their mill was totally destroyed at a loss of \$80,000.

St. Thomas.

Labour was well employed during December. Conditions compared favourably with the previous month and showed a decided improvement over the corresponding month of last year. The supply and demand of labour appeared to be well equalized.

Local industries were well employed.

Traffic on the railroads was heavy and extra men were added to the working forces. The Christmas trade was very satisfactory to the merchants.

Local industries have been well employed during the month. There was a decided improvement in this respect over the corresponding month of last year. Railroad shopmen were well employed.

Toronto.

Industrial conditions during December were generally satisfactory, with less unemployment than has prevailed at this season for several years. Open weather continued longer than usual, but the cessation of construction work laid off a large number of men and there was a considerable influx of unemployed labour from other places. The building trades during the earlier part of the month showed continued improvement. During November building permits were issued representing an approximate value of \$799,395 as compared with \$738,073 during the corresponding

month of last year, indicating a resumption of normal activity in the spring.

The holiday buying season set in earlier than usual and the volume of trade largely exceeded expectations, all classes of retailers reporting a satisfactory and profitable business. The Christmas mails were unusually heavy, requiring the services of 387 extra men as clerks and letter carriers.

The report of the House of Industry presented on the twenty-first, showed a considerable falling off in distress; the number of outdoor poor assisted in November showed a decrease of 88 per cent, and the number of casuals sheltered a decrease of 82 per cent as compared with November, 1914. There were 192 inmates in the home.

Toronto railway traffic receipts showed an increase for November, the amount being \$472,759 as against \$465,035 for November, 1914.

The excavation work for the new Union station on Front street was well under way and will keep a number of men employed during the winter. The intention of the contractors is to have everything ready for the concrete work in the spring.

Steel was being put in place on the Rosedale section of the Bloor street viaduct and the erection of the steel on the Don section will very shortly be begun.

Newmarket.—The various industries of this town reported a marked improvement in trade conditions and great activity in all lines.

Windsor.

Labour conditions were very favourable during December, and there was practically no unemployment.

Retail merchants reported the month the best in a good many years.

All factories were running to full capacity.

Outdoor labour, although weather conditions were unfavourable, was well employed, and numerous houses were under construction at the end of the month.

Woodstock.

Labour of all kinds continued to be pretty fully employed. In this respect conditions have not been better at the same time in several years. There was very little unemployment and very little real hardship. So far as was known nobody was in want.

Industrial conditions were at least no worse than in the previous month. The wagon factories and piano factories reported business fair. Furniture manufacturers reported little change.

Business with shopkeepers was very good. The Christmas business in most lines was especially good.

The season has been a slack one in the building trades, but the supply of labour in this branch was not very large, and most of it has been able to secure employment in one way or another.

MANITOBA.

Brandon.

The general condition of the labour market during the past month was equally as good as the condition prevailing during November, and considerably better than that of the corresponding month of last year.

While there was, no doubt, a certain amount of unemployment, as is customary at this season, there was no distress apparent.

There was no particular activity in the building trades, though the majority of men following these trades were employed.

Manufacturing establishments were busy.

Winnipeg.

Industrial conditions generally remained as in November. Building trades were very slack. Engineering trades were fairly busy. Clerical workers were in much demand early in the month, but later the supply of this class of labour was greater than the demand.

There was little unemployment in the city, but the city relief department look forward to having a large influx of foreign-born unemployed in a few weeks. The difficulties, however, in the matter of unemployment will not be as great as last year.

SASKATCHEWAN.

Prince Albert.

There was little change in labour conditions. Regular employment was scarce. There was an entire absence of industrial activity except in the lumber camps to and from which there was a ceaseless travelling of men.

Fishing was commencing and the first shipments into the city from the northern lakes brought 6 cents per pound.

The district has experienced a very prosperous year, and is settling very rapidly. New villages and settlements are springing up with rapidity as the excellent opportunities are becoming better known.

Regina.

Labour conditions during the month have been quite favourable. There were a few men walking about, but nothing like the same number as last year. There was quite a large demand for winter farm help. The supply was adequate to fill all positions as required. Domestic help was in great demand with the supply very limited.

Building trades were fairly active and were expected to be for two or three weeks.

Retail clerks and delivery employees have been very busy. Retail merchants reported an extra good holiday season, far ahead of a year ago. Wholesale houses reported collections extra good this season.

Railway traffic was very heavy, both in passenger and freight departments.

Farm machinery firms reported that farmers were settling up their indebtedness this season as never before.

Saskatoon.

There were very few signs of the unemployment problem of a year ago, recruiting, together with a greater demand for men on the farms, in the lumber woods, and on ordinary repair work, having absorbed most of those out of work.

There was considerable elevator building in the vicinity during the month. The Canadian Northern Railway has been building coal chutes, etc., on the Goose lake line, which, together with some local repair work, has helped the labour situation in the building line to some extent.

Retail stores reported a much greater volume of business than a year ago.

ALBERTA.

Calgary.

Industrial conditions during December were about normal. There was a slight increase in unemployment over the preceding month, owing to the closing down of the civic public works for the winter and also to the fact that in some districts threshing was finished or discontinued. It was reported, however, that a large amount of threshing was yet to be done throughout the province. The weather was favourable for the work, and many were still employed in the fields. A shortage of cars for handling the grain was also reported from several districts.

The coal mines to the north (Drumheller) were busy, there being a fair demand for qualified miners for the district.

One or two of the saddlery companies were still busy with army contracts. The Canadian Pacific Railway shops at Ogden were working full time.

There was no activity in the building trade in the city, the only work being in the country districts where farmers were erecting houses and farm buildings.

The provincial committee appointed to try and find employment for returned wounded soldiers have, with the co-operation of the city officials, engaged an office where the men will be registered and put to work as soon as vacancies occur at work which they are enabled to do, most of the men returned being unable to follow their previous occupation.

Reports showed a steady improvement in the wholesale and retail trades.

The Associated Charities reported having given relief during the month to 91 British and 6 foreign families, the number given relief in December, 1914, being 504 families.

Edmonton.

Labour conditions during December were very dull, more so than the previous month and the corresponding month last year. There was very little demand for farm help and wages offered were low. The chief reason given for the light demand for farm labour was that of the hundreds of men who went to the harvest fields many of them secured employment for the winter season. This is also shown by the decrease in the number of unemployed, which was about one quarter of the number as compared with the same month last year.

The number of applicants for relief were much less than a year ago, and while the demand on the relief department will increase as winter advances it is not expected to be as serious as last winter.

Wholesale trade was quiet, but retailers reported trade much better than last year.

With the exception of marketing produce, farmers had a quiet month.

Owing to mild weather the demand for coal was much lighter than usual at this season, but the price was higher than a year ago.

Lumbering was quiet. There was very little demand for men to work in the woods in any capacity. For several years tie-making has furnished work for

a large number, but the demand this season has been light.

Railway contractors were doing some tracklaying in the north country.

Lethbridge.

The opportunities for employment were less than during last month. There were quite a number returning from threshing with no openings for them. In the case of female help the demand was greater than the supply. All other lines of employment were well filled.

Flour mills have been adding to their warehouse accommodation so as to allow the mills to run constantly. These buildings are extensive and quite a number of carpenters and others have had employment on them.

Transport was very active in coal and grain.

Farmers were still busy threshing when weather permitted. Very little ploughing has been done this fall.

Coal mining was very active, the mines working at full capacity.

Medicine Hat.

Labour conditions showed little change from those of the preceding month. Almost all local industries were working and there were practically no unemployed in the city. Prospects were bright for a good winter.

Exceptional activity prevailed in the three flour mills which were working day and night, turning out over 3,300 barrels of flour a day.

Wholesale and retail trade was reported fairly good.

BRITISH COLUMBIA.

Fernie.

Labour has generally been employed throughout this district to the same extent as during October and November. There has been no exceptional demand but the unemployed, in spite of this, were very few, as industrial activity

continued to give regular and steady employment.

Activity in the priniepal industries has stimulated wholesale and retail trade.

Activities in lumbering were confined entirely to logging operations, which were being carried on throughout the entire district on a more or less extensive scale.

The coal mining industry was still enjoying the improvement which went into effect in October and no falling off in this industry is expected for the next two months.

Nanaimo.

Labour conditions showed very little change. While there has been very little work for unskilled labour, the number of men out of work has been decreased by men going to other places, but there were still a large number of men idle, especially among the building trades.

Merchants, wholesale and retail, reported business as quiet for the time of year.

Fishermen were quiet. The herring season was about half done, the catch so far not being very large.

The sawmills of the district were working steadily, but not nearly to their capacity. The logging camps have not done much work during the month owing to the extremely wet weather.

The coal mines of the city and district worked well during the month, especially those in this city.

Nelson.

The general condition of labour during December was much quieter than in the previous month on account of cold weather and the holiday season, but Christmas trade has been 50 per cent better than it was one year ago. The city had a number of teams hauling the wood which was cut a year ago by the relief fund and were delivering it at

\$3.75 per cord; regular price is from \$6.00 to \$6.50.

Mining in the Kootenays was still progressing fairly.

There was still a great demand for houses in Trail, and the schools were up to more than their capacity. The Standard mine near Silverton has put on a number of extra men and was running three shifts.

New Westminster.

Employment generally has been less than during November as there have been fewer men on city work, no new construction work begun, and most of the fishermen laid off.

The holiday season caused a slight stimulation of retail trade, but not to any great degree, although in most cases it was not looked for.

The British Columbia Electric Railway has put on a number of jitneys between New Westminster and Vancouver and employed a few chauffeurs.

A few fishermen were working, securing moderate catches for the local market, a few cohoes early in the month and later steelheads, for which they got 5 to 6 cents per lb., and which were nearly all shipped. Of the 2,500 licenses issued this season, only 20 or 25 were fishing at the end of the month.

Lumbering seemed to be improving somewhat. The mills were all running full time and some camps were opened up. There was still a good demand for shingles in the United States market, and the output was only limited by the available supply of cedar.

There was practically no railway construction, except some work on the spur line to the new harbour front.

Prince Rupert.

There was no change in labour conditions as compared with the situation during the previous month.

The fishing industry for the past month showed little change. The total amount of fish landed during the month

was 1,900,000 pounds, which was similar to the catch of last month.

Mining conditions were unchanged from those of the previous month in the Anyox district, where the industry continued very busy. Other portions of the district were almost closed for the winter.

Vancouver.

In the general sense there was no improvement in the labour situation over last month. In those occupations connected with industries supplying Christmas commodities there has been a certain amount of increased labour demand, but it was only of a temporary character.

Relief was being given by the city to 520 families and 137 single men. The latter are all either aged or in some other way physically disabled. The approximate amount now being spent by the city on relief work is \$5,000. A toy-making department has been instituted by the relief bureau. Christmas trading on this work showed a good profit on the output from December 6 to 20.

Building continued to show very disappointing returns, with the result that most of those engaged in that industry at normal times were unemployed.

The harbour commissioners have for some time been planning a large amount of tide flat reclamation work. This was in full swing, and providing employment for from 80 to 100 men. The pay-roll up to December 15 totalled \$60,000. When the scheme is completed the reclaimed area will be divided into industrial sites and leased.

A proposal to close all barber shops at 7 p.m. the first five days in each week was supported by the requisite number of proprietors through a referendum vote, with the result that all barber shops now close at that hour according to law.

The call has been received by local trade unions for the annual convention of the British Columbia Federation of

Labour, to meet in this city January 17, 1916.

The Trades and Labour Council is urging the appointment of a Public Defender in the local Police Court. His duty would be to defend accused persons, particularly those without means to engage counsel. It is stated the plan has been adopted with satisfactory results in some American cities, notably in Los Angeles.

There has been a good deal of complaint of late, chiefly from lumber exporters, that freight ships are not to be obtained for hire in British Columbia ports. A committee has been appointed by the Provincial Government to report on the matter.

The Commission appointed by the latter body to visit various cities in the United States and Canada to inquire into the operation of workmen's compensation legislation, has held final sittings in Vancouver, and will report to the Government. A session of the Provincial Parliament is announced for early in 1916, when a new Workmen's Compensation Act for British Columbia will be brought down.

Many of the men who were assisted to the prairie districts from here to help on harvest work have returned. They are chiefly married men whose homes are here.

While it is generally admitted that for a variety of reasons there are not so many men unemployed here as at this season last year, yet the available labour supply was far in excess of the demand.

Victoria.

Labour conditions during the month have been fairly good, excepting in the building trades, which were in a very depressed condition, as has been the case during the past year. However, everything considered, labouring conditions were in a healthier condition than was the case a year ago.

Retail merchants reported the Christmas trade as fair and quite up to expectations, with a general tendency to

purchase useful articles instead of luxuries.

Up to November 30, 65 per cent of the taxes due for the current year were paid, the amount being \$1,003,770. Last year 67 per cent was collected during the same period.

A "Buy at Home Club" has been organized in the city, and circulars have been issued giving ten reasons why people in Victoria should buy at home, thereby helping to support the business men of their own city.

REPORTS OF WOMEN CORRESPONDENTS.

Montreal.

Female labour had fair opportunities of employment during December. The latter part of the month brought many demands for extra hands in departmental stores and other businesses where the Christmas trade caused unusual activity.

As compared with last year the situation was more encouraging for women workers. Most trades and industries employing women have been well encouraged during the busy season, with the exception of those dealing in the more expensive lines, such as rare furs and high priced jewelry.

Inquiry among the various charitable organizations shows that there have not been as many calls for help as is usual at this season. Last year the situation was unprecedented both as regards the needs of applicants and the number of demands. Enlisting and work connected with the war, the consequent aid given soldiers' and workmen's families, is the principal cause of the improvement noticeable this year.

Encouragement given home industry.—The Canadian Handicrafts Guild has held an exhibit of Canadian-made toys, the first of its kind in the Dominion, as a result of the competition arranged by the Guild and which was responded to in a most satisfactory way. It is hoped that this will be the nucleus of a new industry which under proper direction may prove a means of livelihood to many.

Immigration.—During the month of December the 34th annual meeting of the "Women's National Immigration Society" took place. In the course of the year the society received 136 women immigrants; 28 of this number remained in Montreal, the remainder going to different parts of Ontario and to the Western Provinces. This society gave 4,995 meals during the year. In view of the increase in immigration expected after the war, this organization has petitioned the Federal Government for a higher subsidy.

In this connection also a large meeting was held in order to discuss the establishment of Dominion Labour Bureaus throughout Canada.

Fédération Nationale St-Jean-Baptiste.—The committee of "l'Assistance par le Travail" has given the report of activities for the first month of its second year. From Nov. 15 to Dec. 15 there were 90 applicants; 55 of these were new arrivals at the office, 11 asked for work at home, 24 had worked last year. 44 days' work was given 10 workers. Owing to the bureau being better known, employers apply for hands and thus many workers can be sent direct to some employment without being kept at the workroom.

Toronto.

There has been no great change in conditions for women factory workers in the past month. The extra overtime work of the first half of the month was

almost balanced by the decrease of the last half.

The tailoring trades were dull. Even the larger firms were working short-handed, and many women have been laid off indefinitely.

Domestics.—The Women's Welcome Hostel reported a great scarcity of female help, so many girls having gone back to England and no new ones are coming out. In addition to an average of about ten applications per day received over the telephone and not entered in the books because of the impossibility of filling them, the numbers entered are as follows: number of applications, 163; number of applications filled, 12; number of women registered, 15; number of women placed, 12. None of the 18 applications for out of town could be filled.

Wholesale and retail firms of Toronto report Christmas sales not only greater than last year but greater than in 1913. At one of the department stores 1,000 more employees than last year were on the staff, and in this connection a remarkable change in unemployment was noted; 200 more people than applied were needed by the firm, which has been the reverse in previous years. Housekeepers had the same difficulty in getting extra help for Christmas week or even for the day. The supply of women this year was far too small for the demand.

Department of Public Health.—The work of the Municipal Dental Clinics has been growing rapidly. Approximately 650 patients attended the several adult clinics during the month, and 500 the children's clinics.

Division of Sanitation.—The following numbers show the result of the inspection of establishments during the month: bakeries, 235 satisfactory, 43 unsatisfactory; candy shops, 56 satisfactory, 9 unsatisfactory; laundries, 370 satisfactory, 12 unsatisfactory; restaurants, 914 satisfactory, 338 unsatisfactory.

The latest statistics published by the Department of Public Health report the

total number of infant deaths for the first 11 months of the year 1,260 as compared with 1,457 and 1,753 in the corresponding months of 1914 and 1913 respectively. The general death rate has also been lower. The number of deaths in the month due to typhoid and diphtheria shows a marked decrease over November of last year, while a very large number of cases of measles have been reported with five deaths.

Winnipeg.

A marked improvement in the labour market is to be recorded for December, both in reference to November and to December, 1914; more especially the latter. It is to be noted that one of the largest mercantile concerns in the city gave employment to 1,000 more hands than they did one year previous.

The Christmas trade greatly exceeded one year ago, giving employment to hundreds. Since the movement of the crop business has been increasing, and for the first time on record Winnipeg bank clearings exceeded Montreal clearings.

In no class of woman's labour has there been adequate supply at all times to meet the demand, with the exception of bookbinders, school teachers, and possibly nurses, though the latter have been exceptionally busy, cases being of longer duration, and more in number. Stenographers have been more in demand than heretofore in 1915, and even after Christmas was over the demand continued, though one year ago there was no demand immediately after Christmas.

In domestic lines the girls have not been available to take the positions offered. Even inexperienced and inefficient girls have been pressed into service elsewhere who would otherwise have been seeking domestic employment. Work has been found for hotel and boarding house girls. Factories were fairly steady in the number of hands employed.

Of those who left employment in the stores on December 24, hundreds had been employed on the understanding that their employment would cease on that date. Many employed on that understanding were being kept on.

The unemployment relief department which had been opened in connection with the City Relief Department has been turned over to the Social Welfare Association, formerly known as the Associated Charities. They are able to give considerable employment in their wood-yard to men making application under this class. Of course applications for this class of relief are greatly decreased.

Vancouver.

Labour conditions for women during the past month showed a decided improvement over the previous month, while comparison with December of 1914 shows a decrease of 75 per cent in the number of women seeking employment during December, 1915.

The improvement in conditions for the past month was partly due to the Christmas trade and partly to several Government contracts being placed with local firms.

The decrease in the number of women seeking employment as compared with December of 1914 was due, about 25 per cent to improved conditions, and about 50 per cent to the number of women, particularly skilled or trained women, who have left the city.

While the supply of labour during the past month remained in excess of the demand, some difficulty was experienced in obtaining skilled domestic help, the excess being unskilled help, or girls and women only partially trained in any line of work, and stenographers.

Charitable organizations and women's societies were actively engaged during the month in preparation of Christmas hampers and dinners for needy families and individuals. A number of fami-

lies still have to depend on the relief given by the city for existence owing to the unemployment of the head, who in many instances is a widow or deserted wife with children to support.

An increase in the demand for domestic help was reported. Difficulty in obtaining skilled domestics was followed by a slight increase in the wages offered, the average rising from about \$12.50 per month to about \$15. A decrease was also noticed in the supply of unskilled domestic help, due to the increase of trade for Christmas. The supply, however, was more than equal to the demand.

Sales clerks were temporarily active, especially during the week previous to Christmas day. Garment workers were fully occupied, some difficulty being experienced by a local firm having a large contract for army shirts in obtaining competent operators.

A contract for army boots not being completed kept the boot and shoe workers actively employed. The workers in local knitting factories were also active, one firm being occupied with a Government contract for sweater coats for the army, another with a contract for Australia.

Tailoresses, dressmakers, milliners and seamstresses with the exception of garment workers on Government orders, were only partially occupied, their busy season being over. Those working in candy and biscuit factories were fully occupied.

A number of stenographers and those usually occupied with office work of various kinds were reported as seeking positions, only a few of whom were successful. Laundry workers and waitresses were not fully occupied.

A number of married women, whose husbands are unemployed, were reported as seeking "day" work. Very few of them obtained it, the demand being very low indeed.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—PROCEEDINGS
DURING DECEMBER, 1915.

DURING the month of December a

Board of Conciliation and Investigation was established under the Industrial Disputes Investigation Act to deal with proposals made by the Longshoremen's Association of St. John, N.B., for a new working agreement with the shipping companies to replace one expiring at the end of the calendar year. The report was also received in the Department of Labour of the Board to which matters in dispute between the Acadia Coal Company, Limited, and its working force at Stellarton, N.S., had been referred for adjustment. The Board, in its report, recommended certain wage increases which were accepted by the employing company; it was understood that the findings would also be acceptable to the employees.

Application Received.

On December 20 an application was received in the Department for the establishment of a Board to deal with a dispute existing between various steamship companies trading to the Port of St. John, N.B., including Allan Line, Canadian Pacific Steamships, Limited, Elder, Dempster & Company, Head Line, New Zealand Shipping Company, Furness Line, Manchester Line (Furness, Withy & Company), Robert Reford Company, Donaldson Line, Royal Mail Steam Packet Company, also H. S. Gregory & Sons and H. W. Parlee, stevedores and contractors, and Wm. Thomson & Company, Limited, J. E. Moore & Company, Limited, J. E. Knight & Company, W. A. Mackay, Geo. McKean, J. B. Brand, R. C. Elkin and A. Watson, ship brokers and shippers, and the Longshoremen's Association of St. John, N.B. The dispute grew out of

certain proposals respecting wages, hours and conditions of employment, which were embodied in a new working agreement to take the place of one expiring on December 31, 1915. The number affected was given as 1,135.

A Board was established by the Minister on December 24, 1915, and was constituted as follows: Mr. W. E. Foster, St. John, N.B., chairman, appointed by the Minister on the joint recommendation of the other members; Mr. J. H. Lauer, Montreal, Que., appointed on the recommendation of the Shipping Federation; and Mr. J. E. Tighe, St. John, N.B., appointed on the recommendation of the employees concerned.

Other Proceedings under Act.

In the December number of the *Labour Gazette** reference has been made to the appointment of the Honourable Mr. Justice McCarthy, of Edmonton, Alberta, as chairman of the Board which was established to deal with certain matters in dispute between the Corporation of Edmonton and its street railway employees, members of Division No. 569 of the Amalgamated Association of Street and Electric Railway Employees of America. The Honourable Mr. Justice McCarthy subsequently stated his inability to act in this capacity and accordingly Messrs. J. E. Wallbridge and Wm. McAdams, appointed by the Corporation and the employees respectively, were asked to make a second nomination. The foregoing members recommended Mr. Frank Ford, K.C., of Edmonton, Alberta, and on December 20 this appointment was made by the Minister, the Board then proceeding with its investigation.

*See December, 1915, *Labour Gazette*, p. 697.

ACADIA COAL CO., LTD., AND EMPLOYEES AT STELLARTON, N.S.

ON December 13 the Minister received the report of the Board of Conciliation and Investigation to which had been referred for adjustment certain differences between the Acadia Coal Company, Limited, and the workmen engaged in the company's mines at Stellarton, N.S.

In the application it was stated that the dispute resulted from the employees' demand for a 10 per cent increase in their wages, and affected 430 men.

On November 24 the Minister established a Board to deal with this dispute, which was composed as follows: His Honour Judge W. B. Wallace, Halifax, N.S., chairman, appointed by the Minister on the joint recommendation of the other members; Mr. Wm. H. Chase, Wolfville, N.S., the company's nominee, and Mr. Simon Lott, Pictou, N.S., the employees' nominee.

The report was unanimous and recommended certain increases to take effect from December 15, 1915, also that the rates recommended should not be subject to readjustment until the financial affairs of the company justified a change.

The Department was formally notified by the company of its acceptance of the award, and it was understood that the employees would also accept the findings.

Report of Board.

The text of the unanimous report of the Board in this matter is as follows:

To the Honourable,
The Minister of Labour,
Ottawa, Canada.

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute or difference between the Acadia Coal Company and its employees.

The Board of Conciliation appointed in relation to the differences between the above parties met on Tuesday, December 7, 1915, at New Glasgow, in the County of Pictou, in the afternoon, and on the same evening met at Stellarton, in the same county, each member of the Board having taken the oath prescribed by the statute.

It was considered impracticable to attempt a settlement of the difference without taking any evidence, and at the request of the representative of the employees, the Board decided to hold a meeting open to the public, and at the said meeting to hear any evidence that might be submitted for its consideration. Accordingly a meeting, of which public notice had been previously given by posters, was held on the evening of December 7, at Orange Hall, at Stellarton, which meeting was open to all the employees of the company and to the public generally.

A number of witnesses were examined on behalf of the employees of the company, and, in reply, Mr. George Gray, accountant, made a long statement of the financial position of the company.

On the following morning the Board met again at New Glasgow and considered all the evidence submitted.

The Board then adjourned to meet in Halifax in order to endeavour to reach a final decision, and prepare its report.

The Board accordingly met in Halifax on December 10, 1915, and at such meeting the Board finally decided to make the following recommendations:

Surface Men.

1. All surface men and boys earning a daily wage of \$1.50, or under said sum, to receive 5 cents increase.

Underground Men.

2. All underground men and boys earning a daily wage of \$1.60, or under said sum, to receive 5 cents increase.

3. That timbermen, tracklayers or brushers working on contract shall be guaranteed a minimum earning of \$1.75 per day.

4. That all the said increases shall become effective from the fifteenth of December, 1915.

5. That inasmuch as no decrease in the general expenditure of the company

in the operation of its mines can be reasonably expected for some years, the increased rates of wages hereby recommended should not again be subject to readjustment until a substantial improvement in the financial affairs of the company would justify such change.

All of which is respectfully submitted.

(Sgd.) W. B. WALLACE,
Chairman.

(Sgd.) W. H. CHASE.
(Sgd.) S. LOTT.

Halifax, N.S., December 10, 1915.

**WESTERN COAL OPERATORS' ASSOCIATION AND DISTRICT No. 18,
U. M. W. A.—SETTLEMENT OF DISPUTE AT BANKHEAD
AND CARBONDALE MINES.**

UNDER the agreement between the Western Coal Operators' Association and District No. 18, United Mine Workers of America, two matters which were in dispute during the month of December were referred for adjustment to the Permanent Conciliation Committee, one being a claim under the minimum rate clause by an employee at the mines at Bankhead, Alberta, and the other the question of prices for new work in the Carbondale mines. Following is the text of the committee's findings in each case.

Re Bankhead Mines.

(Seam No. 0000.)

This is a claim made by Mr. F. Wheatley for work done in Breast 9 in the above Seam, amounting to \$22.18, on the ground that from October 1 to October 15 last he did not earn the minimum of \$3.00 per shift when working in the place referred to owing to abnormal conditions.

This claim is made under what is known as "the minimum rate clause" of the agreement between the mine workers and the coal operators, and was heard on the ninth inst. before the committee consisting of Messrs. Graham, Carter and Wheatley, representing the miners, and Messrs. McNeill, Stockett and Wilson, representing the operators.

In order to establish a claim under the above clause, three things must be established:

- (1) That the miner did not earn the minimum wage of \$3.00 per shift;
- (2) That the miner during the time for which the claim was made had done a fair day's work;
- (3) That the miner was prevented from earning the minimum wage owing to abnormal conditions existing where the work was done.

In order to succeed, the miner must establish all of the conditions above referred to, and each case must depend upon the evidence produced to establish the conditions referred to. It was ad-

mitted that for the period mentioned Mr. Wheatley did not earn the \$3.00 per shift, and according to Mr. Wheatley's own statements, which were not denied, he had done a fair day's work, so that the only question left to be decided was whether in this particular case the deficiency was caused by abnormal conditions preventing him from earning the minimum wage, and from the evidence before me in this particular case, and under the conditions referred to, I find that Mr. Wheatley is entitled to be paid the sum of \$22.18, the amount claimed.

Dated the eleventh day of December,
A.D. 1915.

(Sgd.) JAMES MUIR,
Independent Chairman.

I do not concur:

(Sgd.) W. F. MCNEILL,
Commissioner.

(Sgd.) WM. GRAHAM,
Acting President.

Re Carbondale Mines.

This is an application by the manager of the McGillivray Creek Coal and Coke Company, Limited, to have prices fixed for cross-pitch work in the above mine in breasts across the pitch to be 15 feet in width and approximately 10 feet in height, including also the price for pillars across the pitch, and the application comes under the heading of "New Work" as provided by the agreement of 1915, which is shortly as follows:

"That where any new work arises a price for which has not been provided, the question shall be referred to the Commissioner of the Western Coal Operators' Association and the President of District No. 18, United Mine Workers of America, and if they cannot agree upon a price an Independent Chairman shall be called in, as provided in other cases."

It is further provided that in making the prices for new work the committee shall be governed by existing prices in the same mine or in other mines in the neighbourhood.

In this case the application referred to came before the Commissioner and the Acting President, who have failed to agree, and the question must now be disposed of by these parties and the Independent Chairman.

This question was fully discussed by Mr. Graham, the Acting President, representing the miners, and Mr. McNeill, the Commissioner, representing the company, and the undersigned Independent Chairman, on the eleventh inst.

It is admitted that this is "New Work," and is not provided for under the agreement referred to respecting the above mine. It further appears that the roof in the breasts referred to is defective, requiring more work in connection with the timbering necessary to support the roof referred to. And, further, that owing to the floor of the place where the mining is to be done being level, the miners must load and push the coal to the pitch, whence it is carried by gravity, thus occasioning more work to the miner than where the operations are carried on under ordinary conditions.

It appears that on the twenty-fourth of June last, an agreement was reached by Mr. Phillips, the then President, and Mr. McNeill, the Commissioner, fixing the price for this work at 55 cents per cubic yard, and the price for pillars across the pitch fixed the same as those under the agreement applicable to pillar-work up the pitch.

Under the agreement reached as above mentioned, breasts across the pitch were to be 20 feet wide, but as this has been changed to breasts only 15 feet wide the agreement referred to is not now binding on either of the parties, and the question has now to be dealt with by the undersigned.

Mr. Graham claims that owing to the defective roof referred to, a fixed rate should be established for the extra work in timbering referred to which should apply to the whole of the cross pitch work, but as this price is being fixed, not for work that has been done, but for work that may have to be done on account of the defective roof referred to, and it may afterwards be discovered that parts of the roof may not be defective and other parts may be more or less defective and requiring more or less work, it appears to me that this agreement should provide for the extra work as it may arise, rather than that a price should be established which might eventually be unfair to the company or to the miners.

After hearing Mr. Graham and Mr. McNeill, and on examining the existing prices in this mine and other mines in the neighbourhood, which were submitted on the hearings of this application, I find and fix the prices for the work referred to as follows:

For the breasts 15 feet in width and approximately 10 feet in height,

including loading and hauling coal, bratticing, laying track and timbering, 59 cents per cubic yard; if three (3) piece sets are required, \$1.00 per set, in addition to the said 59 cents per cubic yard. Where the breasts are driven over 200 feet, \$1.00 additional per lineal yard is to be allowed up to 300 feet.

For pillars the price to be 53 cents per cubic yard, including timbering, loading and hauling coal and track-work.

Dated the eighteenth day of December, A.D. 1915.

(Sgd.) JAMES MUIR,
Independent Chairman.

I do not concur:

(Sgd.) WM. GRAHAM,
Acting President.

I concur:

(Sgd.) W. F. MCNEILL,
Commissioner.

INDUSTRIAL AND LABOUR CONDITIONS IN CANADA DURING 1915.

THE opening of the year 1915 showed a marked change from the conditions existing at the commencement of 1914. At the beginning of that year the depressed conditions of the previous year were still apparent, but in 1915 the improvement which became noticeable from month to month during the latter part of the previous year had become fairly well pronounced and the close of 1915 witnessed a return to almost normal conditions in many respects. While at the close of 1914 there was still considerable unemployment, and in some localities this condition existed during the early months of 1915, the gradual enlistment of men for overseas service, the employment of others in the manufacture of munitions and other military

supplies, in agricultural and lumbering operations and the heavy falling off in immigration, all combined to bring conditions in many parts of the Dominion back to almost a normal basis so far as employment was concerned. Manufacturing in many lines outside of special activity in the manufacture of munitions of war was improved; lumbering showed activity practically throughout the year; fishing on the whole was good; mining, both coal and metal, showed great improvement, and towards the latter part of the year was back to, if not above, the normal activity of previous good years. Outside of building operations which continued to be dull, practically all the Dominion's industries showed great improvement.

While there was a considerable amount of relief work by charity societies and by municipalities, particularly in the West during the winter of 1915, as the year went on and industrial conditions everywhere improved, the necessity for relief work gradually diminished, until at the close of 1915, except perhaps in a few of the large cities of the West, little in the way of relief was needed, and little unemployment was evident when compared with the conditions existing at the close of 1914. Immigration which in 1914 showed a heavy falling off from the previous year, continued to decrease in 1915, the total reduction being about 70 per cent.

The agricultural industry showed the best return in many years. Practically all districts in the Prairie Provinces produced record crops of grain, and crop failures such as marked the year 1914 in certain parts of Alberta and Saskatchewan were unknown in 1915. Crops were uniformly good all over the country, with the exception of potatoes which in most districts were only half a crop. In a few districts, however, a good crop was reported, and in Alberta and British Columbia very good potato yields were reported. A very large body of men were given employment throughout the year in agricultural operations at good wages.

Fishing on the whole showed a good year. Conditions on the Atlantic coast were fair, the run of mackerel being exceptionally heavy. Lake conditions also showed a fairly prosperous year, with good catches of herring and whitefish. On the Pacific coast good returns were reported for the year in waters near Prince Rupert, though salmon fishing on the Fraser river was poor. Despite the falling off, however, in the catch of salmon on the Fraser the total pack for the year was far in excess of that for 1914 and was not far behind the record pack of 1913.

Lumbering was fairly quiet in some districts, though on the whole the year was a fairly active one. During the

early part of the year the industry was quiet in British Columbia, but improved in the fall owing to better demand from the Western Provinces with the harvesting and sale of the crop. In Eastern Canada practically all the large mills ran steadily until late in the fall, water and weather conditions being favourable. Sales were better than in the preceding year, owing to improvement in some quarters in building operations, the demand for box and for deals and other lumber for the United Kingdom. Freight rates continued high and tonnage was scarce. Operations in the woods at the close of the year were being carried on on the usual scale in New Brunswick and in parts of Quebec and Ontario. In Nova Scotia, there was a falling off in activity in this direction. Northern Saskatchewan lumbering districts were busy. Wages on the whole were less than in the preceding year.

Mining showed a very active year and production in many instances was above the normal of other years. In metal mining improvement continued steadily throughout the year until at its close practically every metal mining district in Canada was experiencing great activity. Coal mining showed some dullness in the early part of the year, but after midsummer and in the closing months of the year became very active. Nova Scotia mines, in fact, were short of labour and were advertising for men. There was some falling off in the demand for coal by railways, but the demand for manufacturing and special purposes more than offset this.

Trade conditions which in 1914 showed a marked falling off as compared with the previous year were improved in 1915. While there was a large falling off in imports, there was a very heavy increase in exports, and the aggregate trade for the year was several millions greater than in 1914.

Railway construction on the whole was quiet, though operations were carried on continuously on new lines in Alberta and British Columbia, and on branches of some of the large establish-

ed lines. Work was also continued actively on the Government Hudson Bay line.

Transportation also showed a better year. The improvement in general manufacturing conditions and the movement of the troops and war material and the exceptionally heavy crop of grain all contributed to this improvement. Towards the latter part of the year railway machine shops which had been running short time in many instances were back to normal conditions, and, in some cases where repairs to rolling stock for use in transporting grain were urgently needed, exceptional activity prevailed. An improvement was also shown in earnings. Conditions in water transportation were also satisfactory.

Immigration and Colonisation.

Immigration.—Immigration to Canada during 1915 continued to show a heavy falling off. Figures (unrevised) prepared by the Immigration Department for the calendar year show that the total immigration to Canada in 1915 was 48,466 as compared with a total of 168,930 in 1914, a decrease of 120,464 or about 71 per cent. The following table gives a comparison of the numbers which arrived from Great Britain, the United States and other countries in 1914 and 1915:

	1914.	1915.
Great Britain.....	49,879	9,606
United States.....	68,659	36,098
Other Countries.....	50,392	2,762
	168,930	48,466

Lands patented.—For the eleven months ended November, 1915, the number of land patents issued in the provinces of Manitoba, Saskatchewan, Alberta, British Columbia and in Yukon

Territory was 18,769, and the acreage 3,032,630.71 as compared with 28,106 patents and an acreage of 4,650,641.15 for the corresponding period of 1914.

Homestead entries.—The number of homestead entries in the provinces above mentioned for the eleven months ending November, 1915, showed a total of 16,122 as compared with a total of 24,142 for the corresponding period of 1914, a decrease of 8,020.

Trade Disputes.

There were 43 trade disputes recorded by the Department as being in existence during 1915. Five of these affecting 155 employees were carried over from 1914, leaving 38 disputes as having actually begun in 1915. During 1914 there were 44 disputes recorded, 40 of which had commenced during the year. Thus the record for 1915 supercedes that for 1914 as being the lowest in the Departmental record. The number of employees involved in the trade disputes of 1915 was 9,139 compared with 8,678 in 1914, an increase of 461. The loss of time in working days to employees through disputes in 1915 was 106,183 as compared with 430,054 in 1914, a decrease of 323,871 days. The 38 disputes beginning during 1915 according to provinces were as follows: Ontario 13, Nova Scotia 7, British Columbia 5, and Quebec, Manitoba and Alberta 4 each. The new disputes of the year occurred in the following trades: mining 6, building 4, metal trades 9, printing and allied trades 1, clothing 4, textile 1, food and tobacco preparation 2, miscellaneous transport 4, and miscellaneous skilled trades 7.

Wages and Hours of Labour.

There were 45 changes in wages and hours of labour affecting approximately 9,204 employees recorded as having taken place during the first nine months of 1915. During the corresponding period of 1914 there were 46 changes recorded affecting 19,591 employees. Of

the 45 changes occurring during the first nine months of 1915, 22 involved an increase in wages, 18 a reduction of wages, 4 a reduction of hours, and one an increase in hours. The greatest number of changes occurred in the building trades, the number recorded being 12, affecting 343 workmen. In the metal trades there were 9 changes affecting 3,197 employees. There were 7 changes affecting 2,487 civic employees and 5 changes affecting 2,270 unskilled workers. The other classes affected by changes in wages and hours were mining, lumbering, woodworking, printing and miscellaneous skilled trades.

In the last quarter of the year, while there was little in the way of general changes in wages and hours of labour, outside of some seasonal changes, such as a increase from 50 hours to 54 hours per week in the shops of the Intercolonial Railway at Moncton, N.B., there were a few changes at some points which affected large bodies of men. Some 2,500 asbestos miners at Thetford Mines, Que., secured an increase of 25 cents per day after a strike. Employees of the Canadian Copper Company's smelter and machine shops at Copper Cliff, Ont., were given an 8 hour shift. Surface and underground employees to the number of 480 at Sydney Mines received an increase of 5 cents per day on November 1, and shiftmen, timbermen, tracklayers, landing tenders and other classes to the number of 630 received a like increase. Early closing rules which went into effect under provincial liquor law changes had the effect of reducing the number of hours worked per day by bartenders in Ontario. Barbers at St. Thomas, Ont., petitioned for and obtained a by-law reducing the number of hours per day during which barber shops in that city may be kept open.

Agriculture.

Agricultural operations during 1915 were very successful, and almost all crops showed a large increase over those of the previous year, with the excep-

tion of potatoes which showed a falling off of nearly 50 per cent in the large producing districts of Eastern Canada. In the West particularly a very heavy grain crop, the largest in the history of the country, was harvested, and at the close of the year was practically all threshed and a great amount marketed. No bad crop failures were reported from any districts, and those parts of Alberta and Saskatchewan which suffered heavily from drought in 1914 produced a good crop in 1915. Spring opened earlier than in the previous year and favourable weather throughout practically the whole of the year permitted early preparation of the soil and good cultivation. Efforts on the part of the Dominion and Provincial Governments to increase the acreage sown to crop, which were commenced in 1914, were carried on in 1915 and there was a greatly increased grain production in practically all parts of the Dominion. The fruit crop on the whole was a good one, though heavy frosts in May and June in parts of Eastern Canada did some damage. Grapes were below the average, but pears and peaches were good. In British Columbia the fruit crop was a good one. Prices for all crops were uniformly good. There was considerable activity in the sale of horses for use as remounts by the army.

The movement of new settlers to the land was adversely affected by enlistments, the practical cessation of immigration and other causes, but there was a considerable movement during the year, particularly in the West, back to the land, by farmers and agriculturists who in former years had gone to the cities.

There was comparatively little change in the wages of farm labour, although in the early part of the season, with the surplus of labour which existed, rates showed a lower tendency for inexperienced labour. With the advance of the season, however, and the absorption of much unskilled labour by enlistments and in some other branches of industry, there was not the same surplus of

labour available, and when the harvesting season was well advanced a scarcity of agricultural labour was reported in some localities and high wages prevailed. The demand, however, was on the whole well met and harvesters were engaged at rates varying from \$2.50 to \$3 a day, and in some cases where the season was well advanced and snow had fallen, as high as \$3.50 and \$4 per day was paid. Men hired early in the spring and early summer were paid wages of from \$35 to \$40 per month.

The usual harvesters' excursions were run by the transcontinental railways and a larger number of harvest hands went from the East than was the case last year. Quite a large number of men were sent out from British Columbia, the railways also making a special rate to harvest hands coming from that province. In a few localities there was a surplus of harvest labour, but this condition was speedily corrected by the transfer of men to other districts where their services were required.

The opening of fruit and vegetable canning factories in June and the continuation of operations for several months provided employment for a large body of workpeople. The harvesting and hauling of sugar beets and the manufacture of these into sugar also provided employment in districts where this work is carried on—notably at Berlin and Chatham, Ont.

Fishing.

Conditions in the fishing industry were on the whole satisfactory. On the Atlantic coast at the opening of the year only fair returns were had, and from some districts drift ice and heavy winds interfered seriously with fishing operations. These adverse conditions prevailed to a great extent along Atlantic fishing grounds until late in the spring. With the commencement of summer, more favourable conditions prevailed and exceptionally heavy catches of mackerel were taken. Lobsters, also, were

taken in large quantities along the coast of Prince Edward Island, and in some localities factories were unable to handle the fish on account of lack of cans. For a time there was also a scarcity of help. Fishing continued fair during the summer, and at the end of the season fishermen had secured good average results. Fall and winter fishing on the Atlantic coast in districts where operations are usually carried on between seasons was fairly good, though as the year drew to a close conditions were quieter. Unfavourable weather during October and November interfered with haddock fishing.

Fishing on the lakes and inland waters showed fair returns. On the Great Lakes fair catches of whitefish and herring were made and a fairly good season was reported on Lake Winnipeg, several hundred fishermen being employed during the season. During the year good catches of whitefish were taken in Lesser Slave lake, a comparatively new fishing ground opened up by the recent construction of the Edmonton, Dunvegan and British Columbia Railway, which connects at Edmonton with the Grand Trunk Pacific.

British Columbia showed a good year. Vessels fishing out of Prince Rupert had very good catches. An order-in-council passed by the Dominion Government, which permits American or foreign fishing vessels to land and sell their catch to Canadian dealers, resulted in the delivery by many American fishing vessels of their catches at the Canadian port, and the fishing industry at Prince Rupert was greatly stimulated. Salmon fishing gave good results taken as a whole, although fishing on the Fraser river was poor and below the catch of the previous year. The salmon pack was 1,133,381 cases as compared with 1,111,039 in 1914, and with the exception of 1913, a record year, was the largest pack since 1901. The district totals were as follows: Fraser river, 289,199 cases; Skeena river, 279,161 cases;

Rivers Inlet, 146,838 cases; Naas river, 104,289 cases; and outlying districts, 313,894 cases.

At the commencement of the whaling season it was expected that owing to the financial stringency whaling companies would not operate and that many men would thus lose employment. Later, however, part of the usual fleet was fitted out, and although starting a few months later than usual a fairly good season's catch was reported.

Lumbering.

Lumbering operations throughout the year were fair, taken as a whole. In Nova Scotia about the usual amount of work in logging operations took place during the winter, though lack of snow interfered to some extent with the work. In New Brunswick logging operations were fully up to those of the previous year. In Quebec the cut of pulpwood was about the same as in the previous year, but the cut of merchant timber was less. In Ontario, also, logging operations were not so brisk. Logging activity in British Columbia, also, was not at all pronounced. The market for lumber continued comparatively quiet owing to poor demand for building operations and high freight rates and lack of tonnage, but towards the end of the year with the harvesting and marketing of the crops a better demand was reported from the Prairie Provinces, which improved conditions for operators in Northern Saskatchewan and in British Columbia. Trade also became better in Eastern Canada, owing to an improvement in building operations in some localities on account of fine open fall weather, and to large orders for lumber to be used in the manufacture of shell boxes.

With the opening up of spring, activity became pronounced in New Brunswick and in Quebec and Ontario. Stream driving operations gave employment to large bodies of men and a number of mills commenced sawing. Wages

for river drivers in New Brunswick ranged from \$2 to \$2.75 per day. Throughout the summer mills in the Maritime Provinces and in Quebec and Ontario lumbering districts continued active, very little in the way of shut-downs through low water or other causes being reported. Conditions in British Columbia, which had been dull, also showed improvement, and with the commencement of summer there was a fair amount of activity which was continued into the fall and winter. Shipments from British Columbia to the United Kingdom were interfered with seriously by slides in the Panama canal. The shingle business in British Columbia was very active owing to a heavy demand from the United States, and in some instances a scarcity of cedar logs was reported. Practically all mills had ceased sawing in Eastern Canada about the middle of November.

Prospects for lumbering operations in the woods for the winter of 1915-1916 were only fair. The uncertainty of the lumber market, the stocks on hand, the scarcity of tonnage and high freight and insurance rates as well as the exchange market were all expected to materially affect the cut of logs. In Nova Scotia a falling off in the number of men going into the woods was reported, but in New Brunswick preparations for logging were carried on on about the usual scale, and in a few districts it was expected the cut would be larger than the previous year. In some parts of Quebec and Ontario the usual amount of work was expected to be done, but in other parts a smaller cut was expected. Wages for bushmen were lower than in 1914, rates in Ontario and Quebec districts varying from \$12 to \$22 per month. In New Brunswick wages were reported \$5 to \$10 lower than last season. Owing to the low wages many men in Ontario districts refused to go into the bush and sought other employment. Logging prospects were good in Northern Saskatchewan, and in British Columbia districts fair.

Mining.

Both coal and metal mining showed a very good year. The revival of the iron and steel industry with the manufacture of munitions of war and other lines had a beneficial effect on coal mining in Nova Scotia, and the increased activity in metal mining in British Columbia and the consequent demand for coal and coke improved conditions greatly in the Southwestern Alberta and Southeastern British Columbia coal fields. Lignite mines in Saskatchewan and Alberta were also fairly active during the year.

With the commencement of the year, coal mining in the Sydney district was improved owing to the banking of coal at the collieries, which was continued throughout the winter months. Mild weather, while it affected the consumption of coal, improved shipments. The blowing in of additional blast furnaces at Sydney and the resumption of work at the steel plant helped the coal trade materially, and coke ovens at Sydney Mines were also re-started. In the spring and during the summer a slight falling off was perceptible. With the commencement of autumn, however, and through the fall and winter months of the year, a marked improvement took place, and at the end of the year very active conditions were reported, with a shortage of miners owing to enlistments. What has been said of the Sydney district applied with more or less regularity to the other producing fields of Nova Scotia, such as Joggins, Westville and Springhill.

In the lignite fields of Saskatchewan and Alberta a fair amount of activity prevailed during the year, depending on the season. The product of these mines is used mostly for domestic purposes and during the spring and summer a certain amount of inactivity is usual. In the late summer and fall and winter months of the year, however, the mines were busy.

Coal mining in the large fields of Southwestern Alberta and Southeastern

British Columbia was slack at the beginning of the year owing to less traffic on the railways and inactivity in factories, though winter conditions caused some local demand. Comparatively dull conditions prevailed throughout the winter, though the manufacture of coke improved. In the spring, however, some improvement became noticeable, and activity in the manufacture of coke became pronounced on account of large orders from the smelters. This improvement, however, was not general, and it was not until about the middle of August that a decided improvement took place owing to the railroad companies commencing to place orders for their supply of winter fuel. The stocking of supplies for domestic purposes during winter also assisted in bringing about a general improvement. The demand for coke continued good. The improvement in coal mining continued during September, and in October and the succeeding months of the year active conditions prevailed. At practically all camps in the district mines were working steadily, and the few idle days which occurred were caused by car shortage and not by lack of orders.

On Vancouver Island practically the same conditions obtained during the year as in the Alberta and Southern British Columbia fields. The Nanaimo mines at the commencement of the year were working slack time and at Cumberland very little was being done. Nanaimo mines as the months advanced showed improvement, though other mines in the district continued slack. The use of fuel oil from California was given as one reason for slackness in the coal trade on the island. Conditions improved somewhat toward the close of the year, especially in mines situated in the city of Nanaimo, and mines in the district, while not operating to full capacity, also showed improvement.

Metal mining was active practically the full year. A number of asbestos mines in Quebec which had been closed down opened up and were actively engaged all year. In the Cobalt district

activity was fairly well pronounced throughout the year, although at its commencement and during the winter some slackness occurred owing to low water interfering with the power supply. With the opening of spring, however, and a full head of water, this condition was speedily relieved and normal activity resumed. Porcupine mines showed normal conditions. In the spring in some of the large Cobalt mines underground operations were cut down, affecting to some extent the number of men employed. A number of miners left for foreign fields from which favourable reports in regard to copper mining had been received. The reduction of operations by the larger mines was, however, offset by the number of smaller companies which resumed or continued operations. In the Sudbury nickel mining district active conditions prevailed throughout the year.

During the year a number of new prospects were discovered at points on the Temiscaming and Northern Ontario Railway and on the Grand Trunk Pacific Railway, and a number of prospectors left for the new fields. At the end of the year, however, very little in the way of development in these sections had been done. In the closing months of the year active conditions prevailed at Cobalt and shipments were reported higher than for the same months in 1914.

In British Columbia the commencement of the year also witnessed improvement. The Granby Company at Phoenix was actively engaged and advanced the wages of its employees. The smelter at Trail was running full time. Rossland mines, also, were busy. As spring approached this activity was not only continued, but added to by the starting up of other mines which had been idle. The Granby Company blew in more furnaces at Grand Forks and again increased the wages of its employees, until finally the men were put back on the scale they had received in 1914 prior to a 25 per cent reduction at the end of that year. During the

spring a serious mountain slide occurred at Britannia Mines which resulted in the loss of 56 lives and 26 employees injured, as well as the destruction of much property. During June, the British Columbia Copper Company, Greenwood, which had been idle for ten months, resumed operations. The Mother Lode and Lone Star mines also resumed operations. The Granby Company resumed the payment of dividends, the first disbursement of the kind since June, 1914. Later in the summer activity became pronounced in lead and zinc mines, and during the fall and winter months many metal mines which had closed down at the commencement of the war resumed operations and sent regular shipments of ore to the Trail smelter. Large additions were made to the Trail plant and many dwellings put up to accommodate the increased number of employees. Activity also was pronounced in mining districts to the north of Prince Rupert and the smelter of the Granby Company at Anyox was actively engaged. On the whole the close of the year witnessed a great revival of metal mining and smelting in British Columbia—and production in 1915 was estimated to be considerably over that of 1914 in most minerals.

Manufacturing.

Conditions in the various manufacturing industries of Canada showed considerable improvement as compared with those of 1914. Instead of a gradual lessening of activity as at the commencement of 1914, there was at the commencement of 1915 an increase in the number of establishments working full time and full handed. While the bulk of this activity was manifested in the execution of war orders or munitions, establishments engaged in the manufacture of staple lines were also favourably affected, and on the whole the year showed a substantial improvement in general manufacturing. The harvesting and marketing of record crops had the effect of stimulating the business of establishments depending for the most part

on Western orders, and a number of manufacturers of agricultural implements and some other lines in the closing months of the year were getting back to a normal basis.

Exceptionally active conditions prevailed throughout the year in the large iron and steel works at Sydney and Sydney Mines, and also in similar industries in Quebec and Ontario. Practically all foundry and machine shops in the country were busy in the manufacture of munitions, and large orders for cottons, woollens, clothing, leather and other goods used in military equipment kept establishments handling these lines in the main industrial centres of the Dominion very busy. The steel plant at Sault Ste. Marie was also fairly active during the year.

Sugar manufacturing companies which commenced operations in the early fall were exceptionally busy for several months and ran day and night. Good prices were paid for beets and a large number of employees were engaged. During the year the construction of a large new mill was commenced at Chatham, Ont., which was expected to furnish employment for upwards of 300 men during the busy season.

Railway Construction.

Railroad construction throughout the year was comparatively quiet. Outside of work which was continued on western lines, construction was confined mainly to maintenance. During the year considerable improvements were made on the Intercolonial Railway, such as ballasting, rebuilding of bridges, etc. Good progress was made on the terminal railway and docks being built at Halifax, and work on a spur line to Bathurst, N.B., was about completed. During the year the Quebec and St. John Railway was taken over by the New Brunswick Government and a new board of directors appointed to complete the construction of the road.

Work on the city electric road at Three Rivers was continued throughout

the year, and at its close the line was formally opened. Work on the tunnel of the Canadian Northern Railway at Montreal was practically completed at the end of the year, and freight was being carried between Montreal and Ottawa.

Construction work on the Lake Erie and Northern Railway was carried on along parts of the line during the year. The London and Port Stanley Railway was changed from a steam to an electric road and opened for traffic under the new system. Towards the close of the year work was commenced on the new union station at Toronto. Plans for construction as approved by the Dominion Railway Board provided for increased accommodation to that originally proposed. Work was also continued on the new station at North Toronto to be used by the Canadian Pacific and Canadian Northern railways.

Work continued fairly active on the Edmonton, Dunvegan and British Columbia Railway, the Alberta and Great Waterways Railway and the Pacific Great Eastern. On the latter line a train service was established from Vancouver to Squamish and from Squamish to Lillooet. Work on the Kettle Valley lines in British Columbia was also continued. At Prince Rupert a large floating drydock was completed and put into operation. A ship repairing plant was also completed in connection with the drydock. Some large oil tanks were also erected by the Grand Trunk Pacific Railway at Prince Rupert, to be used in connection with oil-burning locomotives on the line between Edmonton and Prince Rupert. Considerable progress was made during the year on the Hudson Bay Railway. Construction work on the Roger's Pass tunnel was actively continued.

General Transport.

With the opening of the year transportation conditions were inactive. In quite a number of districts trains were cancelled and crews laid off or put on

short time. Work in repair shops was light. As the winter advanced, however, an improvement became noticeable, due to better conditions in manufacturing, and consequent heavier freight shipments, also to a considerable extent to the movement of troops and military supplies. In the spring improvement was continued, and a number of trains taken off were replaced. With the coming of fall railroad traffic was considerably augmented. Shops were busy repairing rolling stock to handle the movement of grain which was heavy.

At the commencement of the year that portion of the St. John Valley Railway running from Fredericton to Centreville was taken over and operated by the Intercolonial Railway. The Dominion Government took over the National Transcontinental Railway, the Grand Trunk Pacific having declined to lease the line; the Government also took over the Lake Superior branch of the Grand Trunk Pacific. This company arranged for running rights over the Transcontinental Railway, and put on a service from Toronto to Winnipeg and also improved its service between Toronto and Calgary and Saskatoon, also between Edmonoton and Calgary. During the year the Canadian Northern Railway opened its new Sudbury-Port Arthur line for freight traffic.

At the annual meeting of the directors of the Grand Trunk Pacific Railway Company, held in London during April, the financial statement showed a decrease of £603,500 in net traffic receipts, notwithstanding a saving of £419,900 in expenses. Trade depression, reduction in crops and the war in Europe were

all given as causes for the falling off. The annual report of the Canadian Pacific Railway, issued in August, showed that while working expenses were materially reduced, net earnings were \$3,851,000 less than last year. The special income, however, was \$2,381,461 greater than last year, making it possible to leave the rate of dividend unchanged.

The inauguration of "jitney" busses in a number of localities had the effect of reducing street railway traffic and a number of men were laid off in various places. Later in the year, however, the jitney business fell away until at the end of the year street railways were but little affected by jitney competition.

Transportation conditions in lake, river and ocean navigation were fairly active. At the opening of the year conditions at winter ports showed dullness, but this condition was improved as the year advanced. With the opening of inland navigation, about April 15, heavy grain shipments were made from the head of the lakes, and considerable employment was furnished in the cleaning up of docks, repairing and fitting up of vessels and other similar work incidental to the opening of navigation. The taking over of many vessels for war purposes and the consequent lack of tonnage had the effect of bringing about a falling off in freight traffic for a time, though this condition was largely offset later by heavy shipments of grain and war supplies. At the end of November the large bulk of lake and river traffic had ceased, and many men were thrown out of employment, some of whom, however, secured employment at winter ports. Owing to fine open weather, however, a fair amount of lake and coastal

traffic was carried on until about the middle of December in some parts.

During the year some twenty-six Canadian freight steamers on the Upper Lakes were chartered by the Nova Scotia Steel and Coal Company for use on the Atlantic. These steamers were later returned to the lake service to engage in the carrying of grain.

The steamship business of the Allan Line was merged with that of the Canadian Pacific Railway Company under the name of the Canadian Pacific Ocean Services, Limited, the value of the steamship property involved in the transaction being approximately \$23,500,000.

The passenger and general cargo service of the Black Diamond Steamship line which the Dominion Coal Company had operated for a number of years between the ports of Montreal, Sydney and St. John's, Newfoundland, was discontinued, the service having become unprofitable and the company having lost a couple of steamers which it was difficult to replace.

The Trades.

Employment amongst the various trades throughout the year varied. The building trades showed little improvement over conditions of the previous year, though somewhat better conditions were noticeable in parts of the Maritime Provinces and in Quebec and Ontario. In the fall, also, in the West, considerable building in country districts of barns and dwellings was reported owing to good returns from crops. Fine open weather until late in the fall had the effect of prolonging building operations in many parts. The revival of manufacturing activity in

many lines, with exceptional activity in some branches, improved employment for many classes of factory workers. Work for unskilled labour was fairly plentiful throughout the year, more particularly in the latter half, due to agricultural and lumbering operations. Wages on the whole were fairly well maintained, and the tendency noticeable in the previous year towards a reduction in wages of unskilled trades was not so apparent in 1915. Taken on the whole, the year 1915 showed a great improvement over 1914 so far as employment and earnings were concerned. Recruiting and agricultural and lumbering operations absorbed most of the reserve supply of labour, and in the latter half of the year and at its close there was comparatively little in the way of unemployment, except, perhaps, in some of the large Western cities. Charity and relief societies which in 1914 were considerably taxed to look after cases of distress, were called on but little once the winter was over and at the end of the year comparatively little unemployment and practically no distress prevailed.

Metal and engineering trades.—From the commencement of the year to its close most of the classes included in the metal trades were exceptionally busy in all parts of the country, the great bulk of this activity being due to the manufacture of munitions of war and military equipment.

Woodworking.—Woodworking trades on the whole were not well employed throughout the year. Furniture factories for the most part were quiet, though some improvement in orders became noticeable towards the close of the

year on account of good Western crops. A number of woodworking factories doing special work such as the manufacture of boxes were fairly busy. Piano and organ workers were only fairly well engaged, with frequent dull periods. Wagon and sleigh factories were rather better employed, war orders and an improvement in Western demand rendering conditions fairly active.

Printing. — Printers throughout the year were fairly well employed. Short time and reduced staffs, however, were in effect in a number of localities, chiefly in Western Canada, though dullness was noticeable in some other parts as well. A number of newspapers either ceased publication or amalgamated with other offices.

Clothing. — Tailors and garment workers were only fairly well engaged, though activity for the latter was somewhat augmented in a number of districts owing to war orders. So far as general business was concerned, however, the year was a fairly quiet one.

Textile. — Textile workers continued busy in nearly all large industrial centres. The continuation of large orders for military equipment was chiefly responsible for this activity.

Leather trades. — Leather trades for the most part and in the large industrial districts continued fairly active throughout the year, with special activity in certain places and seasons on account of war orders.

Food and tobacco preparation. — Trades engaged in the preparation of food were active. Cigar makers and tobacco workers were quiet, with an improvement toward the close of the year.

Miscellaneous. — Miscellaneous trades such as hotel and restaurant employees, theatre employees and barbers were fairly well employed. There was a steady demand for domestic servants of exper-

ience at fairly good wages. Shop employees were fairly well engaged, with the usual activity at the Christmas season.

Unskilled. — Unskilled trades were fairly well employed, except in the early part of the year, and the situation when contrasted with that of the previous year was decidedly improved. Active preparation for a large crop in the spring of the year resulted in a greater hiring of men in agricultural work, and harvesting and threshing engaged a very large body of labourers. A slightly improved condition in building during the latter part of the season also assisted in increasing the opportunities for employment for unskilled trades. Active recruiting for overseas service and lumbering operations also did much to absorb the surplus supply of labour.

Canada's Trade.

Canada's foreign trade showed in the aggregate a large increase over that of the previous year. Final figures for the calendar year are not available, but the table given below shows the extent of foreign trade during the twelve months ending November, 1915, with a comparative statement for the two preceding years. It will be seen that while there was a falling off in imports of nearly one hundred and ninety million dollars, this was more than offset by a very heavy increase in exports, which amounted to over two hundred and sixty million dollars in excess of the figures of the previous year, making an increase in the total aggregate trade, exclusive of coin and bullion, of over ninety million dollars. Increases were shown in all groups of exports, the largest increases being in animal and agricultural produce and in manufactures.

SUMMARY CANADIAN TRADE, TWELVE MONTHS ENDING NOVEMBER, 1913, 1914 AND 1915.

	Twelve Months ending November		
	1913	1914	1915

Total trade.....	1,132,670,000	1,101,564,282	1,175,309,353

*NOTE—It will be noted that the figures relating to the imports and exports of coin and bullion for the twelve months ending November, 1915, were: Imports, 1915, \$12,908, 570; 1914, \$139,369,894, and exports 1915, \$128,316,291; 1914, \$19,831,382. Although it has been customary to include these figures in trade returns, the total trade figures are seriously disturbed by them in this instance and they should not be taken as an indication of the trade of Canada.

Wholesale and retail trade, in sympathy with increased activity in manufacturing, mining, transportation, agriculture and other industries, showed a marked improvement as compared with the situation in 1914. The volume of Christmas trade was generally heavy and in a number of localities was reported the best in many years. Collections on the whole were well met, a great improvement in this respect being noticeable in the West, owing to the large crops and good prices obtained.

Labour Legislation:

During the year a number of measures affecting labour either directly or indirectly were passed by the Parliament of Canada and by the legislatures of the various provinces of the Dominion.

While no legislation was passed by the Dominion Parliament which could be said to be directly in the interests of labour, with the possible exception of "An Act to Amend the Dominion Elections Act," a clause which gives em-

ployees a certain time for voting without deduction in pay, there were a number of measures having an indirect bearing on matters of interest to labour, such as measures to amend the Bank Act, respecting war expenditure, giving the Government power to take over certain railways, in respect of seed grain, etc.

The Nova Scotia legislature passed an important Workmen's Compensation Act, and, amongst other measures affecting labour, Acts respecting mechanics' liens, factories, coal mines, public health and child labour.

At the session of the New Brunswick legislature two measures directly affecting labour were passed — an Act to amend the New Brunswick Factories' Act and an Act respecting Mechanics' Liens. Some other measures affecting agriculture and providing for a moratorium in certain cases were also passed.

Five measures which may be said to directly affect labour were passed by the Quebec Legislature. One of these measures deals with labourers' wages and insurance, another with workmen's dwellings, whilst others relate to the protection of workmen in mines and in lumber and construction camps. Acts were also passed relating to the regulation of public laundries, private detective agencies and co-operative syndicates.

Two measures directly affecting labour were passed by the Ontario Legislature—an Act to Amend the Workmen's Compensation Act, and the Workmen's Compensation Insurance Act.

Other measures passed dealt with such subjects as fire accidents, installation of machinery, etc. Moratorium legislation in respect to sale of lands was also enacted.

The Manitoba Legislature passed the following measures of direct interest to labour: An Act providing for the creation of a Labour Bureau, an Act to amend the Factories' Act, an Act to amend the Manitoba Railways Act, and an Act respecting Stationary Engineers. Some moratorium measures were also passed.

The Alberta Legislature passed a number of measures dealing with the agricultural industry, affecting such subjects as the inspection of stock, irrigation, seed grain and fodder relief and hail insurance. An Act creating a public utilities commission was also passed.

At the 1915 session of the British Columbia Legislature a Workmen's Compensation Act was introduced, but held over until the next session in order that the bill could be discussed and amended if found advisable. An important measure providing for loans to agriculturists was passed, and amongst legislation directly affecting labour may be mentioned an Act for the protection of workmen employed in industrial operations, an Act to amend the Employment Agencies Act, an Act to amend the Master and Servants Act, and an Act to amend the Shops Regulation Act. Some moratorium measures were also passed.

WHOLESALE AND RETAIL PRICES IN CANADA.—YEARLY REVIEW, 1915.

THE year 1915 opened with industry recovering from a year of depression intensified by war during the latter part. The ever increasing orders for war supplies were making up for the loss of employment in the manufacture of materials for construction and development which had been the predominating characteristic in manufacturing, mining, lumbering and transportation since the beginning of the century and had become increasingly characteristic of agriculture also until 1913, when the increased production of food in the West had begun to offset the great consumption there. The war, however, caused a great demand for all food products for export at high prices as well as a considerable demand for military equipment. Prices of materials, therefore, rose, although there was a drop from the high point caused by speculative prices just after the outbreak of war. Woollen goods, leather goods, munitions, wagons, automobiles and similar supplies were in immediate demand and the manufacture of shells required the installation of machines and the equipment of new plants. Prices of materials had therefore already shown recovery in many lines by the end of 1914, and further advances occurred early in 1915, accompanying the rising market in grains and other food products. The Department's index number of wholesale prices, including 271 commodities, therefore had reached 139.3 in January and rose to 146.4 in April, to 149.6 in August, and to 162.4 in December, averaging 148.7 for the year, as compared with 136.1 for 1914.

The cereal crops of the world in 1914 were estimated to show a shortage of half a billion bushels and, though this was later reduced, under war conditions which kept the Russian crop off the Western European market, a speculative market caused prices to advance steeply. Wheat was over \$1.60 per bushel

in Canada and flour over \$8.00 per barrel. From these levels there was some recession, but there was no approach to normal levels till the summer. The imposition in Canada of additional customs duties of 5 per cent and $7\frac{1}{2}$ per cent on nearly all imports in February caused corresponding rises in prices of many lines of imported goods. Meanwhile metals and chemicals were rising fast. Zinc spelter rose from 6c to 30c per lb. by June, and lead reached 8c by July. Copper rose from 14 $\frac{1}{2}$ c in January to 21c in May. Carbolic acid had reached 55c per lb. by January and was up to \$1.50 by March, there being a great demand for the crude acid in the manufacture of explosives. Glycerine was advancing for the same reason. Chemicals formerly obtained chiefly from Germany rose steeply, as stocks were exhausted, and included many dyestuffs. The export market for prepared fish improved and prices recovered. Wool had already reached high levels, owing to the demand for uniforms, blankets, socks, etc. Jute was in demand for packing for supplies and cotton rose above 10c per lb. by May as stocks were bought up and manufacturers required more than was expected. Flax fibre and its products were scarce as supplies were no longer obtainable from Belgium, and only with difficulty from Russia. Hides and leather advanced considerably. New Brunswick spruce lumber reached \$9.00 per M. early in the year, being in good demand in England as Russian timber was not available. During the summer months prices tended to fall in many foods. The 1915 crops of grain were promising and the supplies of vegetables from the abundant crops of 1914 were large. Dairy products declined as the season advanced, but cheese, butter and eggs were higher than the year before, owing to the continued demand for export to Great Britain. The advance in

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS OF COMMODITIES FROM MONTH TO MONTH, 1915.

materials, however, prevented much decline in the general level.

In the autumn materials advanced still more steeply. Iron and steel and their products rose repeatedly under good demand not only for munitions and machines but for railway equipment and some building material. Other metals were also upward. Chemicals showed some phenomenal advances. Carboic acid touched \$2.50 per lb., and quinine rose from 50c to \$2.50 per ounce, but receded to \$1.50. Alum, bleaching powder, caustic soda, potash and similar products were also steeply upward. Grain and flour rose steadily after the end of September, although lower than a year before. Wool and woollen goods reached very high levels in October. Raw silk had an unprecedented rise as demand improved. Coke and gasoline also advanced. Raw furs were also higher.

The high and rising price levels indicated the great stimulus to industry in agriculture as well as in manufacturing and mining, though accompanied by higher cost of production. Prices of foods, however, were not rising to a corresponding degree, nor even relative-

ly as steeply as in many other countries. Very high levels had been reached in Canada before the war as large quantities of food were being imported to provide for the greatly increased consumption in Western Canada. Exports of butter, beef, cattle and eggs had therefore practically ceased by 1913, though shipments of butter to England and of cattle and beef to United States had begun in considerable quantities in that year and were maintained to a varying extent. As prices in Canada were normally almost above the export level the increased demand for export due to the war did not cause very great advances except in wheat and oats and cheese, and in other products exports were interrupted from time to time by rises in prices in Canada above the export values. After a rise in the autumn of 1914, prices of meats declined and were slightly lower during 1915 than in 1914 except in bacon and mutton. Sugar was higher as half the world's supply came from European countries at war and could not reach the English markets. Tea rose steeply as the war caused a great demand for army supplies, particularly in Russia, and shipments for

Asia were subject to higher rates for freight and insurance, while some cargoes were lost. Coffee, however, was cheaper as the European market for the Brazil crop was curtailed. Potatoes were cheaper as the Canadian crop in 1914 had been large. From a cost of living standpoint the situation was therefore not as serious as might have been expected from the great advances in the general price level. The increase in the cost of staple foods was more than offset by reductions in rent, except in the Eastern Provinces, as the extensive building up to 1913 had provided sufficient accommodation in the new districts and growing urban centres for the increased population, which declined in many localities as construction and development halted. In fuel and lighting also slight reduction in prices were made.

Prices in other countries, in so far as information was available, were upward and with great steepness in some cases. Advances in materials and foods in the United States were similar to those in Canada. In Great Britain retail food prices appeared 24 per cent higher than in December, 1914, in the Board of Trade figures, and 44 per cent higher than in July, 1914. In France many steep advances also occurred. In Germany official figures of the Berlin Municipal Statistical Bureau showed food prices 51 per cent higher in November than a year before, while the figures in the official *Statistische Korrespondenz* showed food prices 93.2 per cent higher in October than in July, 1914. Similar advances also appeared in Austria. In Italy the Bulletin of the Department of Labour shows prices of seven important foods 20 per cent higher than a year before. Prices of 29 articles in the Netherlands appeared 20 per cent higher at the end of November than a year before, according to the figures in the Journal of the Statistical Office. The index number of the Norwegian Labour Office, including 27 articles, rose from 117 in September, 1914, to 140 in September and October, 1915, having stood

at 113 in July, 1914. In Australia the index number of the Commonwealth Bureau of Census and Statistics for retail prices of foods and groceries stood at 1,354 for September, as compared with 1,113 for March and 1,021 for July, 1914. In New Zealand the index number of retail prices of food and rent for the quarter ending September stood at 1,112 as compared with 1,056 for the same quarter a year before, showing a rise of 12.42 per cent for the winter months.

More detailed information as to the price changes in Canada may be obtained from the accompanying tables and the following notes.

Wholesale Prices.

Grains and fodder.—Manitoba wheat reached the highest price on record at the end of April, No. 1 Northern being quoted at \$1.63 $\frac{5}{8}$ in the last week, having risen from \$1.26 $\frac{3}{4}$ in the first week of the year. A shrinkage in the world's crop for 1914 and the impossibility of marketing the Russian crop in Western Europe were the chief factors in contributing to the high price. During the spring and summer months the price declined, and by the end of September was down to 90c. A gradual rise raised the quotation to \$1.15 at the end of the year. As the crop estimates for 1915 for the world were larger than in 1914, prices during the autumn months were about 10c to 15c lower than a year before. Ontario winter wheat followed the market for Western wheat, the highest price quoted being \$1.55-1.57 at the end of April, and the lowest price being 88-90c at the end of September. Other grains were on high levels in sympathy with the wheat market, and as a result of good demand, especially in oats for export. Western oats rose to 66c in April, but were down to 36c in September, reaching 40c at the end of the year. Good malting barley at Toronto rose to 85-88c in March, but was down to 52-54c in September. American corn was up to 83 $\frac{1}{2}$ c in April and to 85c in

*Preliminary figures.

August. The United States crop, however, was larger than in 1914, and the price was down to 67c in October, but rose to 80½c in the last week. Flaxseed was also high, being up to \$1.89 in the last week of the year, and as high as \$1.80 in May. Peas were very scarce, and were quoted higher than \$2.00 in February, and in November. Hay was considerably higher than in previous years, being up to \$21.00 in January and to \$23.00 in August, there being considerable export for the use of armies in Europe. Straw, however, was about \$1.00 lower than in 1914. Bran and shorts were higher than in the previous year, the former reaching \$28.00 in the spring, as compared with \$23.00 in 1914, and shorts being up to \$30.00 per ton.

Animals and meats.—Cattle prices were somewhat lower than in 1914, when prices had been high during the first nine months of the year. The demand fell off in the later months, and continued low in 1915. There was, however, a considerable demand for packed meat for army supplies. Choice steers at Toronto were highest in May at \$8.10-8.60 per cwt. The highest level reached in 1914 was \$8.25-9.35 in September. Western cattle had declined considerably toward the end of 1914, but rose gradually during the early months of 1915, the price reaching \$8.00-8.85 in June. Prices then receded gradually to \$6.25-6.50 at the end of the year. Dressed beef, hind-quarters rose to \$15.00-16.00 in May, but declined to \$13.00-14.00 per cwt. at the end of the year. Hogs rose to \$9.15, f.o.b. country points in Ontario, in May, and to \$9.90 in November. Prices were, therefore, lower than in 1914 early in the year, but higher in the last quarter. Bacon was higher than in 1914, there being large exports for military supplies, and the price rose to 21-22c per lb. in September. Hams rose to 18-18½c in August, as compared with 19½-20c a year before. Barrelled pork was lower than in 1914, the highest price being \$28.00 in the last quarter, as compared with \$30.00 early in 1914. Lard was

lower than in the previous year until the last quarter, when the price reached 14c per lb. Sheep advanced to \$7.00-8.00 in the spring, and after falling in the summer rose again to \$6.00-7.50 in December. Mutton was as high as 15c in May, 14c in August, and again in December, while in 1914 the price had been 10c to 12c per lb.—almost throughout the year. Poultry had declined considerably in the latter part of 1914, fowl selling at 9-11c in December, and turkeys at 14-16c. In the latter part of 1915 the market rose rapidly and fowl sold at 13-14c and turkeys at 22-26c per lb.

Dairy products.—Butter, cheese and eggs had risen at the outbreak of war in 1914 owing to a strong demand and continued at high levels throughout 1915. Finest creamery butter was up to 30-30½c per lb. in Montreal in January and reached 35-36c in April. The lowest prices in the summer was 27½-27¾c in May, as compared with 23-23½c in May, 1914. At the end of the year the price was up to 34½-35c per lb, 5c higher than a year before. Cheese rose to 19-19¼c per lb. at the end of May, as compared with 12¼-12½c a year before. During the summer, however, the price declined to 12½-12¾c, about the same as a year before, but rose to 17¾-18c in December. Eggs were also higher than in the previous year. New laid eggs, at Toronto, were down to 22-23c per dozen in March, as compared with 20-22c a year before and rose to 55-60c in December, as compared with 50-60c a year before. Wholesale prices of milk were almost the same as in 1914, at Montreal and Toronto. At Winnipeg, however, the price rose to \$2.25 per cwt. in the winter as compared with \$2.10 the previous year, and to \$2.50 in the last three months. At Victoria, B.C., milk had declined to 30c a gallon in 1914 and remained at that level throughout 1915.

Fish.—Dried cod, market size, had declined at the outbreak of war, but rose by the end of the year. During 1915 the price was at about the same level

as in 1914. Dried haddock was down to 4c per lb. as compared with 4½c in 1914. Fresh halibut was up to 10c per lb., except in the spring and summer months, the same level as in 1914. Fresh lobsters were sold at 12c in the spring, as compared with 14c in the previous year. Canned lobster, however, were down to 35c, as compared with 40c in 1914. Salt mackerel and salt herring were on the same levels as before. Lake trout was about the same price as in 1914, but whitefish were higher, being up to 14c in May, and again in the latter part of the year. Canned salmon had risen on the outbreak of war, as the pack for 1914 was smaller and there was a good export demand. Prices continued at a higher level during 1915.

Fruit and vegetables.—Apples had declined to a very low level in the latter part of 1914, as a result of the large crop, and the expected decline in export demand for Europe. Winter apples, therefore, sold at \$2.50-3.50 per barrel in January at Toronto, and rose only to \$3.00-5.00 in the spring as compared with \$4.50-7.00 a year before. The crop for 1915, however, was short and prices in November were \$3.00-4.00 for early winter apples, as compared with \$1.50-2.75 a year before. Raspberries, cherries, grapes, peaches and pears were lower than a year before. Strawberries, however, were higher. Dried fruits were higher than in the previous year, as supplies were more difficult to obtain from the Mediterranean districts. Currants rose to 13-14c and Valencia raisins to 15-16c per lb. Prunes were about 1c lower than in 1914, as California crops had been large. Potatoes were very cheap in the first six months of the year, owing to the large yield in 1914. The price fell to 42½c per bag at Montreal in the spring months, as compared with \$1.10-1.15 a year before. The 1915 crop, however, was short owing to excessive rain and the price rose at the end of the year to \$1.40 at Montreal as compared with 60c a year before. Beans became very scarce owing to low stocks from

1914, good export demand for military supplies and the short crop for 1915. The usual imports from Australia were also not obtainable. Three-pound pickers therefore rose to \$3.90-4.00 at Montreal with \$5.00 a year before, the 1914 crop having been good. In the fall, however, the price rose to \$1.50. In December, however, the price rose above \$2.00 per cwt., as compared with \$1.25 a year before. Turnips were cheaper than the previous year throughout. Tomatoes were cheaper than the year before in September, but were higher in October, owing to crop damage. Canned vegetables had been plentiful owing to a good crop in 1913 and 1914, and large packs. In the spring of 1915 stocks were large and demand light. Price cutting therefore lowered values for a time and later a better export demand developed. The acreage and pack for 1915 were curtailed, weather conditions were unfavourable and prices therefore advanced. Canned corn and peas fell from 95c to 72½c per dozen, and rose to 97½c. Canned tomatoes fell from \$1.00 to 80c per dozen, and rose to 1.12½-1.17½.

Miscellaneous foods.—Flour had risen considerably in the latter part of 1914 in sympathy with the wheat market, and continued to advance. In February, 1915, spring wheat patents reached \$8.10 per barrel at Montreal, at compared with \$5.40 a year before, and after receding slightly the price reached \$8.20 in May. In September the price fell and was down to \$5.85 in October, but rose to \$6.30 in December, as compared with \$6.70 a year before. Winter wheat patents rose from \$6.00 to \$8.30 in February, as compared with \$4.75-5.00 in 1914. In October the price was down to \$5.40, as compared with \$6.25 a year before. Bread had risen in some cities on the outbreak of war in sympathy with the flour and wheat markets. Some bakers having large stocks of flour or contracts to run kept the prices down for some time. In February, 1915, a general rise occurred throughout the Do-

minion, when wheat and flour rose rapidly. The wholesale price of bread at Toronto advanced from 3 1/6c per lb. to 3 1/2c and remained at this level until September, when it was reduced to 3 1/3c. In Victoria, B.C., prices fell from 5c to 4c per lb. Declines occurred in many other cities. Oatmeal had risen in the fall of 1914 from \$2.50 per bag to \$3.93 1/2 and continued at this level until July. In October the price was reduced to \$2.40-2.50, but rose to \$2.86 in December. Patna rice had risen from 5 1/2c-6 1/2c to 6 1/2-8c at the outbreak of war and was up to 7 1/2-9c from March to December, 1915. Difficulty in getting shipments and high freight rates were the chief factors in the rise. Tapioca was also higher. Tea had risen steadily during the latter part of 1914 owing to higher freight rates, insurance, interruption to shipments, some losses by sea, and the great demand for use in armies. Medium Japan was quoted at 28-29c in January, but eased off a cent in March, as supplies were more plentiful, and again to 23-24c in July. Indian and Ceylon tea, common Pekoe, was up to 23-25c in January, and after easing off in the spring rose to 29-30c in July. Coffee was lower as the European demand for Brazil coffee was seriously curtailed. Rio coffee was down to 15-17c per lb. as compared with 17-19c in the previous year. Cocoa prices rose somewhat steeply in 1915, as demand was strong. Prices of prepared cocoas and chocolates, however, were kept fairly steady by manufacturers. Sugar had risen from \$4.56 to \$7.16 per cwt. for granulated at Toronto in the second half of 1914 owing to war conditions. In March the price was steady at \$6.91, but fell to \$6.15 by October, although by December the price rose to \$6.76. Barbados molasses had risen to 39c per gallon by January and reached 51c in the last quarter. Glucose rose 40c per cwt. in sympathy with the corn market by August, but declined as the new crop was marketed. Honey was up to 12 1/2c per lb. in the early part of the year, as compared

with 8-10c in 1914. In the last quarter the price was down to 10 1/2c, as compared with 11 1/2c a year before. Maple sugar rose from 9-10c per lb. to 12-13c in April, and after receding to 8-9c in the summer months rose to 12 1/2-13c, as a result of a great export demand for the United States. Salt and vinegar were steady. Pepper rose from 19-22c to 22-26c. Cream of tartar was up to 40c per lb. early in the year and reached 55-65c in November, but receded slightly. Difficulty in getting supplies from France was the chief factor in the rise.

Textiles.—Wool had risen substantially during the last five months of 1914, but steep advances occurred in February, April, June, July and October, owing to the strong demand for army purposes. The clip in Australia for 1914 had shown a serious shortage. Ontario washed wool rose from 28-31c per lb. in January to 30-37c in April to 39-43c in August and to 40-44c in November. In the spring prices eased off to 25-30c for a short time. A line of Canadian yarn rose from 62 1/2 per lb. to 84-85c. Beaver cloth advanced from \$1.65 to \$1.95 per yard. Raw cotton had fallen steeply on the outbreak of war as demand was expected to be seriously curtailed, and the United States crop was the largest on record, estimated at sixteen million bales. In January the price was 7.80c per lb. at New York, as compared with 12.50c in January, 1914. The demand for war purposes was greater than expected and as the crop for 1915 would be reduced in acreage there was considerable buying in the spring. Prices rose to 10.40c in May. The weather was unfavourable during the latter part of the season and the United States crop was estimated at only about twelve million bales. The price therefore rose to 12.55c in December. Manufactured cotton goods were lower in sympathy with the market for raw cotton, but the rising cost and great scarcity of dye-stuffs tended to firm prices considerably. Prices, therefore, averaged little lower than in

1914. Raw silk had fallen steeply on the outbreak of war, as demand for finished goods was greatly curtailed. Japan silk, Kansai, No. 1, was down to \$3.00 per lb. in January, and Italian classical to \$3.35 as compared with \$4.55 a year before. Demand improved steadily throughout the year and steep advances occurred in the last quarter, Japan filatures rising to \$4.72½ and Italian classical to \$4.85. Jute had risen steeply at the outbreak of war, as supplies were uncertain, but fell steeply as the demand for industrial purposes was curtailed. As industry revived and shipments of war material became enormous, the demand for jute for packing increased and the price rose from 4.42c per lb. at Montreal to 6.28c in October. Flax fibre rose from 12-14½c to 18c, and tow from 5½-6½c to 8c as supplies from Belgium and Russia were no longer obtainable. Flax fibre and linen rope advanced in sympathy. Floor oil-cloth rose from 20½c to 30c in sympathy with the market for jute and burlap.

Hides, leather, boots and shoes.—The demand for war supplies had caused a considerable increase in demand for hides and leather and prices advanced rapidly early in 1915. Hides, No. 1, inspected steers, rose at Toronto from 15c to 17-18c, and after falling off in the spring and summer when the quality of receipts is poor reached 18c in September. Calfskins similarly rose from 17c to 18c, but fell off to 15c. No. 1 sole leather rose from 37-38c to 38.40c, and harness leather from 43-44c to 51-53c. Heavy upper leather rose from 60-65c to 70-75c. The demand for boots in Canada improved as the industrial situation became very favourable and larger crops led to better demand from farmers. Mens splits rose 10c per pair and box calf advanced slightly.

Metals and implements.—Iron and steel markets had been greatly depressed in the latter part of 1914 by slow demand and the effect of the war on general trade conditions. Improvement set in early in the year 1915 and prices

were firmer. N. S. pig iron rose to \$19.75-20.00 in the spring. Toward the end of the year, owing to continued good demand from railways for equipment, prices advanced. Nova Scotia pig iron reached \$22.00 in December. Iron bar was up to \$2.50 as compared with \$2.00 at the beginning of the year. Steel billets were up from \$24.50-25.00 to \$33.00, and steel bar from \$2.10 to \$2.55. Iron and steel products also advanced. Other metals were still more steeply upward, as a result of the demand for war supplies. Aluminium rose from 19c to 75c per lb., brass from 16¼c to 33c, copper from 14½c to 22c, lead from 5c to 7½c, quicksilver from \$50.00 per flask to \$110.00. Zinc spelter rose from 6c per lb. in January to 30c in June, but eased off to 17½c in October, becoming firmer and rising to 21c in December. Zinc sheets rose from 8c per lb. to 30c and fell off to 19c. Antimony had risen on the outbreak of war, and advanced steeply in the spring, reaching 40c per lb. as compared with 8¾c before the war.

Fuel and lighting.—Bituminous coal, Nova Scotia, was down to \$3.35 at Montreal, compared with \$3.44 in 1914, and in December the winter price was \$3.57, as compared with \$3.66 in the previous year. The industrial demand was much less than in previous years. In Nova Scotia, however, the demand for use in iron and steel mills was much greater than in previous years. Coal also averaged lower in British Columbia. Anthracite coal was down to \$6.70 at Montreal, in the early part of the year, as compared with \$6.80 in 1914. In May the price was reduced to \$6.20, as compared with \$6.25 a year before, and in December rose to \$6.65, as compared with \$6.70 in 1914. Connellsville coke was down to \$1.55 at the ovens early in the year, in sympathy with the low market for iron and steel. In the latter part of the year the price rose steeply, reaching \$2.50-2.75 in November. Gasoline had declined in 1914, but under better demand rose in 1915 from 17½c to 22½c. Coal oil declined in January

from 15c to 14c per gallon for water white. Matches had risen at the end of 1914 on account of the higher cost of chemicals and in the autumn of 1915 one line advanced further from \$5.20 to \$5.80 per gross.

Building materials.—The market for lumber was quiet throughout Canada during the year, there being little demand for use in woodworking. There was a good demand for export to England and record prices for New Brunswick spruce deals were paid at St. John early in the year, \$19.00 per M., as supplies from the Baltic Sea could not be obtained. Exports from Canada, however, were seriously curtailed by the scarcity of and high rates for space in ships. Spruce deals therefore fell to \$15.50. Shingles were lower than in 1914, and fell to \$2.50-3.90 per M., as compared with \$2.60-3.20 in 1914. Pine, hemlock and hardwood had declined in the latter part of 1914, and continued on the lower levels. British Columbia fir and cedar shingles were also lower as the demand on the prairie for building material was light. Bricks fell to \$9.00 per M., as compared with \$11.50-12.00 early in 1914. Fire bricks, however, advanced steeply, as a result of higher freights from England. Soil pipe was lower at 18½c per foot until November, when the price rose to 20½c. Iron pipe, nails, hinges, iron wire and wire cloth similarly advanced in sympathy with the iron and steel markets. Lead pipe rose from \$7.12½ per cwt. to \$9.50, in sympathy with the lead market. Copper wire rose from 14-14½c to 21½c per lb. Galvanized wire fencing rose from \$2.35 per cwt. to \$3.45, as a result of advances in zinc spelter in the spring and in iron and steel in the autumn. Many paints and colours rose in sympathy with the higher markets for metals and materials. White lead advanced from \$8.60 per cwt. to \$10.60. Venetian red advanced from \$1.80 to \$2.50. Paris green from 18½c to 25c per lb. Prepared paints advanced from \$1.70 to \$1.95, but dropped to \$1.85 when lead receded. Linseed

oil rose from 55c to 85c in sympathy with flaxseed. Benzine advanced from 18½c to 23½c in sympathy with gasoline. Turpentine rose from 65c to 75c per gallon. Shellac was higher on account of the advance in alcohol. Glue rose from 11-15c to 11-20c per lb. owing to higher cost of importing. Window glass had risen from \$3.40 per box to \$5.20 in 1914, when Belgium supplies were cut off. In Montreal the price advanced in August to \$5.85. Putty rose from \$2.60 to \$2.70, in sympathy with whiting and oil.

House furnishings.—Prices of furniture were fairly well maintained as lumber and wages showed little reduction and the market improved. Earthenware rose steeply as a result of advances in England on account of higher prices for coal and other factors in production and also on account of higher freights and insurance. English table knives went off the market after rising considerably. Brooms rose 50c per dozen as broom corn was scarce owing to wet weather.

Drugs and chemicals.—The feature of this group was the rise in carbolic acid, which advanced from 55c in January to \$1.50 in April and \$2.00 in October, and at the end of the year was quoted at \$2.50. A great demand for crude carbolic acid in the manufacture of explosives, as well as the great requirements for hospitals were factors in the rise. Alcohol had risen from \$4.75 to \$5.70 in August, 1914, in sympathy with grain prices and the increased excise duty in Canada. Prices fell at the end of the year to \$5.50 per gallon and continued at this level throughout the year. Alum rose from \$1.65 in January to \$3.00 in September and to \$5.00-10.00 in December, and was still rising. Bleaching powder rose from \$1.85 in January to \$4.00 in December. Caustic soda had risen to 3c by January and reached 6c in October. Glycerine rose from 30c per lb. to 60c. Opium advanced from \$10.00 to \$12.00 per lb. Quinine had risen to 50c per ounce and reached \$2.00 in November, but eased off slightly.

COST PER WEEK OF A FAMILY BUDGET OF STAPLE GOODS, FUEL AND LIGHTING AND RENT, IN TERMS OF
THE AVERAGE PRICES IN SIXTY CITIES IN CANADA FOR EACH MONTH, 1915.

Miscellaneous.—Raw furs had fallen steeply in 1914 as the market was demoralized after the outbreak of war. Prices recovered gradually and by the end of 1915 were as high as in August, 1914. Mink had fallen to \$2.00 and rose to \$3.00. Muskrat was down to 12-15c per skin, but rose to 25c. Hops had risen steeply at the close of 1914, but eased off in 1915. Canadian hops declined from 17-19c per lb. to 14-15c. Best English hops rose from 31c to 35c in February and reached 40c in the autumn, as the Bohemian hops were no longer obtainable. Malt declined in sympathy with barley from \$1.10 in February to 95c in October. Draught ale and porter had risen from \$6.25 to \$8.40 per barrel in August, as a result of increased excise duties, and higher prices for malt, hops, etc. In January the price fell to \$8.25. Plug tobacco had risen in 1914, as a result of increased excise duty, and continued on the higher level. Raw leaf tobacco was higher in price at the end of 1915 as the crop had been seriously damaged by excessive rain. Ontario Burley was bought for 13½c for best quality, as compared with 12½c in the previous year. The pulp and paper markets were much firmer owing to the increased demand in the fall of 1914 under greater consumption by daily papers for war extras, and the interruption to shipments of pulp from Europe to the United States. The demand for newsprint, however, fell off somewhat during the year and prices receded 5c to 10c per cwt. Wrapping paper was also in less demand and eased off. Ground wood also declined from \$17.00-18.00 per ton to \$15.00-16.00, as the United States mills had plenty of water. Sulphite pulp fell early in the year \$4.00 per ton, but in the autumn advanced \$5.00-12.00 per ton, bleached rising from \$58.00 to \$70.00. Binder twine declined from 9¼c to 8½c. Manila rope rose from 14c to 15c per lb. Gunpowder had risen from \$3.50 per keg to \$4.80 and reached \$7.20 in the autumn. Raw rubber had reached a higher level in January at 70-72c per lb.,

but eased off to 53-54c in the spring, advancing in November to 65½c.

Retail Prices.

Food prices had shown many steep advances on the outbreak of war, notably in flour, bread, oatmeal, sugar, tea, butter and cheese. Early in 1915 still further increases occurred in bread, flour, and oatmeal, in sympathy with the wheat market, while butter and cheese continued to advance, there being a strong export demand. Sugar, however, eased off for a short time and did not surpass the height reached in November, 1914. Tea advanced further, but as cheaper grades could be used the average cost did not show a great rise. Potatoes continued low. Butter and cheese continued throughout the year 3c to 5c higher than in 1914. As wheat and flour declined in the latter part of the summer bread dropped considerably, in some localities to the level prevailing before the war. Beans continued high and advanced as the crop was injured by wet weather. Potatoes also rose as the crop was considerably damaged.

Coal and wood averaged lower than in the previous year from month to month, greater competition among dealers and in some cases lower cost of delivery and transportation being reported. Coal oil was slightly lower.

Rents had declined during 1914 except in New Brunswick and Prince Edward Island, and this movement was somewhat accelerated after the outbreak of war, especially in the western provinces where financial stringency had great effect in curtailing construction and development. The downward tendency continued during 1915, although some advances were made in Ontario and Quebec for a short time. As the industrial situation improved owing to the demand for war material and the favourable crop conditions there was less change during the latter half of the year. The declines in the average for rents therefore more than offset the rise in the price of foods in the average for the Dominion.

**PRICES, RETAIL AND WHOLESALE,
CANADA, DECEMBER, 1915.**

THE chief feature of the prices movement was the continued advance in materials, especially in iron and steel and their products, owing to strong demand and scarcity in supplies. Wheat, oats, flour and oatmeal also advanced considerably, while dairy products were up owing to the advance of the season, export demand, however, being still a strong factor. Poultry rose considerably during the month.

In retail prices the weekly cost of a list of staple foods rose from \$8.016 to \$8.128, eggs, butter, cheese, bread, flour, rice, beans, evaporated apples, potatoes being slightly higher, while beef and other meats were slightly lower. Coal and wood were slightly higher. Rents were unchanged.

In wholesale prices the Department's index number rose to 162.4 for December as compared with 158.6 for November and 137.6 for December, 1914. The chief increases were in metals and metal products. Poultry, dairy products, vegetables, flour, oatmeal, sugar, textiles and raw furs also advanced somewhat. In drugs and chemicals some lines eased off slightly. As compared with December, 1914, grain was lower but fodder higher, cattle were lower but hogs, sheep and poultry were higher. Dairy products were higher but fish averaged lower. All fruits and vegetables, were higher, breadstuffs were lower, but other foods were higher. All groups of materials were higher, except lumber and liquors and tobacco, malt and hops being lower.

More detailed information as to the price movement appears in the accompanying tables and in the following notes.

Retail Prices.

Beef.—Sirloin steak declined at Hull, Que., at Ottawa, St. Catharines and Owen Sound, Ont., at Regina, Sask., and at Lethbridge, Alberta, but advanced at Brandon, Man., and at Vancouver, B.C. Round steak was also down at Ottawa, St. Thomas and Owen Sound, Ont., at Regina, Sask., and at Vancouver, B.C., but was up at Hull, Que., and at Brandon, Man. The price of prime rib roast was lower at Hull, Que., at Ottawa, Ont., at Regina, Sask., and at New Westminster, B.C., but higher at Brandon, Man., and at Vancouver, B.C. Medium shoulder roast was lower at St. Catharines, Ont., at Regina, Sask., and at Medicine Hat, Alberta. At Ottawa, the lower prices were reported due to the colder weather, while at Regina, Sask., prices fell as supplies from the country were coming in freely. At Brandon, however, beef was reported scarce and prices upward.

Veal.—The price was higher at Vancouver, B.C., but lower at St. Catharines and London, Ont., and at Victoria, B.C.

Mutton rose at Niagara Falls, Ont., and at Vancouver and Victoria, B.C., but fell at St. John's, Que., at St. Catharines, Berlin, London and Cobalt, Ont., and at Lethbridge, Alberta. Mutton was scarce at Niagara Falls, Ont., and also at Victoria, B.C., where the wholesale price was somewhat firmer.

Pork.—Fresh roasting pork declined at Newcastle, N.B., at Hull, Que., at Ottawa, Niagara Falls and London, Ont., and at Lethbridge, Alberta, but advanced at Kingston, Toronto and St. Thomas, Ont., at New Westminster and Vancouver, B.C. Pork chops also fell at Newcastle, N.B., at Hull, Que., at London, Ont., and at Lethbridge, Alberta, but were higher at Kingston and

*Coal, wood and coal oil. No allowance is made for the varying extent to which these are used in the different localities and provinces.

Toronto, Ont., at Calgary, Alberta, and at New Westminster, B.C. Prices of salt pork were higher at Toronto, Ont., and lower at Newcastle, N.B., and at London, Ont. Stocks of pork at Newcastle, N.B., were rather heavy, and prices easier, but at Toronto, Ont., the hog market was very firm, as Ontario hogs were not equal to the demand and supplies were obtained from the West to meet the shortage. At Niagara Falls, Ont., however, the local market was well stocked with fresh pork as farmers were anxious to sell.

Bacon was higher at Charlottetown, P.E.I., at Montreal, Que., at Peterborough and Gueph, Ont., at Medicine Hat, Alberta, and at Nanaimo, B.C., but lower at Hamilton and London, Ont., and at Vancouver, B.C. At Montreal, Que., higher prices were said to be due to the increase in the price of fresh pork.

Fish.—Fresh fish rose at Westville, N.S., at Brockville, Kingston, Peterborough, Orillia, Niagara Falls and Woodstock, Ont., at Edmonton, Alberta, and at Vancouver, B.C., but fell at Fernie, B.C. Salt herring advanced at Brantford, Ont., and declined at Medicine Hat, Alberta. Canned salmon rose at Sydney, N.S., and at New Westminster, B.C. The rise in fresh fish prices at Vancouver, B.C., was due to the recent bad weather.

Lard.—The price of lard was up at Sorel, Que., at Ottawa and Stratford, Ont., and at Edmonton, Alberta, but was down at Cobalt, Ont., at Medicine Hat, Alberta, at New Westminster, Vancouver and Nanaimo, B.C.

Eggs.—Both fresh and packed eggs were reported higher in fourteen of the cities and lower in two. Fresh eggs, alone, were up in fifteen cities and down in two, while packed eggs only were up in one. A scarcity of stocks of fresh eggs was reported in most localities, and this also affected the packed egg market. The export demand was also a factor in raising prices.

Milk prices were higher at Westville, N.S., at Moncton, N.B., at Sorel and St. John's, Que., at Sault Ste. Marie, Port Arthur and Fort William, Ont., and at Regina, Sask. At Moncton, N.B., it was reported by the retail milk dealers that the higher price of feed was responsible for the rise in milk.

Butter.—Both dairy and creamery butter were higher in ten cities and lower in one. Dairy butter alone advanced in three cities and declined in two, and creamery butter alone advanced in nine cities and declined in one. Stocks of both dairy and creamery butter were reported low, and supplies hard to get.

Cheese.—New cheese advanced in 12 cities and declined in one, while old cheese advanced in seven cities and also declined in one. A good export demand was reported, and prices were upward on the local boards.

Bread advanced in price at Port Arthur and Fort William, Ont., but declined at Amherst, N.S., and at Calgary, Alta.

Flour prices were higher in 22 of the cities, following increases in wholesale prices in sympathy with the wheat market.

Rolled oats.—Prices were upward at St. John, N.B., at Kingston, Ont., and at Prince Albert, Sask., in sympathy with the advance in oats.

Rice was higher at Montreal, Que., but lower at St. Thomas, Ont., and at Vancouver, B.C. At Montreal, increased freight rates were reported to be partly responsible for the increased price. Patna rice also advanced at Montreal, Que., and at New Westminster, B.C.

Tapioca prices fell at Niagara Falls, Ont., and rose at Medicine Hat, Alberta, and at New Westminster and Vancouver, B.C. Wholesale prices of tapioca were reported higher at Medicine Hat, Alberta.

Canned vegetables.—Canned tomatoes were up at Westville and Halifax, N.S., at Moncton, N.B., and at Ottawa, Orillia and Cobalt, Ont., but were down at Sydney, N.S., while canned peas and canned corn rose at Cobalt, Ont.

Beans.—Increases were reported in 16 of the cities as the Canadian crop was damaged by wet weather and stocks from 1914 were very small, while imports from Austria were cut off.

Evaporated apples were upward at Cobalt, Ont., at Medicine Hat, Alberta, and at New Westminster and Vancouver, B.C. At Medicine Hat, Alberta, the old stocks were said to be cleaned out, and new apples higher in price.

Prunes.—Prices were reported higher at Sydney, N.S., and at Vancouver, B.C., but were lower at St. John and Newcastle, N.B., at Niagara Falls, Ont., at Edmonton, Alberta, and at New Westminster and Victoria, B.C., as the new crop was on the market.

Sugar.—Granulated sugar advanced in thirteen of the cities and declined in two, while yellow sugar advanced in eight cities and declined in three. The raw sugar market has been higher.

Tea.—Black tea was up at Orillia and Stratford, Ont., and at Vancouver, B.C., but down at London, Ont. Green tea also advanced at Stratford, Ont., and at Vancouver, B.C.

Coffee was higher at Niagara Falls, Ont., but lower at Sydney, N.S., and at New Westminster and Vancouver, B.C.

Potatoes.—The price declined in one city, but advanced in 38. A general scarcity was reported, due to short crops in the East. In some localities bad roads and heavy snow storms prevented the farmers marketing their stocks.

Starch rose at Vancouver, B.C.

Coal.—Anthracite coal was higher at Charlottetown, P.E.I., at St. John, N.B.,

at Sorel, Que., and at Sault Ste. Marie, Ont., but was lower at Brandon, Man. Bituminous coal, domestic, advanced at Fredericton, N.B., and at Sorel, Que., but declined at Brandon, Man., and at Vancouver, B.C. Both anthracite and bituminous coal declined at Brandon, Man., lower freight rates from the lignite mines and increased competition being reported as the causes.

Wood.—Hard wood advanced at Brandon, Man., and declined at Orillia, Ont. Soft wood was higher at Fredericton, N.B., and at Brandon, Man., but was down at Orillia, Ont., and at Victoria, B.C. At Orillia, Ont., it was stated that the good sleighing enabled farmers to bring in more wood. At Victoria, B.C., heavy stocks and keen competition affected prices.

Rent.—No changes were reported throughout the Dominion.

Wholesale Prices.

Grains and fodders.—Manitoba wheat rose to \$1.12½ in the first week, in sympathy with the rising markets at Liverpool, in the United States and elsewhere. The price then eased off slightly for a short time, but rose to \$1.15½ by the last week. The market continued strong even after the close of navigation, as the export demand was good and large quantities were shipped by rail. The high freight rates from Australia and Argentina to Great Britain also tended to cause a strong market. Ontario winter wheat rose to 96-99c in the first week, and to \$1.05-1.07 by the end of the month. Good malting barley rose to 57-760c at Toronto, and western barley rose to 68c, the top grades being in good demand. Western oats rose to 42¼c in the first week in sympathy with the wheat market. The price then eased slightly, but recovered, the demand being good. Ontario oats rose to 37-39c.

RETAIL PRICES OF STAPLE ARTICLES

The accompanying table sets forth the retail prices prevailing on, or about, the fifteenth day of the month preceding the present issue of the *Labour Gazette*, of the more important staple commodities entering into the cost of living in the leading centres of industry throughout Canada.

The list of commodities includes thirty-two varieties of food, with fuel and coal oil. In addition a statement is given of the rental of a representative workingman's dwelling of the better class in the quarter of each locality usually occupied by workmen.

OF CONSUMPTION, CANADA, DURING DECEMBER, 1915.

The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison. Such comparisons, however, will reflect conditions better if averages over some time are taken and if the several articles are grouped together as in a family budget.

The quotations contained in the table have been furnished by the correspondents of the *Labour Gazette* in the respective localities, under detailed instruction as to sources of information, quality of goods to be quoted, etc., from the Department.

COMMODITIES, CANADA, DECEMBER, 1915.

Rice, good medium, per lb.	Beans, hand picked, per lb.	Apples, evaporated, per lb.	Prunes, medium quality, per lb.	Sugar		Tea		Coffee, medium, per lb.	Potatoes, per bag of 1½ bushels.	Vinegar, White Wine, XXX, per quart.	Starch, laundry, per lb.	Coal		Wood		Coal oil, per gallon.	Rent per month (6 roomed dwelling in workman's quarter)	
				Granulated, in dollar, lots per lb.	Yellow, in dollar lots, per lb.	Black, medium Indian or Ceylon, per lb.	Green, medium Japan, per lb.					Anthracite, stove per ton of 2,000 lbs.	Bituminous, domestic, per ton of 2,000 lbs.	Hard, best, per long cord.	Soft, per long cord.		With sanitary conveniences.	Without sanitary conveniences.

†Erroneously quoted in *Gazettes* for October and November at 5 5/9e instead of 4 1/6c. *Dairy prints.

†Natural gas. §Delivery extra. a. Slabs or millwood, per wagon load. b. Tamarac, jackpine, etc. c. Lignite. d. Per 100 lbs.

American corn advanced to 76½ in the first week, and after easing off rose to 80½c in the last week. Flaxseed was up to \$1.83½ in the first week in sympathy with United States markets and by the last week had risen to \$1.89, as receipts were light. Ontario peas had declined to \$2.10 by the last week in November, and by the middle of December were down to \$1.80. Rye was nominally up to 86-88c for No. 2 Ontario at Toronto in the first week, but eased off to 86-67c. Hay advanced at Montreal from \$18.50 to \$20.00-20.50. Some scarcity was reported and the Canadian Government placed an embargo on shipments for export except to Great Britain or allied countries. The Canadian crop was estimated slightly larger than 1914, but not as large as in 1913. Straw was slightly firmer at \$6.50-7.00 per ton. Bran rose from \$21.00 to \$22.00 per ton, there being a good export demand.

Animals and meats.—There was a good demand for well finished cattle and prices for the best steers rose to \$8.50 at Toronto. At Winnipeg prime steers sold for as high as \$7.15, but common grades declined. Veal advanced 50c per cwt., and top grades sold at \$14.00. Hogs were slightly easier at \$8.90, f.o.b. shipping points in Ontario, in the first week, and after falling to \$8.15 the next week rose to \$8.40. The demand from packers was reported to be fairly well filled. Dressed hogs eased off from \$12.50-13.25 to \$12.00-12.50. Sheep rose to \$6.00-7.50 per cwt. at Toronto, and mutton to \$12.00-14.00 per cwt. Dressed lambs rose to \$16.50-18.50. Poultry advanced steeply during December, fowl rising from 11-13c to 13-14c, and turkeys from 18-20c to 22-26c.

Dairy products.—Finest creamery butter advanced at Montreal to 33½-34c in the first week and to 34½-35c in the third week. Creamery solids were firmer at Toronto. There was a good demand from Canadian points and receipts were falling off. Cheese rose to 17¾-18c in the first week and continued at that high level. Fresh eggs rose to 50-52c at Montreal in the first week, but eased off to 48-52c in the third week. New-laid eggs in cartons at Toronto rose to 55-60c, but declined 5c in the last week, receipts being large for the time of the year owing to milder weather. Exports continue fairly large, but less than in recent months.

Fish.—The market for dried fish was reported stronger, and bank fish were sold at Lunenburg at \$7.15 per quintal. Stocks remaining were considered light. The Porto Rico market was better and prices were steady, industry being more prosperous there. Prices of dried fish were very high in Europe, but cost of transportation was also high. The market for pickled fish was very strong, No. 1 herring selling at \$4.25. Supplies of salt mackerel were exhausted.

Fruits and vegetables.—Early winter apples were selling at \$3.00-6.00 per barrel at Toronto as compared with \$2.50-3.00 a year before. Bananas were slightly firmer and Messina lemons declined to \$3.50-3.75 and naval oranges to \$4.00-4.75, the new crop being marketed. Currants continued high at 13-14c per lb. Prunes were 1c lower at Toronto. Valencia raisins continued high at 15-16c. Potatoes rose to \$1.40 at Montreal and also at Toronto. Beans, three pound pickers, advanced to \$3.90-4.00 at Montreal. The supplies were

*Five commodities off the market, fruit, vegetables, etc.

One line of speller has been dropped.

†Partly revised.

scarce as a result of wet weather during the autumn. Onions rose to \$1.75 per 75 lb. bag at Montreal. Turnips eased off to 35-40c per bag. Canned corn, peas and tomatoes rose 2½c per dozen.

Miscellaneous foods.—Flour advanced in sympathy with the rising wheat market. Spring wheat patents rose from \$5.95 per barrel to \$6.30 at Montreal and winter wheat patents from \$5.80 to \$6.10. Oatmeal rose from \$2.40-2.50 to \$2.86. Sugar advanced to \$6.75 per cwt. at Toronto, in sympathy with the raw sugar market. Honey was firmer. Pepper rose 2c per lb. Cream of tartar eased off to 48-52c per lb. Baking soda advanced from \$2.00 to \$2.10 per cwt.

Textiles.—Wool was in strong demand in England. Manufacturers continued busy. Raw cotton advanced to 12.55c per lb., the crop reports showing shortage. Raw silk continued to advance, Italian classical rising from \$3.90 to \$4.85 per lb. Jute and hessians were steadier.

Hides, leather, boots and shoes.—The market continues steady.

Metals and implements.—Iron and steel and their products continued to advance owing to the great demand and shortage in supplies. Nova Scotia pig iron rose from \$21.00 to \$22.00 per ton. Iron bar rose to \$2.50 per cwt. Black sheets, galvanized sheets, boiler plates, steel billets and steel bar also showed considerable advances. Aluminum eased off slightly. Copper advanced over 1c per lb., and lead rose to 7c at Toronto. Quicksilver advanced again, reaching \$110.00 per flask. Spelter rose from 18c to 21c per pound, and solder rose from 22c to 23-36c. Tin advanced from

40c to 46c per lb., and zinc sheets advanced from 19c to 23¾c per lb.

Fuel and light.—Nova Scotia bituminous coal at Montreal advanced to winter prices at \$3.57 per ton, as compared with \$3.66 last season. Connellsville coke receded slightly from the high level in November, being down to \$2.15-2.25. Gasoline advanced 1c to 22½c per gallon.

Building materials.—New Brunswick spruce deals recovered the slight decline in November, reaching \$16.00 per M. Freights to England rose to 200s. per standard, and no space was obtainable, although the demand for lumber for export was good. There were also more inquiries from the United States. Trade in lumber was quiet at Montreal as the winter season was setting in. The demand for shell boxes was less. Reports of lumber trade in Ontario were more encouraging than for some time. There was a better demand from the retail trade and from wood consuming manufacturers. The market for hemlock showed signs of improvement. Builders' hardware advanced in sympathy with the iron and steel markets, including iron pipe, nails, hinges, iron wire and wire screen. Copper wire was slightly easier. White lead rose to \$10.20 per cwt. at Toronto. Linseed oil advanced to 85c per gallon. Turpentine rose to the same level. Benzine advanced 1c per gallon.

House furnishings.—The demand showed improvement and was much better than a year before. Brooms advanced 50c per dozen on account of the damage to the broom-corn crop by wet weather.

Drugs and chemicals.—Alum was as high as 10c per lb., and still rising. Bleaching powder rose another cent per lb, while caustic soda and carbolic acid were slightly higher again. Opium advanced to \$12.00 per lb. Quinine eased off from the very high level in November to \$1.50 per ounce. Soda ash was slightly lower.

Miscellaneous.—In raw furs, raccoon rose to \$2.50-2.75 per skin, and black Canadian skunk to \$4.00-4.25. Canadian hops were slightly easier. Sulphite pulp continued to advance, the price rising to \$62.00-70.00 for bleached. Crude Para rubber advanced to 65½c per lb. at New York.

Prices in Other Countries.

The accompanying table includes the latest findings of the currently published index numbers of wholesale prices in Great Britain and the United States.

The *Economist*, London, December 4, 1915, reports:

The enormous wastage of food by the armies, the continual diversion of factories from the production of utilities to the making of explosives, the shortage of labour, the congestion on railways and at the ports, with an abnormal dearth of shipping, are still exerting a most maleficent influence on the course of prices, which, according to our index number, are still advancing rapidly. . . . Cereals show a big advance over last month, and prices, especially of home-grown products, are rapidly approaching the high level of last May. Supplies of British wheat are still plentiful, but values have remained very firm, the *Gazette* average price for last week being 11s. per quarter higher than a year ago at 54s. 2d. The quotations for foreign wheat have eased off slightly since the middle of the month, for shipments continue on a generous scale. But a good deal has to be done in the way of replenishing stocks both here and in France. . . . Flour which has risen 1s. during the month, is now 20s. higher than in November, 1913, and 7s. above last year's quotation. . . . Barley and oats are both higher, on account of the continued shortage of available supplies. Meat prices are lower than for some months past, doubtless on account of the reductions in the home demand. In the group of

secondary food products a fall in tea and coffee has been balanced by an advance in butter. . . . In the textile group, cotton and wool are practically unchanged, silk being responsible for the greater part of the rise. The rapid advance in the price of silk during the past few months is almost unprecedented. . . . In the mineral group, iron and steel have risen, but the principal advance has occurred in the minor metals. . . . In the miscellaneous group rises have occurred in rubber, oils and seeds, tallow and indigo. . . .

Dun's index number also advanced, all groups being higher except provisions, where beef, hogs and bacon were lower. Breadstuffs, dairy and garden products, iron and steel, clothing, drugs and chemicals showed the chief increases.

The *Gibson* index number, embracing 22 foods, stood at 62.1 for December, as compared with 60.6 for November and 62.3 for December, 1914.

The *Annalist* index number, including 25 foods, stood at 149.11 for December 25, as compared with 145.82 for November 27, and 147.40 for December 26, 1914.

Bradstreet's index number showed a rise by December 1 when the level was 17 per cent over a year before and 11.5 per cent higher than Dec. 1, 1912, the highest record previously. Breadstuffs, provisions, hides and leather, textiles, metals, oils, naval stores, building materials, and chemicals and drugs showed the chief increases for the month.

The United Kingdom Board of Trade *Labour Gazette* for December reported retail food prices on December 1 less than 2 per cent higher than on November 1. Flour, bread, milk, potatoes, cheese and eggs showed advances. As compared with December, 1914, prices averaged 24 per cent higher. Beef, tea, mutton, flour, bread, butter, eggs, milk, cheese, bacon, sugar and potatoes had advanced from 40 per cent down to 15

(a.) Base 1890-1899=100; 272 commodities included.

(b.) Base 1901-1905=100; prices of 44 commodities at January 1st of each year and the end of each month

(c.) Prices in 1867-1877=100; 45 commodities included.

(d.) Total cost at the first of each month or year of a certain quantity of 96 commodities.

(e.) Total cost at the first of each month or year of a certain quantity of about 200 commodities.

(f.) 22 foodstuffs; based on the Dunn index number, 1907.

(g.) Prices in 1890=100; 48 commodities included

(h.) Index Number for August 15th, \$9.8495.

*Figures partially revised.

per cent in the order given. Fresh fish were 50 per cent higher, but margarine only 3 per cent.

Prices in Berlin, Germany, as shown in the official journal *Statistische Korrespondenz*, were considerably higher in October than the previous month in butter, lard, eggs and bacon, while other articles advanced less. Sugar and mutton were slightly cheaper. The average rise was 8.3 per cent over September and 93.1 per cent over July, 1914.

The Bulletin of the Italian Labour Department for December 1 gives the index number of prices of seven foods at 120.0 for October, as compared with 118.8 for September, and 97.6 for October, 1914.

The Journal of the Statistical Office of the Netherlands for November 30,

1915, gives index numbers of retail prices of 29 articles for October as 145, as compared with 147 for September and 113 for the first half of 1914, and 121 for the second half of 1914. Beans and peas were lower, but soda was higher.

The index number of the Norwegian Labour Office, including 27 articles, stood at 142.5 for November, as compared with 140.3 for October and 139.6 for September, the base being the year 1911.

Prices in Australia up to September, 1915, appeared in the September number of the Monthly Summary of Australian Statistics. The index number of retail prices of food and groceries for the 30 towns averaged 1,354 for that month, as compared with 1,423 for August, and 1,021 for July, 1914.

REPORTS OF EMPLOYMENT BUREAUS.

ELEVEN employment bureaus of the Young Women's Christian Association reported 1,217 vacancies notified and 253 women and girls placed during the month ended November 30.* The nine public employment bureaus co-operating with the Department reported 4,668 vacancies notified and 3,782 individuals placed. Twelve employment bureaus of the Salvation Army reported the distribution of 1,402 casual jobs to 870 persons. The individual returns are given in the following tables:

*In the last issue the reports of the London and Calgary associations were omitted from the table although included in the total. The bureau of the London association reported 24 vacancies filled and 17 individuals placed, and the Calgary bureau 34 vacancies filled and 34 individuals placed.

REPORTS OF Y. W. C. A. EMPLOYMENT BUREAUS FOR THE MONTH ENDED NOV. 30, 1915.

[illegible]

FAIR WAGES CONTRACTS, DECEMBER, 1915.

DURING the month of December the Department of Labour received for insertion in the *Labour Gazette* information relating to seven contracts awarded by the Department of Public Works. One of these contracts contained a fair wage schedule and the other six contained the general fair wage clauses providing for the rates generally accepted as current in the locality where the work is being carried on. A statement is added for supplies given by the Post Office Department, subject to the regulations for the Suppression of the Sweating System.

Fair Wages Schedules.

DEPARTMENT OF PUBLIC WORKS.

Steel gates, towers, operating bridges and operating machinery for the regulating dam, Big Chaudiere Falls, French River, Ont. Name of contractor, Dominion Bridge Company, Limited, Montreal, Que. Date of contract, December 20, 1915. Amount, \$28,224.

Trade or Class of Labour.	Rate of wages. Not less than the following:
Erection foreman.....	50c. per hr., 10 hrs. per day
Blacksmiths.....	35 " 10 " "
Blacksmiths' helpers.....	25 " 10 " "
Engineer for hoisting engine.....	35 " 10 " "
Fireman.....	25 " 10 " "
Builders' labourers.....	25 " 10 " "
Ordinary labourers.....	20 " 10 " "
Teamsters.....	20 " 10 " "
Driver with 1 horse and cart.....	30 " 10 " "
Driver with 2 horses & wagon	40 " 10 " "

Fair Wages Clauses.

A number of contracts were awarded which did not include a fair wages schedule, but contained the following clauses providing for the payment of wages current in the district where the work was to be carried on:

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

DEPARTMENT OF PUBLIC WORKS.

Post office fittings in Postal Station "C," Vancouver, B.C. Name of contractor, The Berlin Office and Fixture Company, Limited, Berlin, Ont. Date of contract, November 29, 1915. Amount, \$2,462.

Post office interior fittings in public building, Bathurst, N.B. Name of contractor, The J. T. Schell Company, Alexandria, Ont. Date of contract, December 3, 1915. Amount, \$443.

Electric freight elevator in public building, New Westminster, B.C. Name of contractor, Sloan and Harrison, New Westminster, B.C. Date of contract, December 8, 1915. Amount, \$3,300.

Interior fittings in Customs examining warehouse, Port Arthur, Ont. Name of contractor, W. J. Trick Company, Limited, Oshawa, Ont. Date of contract, December 10, 1915. Amount, \$3,997.

Alterations to Post Office interior fittings, Yarmouth, N.S. Name of contractor, Thomson and Theakston, Halifax, N.S. Date of contract, December 15, 1915. Amount, \$600.

Retaining wall and sidewalks, Customs building, Sussex Street, Ottawa, Ont. Name of contractor, P. Lyall & Sons Construction Company, Limited. Date of contract, December 16, 1915. Amount, \$22,637.50.

LABOUR CONDITIONS.

(Applicable only to the immediately foregoing contract.)

That this contract is made subject to the regulation made by Order in Council, dated the third day

of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

The contractor shall not assign or sub-let this contract without the written consent of the Minister first obtained, provided, however, that (unless in any case, the Minister objects thereto) the contractor may sub-let such portions of the work herein contracted for as is customary and usual in the construction of such works, but His Majesty shall not in any way be held responsible for the payment of any moneys due to any sub-contractor, and the contractor shall be held responsible for the proper performance of every portion of the work herein contracted for.

All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available, or that other special circumstances exist which would render it contrary to public interest to enforce the foregoing condition in respect of the employment of resident Canadian workmen.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there is no current rate in such district, then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, or if there is no custom of the trade as respect to hours in the district, then fair and reasonable hours, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final.

The contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract in respect of work and labour performed in the execution of the said contract, unless and until he shall have filed in the office of the Minister, in support of his claim for payment, a statement showing the names, rates of wages, amounts paid and amounts (if any) due and unpaid for wages, for work and labour done by any foreman, workman, labourer or team employed upon the said work, and such statement shall be attested by the statutory declaration of the said contractor, or of such other person or persons as the Minister may indicate or require, and the contractor shall from time to time furnish to the Minister such other fur-

ther detailed information and evidence as the Minister may deem necessary, in order to satisfy him that the conditions herein contained to secure payment of fair wages have been complied with, and that the workmen so employed, as aforesaid, upon the portion of the work in respect of which payment is demanded have been paid in full.

In the event of default being made in payment of any money owing in respect of wages of any foreman, workman or labourer employed on the said work, and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

No portion of the work shall be done by piece-work.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the person entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

The contractor shall not be entitled to payment of any of the money which otherwise would be payable under the terms of the said contract in respect of any goods or materials supplied, unless and until he shall have filed in the office of the Minister, in support of his claim for payment, a statement showing the prices and quantities of all the goods and materials supplied for the performance of the work and the amounts paid and amounts (if any) due and unpaid for such goods and materials, the names and addresses of the vendors, and such other detailed information and evidence attested by a statutory declaration of the said contractor, or of such other person or persons as the Minister may indicate or require, or may deem necessary, in order to satisfy himself that the conditions herein contained have been complied with and that the goods and materials for the portion of the work in respect of which payment is demanded have been paid in full for.

In the event of default being made in payment of any money in respect of goods and materials supplied for the work in the execution of the said contract, and if a claim therefor is filed in the office of the Min-

ister and proof of such claim satisfactory to the Minister is furnished, the Minister may, out of the moneys at any time payable by His Majesty under said contract, pay, or cause to be paid, such claim, and the amounts so paid shall be deemed payments to the contractor.

POST OFFICE DEPARTMENT.

During the month of November, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages and the performance of the work under proper sanitary conditions.

TRADE DISPUTES DURING DECEMBER, 1915.

DURING December the Department of Labour recorded two new trade disputes. Two disputes were carried over from November, thus making a total of four trade disputes in existence during December. The record for November showed five disputes in existence, while the record for December, 1914, was six disputes. There were two firms and 160 employees involved in the new disputes of the month, and in the two disputes carried over from November there were seven firms and 68 employees involved, making a total of nine firms and 228 employees involved in the disputes on record as in existence during December.

Duration of trade disputes.—Time losses for strikes in existence during December are estimated at 3,088 working-days, including losses of 1,320 days on account of the two disputes beginning during December. The disputes in existence during November, 1915, entailed time losses of 5,367 working-days and disputes during December, 1914, caused time losses of 4,672 days.

Trades affected.—The following table shows the trades affected and the number of employees involved in the two disputes of the month:

TRADES.	No. of disputes.	No. of employees involved.
Metal trades.....	1	100
Miscellaneous skilled trades.....	1	60
Total.....	2	160

Localities affected.—The localities affected by the new disputes of the month were Esquimalt, B.C., and Ottawa, Ont.

Causes.—The causes of the new dis-

putes were (1) a demand for a fortnightly pay-day and an increase in wages, and (2) employees alleged unfair discrimination against members of their union.

Disputes beginning before December.

The trade disputes carried over from November were as follows:

- (1) Plumbers and steamfitters, Victoria, B.C. Dispute commenced February 16, 1915.
- (2) Boilermakers, iron workers and helpers, Halifax, N.S. Dispute commenced August 2, 1915.

Disputes beginning during December.

Two new disputes commenced during the month, one of which, however, was amicably settled.

Iron workers, Esquimalt, B.C.—On December 21, 100 iron workers, employees of the shipbuilding firm of *Yarrows Limited*, Esquimalt, B.C., went on strike to enforce their demand for a fortnightly pay-day and an increase in wages. This dispute was still in existence at the end of the month.

Printing-room employees, Ottawa, Ont.—On December 11, 60 female employees of the printing-room of the *American Bank Note Company* went on strike as a protest against what they alleged as unfair discrimination against one of their fellow employees and a member of their union. The dispute which involved, from the company's standpoint, a question of discipline, was amicably settled on December 18. The settlement included arrangements looking to the avoidance of future disputes by the establishment of a permanent conciliation committee representing the company and the employees.

TABLE OF TRADE DISPUTES IN EXISTENCE DURING DECEMBER, 1915.

<i>Metal—</i> Boilermakers, iron-workers & helpers.	Halifax, N.S.	Demand for minimum wage scale.	2	40		Aug. 2, 1915.	" " "
DISPUTES BEGINNING DURING DECEMBER, 1915.								
<i>Metal—</i> Iron workers	Esquimalt, B.C.	Demand for fortnightly pay day and an increase in wages	1	100		Dec. 21, 1915.	Unsettled at end of month.
<i>Miscellaneous—</i> Printing-room employees	Ottawa, Ont.	Concerning a question of discipline	1	60	Dec. 11, 1915.	Dec. 18, 1915.	Amicable settlement.

*Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where, after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF DECEMBER, 1915.

Under this heading, account is taken of such accidents only as were sustained by male and female workers in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the Dominion or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Department of Mines of Nova Scotia, Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

DURING the month of December, 1915, there were 55 workpeople killed and 268 injured, according to the industrial accident record of the Department of Labour. The record for the month of November was 50 killed and 273 injured, and the record for December, 1914, was 63 killed and 300 injured. Comparing the December record with that for November it will be seen that there were five more industrial fatalities and five fewer workpeople injured during December than during November. The December record for 1915 shows that there were

eight fewer workpeople killed and 32 fewer injured than in December, 1914.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF DECEMBER, 1915, BY INDUSTRIES AND GROUPS OF TRADES.

Trade or Industry.	Killed.	Injured.	Total.
Agriculture.....	5	8	13
Fishing and hunting	2	2	4
Lumbering.....	1	4	5
Mining.....	8	27	35
Railway Construction.....	1	1	2
Building Trades.....	1	7	8
Metal Trades.....	8	76	84
Woodworking Trades.....	2	7	9
Printing and allied trades.....	2	2	4
Textile.....	1	1	2
Food and Tobacco Preparation.....	4	4	8
Transportation:—			
Steam Railway Service....	13	70	83
Electric Railway Service..	1	6	7
Navigation.....	1	2	3
Miscellaneous.....	3	27	30
Public Employees.....	8	8	16
Miscellaneous Skilled Trades	5	14	19
Unskilled Labour.....	1	4	5
Total.....	55	268	323

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING DECEMBER, 1915.

Trade or Industry.	Locality.	Date.	Number.	Cause of Fatality.
Agriculture—				
Farmer.....	Ottawa, Ont.....	Dec. 27	1	Crushed by overturning of threshing engine.
".....	Brandon, Man.....	" 6	1	Struck by a flying piece of broken cutting [wheel.
".....	Whitby, Ont.....	" 2	1	Fell from a wagon.
".....	Virden, Man.....	" 13	1	Kicked by a horse.
".....	Port Hope, Ont.....	" 3	1	Drowned in a well.
Fishing and Hunting—				
Fishermen.....	Vancouver, B.C.....	" 16	2	Drowned—launch collided with tug boat.

TABLE OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING DECEMBER, 1915—Continued.

Trade or Industry.	Locality.	Date.	Num-	Cause of Fatality.
Lumbering—				
Logger.....	MP. 17, E. & N. Rly., B.C.	Dec. 10	1	Crushed by falling logs.
Mining—				
Miner.....	No. 6 Col. Glace Bay, N.S.	" 12	1	Struck by shaft of crane.
".....	No. 16, New Waterford, N.S.	" 2	1	Run over by mine cars.
".....	Eustis, Que.	" 14	1	Fall of rock.
".....	Cobalt, Ont.	" 20	1	Explosion of a "miss-fire" charge.
".....	Nordegg, Alta.	" 16	1	Struck by a mine car.
".....	Hanna, Alta.	" 9	1	Fall of coal.
".....	Edmonton, Alta.	" 27	1	Fall of rock.
".....	Estevan, Sask.	" —	1	Struck by mine machinery.
Building Trades—				
Sheet metal worker.....	Ottawa, Ont.	" 8	1	Fell from a scaffold.
Metal Trades—				
Machinists.....	Toronto, Ont.	" 6	4	Fatally scalded by steam.
Machinist.....	Walkerville, Ont.	" 6	1	Fell through opening in floor.
Dry dock employee.....	Quebec, Que.	" 5	1	Fell from a ladder.
Lineman.....	Portage La Prairie, Man.	" 18	1	Electrocuted.
Shipyard employee.....	Montreal, Que.	" 7	1	Fell from a scaffold.
Woodworking Trades—				
Furniture factory employee.....	Stratford, Ont.	" 10	1	Struck by a flying fragment of broken saw.
Planing mill employee.....	Hamilton, Ont.	" —	1	Blood poisoning—Infection of wound received while operating a machine.
Food and Tobacco Preparation—				
Flour mill employee.....	Moosejaw, Sask.	" 7	1	Mangled by elevator machinery.
Grist mill employee.....	Montreal, Que.	" 30	1	Mangled by machinery.
Flour mill employee.....	Medicine Hat, Alta.	" 25	1	" " "
Brewery worker.....	Trail, B.C.	" —	1	Overcome by charcoal fumes.
Steam Railway Service—				
Conductor.....	Simcoe, Ont.	" 13	1	Run over by a train.
Fireman.....	Megantic, Que.	" 11	1	Head struck by protruding object on passing
Brakeman.....	Montreal, Que.	" 11	1	Run over by cars. [cars.
".....	Paddington, Ont.	" 1	1	Crushed between cars.
".....	Extension, B.C.	" 9	1	Run over by cars.
Yard foreman.....	Montreal, Que.	" 31	1	Run over by a locomotive.
Yardman.....	Montreal, Que.	" 21	1	" " "
".....	Hamilton, Ont.	" 15	1	Run over by cars.
Sectionman.....	Fargo Junction, Ont.	" 25	1	Struck by a train.
Watchman.....	Minaki, Man.	" 23	1	" " "
Employee.....	London, Ont.	" 24	1	Struck by a falling car door.
".....	Bridgewater, Ont.	" 13	1	Crushed between shed platform and car.
".....	Earl Grey, Sask.	" 16	1	Run over attempting to board moving train.
Electric Railway Service—				
Trackman.....	North Vancouver, B.C.	" 7	1	Fell from a velocipede.
Navigation—				
Marine engineer.....	St. John, N.B.	" 3	1	Drowned—fell overboard.
Miscellaneous Transport—				
Driver.....	London, Ont.	" —	1	Kicked by a horse.
Teamster.....	Hamilton, Ont.	" 6	1	Struck by an automobile.
".....	Montreal, Que.	" 30	1	Struck by elevator brake.
Miscellaneous Skilled Trades—				
Glue factory employee.....	Brantford, Ont.	" 8	1	Mangled by machinery.
Clerk (hardware store).....	Charlottetown, P.E.I.	" 21	1	Struck by falling iron bars.
Employee (carbide works).....	Welland, Ont.	" 20	1	Mangled by machinery.
Hotel porter.....	Toronto, Ont.	" 17	1	Fell down stairs.
Watchman.....	St. John, N.B.	" 6	1	Run over by a railway car.
Unskilled Labour—				
Labourer.....	Stayner, Ont.	" 14	1	Struck by a falling plank.

IMMIGRATION—EMIGRATION—COLONISATION.

(1) Movement of British Subjects between the United Kingdom and British North America.

Immigration to British North America from the United Kingdom.—Of the 6,327 British subjects previously resident in the United Kingdom who departed during November to take up permanent residence in places out of Europe, 650 were destined for British North America as compared with 1,307 in October and with 1,429 in November, 1914. The number departing in the eleven months ending November was 73,792, and of these 16,052 were destined for British North America as compared with 77,664 destined for British North America in the corresponding period of 1914.

Emigration from British North America to the United Kingdom.—Of the 8,183 British subjects previously resident in places out of Europe who arrived in November to take up permanent residence in the United Kingdom, 4,089 were from British North America, as compared with 4,006 in October and with 5,706 in November, 1914. The number arriving in the 11 months ending November was 84,818, and of these 34,773 were from British North America, as compared with 29,290 in the corresponding period of 1914.

Balance.—It appears from the above that in the movement of British sub-

jects between the United Kingdom and British North America, the latter had an outward balance of 3,439 in November, as compared with an outward balance of 2,699 in October and an outward balance of 4,277 in November, 1914, and that for the eleven months ending November British North America had an outward balance of 18,721, as compared with an inward balance of 48,374 for the corresponding period of 1914.

(2) Movement of Persons other than Citizens of the United States between the United States and British North America.

Immigration from British North America to the United States.—According to the November Bulletin of the Bureau of Immigration of the United States Department of Labour, alien residents of the United States to the number of 1,468 departed to take up permanent residence in British North America during November, as compared with 1,099 in October.

Emigration from British North America to the United States.—During November, 9,938 persons (not including citizens of the United States) left British North America to take up permanent residence in the United States as compared with 7,305 in October.

Balance.—It appears from the above that in this movement between the United States and British North America the latter had an outward balance of 8,470 in November as compared with an outward balance of 6,206 in October.

Lands Patented.—According to the Department of the Interior's statement of letters patent covering Dominion lands in Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory for the month of November, 1915, the number of patents was 1,843 and the number of acres 292,028.67. These numbers compared with 1,750 and 297,699.18 respectively in November, 1914. For the eleven months ended November, 1915, the number of patents was 18,769 and the acreage 3,032,630.71 as compared with 28,106 patents and an acreage of 4,650,641.15 for the corresponding period of 1914.

Homestead Entries. — In November there were 345 homestead entries in Manitoba, 692 in Saskatchewan, 514 in Alberta and 22 in British Columbia, a total of 1,573 as compared with 1,894 in November, 1914, a decrease of 321. The numbers for the eleven months ending November were: Manitoba, 3,815; Saskatchewan, 5,781; Alberta, 6,083; and British Columbia, 443, a total of 16,122, as compared with a total of 24,142 for the corresponding period of 1914, a decrease of 8,020.

Of the 1,573 entries in November, 239 were made by persons who had previous entry, 226 by citizens of the United States, and 299 by persons from the United Kingdom. Canadians from Ontario and Quebec made 248 entries; from the Maritime Provinces, 23; and from the Western Provinces, 152. The remaining entries were made by persons of other nationality.

BUILDING PERMITS DURING DECEMBER, 1915.

THE total value of building permits in December was \$3,690,266 as compared with \$3,444,250 in November and with \$2,316,674 in December, 1914. The total for the 12 months ending December, 1915, was \$34,109,659 as compared with \$100,003,008 for the 12 months of 1914. Nova Scotia is the only province

showing an increase in the total value of building permits issued during 1915 as compared with the total value for 1914. The total for New Brunswick was practically the same as in 1914. The greatest declines for the year took place in Alberta, Saskatchewan and Manitoba.

BUILDING PERMITS DURING DECEMBER, 1915.

REVIEWS.

Dust in Mines.

Great Britain.—Seventh Report of the Explosions in Mines Committee, submitting report on the effects of inhaling dusts applicable for stone-dusting in coal mines by J. S. Haldane, M.D., F.R.S., 1915.

THE experiments initiated under Sir William Garforth's direction by the Committee of the Mining Association of Great Britain, have shown that by the addition of a certain proportion of inert dust the coal dust which is the inflammable agent in all great colliery explosions may be rendered non-inflammable, and that a practical means of entirely preventing these great disasters is thus available. This, however, raises the question of the effects of inert dust upon the lungs. It would appear from coal-mining experience that the breathing of dust in moderate quantities is not necessarily unhealthy, but the evidences in connection with metalliferous mining show that the breathing of certain kinds of dust is extremely unhealthy. It seems quite clear that fine dust from uncombined crystalline silica is dangerous, but on the other hand, many forms of inorganic or organic dust are known to be practically harmless such as chalk, clay, various silicates or aluminates. It is definitely known that as a consequence of the damage produced by continued inhalation of crystalline siliceous dust of certain kinds the lungs become predisposed to attacks by tubercle bacilli, the effects of which constitute phthisis, and also bronchitis.

Sir William Garforth proposed the dust of powdered shale as a variety of inert dust for the prevention of coal dust explosions. Samples of fine dust from coal mines have commonly contained

from 15 to 60 per cent of stone dust. It is this mixture which is mainly breathed by the men, and the fact that colliers are, as a class, so immune from phthisis is in itself good evidence that dust from the shales, etc., which are commonly adjacent to coal seams is relatively harmless. Samples of dust taken from the Nottingham colliery district had an average of 43.0 per cent of ash which practically represents shale dust. This high proportion seems to explain the relative immunity of the district from explosions, and it is also to be noted that the death-rate among miners in the Notts and Derbyshire district is, as compared with the average for English miners, lower from all causes and the mortality from lung diseases is exceptionally low.

These considerations seem to furnish very conclusive evidence that nothing is to be feared from the substitution for more or less pure coal dust on the roads of a coal mine, of a dust mixture containing 50 per cent or more of inert dust derived from shale.

The experiments on animals carried on by Professor Beattie of the Liverpool University, as well as those conducted about 30 years ago by Professor Arnold of Heidelberg, show that comparatively little injury to the lungs results from inhaling the soft soot particles of smoke, or the particles of shale dust or coal dust.* Experiments carried on by Dr. Haldane, with the assistance of A. E. Mavrogordato, M.A., M.R.C.S., L.R.C.P., gave similar results. These experiments also seem to show that crystalline silica is only dangerous when its particles are broken up into fine, sharp-edged dust particles. Fused silicate in the form of

*Julius Arnold, Untersuchungen über Staubinhalation und Staubmetastase, 1885.

dust is less hard than quartz, and usually more liable to solution or disintegration when it enters the lungs, and for this reason it is less dangerous than quartz. Sand is relatively ineffective for stopping explosions. For stone-dusting, a substance is required which is as easily suspended in the air as coal dust, which is as harmless to breathe, and which passes along with the coal dust to such positions as the tops of timber bars on the roof. Experience has shown that shale dust fulfills all these conditions.

There is, however, reason for believing that coal dust and shale dust do some harm in the long run, and the fact that about the age of 55 there is a somewhat undue rise in the mortality from lung disease (mainly bronchitis) among coal miners is very probably connected with the inhalation of dust. On grounds of health, therefore, it seems desirable to prevent dust as much as practicable, and various ways of diminishing dust are suggested, such as the use of tubs, which will not scatter small coal and dust along the roads, the cleaning up of the roads when much dust accumulates, and by not putting on more stone dust than is really necessary to make the road secure from dust explosions. The report concludes with the following summary and an appendix by A. Mavrogordato dealing with experiments on the Inhalation of Different Varieties of Dust:

- (1) Both from human experience in coal mines and from experiments on animals there is clear evidence that shale dust, when inhaled, is no more deleterious than coal dust, so that shale dust may be used quite safely for stone-dusting in coal mines.
- (2) Flue dust, when inhaled, produces in animals effects which point to the conclusion that it may be unwise to employ it for stone-dusting in mines.

- (3) Indications are given as to what varieties of stone-dusting material may be used in mines without detriment to health.
- (4) It is desirable from the point of view of health to reduce, as far as practicable, the inhalation of any kind of dust in mines.

Sunday Labour.

Great Britain.—Ministry of Munitions, the Health of Munition Workers' Committee, Report on Sunday Labour. London, 1915.

The Health of Munition Workers' Committee, of which Sir George Newman is chairman, which was appointed in September last to "consider and advise on questions of industrial fatigue, hours of labour, and other matters affecting the physical health and physical efficiency of workers in munition factories and workshops," has submitted a report on Sunday labour under date of November, 1915. The committee found that both employers and employees were unfavourably disposed to Sunday labour, although the practice has been widely adopted on account of heavy demands of output, or because the workpeople in the first instance wished to obtain the increased pay. The objections of employers are classified as follows:

- (a) *Administrative.*—Supervision is difficult, and imposes a severe strain on the foremen, yet deputies are not easy to obtain.
- (b) *Economic.*—Sunday labour means high wages, often coupled with increased cost of running the works. Though attendance on Sundays is generally good, it is not always accompanied by a satisfactory individual output, while it is often associated with bad time-keeping on other days of the week.

- (c) *Religious and Social*.—There is a considerable feeling that the seventh day, as a period of rest, is good for body and mind.

Much of the employers' evidence was to the effect that seven days' labour did not materially increase the output, while the evil effects upon the workers of the severe strain were quite apparent.

Trade union officials were also in favour of the abolition of Sunday work, and they attributed much of the loss of time to the need of more rest on the part of the workers.

The committee therefore recommend that a weekly period of rest must be allowed to all classes of workers if the maximum output is to be secured and maintained, and they consider that since on economic and social grounds this weekly period of rest is best provided on Sunday, Sunday work should be confined:

- (a) To sudden emergencies, including the occasional making up of arrears in particular sections; and
- (b) To repairs, tending furnaces, etc., (the men so-employed being given a corresponding period of rest during some other part of the week).

The committee suggest that, pending a general discontinuance of Sunday labour, the following ways of mitigating the evil might be adopted:

- (a) Where two shifts are worked, to discontinue the practice by which the change from one shift to the other is made by working continuously for a period and a half, instead of closing down on Saturday night or during the period of the day shift on Sunday.

- (b) Where three eight-hour shifts are worked to omit one or two shifts on Sunday.

- (c) Where workers are employed only during the day with overtime, to reduce, as far as possible, the hours of work on Sunday.

- (d) To give all workers alternate Sundays off, or at the very least a Sunday off at frequent intervals. Various ways of giving effect to this last recommendation are suggested.

The committee anticipate that in order to secure a large measure of reform it may be necessary to impose certain restrictions on all controlled establishments, since competition and other causes render it difficult for individual employers to act independently.

Infant Welfare Work.

United States.—United States Department of Labour. Children's Bureau. Baby-Week Campaigns. Suggestions for communities of various sizes.

This bulletin on Baby-Week Campaigns was prepared by Dr. Grace L. Meigs, head of the division of hygiene of the Children's Bureau, with the assistance of Mary Swain Routzahn of New York. It aims to create public interest in infant welfare work and presents in detail practicable methods of organizing and carrying on Baby-Week Campaigns. Such campaigns have been held successfully in Chicago, New York, Grand Rapids, Pittsburg and other cities. They have been primarily educational, having the twofold purpose of giving to parents the opportunity of learning facts with regard to the care of babies and of making known to the community the importance of its babies, the special facts relating to them and the need of permanent work for their welfare.

The report gives a review of the New York and Pittsburg Baby-Week Campaigns as illustrating methods that have proved successful for Baby-Weeks having an educational purpose. In New York the object was to drive home to the public the fact that while great advances had been made in lowering infant mortality in the city, much remained to be done, and also to create a widespread interest in the baby welfare work under way. In that city Baby-Week started with the observation of Baby-Sunday in all the churches. Little mothers' day came next in the schools with the distribution of educational literature to mothers by the children. Visiting days to milk stations and hospitals, nurseries and dispensaries formed part of the programme, and also an outing day for mothers and babies. Pittsburg's Baby-Week added a few new features such as a play twice a day. Suggestions are also given for Baby-Weeks in smaller communities.

The report emphasizes the importance of a "follow-up" programme. After the public has realized through the Baby-Week Campaign the need of greater efforts, it is time to arrange a specific, permanent programme for the welfare of babies. Committees should be appointed to investigate the milk supply, to improve sanitation and industrial conditions, and to make birth registration prompt and complete. Infant welfare stations should be established where children could be brought once a week and a visiting nurse should be appointed to call at the homes. From

follow-up work is derived the lasting good which should come from every such effort.

The appendices include much additional information and the report should prove of great assistance to health officers, social workers and others in the promotion and conduct of public health campaigns.

Railway Accidents.

Great Britain.—General Report to the Board of Trade upon accidents that have occurred on railways of the United Kingdom during the year 1914.

The length of railways of the United Kingdom at the end of 1914 was 23,700 miles. As the greater portion consisted of two or more lines of rails the total track mileage with sidings was 55,662. The accidents due to the movement of trains on these lines totalled 8,965, of which 1,115 were fatal. This is a decrease of 1,220 in the number of accidents since 1913. The passengers injured numbered 2,340, servants of companies or contractors 5,065, and other persons 345. In addition to the accidents caused by the running of trains a large number occurred on railway premises. These accidents were due to misadventure and comparatively few were preventable. Such accidents resulted in the death of nine passengers, 52 servants and 19 other persons, and injury to 638 passengers, 22,153 servants and 598 other persons. Although the number of injured is large the proportion of serious injuries is smaller than in the case of railway accidents proper.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

NOVA SCOTIA CASE.

AN interesting decision has recently been handed down by the Supreme Court of Nova Scotia, which has an important bearing on the Workmen's Compensation Act of that province, passed at the last session of the legislature.

A workman in a sawmill was injured and the arbitrator appointed under the provisions of the Workmen's Compensation Act held that the workman was employed in a sawmill and not in lumbering, although the sawmill was used in connection with the production of lumber. Lumber operators appealed the case so as to make a test and settle the point whether a man employed in a sawmill could be considered as engaged in lumbering and thus not come under the Workmen's Compensation Act. The Supreme Court upheld the decision of the arbitrator and the workman injured therefore received compensation under the Act. (*Grant v. Sutherland.*)

QUEBEC CASES.

Workmen's Compensation Act.—Indemnity.—Rents.—Capital.—Construction of certain articles of the Act.

The Privy Council recently affirmed a judgment rendered in 1913 by the Superior Court and confirmed by the

Court of Review. The facts of the case, involving a construction of the Workmen's Compensation Act of the Province of Quebec, were recited in the judgment rendered by Viscount Haldane, as follows:

"The question which Their Lordships have to decide arises as follows: The respondent was a railway man employed by the appellants. He suffered serious injury in an accident, the result of which was that he was partially but permanently incapacitated. He claimed that this entitled him to compensation, under the Workmen's Compensation Act of the Province of Quebec, to the extent of a rent or annuity for his life of \$337.50, being half the amount by which his earning capacity had been reduced by the injury. The appellants did not dispute the title to compensation on this basis, but contended that under Article 7322 (sub-head 2) of the Act the amount of the rent that could be claimed could not exceed the annual rent procurable with a capital sum of \$2,000. The only question to be decided is one of construction of the Statute.

Article 7322 provides in Sub-section 1 that in cases to which the section applies the person injured is to be entitled in case of absolute and permanent incapacity to a rent equal to half his yearly wages, and in case of permanent and partial incapacity to a rent equal to half the sum by which his wages have been reduced in consequence of the accident.

Sub-head 2 of the same Article provides that "the capital of the rents shall not however in any case, except in the case mentioned in Article 7325, exceed \$2,000." Under that Article the Court may reduce the compensation, if the accident was due to the inexcusable fault of the workman, or increase it, if the accident was due to the inexcusable fault of the employers. Under Article 7329, after the amount of the compensation has been agreed or after judgment ordering it to be paid, the employer is to pay the amount of the compensation to the person injured or his representatives "or as the case may be and at the option of the person injured or his representatives, shall pay the capital of the rent to an insurance company, designated for that purpose by the Order-in-Council?"

"Their Lordships are of opinion that the Article last quoted interprets the reference to capital in sub-head 2 of Article 7322, and that this sub-head cannot properly be read as applying to any other case than that in which the injured person or his representatives demand that the capital, by which they understand to be meant the capitalized value of the rent, shall be paid over to an approved insurance company which will provide an annuity in lieu thereof. They observe that in sub-head 2 of Article 7322 the limitation is expressed to refer only to the capital of the rents described, and that no reference to this capital occurs elsewhere in the article. To read the words as governing the amount of the rent where it is claimed from the employer himself instead of the amount to be paid to an insurance company for providing an annuity in lieu thereof, would be to introduce extra-

ordinary results. An old man with a short expectation of life would obtain a larger compensation than a younger man. The latter, though equally incapacitated, might have been earning higher wages than the former. Yet on the construction of the Act contended for by the appellants he would get a smaller annuity from the insurance company by reason of his longer expectation of life. But it is natural that the Act should give the claimant the option of having what will often prove the better security of the obligation of the approved insurance company. Their Lordships think that the meaning of sub-head 2 is that if the claimant exercises this option, the capital sum which he can compel the employer to find and, it may be, to withdraw from his business, is to be limited. The sub-head would have been introduced by the draftsman more naturally after Article 7329. But Their Lordships do not find in the place in the Act where the words have been introduced any sufficient reason for construing them otherwise than according to what appears to be their natural meaning, and as they have been construed by the majority of the learned judges in the Courts of Quebec both in the present case and in *The Grand Trunk Railway Company v. McDonnell* (21 K.B. 532). They occur in the view that the expression "capital of the rents" in sub-head 2 of Article 7322 derives its meaning as there used from the subsequent Article 7329. It may or may not suit him, having regard to his age and his estimate of his security for his rent, to exercise the option. If so, it is only at the option of the claimant that the capital demand can be made to

which the limitation applies. It may or may not suit, having regard to his age and his estimate of his security for the rent, to exercise the option. The injured man may think it wisest to avoid the risk of proceedings to revise the amount of the compensation on the ground of diminution of the disability, under Article 7346, which provides for such revision, by changing the rent into an annuity purchased from an insurance company. To enable him to secure these advantages, it was natural that the Legislature should give him an option, and no less natural that the amount of capital he could call for in connection with them should be limited. It is, however, far from being obvious why the words should have been introduced at all, if they are to bear the construction for which the appellants contend, and are to restrict, not only the amount in case of exercise of the option, but the rent itself, in such a fashion that a man earning high wages would get no more compensation for being incapacitated from earning than a man earning much less. Their Lordships are of opinion that the language employed is not such as would have been relied on, if the intention had been to produce so remarkable a result.

They will therefore humbly advise His Majesty that the appeal should be dismissed with costs, to be taxed as between solicitor and client, according to the conditions prescribed by the Order-in-Council giving leave to appeal. (*Canadian Pacific Railway Company v. McDonald.*)

Workmen's Compensation Act.—Application.—Suspension of Work.—Salary.

The plaintiff, while at work for the defendant company, met with an acci-

dent on the third day of January, 1913, by which he lost his two hands and one eye, and sued the company, under the common law, for \$25,000. The defense admitted the accident, but pleaded that the plaintiff should have brought his action under the Workmen's Compensation Act, and not under the common law, as he was earning less than \$1,000 a year. The trial judge assessed the damages at \$12,000, but reduced the amount, owing to the contributory fault of the plaintiff.

By consent of the parties, the sole question submitted to the Court of Review was whether the action should have been taken under the Workmen's Compensation Act, or under the common law. It was established that the plaintiff entered the employ of the defendant in July, 1911, at a salary of 17½ cents an hour, which was subsequently increased to 35 cents an hour, and on the first of January, 1912, he entered into a new agreement whereby his salary was fixed at 40 cents an hour. On the fifteenth of February, 1912, he was laid off, for reasons not under his control, and resumed work on the first of May following, at exactly the same salary. During the time he actually worked, he received from the defendant the sum of \$939.50. The Court of Review held that, as his idleness "was not voluntary, was not due to laziness, and was not due to any cause that was foreseen or expected at the time his engagement was made," the amount he would have received had he worked, instead of being idle, from February 15 to May 1, should be added to the amount he had actually received, which would make his yearly salary much more than \$1,000, and that consequently he was entitled to bring his ac-

tion under the common law. (*Reynolds v. Canadian Light and Power Company.*)

Workmen's Compensation Act.—Limitation.—Interruption of the limitation.

In an accident which occurred on July 2, 1913, on the line of the Quebec and Lake St. John Railway, a train hand was so severely injured that his right leg had to be amputated. The railway company paid the hospital fees and the doctors' bills and for 13 months paid an indemnity based on the employee's wages during the 12 months preceding the acci-

dent. The employee brought an action for the payment of an annuity of \$248.41 on September 21, 1914, or a little more than a year and two months after the accident. The company pleaded limitation, the action not having been brought within a year after the injury. The Superior Court, however, held that the company, by paying the indemnity, had recognized the claim and had thereby interrupted the limitation. This judgment was subsequently affirmed by the Court of Review. (*Quebec and Lake St. John Railway Company v. Forgues.*)

THE LABOUR GAZETTE

FEBRUARY, 1916.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

A DISPUTE of particular interest dealt with under the Industrial Disputes Investigation Act during the past month was that between the shipping companies doing business at the port of St. John, N.B., and the Longshoremen's Union of that port, known in its dealings with the companies as "The Longshoremen's Association of St. John." A working agreement had existed between the companies and longshoremen dating from November, 1913, and renewable from year to year "unless or until either party gave notice to the contrary at least thirty days prior to the expiration of any calendar year." Negotiations looking to a new agreement were opened within the requisite time and, no agreement being reached in this way, the Minister of Labour, on request, established a Board of Conciliation, of which Mr. W. E. Foster, of St. John, was chairman, Mr. J. H. Lauer, of Montreal, was named by the shipping companies, and Mr. J. E. Tighe acted for the employees. As an outcome of the Board's efforts a working agreement was drafted following generally the lines of that under which work had been carried on during the past two years, the previous agreement having been arranged by a Conciliation Board also under the chairmanship of Mr. Foster. The hours and wages under the new agreement remain substantially as before, namely, as to hours, ten hours to be a working day from November 15 to April 30 and nine hours prevailing from May 1 to November 15, while wages are 35 cents per hour, day or

night, during the winter season, and 40 cents per hour during the summer season until May 1, 1917, when the rate becomes 40 cents per hour winter and summer without distinction. The agreement underwent changes in certain details and was made effective, subject to ratification by the respective parties, for four years, namely, until December 1, 1919, and, as in the case of the expired agreement, from year to year save on due notice from either party.

* * *

A FEATURE of special interest in the draft agreement, apart from working conditions and wages, was the proposition that the parties should arrange for the establishment of a permanent local Board to deal with the currency of the agreement with local questions arising and as to which there may be differences of view, the Board to consist of three members, a representative of the shipping interests, a representative of the longshoremen, and a chairman elected by joint agreement or failing joint agreement to be appointed by a judge of the Supreme Court of New Brunswick. Decisions of the Board so constituted are to be final and binding on both parties.

This recommendation represents a departure from the beaten track in procedure in these matters, though it is by no means without precedent. The successive working agreements which have been made as between the Western Coal Operators' Association in the Crow's

Nest Pass coal region and the miners employed in the various collieries controlled by members of the Association have now for many years included provisions for the establishment of such a permanent Board, and the Board has been a fairly effective instrument in the adjustment of the numerous differences arising during the life of a particular agreement; in this case the chairman of the permanent Board, when not secured by joint agreement, has been appointed by the Minister of Labour. A permanent committee on similar lines was created some years ago as the outcome of a hearing before a Conciliation Board which dealt with a dispute between the Shipping Federation of Canada and the longshoremen of Montreal. This committee also had some initial successes, but later on other agencies had to be invoked to secure the adjustment of minor disputes.

The present move is regarded as distinctly hopeful in nature and as promising much for the amicable arrangement of minor differences. At the date of writing the findings of the Board have been accepted by the employees and by a majority of the shipping companies concerned. The text of the Board's report appears on another page.

* * *

THE only other Conciliation Board in session during January was that constituted at Edmonton under the chairmanship of Mr. Frank Ford, K.C., for the adjustment of a dispute between the Corporation of Edmonton and its employees, being street and electric railway workers; others members of the Board were Messrs. J. E. Wallbridge and William McAdams, representing the corporation and employees respectively. At the time of writing it was understood the enquiry was nearing its close, an adjustment having been reached on most points.

As to disputes during the month resulting in strikes or lockouts, the record is practically clear. During the last few days of January friction developed between a London, Ontario, manufacturing company and a few of its machine operators, a change in piece-work rates causing about 25 of the latter to withdraw for a few days. The good offices of the Minister and Department of Labour were utilized in restoring good feeling, and work was resumed. With this trifling exception the month was void of strikes or lockouts.

* * *

PART I of the report of the Commission on Unemployment appointed by the Government of Ontario has been issued. It is a substantial pamphlet of 86 pages, but is only a small portion of the entire report, which comprises four parts, aside from numerous appendices. It is understood that copies of Part I only are at present ready for distribution. The chief feature of the report is undoubtedly the recommendation of the appointment of a Provincial Labour Commission, the duties of which, as summarized in the introductory pages, are as follows: (1) to administer a system of free public employment bureaux; (2) to control private employment offices; (3) to co-operate with rural and urban committees in regard to vocational guidance, extension of the school age, development of local rural interests, and the extension of technical, trade, agricultural and domestic training; (4) to develop an adequate system of statistics; (5) to interpret these statistics so that the causes of unemployment and other features of labour problems may be more generally understood, and that constructive measures of prevention may be brought to the attention of workmen, employers and public authorities; (6) to bring the knowledge and experience of other countries

to bear upon Canadian labour problems; (7) to further the organization of provincial employment bureaux throughout Canada with a view to their ultimate linking together in an effective national system.

The Commission comprised the following gentlemen: Sir John Willison (chairman), Archbishop McNeil, Archdeacon Cody, Reverend Daniel Strachan, W. K. McNaught, Joseph Gibbons, G. Frank Beer, Professor A. T. DeLury, Gilbert E. Jackson, W. P. Grundy, all of Toronto, and W. L. Best, of Ottawa.

A review of the report will appear in a later issue of the *Labour Gazette*.

* * *

MR. W. B. WILSON, Secretary of Labour in the United States Government, gave recently a ruling of some interest and importance to Canadian members of the different railroad brotherhoods. It seems that early in 1915 it was reported to Mr. H. B. Perham, President of the Order of Railroad Telegraphers, that telegraphers in Canada employed on the Canadian Northern Railway were being denied the right to exercise their promotion and seniority rights as per agreement with that company. The promotion district covers 437 miles of railway, upon which 52 telegraphers were employed, ten positions being in the State of Minnesota and 42 in Canada. The men employed in the positions located in Minnesota were permitted to exercise their seniority rights in filling vacancies occurring at any of the 42 positions in Canada on that particular promotion district, but the Canadian telegraphers were denied the same right where vacancies occurred in any of the positions in Minnesota. Mr. Perham took up the matter with the United States Secretary of Labour, and the correspondence resulted in a decision intended to protect the interests of Canadian members of the brotherhoods. Mr. Wilson's ruling is as follows:

“Persons employed in the transportation divisions of railroads crossing the boundary line between Canada and the United States, who come to the United States for the purpose of accepting positions growing out of seniority regulations connected with their employment on such roads, shall not be considered as alien contract labourers.”

* * *

THE subject of technical education was the occasion of a question in Parliament, on Thursday, February 3, by the Honourable Rodolphe Lemieux, K.C., who asked, “Is it the intention of the Government to take action on the report of the Commission on Technical Education?” The Honourable T. W. Crothers, Minister of Labour, replied as follows: “As soon as complete copies of this report were received from the King's Printer, the Minister of Labour caused a complete copy to be forwarded to each Provincial Premier, together with a letter from the Minister of Labour inviting an expression of view regarding the recommendations of the Commission, and intimating that any suggestion would receive a careful consideration. In the meantime the Department of Labour proceeded with the distribution of the report, several thousand copies being distributed to persons believed to be interested in the subject of technical education, requests for copies also receiving prompt attention. The various Provincial Premiers acknowledged reception of the reports, but, with one or two exceptions, no expression of view was received. The recommendations of the Commission being based on a proposed intimate co-operation as between the Dominion Government and the governments of the various provinces, the Dominion Government will be better able to determine its course of action when it has received the views of the various provincial governments.”

TWO conferences of unusual importance in labour matters have been proceeding during the past few weeks in the United States, both relating to labour organizations having large Canadian membership. The particular organizations concerned are the United Mine Workers of America, comprising coal miners, and the four operating railroad brotherhoods, comprising (1) locomotive engineers, (2) firemen and enginemen, (3) conductors, and (4) trainmen. The number of employees directly concerned in the outcome of the negotiations proceeding is computed at not less than 1,000,000, namely, 350,000 railroad employees in the various classes named, and six to seven hundred thousand coal miners, the latter figure including, however, a proportion of non-union workmen. The U.M.W.A. has preferred demands representing 20 per cent increases in wages in both anthracite and bituminous coal fields, to be effective from the expiration of the present agreements, which end on March 31 next. There have been no considerable wage increases in this industry since 1912. At the time of writing, judging from expressions of leading United States newspapers, the outlook for an amicable settlement is not distinctly hopeful. The only U.M.W.A. agreement of importance in Dominion coal fields at the present time is that covering the collieries embraced in the Western Coal Operators' Association and extending over Southeastern British Columbia and Southern Alberta, the agreement in this case not expiring until March 31, 1917. It would seem likely therefore that, whatever may be the outcome of the negotiations in question, the effect will be felt but indirectly by the coal mining industry in Canada. Should, however, a wage increase be conceded, the increased coal prices expected to follow in the United States will, no doubt, extend equally over those large sections of Canada which depend upon the United States for coal.

THE negotiations affecting railway employees are of a somewhat less definite character. The four railroad brotherhoods named are advancing a claim for what is described generally as an eight-hour day, but which the railroad companies urge becomes on examination a demand for overtime rates on work outside of an eight-hour day, since the exigencies of the case will rarely permit an absolute limitation to eight hours' work. The movement extends over 280,000 miles of railroad in the United States and Canada. No information has been given to the public as to any discussions in this matter by the representatives of the brotherhoods and railroads controlled in Canada. Apart from a natural desire to await the outcome of the wider negotiations, the Canadian membership of the brotherhoods is thought inclined to continue the conservative policy which has marked its attitude since the commencement of the war, a leading feature of which has been the avoidance, so far as at all possible, of causes of industrial friction and disturbance.

* * *

PRICES continued steeply upward, the Department's index number of wholesale prices going up ten points, due to considerable rises in metals, chemicals, grain, potatoes, textiles, coke, gasoline and many other commodities. In retail prices, flour, beans and potatoes showed some increases. The cost of a weekly budget of family commodities showed a considerable increase over the figures of last month and a noticeable increase when compared with the cost of the same budget in January 1914.

* * *

EMPLOYMENT in January showed comparatively little change from the conditions of the previous month. Heavy storms and snowfalls in parts of the Western Provinces had the effect of

throwing some men out of work in mines and in sawmills, and in Eastern Canada severe weather had an adverse effect upon what little building was being done. These weather conditions, however, had the effect of providing considerable employment for casual labour in clearing snow from streets and railway tracks. Ice cutting also continued to give employment to unskilled labour. Farmers in many parts, anticipating a shortage of farm labour for the spring and summer, were endeavouring to secure help somewhat ahead, and in a number of instances were meeting with difficulty in engaging suitable men. No exceptional measures were taken by municipalities for the relief of distress and the situation in this regard was decidedly improved when compared with conditions in January, 1914.

* * *

DURING the months of December and January the Census and Statistics Department commenced the taking of a postal census of manufactures for the year 1915. The census is being taken under Order-in-Council dated December 8, 1915, and manufacturers to whom schedules were sent are requested to send in the information not later than January 21, 1916. A recent copy of the Canada Gazette publishes in full the form used, which is sent out under the signature of Mr. Robert H. Coats, formerly chief statistician of the Department of Labour and now Dominion Statistician and Controller of Census. Manufacturers are required to supply information on such subjects as the amount of capital employed, the number of salaried employees, wage earners, materials used, days in operation and products manufactured during the year. Schedules sent in will be treated as con-

fidential and will be used only in tabulations which will not reveal individual business.

* * *

THE Fair Wages Branch of the Department of Labour has been strengthened by the appointment of an officer who will make his headquarters at Saskatoon, Mr. Frederick E. Harrison, mayor of that city for the past three years, having accepted the position. Work in Western Canada falling to this branch of the Department has been performed hitherto by officers stationed respectively at Winnipeg and Vancouver. While construction of public buildings has not been since the commencement of the war pressed forward in most parts of the Dominion, orders for war munitions of various kinds are causing activity in the great majority of the factories and workshops in the western cities, and matters are continually arising which need the attention of the Fair Wages Officers, by way of inspection, regulation of wages, and conciliation. With the utmost activity and constant travelling on the part of two western officers it has been found difficult at times to meet the growing requirements, in these matters, of the great territory involved. Mr. Harrison's appointment will, it is believed, increase considerably the effectiveness and efficiency of the Fair Wages Branch. During his prolonged term of office as mayor of Saskatoon, Mr. Harrison came much in contact with industrial questions and had relations with employers and workmen. The experience thus gained and an extensive acquaintance with Western Canada will, it is thought, be of considerable value in the important work now undertaken by Mr. Harrison.

INDUSTRIAL CONDITIONS DURING JANUARY, 1916.

GENERAL SUMMARY.

INDUSTRIAL conditions in January were on the whole favourable, although opportunities of employment for some classes of workmen were lessened by cold weather and heavy snowfalls, which in Western Canada interrupted mining and lumbering operations in some localities. These storms, on the other hand, provided considerable employment to unskilled trades in the clearing of streets and railway tracks. Ice cutting also afforded some employment in various parts of the country. Building operations were practically at a standstill in most localities, though some outside and interior work was carried on in districts where the weather was favourable. In some parts where special manufacturing activity prevailed, members of the building trades found employment in the factories. There was no appreciable increase in the numbers of those out of work, except in a few instances, and there was little, in the way of special measures by municipalities to relieve distress. In this respect as compared with the same month in the previous year the situation was decidedly improved.

The usual seasonal quiet prevailed in agricultural operations. Farmers in a number of districts, fearing a shortage of farm help, were endeavouring to engage men ahead, and were finding it difficult to secure the sort of help desired. Very few men were available in localities where last winter the supply was considerably more than the demand.

Fishing, owing to rough weather, was quiet on the Atlantic coast. Practically nothing was done on the lakes, except fishing through the ice at some points, and on the Pacific coast bad weather

also interfered with operations. Lumbering operations were seriously affected in British Columbia by cold weather and heavy snowfalls, which tied up some of the mills. Conditions in Eastern Canada were on the whole favourable, though lack of snow was reported at some points in Nova Scotia. Coal and metal mining continued active, though operations were impeded somewhat in the West owing to heavy snowfalls which interfered with transportation and caused some idle time in the mines. Manufacturing showed little change from the fairly active conditions of the previous month. Railroad construction was carried on about as usual in the Western Provinces and in British Columbia, but little outside of maintenance work was being done in Eastern Canada. Conditions in general transport were active on the whole, though passenger and freight services were seriously interrupted in parts of the Western Provinces by storms and heavy snowfalls. Digging out trains and keeping the lines clear rendered conditions active for maintenance crews.

The wholesale prices index number of the Department stood at 172.0 for January as compared with 162.4 for the previous month, 139.3 for January, 1915, and 136.5 for January, 1914. The most important increases for the month were in metals, chemicals, grain, hogs, poultry, dairy products, apples, potatoes, textiles, hides, leathers, boots and shoes, coke, gasoline, spruce deals and building materials. In retail prices slight increases in beef, mutton, eggs, butter, flour, beans and sugar, and a considerable rise in potatoes raised the cost of a week's supply of 29 staple foods to \$8.28 for January, as compared with \$8.13 for December and \$7.97 for January a year ago. The chief ad-

vances for the year were in lard, eggs, butter, cheese, evaporated apples, sugar, tea, coffee and potatoes, but milk, bread and flour were lower. Coal and wood also averaged slightly lower.

Changes in Wages and Hours of Labour.

There were a few changes in rates of wages and hours of labour reported to the Department during the month. An adjustment in the day rates of the low paid and intermediate class of workmen employed at the Sydney steel plant was announced by the company. The increases to the lowest paid classes amounted to about 11 per cent, the intermediate classes receiving somewhat less. Printers at Halifax signed an agreement at the first of the year calling for an advance from \$16 per week to \$17 per week for a period of two years. Longshoremen at Halifax, by an award of a Board of Investigation appointed under the Industrial Disputes Investigation Act, received an advance of 2 cents per hour, bringing the day rate up from 28 cents to 30 cents per hour. About 7,000 employees of the Dominion Textile Company at Montreal and other branches of the company received an increase of five per cent. The new schedule went into effect on January 24, the increase being on the initiative of the company.

Agriculture.

Agricultural operations as is usual at this season of the year were quiet. Work in the east was confined to the cutting of cordwood, feeding of stock and in making repairs. In some parts of Ontario it was reported that farmers were finding it difficult to secure farm labourers, and, believing that help would be scarce owing to the number of enlistments, were offering \$35 to \$40 per month to single men for the season. In the vicinity of Saskatoon farmers were engaging men, and at Regina were having difficulty in securing help to do

chores around the farm. Wages of \$25 a month with board were offered, but there were very few applications. Last winter there were lots of men to be had at \$5 and \$10 per month. The provincial bureau of labour was unable to supply the demand, which was to increase considerably in the spring. At Lethbridge, on account of more stock being kept, there was a better demand for men, and while the month was a dull one for farmers there were not so many of them seeking work around the coal mines as in former years.

Fishing.

Rough weather on the Atlantic coast rendered the month a quiet one for fishermen. At Digby practically no vessels landed, and very little fish from boats. The lobster season opened at this point on January 6, but on account of very rough weather most of the traps were not put out until January 10 and 11. Fishermen reported lobsters scarce, though factories were fairly busy putting up tinker lobsters. At Yarmouth fishermen in all branches were reported as having good catches, particularly lobstermen. Since the winter set in, fishing operations in Prince Edward Island waters have been confined almost entirely to smelts. The catch of the latter has not been up to that of former years due to the fact that at the beginning of the season ice conditions were bad, cutting off about 15 days and causing a big shrinkage in the catch. The smelt fishermen of the Island have united with those of New Brunswick in asking the Dominion Government for an extension of the season which closes February 15 to February 25. At Newcastle fishermen were engaged in smelt fishing, but the catch being taken was not up to the average for the reasons stated above. At St. John it was reported that good catches of gaspereaux and smelts were being secured in the Kennebecasis river. Gaspereaux were retailing at 10 cents each, while 10 and

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trade and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favorable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trade and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favorable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

11 cents per pound was being paid for smelts.

At Three Rivers tom-cod fishing was fairly good. At Port Arthur fishing, except through ice holes which was being carried on by a few fishermen living along the coast, was over. A considerable industry in fresh water fish from Northern Saskatchewan lakes has grown up, giving considerable employment. Grand Trunk Pacific facilities for transportation from Northern British Columbia were reported to have reduced the price of fresh salmon in Saskatoon about 33 per cent.

Fishing on the Pacific coast was also quiet owing to bad weather. At New Westminster fishing was reported practically at a standstill owing to cold weather and floating ice. At Nanaimo fishermen, outside of those fishing for herring, were quiet. The herring catch up to the end of the month was not up to that of the past years. Conditions at Prince Rupert were fairly active.

Lumbering.

Open weather and absence of snow in lumbering districts in Nova Scotia retarded logging operations, and on this account and increased freight and insurance rates the cut was expected to be considerably less in the province than it was in the previous year. In some districts in New Brunswick, also, lack of snow impeded operations. In the St. John district lumbermen were complaining of lack of snow, and there was too much ice on the roads. At Fredericton active conditions prevailed, though lack of snow in some parts interfered with hauling. At Newcastle lumbering companies continued to employ large crews and operations were proceeding rapidly, helped by just the right quantity of snow. Good conditions were also reported in Quebec districts.

In the Peterborough district wet weather interfered with logging and a number of men left the camps for the cities.

In the Cobalt district there was considerable activity in the woods, though operations were scarcely up to normal. A great quantity of pulpwood was being taken out, mostly for shipment to American pulp mills, but even in this line it was reported that the quantity was below that of two years ago. At Port Arthur lumbering was not particularly active. There were a few camps engaged in cutting pulp wood, ties and saw logs, and many men thrown out of employment by the closing of navigation and fishing were in the woods at this work. There was an improvement in wages and conditions owing to the greater scarcity of men capable of doing the work.

Lumbering in Northern Saskatchewan was reported to be on a much larger scale than a year ago, and men for lumbering operations were being sought in the cities during the month.

In some parts of British Columbia lumbering operations continued on an extensive scale, but in other districts very severe winter weather interfered with the work. Near Fernie logging operations were brought to a standstill. Shipments were also delayed on account of the severe weather. At New Westminster the cold weather and heavy snowfall caused the mills to close down, and prevented the movement of logs. Lumbering camps were busy, but the mills were expected to be idle until a thaw set in. The demand for export lumber and for shingles for shipment to the United States was good. Conditions on Vancouver Island were good and indications pointed to large orders from the Prairie Provinces in the spring. One of the mills on the Island exported over 14,000,000 feet of lumber during the past year, which constitutes a record for an Island mill.

Mining.

Coal mining was busy in practically all coal producing fields of the Dominion. In the Sydney district condi-

tions were active. Very little coal had been placed in the heaps as shipping was busy throughout the month. Companies were planning to increase outputs, though there was some doubt as to whether this could be done owing to shortage of labour. Added to the shortage there was an epidemic of grippe which laid off several hundred miners. At Westville the supply of men did not meet the demand, though all the mines operated full time. The Drummond mine again resumed operations and about 500 tons per day were being raised. The output, it was expected, would be back to normal in the course of a few months. The Acadia Coal Company averaged about 2,000 tons per day for January. At Springhill and Joggins coal mining was active, though most of the mines were shorthanded.

Western coal miners were exceptionally busy owing to very severe weather which created a heavy demand. Railway companies were unable to deliver coal from the mines in sufficient quantities on account of continued snowstorms, and in a few cities in Saskatchewan and Alberta there was danger of a shortage. In the Fernie district the coal mining companies found it impossible to supply the demand for both coal and coke. While the increased demand was enhanced by the severe weather, the same cause made it impossible to carry on operations continuously. Two snow slides at the Coal Creek mines closed down two of the mines for ten days, which considerably reduced the output. Blockades on railway lines in the locality were also responsible for several idle days at the mines. Vancouver Island mines were fairly active.

Metal mining continued active in Eastern mines, though there was a slight slackening in some of the British Columbia mines owing to the severity of the weather. In the Sherbrooke, Que., district asbestos, copper and chrome mines were running as usual. At Cobalt and Porcupine conditions were better than at any time since the war be-

gan. All the various mines were running full time both in the silver and gold camps, and the tendency was to increase, where possible, the number of employees at every producing mine. In some part of British Columbia severe weather caused a shortage of water owing to the freezing up of the creeks and a number of mines reduced their working forces on this account. Heavy snow slides in some parts blocked railway lines and a few mines were obliged to shut down. The Rossland mines and the Trail smelter were running at full capacity.

Manufacturing.

Manufacturing showed little change from the fairly active conditions of the previous month. Both the steel plants at Sydney and Sydney Mines produced up to capacity. The Sydney company will increase its quantity of iron ore and limestone by 300,000 tons over that of last year. The Nova Scotia Company will also add to its supply of raw materials for the making of steel. Truro industries were reported active. At Amherst there was increased activity in woodworking establishments, and the rolling mills, steel and moulding shops of the Canada Car and Foundry Company were operating after a shutdown of some few months. At Newcastle and Moncton all industries were working steadily. Active conditions were also reported from Fredericton.

Cotton mills at Montreal were well employed, also woollen factories. Boot and shoe factories shut down for a time during New Year holidays, but before the middle of the month business was in full swing again with good orders in hand. Factories at Three Rivers were reported busy.

Factories in the chief industrial centres of Ontario were in most instances actively engaged. At Toronto metal factories were busy and piano factories fairly so. Clothing factories were well engaged and boot and shoe factories

were busy. Breweries and cigar factories were quiet. At Berlin furniture factories were working short time, but rubber factories, button factories, shoe factories, foundries, robe and clothing factories, shirt and collar factories, tanneries, biscuit and confectionery factories were all working full time. Some factories were working overtime. Wholesale meat and sausage factories were busy. Breweries and cigar factories were working full time. At Woodstock a slight improvement was reported in the furniture trade. Manufacturers at Hamilton for the most part were busy, and the amount of work being turned out was far in excess of that of a year ago. At Brockville manufacturing generally was good. The automobile industry was active and carriage and wagon factories were fairly busy. At Galt shoe and textile factories were busy and working overtime. A number of factories were affected by floods and had to shut down, throwing several hundred operatives out of employment for a few days. At Guelph manufacturing on the whole was well maintained and the annual shut-downs for stock-taking and repairs were of shorter duration than usual. At Peterborough active conditions prevailed and a shortage of female help was reported. Vacancies were also reported in the woollen mills of Brantford and Paris. At Owen Sound some factories were running eight hours instead of ten. At Niagara Falls, London, Belleville, Kingston, Windsor and Stratford manufacturing establishments were reported either active or fairly busy.

At Medicine Hat nearly all the local industries were working and many reported business improving. Flour mills were working day and night.

Railway Construction.

Railway construction was continued on lines being constructed in Northern Alberta and in British Columbia. The head of steel of the main line of the Edmonton, Dunvegan and British Co-

lumbia Railway reached Spirit river during the month, a distance of 357 miles from Edmonton. The laying of steel on the Grand Prairie branch which heads off from the main line at a point east of Spirit river will be proceeded with at once and will probably be completed early in March. Steel was laid on the Alberta and Great Waterways Railway to Mile 182, and was expected to reach McMurray by April 1 in time to take forward the spring shipments of northern freight. During the year 1915, 326 miles of new railway were constructed in the province of Alberta.

Some construction work was also carried on in Eastern Canada. The spur connecting the main line of the Intercolonial Railway with the Transcontinental Railway at a point 11 miles west of Moncton was completed and all trains were using the Transcontinental track for that distance. The old main line track has been taken up and Berry's Mills station transferred to the Transcontinental line. A new station to replace the one destroyed by fire has been erected at Derby Junction. Construction work was carried on steadily on the Lake Erie and Northern Railway. The city of Brantford carried a by-law to sell part of the Grand Valley Railway to the Lake Erie and Northern, the purchase price being \$30,000. It was expected that the new road would be running between Galt and Port Dover in the near future. The road has been purchased by the Canadian Pacific Railway and will be run in conjunction with the Galt, Preston and Hespeler and the Preston and Berlin road.

A number of places in Ontario voted in favour of the proposal to construct an electric radial railway between Toronto and London.

General Transport.

Railway transportation continued active, though in the Western Provinces operations were seriously interrupted

during the month by heavy snowstorms and mountain slides. Traffic continued fairly busy in the Maritime Provinces. At Moncton steadily active conditions were reported. The winter time table of the Canadian Government Railways went into effect January 16. Traffic continued exceptionally good and the call for special crews rendered conditions active among trainmen.

In the West railway transportation was adversely affected by severe storms and snowfalls. At Brandon there was a very heavy snowfall during the month and it required all the help possible to keep the railways running. Owing to difficulty in keeping transportation open the city had to take special measures to insure a supply of fuel for the water-works. Large numbers of men, also, were required to keep the street railway tracks clear. At Moosejaw the very severe weather and heavy snowfalls made it almost impossible to keep the line clear for some time. Railway companies were hauling only passenger and coal trains and few trains were running on time. The street railway at this point, also, had trouble throughout the month and only ran cars at intervals. Coal shortages were threatened at a number of points. Fernie, B.C., also reported transportation facilities seriously hampered by the severe snowfalls and cold weather.

At Vancouver during the month plans were completed for the formation of a company to undertake the building of ships to have their home port in Vancouver. This is the result of a shortage of vessels and especially of ships to carry lumber manufactured in British Columbia to Australia. It is announced that the new boats will be of wood specially designed for lumber carrying and that one will be built at a time, the number being increased as the trade develops.

On January 1 the British Columbia Electric Railway at Victoria and Vancouver increased the fares on their rail-

way from eight tickets (non-transfer) to six (transfer) for 25 cents. The reason given for the increase is that the company found it impossible to pay the operating costs of its street system at the cheaper rates.

The Trades.

Building.—The usual quiet during January was added to by very severe weather in many parts of the Dominion, and even interior work had to be abandoned in some localities. In a number of places, however, many men following the building trades secured employment in factories.

Metal.—Machinists and some others of the metal trades continued very active. Plumbers and steamfitters, also, were busy in many localities, owing to frozen water pipes.

Printing.—Conditions in the printing trades continued fair.

Textile.—Textile trades were active in most of the localities where cotton and woollen manufacturing is extensively carried on.

Clothing.—Tailors were not very actively employed. Garment workers employed on war orders were active; others were only fairly well engaged.

Food and tobacco preparation.—Trades engaged in food preparation were busy. Cigarmakers, tobacco and brewery workers, with the close of the holiday trade were not so well-engaged.

Leather.—Leather workers continued fairly busy.

Transport.—Railway workers were for the most part active in both traffic and mechanical departments. In the

West very heavy storms and snowfalls interrupted train services in many localities, but there was exceptional activity amongst railway workers engaged in clearing the lines.

Unskilled. — Severe weather during January afforded considerable employment in many parts of the country in clearing the streets and street railway tracks of snow, and in some instances it was found difficult to secure sufficient men for the work. The work of clearing steam railway lines, particularly in the West, also gave employment to many men. Outside of these special instances, however, and the cutting of

ice, there were few opportunities of employment for unskilled labour.

Canadian Trade.

The total imports of merchandise entered for consumption in Canada during December, 1915, amounted to \$45,690,721 and compared with \$30,392,913 in December, 1914, an increase of \$15,297,808. Domestic exports of merchandise for December, 1915, amounted to \$92,171,402 as compared with \$37,193,609 for December, 1914, an increase of \$54,977,793. Increases in the exports of the products of the mines, forest, manufactures are shown, while a decrease was shown in the export of the products of the fisheries and of miscellaneous merchandise.

The following table gives the latest official summary of Canadian foreign trade:

IMPORTS AND EXPORTS, DECEMBER, 1915.

Imports entered for consumption.	December.		Exports. (Domestic.)	December.	
	1914	1915		1914	1915
Dutiable goods.....	\$17,482,008	\$24,805,899	Mines.....	\$3,791,209	\$5,632,984

*NOTE.—It will be noted that the figures relating to the imports and exports of coin and bullion for the twelve months ending November, 1915, were: Imports, 1915, \$12,903,750; 1914, \$139,369,894, and exports 1915, \$128,316,291; 1914, \$19,831,382. Although it has been customary to include these figures in trade returns, the total trade figures are seriously disturbed by them in this instance and they should not be taken as an indication of the trade of Canada.

The following are the returns of the Canadian bank clearing houses for January, 1916, with increase or decrease over January, 1915:

	January, 1916.	January, 1915.	Changes.
Montreal.....	\$261,581,500	\$188,434,337	+ \$ 73,147,163
Toronto.....	194,964,304	146,700,771	+ 48,263,533
Winnipeg.....	145,723,005	102,143,672	+ 43,579,333

Medicine Hat.....	1,334,407	888,721	+ 445,686
New Westminster.....	844,294	1,107,170	— 262,876
Peterborough.....	2,234,818	1,773,303	+ 461,515
Totals.....	\$758,593,915	\$575,267,199	+ \$183,326,716

Canadian revenue for December, 1915, amounted to \$17,271,516.63 as compared with \$9,167,940.62 for December, 1914, an increase of \$8,003,576.01. The expenditure on capital account for December, 1915, was \$21,642,801.82 compared with \$11,258,778.06 for December, 1914. The expenditure for December, 1915, comprised \$19,233,943.04 for war purposes, \$2,158,858.78 for public works, including railways and canals, and \$250,000 in railway subsidies.

The bank statement for December, 1915, showed the paid-up capital stock

of the chartered banks of Canada to be \$113,987,577 as compared with \$113,987,275 for the month of November, 1915. Deposits payable on demand for December amounted to \$423,690,384, compared with \$406,735,171 for November, 1915. Notes in circulation for December amounted to \$122,199,582, compared with \$124,153,685 in November. Loans to cities, towns, municipalities and school districts during December amounted to \$30,878,028 as compared with \$41,064,550 during November, 1915.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

Labour has been active during the past month.

Wholesale and retail trade was somewhat less than last month and than January of the previous year.

Lumbering has been greatly handicapped by lack of snow, and the cut will for various reasons be considerably less than that of the past year. Coal mining was very active. Most of the mines were short-handed. The miners also report that they are somewhat handicapped owing to shortage of cars. The rolling mill, steel and moulding shops of the Canada Car and Foundry Company were operating after a shut down of some few months. Woodworking plants showed an increase in activity.

Halifax.

The labour situation in Halifax during January in some branches of the building trades has been very good. The demand for carpenters has been good, and builders' labourers have also been well employed.

Along the waterfront longshoremen and freight handlers have been fairly well employed.

Local biscuit and confectionery manufacturers have been advertising for female help. Shoemakers and harness makers were also in demand.

Sydney.

Labour conditions continued active over the entire district, and labour generally was well employed. Both steel and coal operators are planning for larger outputs this year, but while the steel trade will no doubt show increased tonnage, it is doubtful if the coal outputs will be much larger, owing to shortage of labour. Added to this shortage, during the month the mines were much affected by an epidemic of grippe, which laid miners off by the hundreds. The smaller plants such as wood factories, foundries, etc., have in some cases laid off a few outside men for the winter, but these have been eagerly picked up by the larger concerns. The out-door trades have been, as usual, affected by winter conditions, but there was plenty of work in the district.

Railway transportation was fairly heavy.

The volume of business done by the wholesale and retail trades was much larger than in January of last year.

Truro.

All classes of labour were well employed during the month, but as it drew to a close the demand for skilled labour, as usual at this time of the year, fell off.

There was at no time during the month much enquiry by unskilled labour for employment.

All industries operated full time, and the lumber trade improved.

Railway operating never was greater. More traffic offered than could be readily handled.

The between season retail and wholesale business was good.

Customs receipts and bank clearings were satisfactory.

The cost of living ran fairly even with the previous month, the only rises being in flour and farm produce prices.

The chair works at Bass River was shut down for two weeks' stock-taking.

Westville.

Labour conditions continued satisfactory in this district, and while the scarcity of labour was not so pronounced there was ample demand for all classes, and the outlook compared favourably with that of last year.

Railway traffic during the first half of the month slackened somewhat, owing to the scarcity of ingots and material being shipped to the manufacturing plants, but, during the latter part of the month, was extremely busy.

Wholesale and retail trades continued busy, and report a considerably larger volume of business than in the first month of last year.

The situation in the coal industry remained unchanged. The supply did not meet the demand, though all the mines operating worked full time.

The woollen industry was very quiet. The decision of the Nova Scotia Underwear Company, who were burned out some months ago at Eureka, to rebuild at Windsor, N.S., will cause a considerable loss to the locality, industrially.

PRINCE EDWARD ISLAND.**Charlottetown.**

Conditions in the labour mart compared very favourably with those of December, and were an improvement over that of same month in 1915. This improvement was due to the work of the new car ferry steamer "Prince Edward Island," in making regular trips to and from this port, thereby giving employment to a large number of men.

Considerable work was also in progress in other trades. Carpenters were well employed on several large contracts and the outlook was good for a brisk spring season.

The report of the Accountant of Public Works shows that there was expended in Prince Edward Island last year for the construction, improvement and repair of wharves and breakwaters, and the dredging of harbors, the sum of \$295,806.77.

NEW BRUNSWICK.**Fredericton.**

The general condition of the labour market was good during January when compared with the corresponding month in previous year. At this season there is always a slackness, with considerable unemployment, but principally owing to the large number of enlistments from this district there are fewer unemployed persons than in former years. Industrial establishments, especially those engaged in the manufacture of military supplies, were generally active, and some had to work overtime. The shortage of work was felt most in the building trades, but the men look for these conditions at this season and are prepared for it.

Moncton.

Labour conditions during January were naturally not as active in all lines as in the preceding month, but were

fairly normal for the season of the year. In railway circles and in all of the various manufacturing plants, steadily active conditions prevailed, and the outlook was good. Building operations have become quieter, but there was still considerable employment in this branch as work upon several large public contracts were being carried on through the winter.

The winter time table of the Canadian Government Railways went into effect January 16 and showed but little curtailment locally in the train service. Traffic continued exceptionally good and the call for special crews makes very active conditions among trainmen.

Newcastle

The labour situation was somewhat better in January than the corresponding month last year and compared favourably with last month's activities.

Both inside and outside labour was well employed and there was practically no unemployment.

A large number of building tradesmen who generally have a slack period at this season of the year have been employed repairing buildings, etc.

Railway men reported freight on the Canadian Government Railways the best for the last 30 years at Newcastle.

St. John.

The labour market was normal during January, but the building trades continued dull.

The St. John Street Railway Company inaugurated a new through service on January 1 from the market square to the west side ferry line and from Main street to Fairville.

Exports to the United States for the quarter ending December 31, 1915, showed an increase of \$375,632.13, as compared with the same quarter in 1914.

Inland revenue receipts for December were \$27,632.67, and for the corresponding month in 1914 \$21,935.85, an increase of \$5,696.82. A comparative

statement shows an increase for the year 1915 of \$33,544.71.

The customs receipts for the month of December were \$256,612.15, and for December, 1914, \$116,025.45, an increase of \$140,586.70.

The total harbour receipts for 1915 were \$122,562.80, and the corresponding figures for 1914 were \$94,998.91, an increase of \$24,564.79. The total receipts for the month of December were \$14,000, double that of December, 1914.

The total receipts of the pilots for 1915 were \$36,143, an increase of \$3,130 over that of 1914. Of this amount British vessels paid \$26,938, and foreign vessels \$9,204.

Receipts of the savings bank for December were \$55,110.74, and withdrawals \$69,783.90.

The free evening technical school has been re-opened after the vacation. Instruction is being given in two branches—commercial arithmetic and mechanical drawing.

All grades of American hard coal have advanced \$1 a ton. Shortage of coal carrying vessels is said to be the cause of the advance.

The figures of the transatlantic wood trade from St. John in 1915 have been published. In spruce deals there has been an increased shipment of 54 million feet, and the increase would have been larger if the freight rates had not been so high.

Woodstock. — The Potato Products Company, which employs between 80 and 90 hands, has closed down on account of the high price of potatoes, which is their chief article of manufacture.

QUEBEC.

Hull.

Labour conditions were about the same as during the preceding month, but much better than during the corresponding month of last year. Pulp factories were working full time. Unskilled la-

hour was more fully employed than before the war, but at smaller wages. The men employed in the bush will likely continue to work throughout the winter.

Charitable societies reported a decrease of 60 per cent in the number of men seeking work as compared with January, 1915.

General business was fairly active, although not quite as good as during last month.

Montreal.

Most statements during January from men at the heads of banks, large wholesale houses and many manufacturing industries indicate that the progress towards prosperity noted in recent months still continues, war orders and the moving of the crop being still the basis of this prosperity.

Dry goods travellers are devoting their attention mainly to spring goods, and have instructions in some cases not to push certain lines of fall goods owing to the great uncertainty as to mill deliveries. There is already, however, considerable buying of certain lines of fall goods such as corduroys, velveteens and sealettes which will largely replace the usual lines of dress goods. The difficulty met with by the dry goods trade in securing some of their lines of imported goods is having a beneficial effect on Canadian industry in a number of cases where Canadian manufacturers are supplying the lack. They have in some instances made big strides, notably in making hosiery and underwear, both in wool and cotton.

Cotton mills are well employed, and manufacturers of domestic woollens, in booking new wholesale orders, state specifically that they cannot guarantee prompt or full deliveries owing to the difficulty in securing supplies of raw wool and dyes. Manufacturers of furs closed up their year in good shape.

Boot and shoe factories were more or less shut down while operatives enjoyed holidays from New Year's to Epiphany, but before the middle of the month

things were in full swing again with better orders in hand. There was a good export movement in sole. The scarcity of dyes and chemicals has had its effect on the tanning trade. Paint manufacturers were receiving good orders for spring shipments, but were puzzled as to where they are going to get many lines of goods to fill their orders.

The building trades were still very quiet. Those belonging to the printing and allied trades were not getting nearly the amount of work usual in prosperous times, but the amount of employment varied.

The Soldiers' Employment Commission has established relations with employers with a view to securing employment for disabled soldiers. A number have been placed in this way already, and men unable to resume their old occupation on account of injuries are being taught others, when it is possible.

About 7,000 employees of the Dominion Textile Company benefit from an increase of wages by five per cent at the different mills of the company. The new scale went into effect on January 24, the increase being entirely on the initiative of the company. The mills are running at capacity at present on orders received for domestic use.

The renting situation is more stable than it was last spring. War conditions have been discounted, and the tendency on the part of real estate owners is to accept a reasonably low rent for a short term lease.

Fifty bar-rooms will go automatically out of business after May 1, each getting a compensation of \$3,000.

Both the Western and Royal Victoria hospitals report expenses of maintenance per patient to have increased. At the Western, Mr. Charles T. Hare, treasurer, said that operation expenses had been increased 10 or 15 cents a day per patient, although the increase was largely due to the higher price of medical supplies. The total cost per day in the Royal Victoria for each patient was

\$2.25, 5 cents increase over the previous year. The daily cost of provisions for each person, however, was 32 cents a day, only 1 cent more than in 1914.

The Meurling Refuge records show that the number of homeless men has decreased by 50 per cent from the same time a year ago. Thirty-eight civic employees are on active service, and the men are being paid in full while they are away, the total sum thus spent annually amounting to \$34,780.

The mayor has directed that hereafter no begging shall be allowed in the streets. Institutions will care for those who are absolutely helpless, all the others will be found work if they will work.

According to an opinion of City Attorney Laurendeau with regard to the report of the fair wage inspector re stonecutters complaining that they were not paid the fair wage scale on the public library work, the city can take the difference between the money actually paid the labourers and the amount due them according to the fair wage scale from the deposits which contractors have to make with the city in tendering for contracts as a guarantee of good faith.

The railroads still show themselves to be making lots of money, and the bank statements made in January look very well. The Canada Cement Company did very well when the lack of building activity through the country is considered. The customs receipts for the port were nearly 50 per cent in excess of last year.

Quebec.

The month has been a fairly good one as compared with the same month in other years. Conditions in the building trades for outside work were dull, though this condition is the rule during winter. In manufacturing industries conditions were fairly active. The number of unemployed was materially increased when work closed down upon buildings not in a stage sufficiently advanced for inside work.

The Quebec city corporation decided to start work upon the drainage of one of its newly-annexed suburbs. This work will amount to about \$30,000 and will give employment to between 200 and 300 labourers for a couple of months.

The ice harvest has only just commenced, this being some three weeks later than last year. It affords employment to a couple of hundred men. Shopping and delivery employees experienced the usual lull after the holidays, but not to any greater extent than usual.

Sherbrooke.

Labour conditions were about the same as last month.

The different railroads did a good freight business and also showed an improvement in their passenger business.

Lumbering was only fair.

The different mines in this section, asbestos, copper and chrome ore were running as usual.

Sorel.

The condition of the labouring class was most satisfactory. Shipbuilding establishments, factories and industrial plants were all very busy, and the number of employees was considerably increased. Trade was quite satisfactory, and better in certain respects, than during the corresponding month of last year. The month on the whole was a very good one.

St. Hyacinthe.

The general condition of the labour market was very good, in fact better than during the corresponding month of last year. The building trades were quiet; some of the men, however, found work in the factories. All the other industries were active and in some cases overtime had to be made.

Retail business was fairly active, but the wholesale trade was rather quiet.

St. John's and Iberville.

Labour conditions improved as compared with last month. Factories worked full time, although there still was some unemployment among the building trades and unskilled labour. Very little new work has been started in the building line, with little prospect of any for some time.

Business in general was better than during last month, on account of there being more work in the manufacturing establishments.

Three Rivers.

The labour situation during January was fairly satisfactory, showing very little difference from last year.

Tommy cod fishing was fairly good.

Lumber firms are doing well this season owing to mild weather and good roads.

All factories were running full time with a good amount of orders ahead.

The municipality of Le Cap de la Madeleine voted to grant a franchise to the Three Rivers Traction Company allowing them to run their cars through the streets of the village.

ONTARIO.**Belleville.**

General labour conditions during January, despite the condition of the times, were excellent. Whilst in some branches of trade there was a comparative lull the general condition was good. In two manufacturing concerns employees were working day and night. In other branches of work there was considerable activity and such factories as manufacture locks, etc., and the shirt factory were all working full time.

At Bancroft and adjacent localities marble quarries during the last two weeks of the month were working overtime to fill orders. The marble quarried is considered the finest product in Canada and has been meeting with a ready sale.

Brantford.

Labour conditions remained generally the same as last month, the supply and demand being about equal. There was practically no unemployment, and in some instances workers were being advertised for, namely, machinists and workers in the cotton and woollen mills.

Building trades remained quiet, no permits being taken out for the past month, but the men in these trades have secured factory work.

The most prominent feature of the month's activities was the voting on a by-law to sell a part of the Grand Valley Railway to the Lake Erie & Northern Railway Company. The question was treated as a money by-law, and the by-law carried, the purchase price being \$30,000.

Agriculturists have the usual winter work to do.

Manufacturing concerns were keeping all available men and women employed. There were vacancies in the woollen mills here, and also at Penman's at Paris.

Railroad construction was carried on steadily on the Lake Erie & Northern Railway.

Berlin.

Labour conditions in Berlin and Waterloo for the month of January showed very favourably compared with those of the previous month and were away ahead of the same month last year. Although some of the furniture factories were only working eight and nine hours per day a few were working overtime. Rubber factories, button factories, shoe factories, foundries, robe and clothing factories, shirt and collar factories, whitewear, tanneries and biscuit and confectionery factories were all working full time, while the Buffalo Forge factory and Dominion tire factory were working double shifts. Felt factories were also working overtime. Wholesale meat and sausage factories were busy, while breweries and cigar

factories were working full time. On account of the mild weather during the month, painters and decorators, carpenters and plasterers were employed steadier than last month. There were still a number of houses unfinished. Unskilled labour was not much in demand during the month. However, this class and bricklayers were about the only ones unemployed.

There was quite a shortage of female labour in shirt, button and whitewear factories.

Customs returns for Berlin for December, 1915, were \$73,355.38; for December, 1914, \$44,994.15; an increase of \$28,361.23.

The Hydro Radial By-law was carried by a majority of over 600 on New Year's Day.

Brockville.

There has been a slight falling off in labour activity when compared with December, 1915, noticeably owing to the lack of outside work. Manufacturing, however, was fairly good in most lines and the unemployment question was not at all serious, there being very few unemployed for the mid-winter season. Railway traffic has been unusually active, both on the Grand Trunk Railway and the Canadian Pacific Railway for the season.

Agriculture was very quiet.

Manufacturing was generally good. The steel and iron trade was brisk. The carriage and wagon trade was fair. The motor car industry was active and a large output is looked for. The motor boat trade was only fair.

Ice cutting operations were in progress for a time and were active. The continued mild weather and rain, however, has almost cleared the river of ice and this work at the end of the month was at a standstill.

Chatham.

Labour conditions in January showed little change over those of the preced-

ing month. Outside work was carried on with considerable activity. Foundations for new factories were being completed as fast as possible.

Owing to the large Xmas business retail trade was quiet the greater part of the month.

Railway traffic declined during the last few weeks of the month. Considerably less money was paid out for charity in 1915 than in 1914.

Farmers were realizing that farm help will be scarce owing to the number of enlistments and were offering \$35 to \$40 per month to single men for the season.

Cobalt.

Skilled miners resident in Cobalt found steady employment at the various mines. There was sufficient work to absorb all local labour in this line, but conditions were not such as to encourage outside transient labour to come in quest of work.

Common labour was able to find work at something or other if inclined to accept the rate of wages offered, the average rate paid being from \$2 to \$2.50 per day without board.

Galt.

Everything still seemed to be booming in Galt and district. The big machine shops were working day and night. The large shoe factories and textile companies also were working overtime.

The customs returns for Galt show a great increase for December, 1915, over the same month the previous year.

The Galt Electric and Gas Fixture Company's plant, which was the scene of a bad fire a short time ago, was again running full force.

There were only a few cases where relief was necessary, and they were caused by the illness of the breadwinner.

Owing to the stoppage of a number of factories by floods from 600 to 700

male and female operatives were thrown out of employment for several days.

Guelph.

The general condition of the labour market during January continued satisfactory and showed a marked improvement over the corresponding month of last year, with less unemployment than has prevailed at this season for several years.

Manufacturing on the whole was well maintained and the annual shut down for stock-taking and repairs was of shorter duration than usual.

Weather conditions have not been favourable for ice harvesting.

The by-law to guarantee \$347,000 to the Hydro Radial Union was carried by a majority of 634.

Customs returns for the month of December amounted to \$26,074.95, showing an increase of \$15,027.26 over the corresponding month last year.

Hamilton.

Labour conditions during January were fairly good in most branches of industry and showed a considerable improvement over the corresponding month of last year.

As is customary at this season, some of the building trades were quiet, but a demand for factory workers gave employment to many who had been employed on outside work until the end of the year.

The annual report of Industrial Commissioner Marsh showed that his department had had an exceptionally good year, eight new factories having located here during 1915, which is the best showing of any year since 1912. Besides these eight new factories, the Mercury Mills Company, which located here in 1912, has purchased six acres of land and plans are now being prepared for a complete new plant. Hamilton figures among the 60 municipalities receiving

authority for reductions in hydro power rates. The new rates for house consumption allowed this city show a reduction 2.5 to 2 cents for the first k.w.h. and from 1.25 to 1 for additional. The new commercial rate is: for the first 30 hours 1.5, and for all over 100 hours .15. Hamilton will receive hydro power at \$14 per h.p., a decrease of \$1.

The returns made by the Assessment Department places the average assessment of each of the 33,745 houses in the city at \$2,069. The average assessment last year was about \$1,800 per house.

Christmas business for 1915 at the local post office proved to be a record, particularly with the overseas outgoing parcels, over 25,000 being handled.

Customs returns for the month of December and the year 1915 show an enormous increase. The figures are: December, 1915, \$418,196.24; December, 1914, \$163,260.92; an increase of \$254,935.32.

A number of merchants in the city are trying to bring about an early closing rule and are meeting with much encouragement in their efforts. They are trying to induce all merchants to close their places of business on Tuesday, Wednesday and Thursday evenings at 6 o'clock, except during Christmas week or on nights before holidays.

Permission has been granted by the provincial authorities for the spearing of fish in Burlington Bay again this winter.

The civic works department does not contemplate building any new roads during 1916, but will devote considerable time to the repairing of the asphalt and macadam roads now in use.

Farmers at this season of the year are not very busy, but in spite of this the supply of farm help is not equal to the demand.

Manufacturers are for the most part busy. The amount of work being turned out is far in excess of what it was a year ago.

Kingston

There was little change in labour conditions as compared with last month; manufactories in general were active. Taking a general view of the situation prospects were good and away ahead of the same month last year. The steel work at the new causeway is being pushed ahead as fast as the weather will permit.

Inland revenue for December totalled \$11,002.66.

The annual report of the fire department shows a decrease in the losses by fire as compared with 1914 of \$225,418.

London.

Labour conditions remained about the same as last month, and were much better than a year ago. The different factories were all busy, and for Christmas holidays one large stove company only closed down for three days where they generally close for ten days. In the printing business conditions were good with no idle men in the city. Outdoor trades were quiet, but quite a number have found work in other lines. The railroads were busy, and reported large quantities of freight moving.

The city is preparing a large programme of permanent roadways, sidewalks, etc., to be commenced as soon as spring opens up. A large force continues to work on storm sewers.

Commercial travellers report a larger volume of business than a year ago and a more settled feeling among the retail merchants of Western Ontario.

Very little call has been made upon the relief associations for help so far this year.

Niagara Falls.

The year opened with favourable conditions in all industrial circles and this state of affairs promises to continue indefinitely. A lessening of employment in building trades and woodworking industries was offset by activity in the

same lines in the contiguous city of Niagara Falls, N.Y. Many Canadians are employed there.

The Oneida Community, Limited, which formerly operated a chain and trap factory here, and which still owns valuable property in the city, will establish a silver-plating and cutlery factory. A temporary plant will employ 50 hands and a factory to be erected will employ 100. This will be the third factory of its sort in the city.

A review of the building trades for 1915 shows \$1,048,000 expended on erection and repairs of buildings, a decrease of \$187,000 from 1914. Two-thirds of the work was undertaken in the last six months of the year. The outlook is good.

Commercial, financial and transportation conditions were generally satisfactory.

Fire losses in the city during 1915 were \$38,000, with \$29,000 insurance.

Manufacturing generally was active.

Port Colborne.—The Canada Cement Company's plant was closed down for an indefinite period for extensive repairs.

Welland.—Local industries continued to be busy and the general state of employment was good.

Orillia.

Labour conditions continued very satisfactory. There has been practically no suffering from lack of unemployment this winter.

Customs receipts for the port of Orillia and outports for December amounted to \$62,608, as compared with \$5,595 for the same month in 1914.

Conditions in agriculture were quiet, and in lumbering there was only a fair amount of activity.

The smelter was busy and general factories were active.

Ottawa.

But little change in the labour situation was recorded last month as compared with December. A number of

trades continued busy in the filling of war orders; others remained slack, but for the most part the trades in general were fairly well employed. The annual ice harvest helped to improve the situation slightly. Unskilled labour was dull even with the advent of several civic projects. The building trades were particularly dull. On the whole the situation showed very little change.

During the month the registration of the unemployed at the civic bureau totalled 400.

A unique action which creates a precedent for local street railway employees is contained in a fine levied in police court on a motorman who failed to heed the signals of a traffic policeman.

Statutory salary increases for civic employees have been granted as usual this year.

That a farmer is responsible for the safety of a boy employee has been demonstrated here in the award of \$250 damages to the father of a youth who, while driving cattle, was fatally gored by a bull.

In an effort to establish a superannuation fund for city firemen the Firemen's Benevolent Association has offered to subscribe \$10,000 towards the project.

Owen Sound.

Labour conditions during January were slightly quieter than in December. A few men have been reported as idle, in other cases some of the factories or departments of factories were running eight hours a day instead of ten. While general work was quiet some factories engaged on special work were busy.

Business on the whole for the month has been fairly good.

The calls on the benevolence committees of the town were away below last year's.

Peterborough.

The general condition of the labour market for January was very satisfac-

tory and showed a marked improvement over conditions prevailing in the same month of last year.

Foundries and textile factories were all working full time, several working overtime. Manufacturing industries generally were working to full capacity. A scarcity of female help was reported.

The building trades did very little, though this is not unusual at this season of the year. No building permits were issued during the month, but there was a lot of repair work being done.

Farmers find it hard to get help.

Port Arthur and Fort William.

Labour conditions generally for January have been much the same as those for the last month of 1915. The complete shut down of navigation, which only partially affected December, has affected the whole of January, and the completion of the herring season in December and the freeze up of the lake in January has cut out the work of the fishing fleet.

Manufacturing, except in some special instances, was very quiet.

Sault Ste. Marie.

Labour conditions remained practically unchanged from those of the previous month. Outside of some interior repairs building was at a standstill. It was expected there would be considerable activity in metal mining shortly on account of rich finds at Michipicoten and the Gourdeau districts. Increased activity at Bruce Mines was also expected.

Stratford.

Labour was generally well employed in the city and district and conditions compared favourably with the preceding month.

Local industries were well employed. The Grand Trunk Railway shops and other factories were employing day and night gangs.

Customs returns for December, 1915, were \$21,163.37; in December, 1914, the returns were \$10,520.54.

Manufacturing concerns were all busy.

St. Catharines.

Labour conditions continued favourable. Building trades showed a falling off, following usual trend at this season.

Labour conditions in Merritton, Thorold and Pt. Dalhousie continued fair.

St. Thomas.

Conditions continued fair in labour circles throughout January. The building trades were very quiet, as is usual at this time of year. Local industries engaged in turning out war orders were busy; other industries were fairly well employed. General conditions in this city and district were much better than during the corresponding month of last year. There were very few idle men; the opportunities for employment being good.

Railroad traffic employees report a fair month, with slight falling off in traffic towards the end of the month. Railroad shopmen were well employed.

Retail trade showed a falling off after the Christmas trade. Wholesale trade was fair.

The barbers of this city were successful in having a city ordinance passed regulating the closing of all barber shops.

Toronto.

Labour was more generally employed during January than has been the case for some years. A large proportion of those in the building trades were out of work, but most other classes of skilled workers were well employed, and the number of unskilled labourers unemployed was much fewer than is usual at this time of year. A considerable percentage of clerks, salesmen and others engaged in light occupations were idle.

On the first the ratepayers adopted, by a large majority, the by-law for the guarantee of bonds to the amount of \$4,240,000 for the construction of the proposed hydro electric radial railway from Toronto to London. The by-law was subsequently passed by the City Council.

The customs receipts for December were larger than during any previous month, amounting to \$2,128,050, as compared with \$1,017,096 for December, 1914, and \$1,397,375 for the same month of 1913.

The Toronto Harbour Board has prepared estimates for the work of the coming season, showing a proposed expenditure of \$2,700,000. Much of the work will consist of the reclamation of land and constructing sea-wall foundations and will give employment to about 800 men.

The report of Works Commissioner Harris on the civic car lines shows a revenue for 1915 of \$199,300 from the carrying of 11,712,390 passengers, as compared with a revenue of \$166,995 from 9,839,765 passengers in 1914.

The 45th annual convention of the Bricklayers', Masons' and Plasterers' International Union was held here beginning on the eleventh and continuing for two weeks. About 300 delegates were in attendance. They decided to affiliate all Canadian locals with the Canadian Labour Congress.

The metal and engineering trades were active. A number of the employers have agreed to the demands of the Machinists' Union for a nine-hour day and time and a half pay for overtime. Cabinet makers, furniture workers and upholsterers were quiet. Piano workers were fairly well employed. Jewellers and silversmiths had plenty of work. Printers, bookbinders and lithographers were fair. Leather workers were active. Garment workers had an active month. Boot and shoe workers and hat and cap workers were well employed. Furriers were fair. The provision trades had steady work. Brewers and cigar makers were quiet. Hotel employees

were slack. Restaurant help were better employed. A difficulty between hotel and restaurant proprietors and the waiters, waitresses, cooks and others employed in serving food arose out of an order issued by the Medical Health Department that the latter must be medically examined every six months. The Waiters' Union has protested against its members having to pay the cost of the examination which they claim should be borne by the employers. Railway men and others engaged in transportation had a fair amount of work.

Windsor.

Labour conditions have been very satisfactory. In fact the demand for labour was far better than last year at the same time or even in June last year, and at the end of the month there was practically no unemployment.

In the building trades there has been a good demand for tradesmen. Although there was very little large buildings being constructed, men were kept employed on numerous dwellings under construction.

Factories have been active. The Peabody Overall Company was not able to obtain female help required to fill its contracts. Automobile factories were very busy, looking forward to an exceedingly active season.

Woodstock.

Labour continued to be pretty fully employed. The only idle men to be found in the city were those connected with the building trades—chiefly bricklayers and carpenters—and idleness at this time of the year is nothing unusual for these trades. For unskilled labour there was a demand. Local ice dealers were looking for men to harvest the ice crop and finding difficulty in securing them.

The factories reported a fair balance in the matter of demand and supply. With some exceptions business was not very brisk, though a slight improvement

was reported in the furniture trade; but if there was a considerable increase in the ordinary business of the factories it would be hard to get men to take care of it.

Shop-keepers reported business fairly good.

Farmers continued to complain of the scarcity of help, and expect increased difficulty in obtaining labour when the time comes for spring work.

MANITOBA.

Brandon.

During the past month labour has been exceptionally well employed. The demand for labour exceeded that of the previous month and was considerably greater than during the corresponding month of last year.

The abnormal weather conditions have been responsible for such a demand for men. It has required all the help available to keep the railroads running at all, so great has been the fall of snow, and so frequent the storms. Over 40 inches of snow have fallen during the month, the record for this district being reached.

The street railway has had a difficult time endeavouring to keep a schedule against the most trying conditions in its history. Large numbers of men have been employed on the almost hopeless task of keeping the tracks clear.

Owing to the transportation problem the city has been in imminent danger of a fuel famine. Special measures have had to be taken by the City Council to ensure a supply of fuel for the waterworks department.

One of the worst fires in the history of Brandon occurred on January 17 when the Syndicate Block was destroyed. The property loss is estimated at \$300,000, besides which four lives were lost and five people injured. Work has already commenced on the re-erection of a portion of the block destroyed.

In the closing hours of the old year a fire occurred in the premises of Gooden, Rae & Company, destroying

their stock and doing considerable damage to the building. In all, during the past month, one department store, two clothing stores and one furniture store have been destroyed by fire.

Successful conventions of stock breeders' associations and of the grain growers' association have been held in the city.

Winnipeg.

Labour generally was fairly well employed during the month. About 1,500 employees of the Canadian Pacific Railway shops were working at reduced hours throughout the month, but with this exception engineering trades were fairly well employed. Machinists working at the National Transcontinental Railway shops at Transcona continued to work 40 hours per week.

Retail trade was quieter than in the previous month, and much extra help engaged in the several branches was dispensed with after the Christmas season closed.

The heavy snowstorms that prevailed during the month provided work for a large number of labourers. It was particularly noticeable that there was a scarcity of English-speaking labour for unskilled work. So far there has been no problem of unemployment in this district. The Returned Soldiers' Association of Winnipeg has rendered service in the matter of finding employment for those who have returned from the front, and its operations are to be extended throughout the province.

The Free Employment Bureau found positions for over 534 men during January. This year's interview of the Trades and Labour Council with the Provincial Cabinet took place early in the month, and the following subjects were introduced for the approval of the cabinet: a proposal to incorporate the Shops Act with the Factory Act; a better organization of the Labour Bureau; an amendment to the Elections Act making voting a compulsory duty; the union label to appear on all Government

printing; an amendment to the Garnishment Act to raise the amount exempt from garnishment from \$25 to \$40, and that no garnishment should be made until after a judgment had been secured; the establishment of a small debtors' court; inspection and testing of refrigerator plants and compressed air tanks; a bill concerning those employed in the barber trade; amendment to the fair wage schedule, providing that trades' union rate of wages should be included in all Government contracts.

The amount of grain that passed through Winnipeg during January was in bushels: wheat, 9,960,800; oats, 4,559,200; barley, 760,700; flax, 126,500.

SASKATCHEWAN.

Moose Jaw.

Very severe weather and heavy snowfalls completely stopped work of all kinds and only the absolutely necessary work was being done. Railway companies were hauling only passenger trains and coal. Practically no wheat was moving. Very few trains were running on time, and high winds and drifting snow made it impossible to keep the track clear. The Street Railway Company had great trouble all month and cars could only run at intervals.

On the farms only chores could be done and no attempt was being made to haul out grain, of which there was still a great quantity in the hands of the farmers.

Coal shortages are threatened at a number of points and unless the weather moderated it was expected the situation might be serious.

Prince Albert.

There was little change in the labour market. Any available labour was being utilized in the cutting of fuel.

Railway transportation has been seriously handicapped by heavy snowfalls and the whole system, both passenger and freight, has been disorganized.

The provision market has been steady but fuel showed a tendency to rise towards the end of the month, owing to difficulty in obtaining supplies through the snow-bound roads.

The demand for lumber was good and the camps were busy.

Regina.

Unskilled labour was well employed. Heavy snowstorms were responsible for a large amount of street cleaning and the railroads also had large gangs at work cleaning the snow from tracks and yards to facilitate the moving of trains, switching, etc.

The building trades were not so busy as last month, although carpenters and plasterers were keeping fairly well employed.

Railway traffic eased off considerably; owing to the very severe weather the railways have not been able to keep so many trains on the roads.

Farmers are having difficulty this winter in securing men to do chores around the farms. They have been offering \$25 a month with board, but have been getting very few applications. Last winter there were lots of men to be had at \$5 and \$10 per month.

The Provincial Bureau of Labour, while doing its best, has not been able to supply the demand, and was expecting a very large demand for spring help with little prospects of being able to supply it. According to reports the wages will have to be increased considerably.

The Imperial Oil Company has purchased 55 acres of land just outside the city limits, on the Canadian Pacific Railway and Grand Trunk Pacific lines, and will build a large refinery this summer. In fact work was already commenced on the temporary buildings. The company intends having 400 men at work as soon as spring opens up.

There was a coal shortage in Regina during the month which was at one time very acute, but at the end of the month

according to the coal dealers the situation was well in hand. A break in the cold weather will help considerably. The city has placed its teams delivering coal so that when cars come in they can be quickly distributed to the public.

Saskatoon.

Industry was seasonably quiet in many lines except lumbering, transport and various repairs. Recent storms have made repair crews very active replacing broken telephone and telegraph lines. With the revival of business conditions very many telephones have been installed in the city and vicinity.

The coal trade was very brisk with a prospect of a shortage of supply.

Farmers were taking on men in the vicinity. Some repairs and alterations to buildings in the city were in progress.

The Grand Trunk Pacific facilities for transportation from Northern British Columbia have reduced the price of fresh salmon in the city about 33 per cent.

A considerable industry in fresh water fish from Northern Saskatchewan lakes has grown up, giving considerable employment.

Lumbering in Northern Saskatchewan woods is on a much larger scale than a year ago, and men have been sought in this city during the past month.

ALBERTA.

Calgary.

Owing to the severity of the weather in January outside work was practically discontinued. There was but little change in labour conditions over the preceding month, while it is quite evident that there was considerable improvement over the same month last year.

The continued severe cold spell, coupled with the increased price of gas, has created quite a demand for coal, consequently the coal mines and supply

houses have been taxed to the utmost to meet the demand. The railway companies could not deliver the coal from the mines in sufficient quantities owing to the continued snow storms.

The employees of the Canadian Pacific Railway Ogden shops were put on short time during the last week of the month. This means an eight hour day and frequently no work on Saturdays.

The labour bureau, which was carried on for the last two or three years by the municipality, has been closed down indefinitely.

Wholesale and retail merchants reported that trade was improving generally. During the month there were three fires in the business section of the city causing an aggregate damage of \$88,500.00.

The convention of the United Farmers of Alberta was held in the city from January 17 to 21.

The Associated Charities report giving relief to 108 British families and eight foreign for the month.

The new wage scale of the Calgary Municipal Street Railway for 1916 was submitted and passed by the city authorities as follows: First year by emergency contract, 26 cents per hour, any capacity; first year, accepted, 28 cents per hour as competent man; second year, accepted, 30 cents per hour as competent man; third year, accepted, 33 cents per hour as competent man; fourth year, accepted, 35 cents per hour as competent man. Men operating one man cars, excepting trailers and Ogden special cars, 40 cents per hour. The scale to take effect February 1, 1916.

The gross earnings of the city market during 1915 were \$14,921, according to a report submitted to the city commission by Market Superintendent McKenzie. The earnings—gross—for the past four years were as follows: 1912, \$1,432; 1913, \$4,925; 1914, \$11,650; 1915, \$14,921. This year will not be as good as last year, it is probable. The report states that the year was commenced with 17 vacant stalls. A request

for an improved car service to the market is made in the report. Commissioner Graves will go into this question.

Edmonton.

The usual dull period following the holidays was more noticeable the past month owing to very cold weather which retarded work in many lines. On the other hand weather conditions caused a heavy demand for coal. Miners were in good demand and retail dealers found it difficult to secure the necessary teams to make deliveries. Ice cutting provided considerable work during the month.

The demand for farm help, bush men and tie makers was less than a year ago and the wages offered were low. While there was a surplus of labour on the market it was much less than a year ago. No relief work was carried on and the number receiving assistance from the city was small compared with a year ago.

Freight shipments were light. Customs collections for the last quarter of 1915 were \$208,168 as compared with \$172,109 for the same period of 1914.

Excise collections for the last three months of 1915 were \$68,112 as against \$48,084 for the corresponding quarter in 1914.

Lethbridge.

Labour conditions have been fairly good through the present month considering that the weather has been very wintry. There was little demand for farm help and around the coal mines.

Commercial activity was far greater than in the same month of last year, owing to shipments of wheat and coal.

Bank clearings were about 100 per cent better than last year.

Farmers were busy getting their wheat shipped. Stock on the farms is getting more attention, and more help is being hired on that account. This month is considered the dull month with the farmers, but there are not so many of them seeking work round the coal mines as in former years. They have more to

attend to on the farms and are better off than last year.

Coal mining was very active, all the mines working at full capacity.

Medicine Hat.

Labour conditions were about the same as last month; very few men were out of employment. Many of the labourers who have returned from the harvest field have found employment in factories.

Nearly all local industries were working and many reported business improving. Flour mills were still working day and night.

Wholesale and retail merchants reported a good month's business, far ahead of the same time last year.

Conditions in the town of Redcliff are getting back to normal as shown by the amount of business done at the Canadian Pacific Railway station for the month of November over the same month a year ago. The receipts show an increase of over \$3,600 on outgoing freight and \$2,600 on incoming freight. Shipments of brick, coal and rolled iron were increasing almost daily. Grain shipments were also increasing; at the end of the month about 300,000 bushels had been shipped.

The Redcliff rolling mills have added new machinery to their plant, which means an addition of 50 men to their staff. It is their intention to install a nut and bolt plant which will mean a staff of 200 men in all by next spring.

BRITISH COLUMBIA.

Fernie.

During January, while the demand for labour was not noticeably increased, steady employment in the principal industries would have resulted but for the prevailing extreme climatic conditions which seriously handicapped operations in practically every line of business.

Industrial activity diminished on account of the heavy snowfall coupled with exceptionally low temperatures (for 28 days in January the thermometer ranged from 10° below zero to 49° below) making it almost impossible to carry on outside operations of any nature.

Commercial activity as affecting the wholesale and retail trades was fair, but transportation facilities were seriously hampered.

Lumbering was interfered with by the severe winter weather. The extreme cold also created a heavy demand for coal, which mining companies were unable to meet.

Nanaimo.

The labour situation has shown in the principal industry a slight change for the better during the month, there being fewer men looking for work in the mines than at any time last year, although there were still a large number of men out of work, especially in the building trades and among the loggers.

The coal trade has been very active during the month owing largely to the severe weather.

Nelson.

Conditions were not so bright during January as they were the previous month, owing to the weather which has not been so severe for some years.

The city has been finding employment for anyone requiring help, and so far as known there was no one in want.

There was a shortage of coal owing to inability to get coal miners, and orders could not be filled. There was, however, plenty of wood.

The Kootenay-Boundary mines showed a large increase in output of concentrates, an increase over last year's output.

The Trail smelter was running at its full capacity.

Outside building operations at Trail were practically at a standstill owing

to the extreme cold weather, but operations will begin again as soon as the weather permits.

The Rossland mines were running full capacity.

New Westminster.

The employment of men has been less general during January than in December, owing principally to the unusually severe weather and snowfall, which began early in the month. This caused a cessation of work in the sawmills, which were forced to close down, and also prevented the moving of logs. All outside work was practically at a standstill, although there was very little doing before. Some little relief resulted from the snowfall, which necessitated the keeping clear of car tracks, etc.

Street car traffic has increased slightly, although the city was unable to negotiate a "six for a quarter" ticket rate similar to that of Vancouver and Victoria.

Fishing during January was practically at a standstill owing to cold weather and floating ice.

Lumber camps were busy as usual, although the mills will be idle until a thaw comes. The demand for export lumber was good and for shingles for shipment to the United States.

The woodworking factories were slack.

Vancouver.

While there were less men unemployed than at the same time last year, the supply of labour was very much in excess of demand.

Relief was distributed by the city to necessitous cases. One hundred and eighty single men were being supported, all either aged or infirm men. Five hundred and seventy families were being relieved. The total amount being spent by the city each month in relief work is \$4,000. Besides distributing relief, the civic bureau which has this work in charge also registers men for employment. The average number applying at

the bureau each day for work has been 40. During December 30 men were sent to work for the city, 79 were sent out to work in the city for private firms, and 79 were sent to various places outside the city in response to requests for men.

Building returns for the year 1915 show a very big decrease as compared with 1914. The latter year was very much quieter in the building trade than in former years.

Fire loss during 1915 amounted approximately to \$608,224. Of that amount \$431,317 was insured, leaving property loss above insurance of \$177,927. These figures show a reduction in fire losses as compared with 1914 of \$70,000.

Inland revenue returns for December show an increase over the corresponding month of 1914. The total for that year was \$43,032.72. The total for 1915 was \$57,130.63, an increase of \$14,097.72.

The sixth annual convention of the British Columbia Federation of Labour gathered here Monday, January 17. Twenty-six delegates were present. The convention remained in session until the following Wednesday noon.

Labourers in the employ of the city have for some time been working half time at the rate of \$2.25 per day. Representatives of the men's association appeared before the city authorities and requested that they be put on full time. It was maintained that a living wage could not be earned by the half time system. If the request is acceded to it will cause the dismissal of a number of labourers in civic employ.

Fishermen reported very rough weather at the fishing grounds, necessitating the vessels seeking shelter, in some instances for days at a time. This condition is reflected in a rise in the price of fish.

Machinists reported a steady demand for men of their trade. Those in the employ of the Canadian Pacific Railway were working short time. Bootmakers reported conditions good.

The general industrial situation was very quiet, and particularly does this apply to the building trade; very little work was projected for the coming year. Owing to seriously reduced revenue, and big arrears of unpaid taxes, the city is not intending to carry out any large scheme of new public works, but to keep expenditures down to the lowest possible minimum consistent with maintaining the civic services.

Victoria.

Owing to the unusually severe cold weather which prevailed during January, outdoor labour conditions were the dulllest for many months past, very little work being carried on. Conditions of indoor employment were about up to

the average. At the Municipal Labour Bureau 650 men were registered at the end of the month, and 450 women. The Friendly Help Society had a busy time dispensing fuel, food and clothing to those who were in want during the cold spell.

On January first the British Columbia Electric Railway Company increased the fares on their railway from eight tickets (non-transfer) to six (transfer) for 25 cents. The reason given for the increase is that the company found it impossible to maintain the cheap rates, as they were found to be insufficient to pay the operating expenses of its city system.

The outlook for the lumber industry continues to improve, and indications point to largely increased orders from the Prairie Provinces in the spring.

REPORTS OF WOMEN CORRESPONDENTS.

Montreal.

There has been nothing in particular to note during the first month of 1916 as affecting female labour. Conditions compared favourably with those of January, 1915.

Women have had a fair amount of employment; in domestic service it has been found difficult to get experienced help.

On enquiry as to conditions among women clerks in stores it is found that many complain of the long hours imposed at the busy seasons; it is hoped that by next year employers will be able to divide the extra time so that none will feel the strain too heavily.

During the winter months much discomfort to employees and danger of contracting serious illness come from the draught caused by the constant opening of the doors in departmental stores. In some large stores it has been noticed of late that glass screens have been placed at the end of counters in immediate proximity to the doors.

Unemployment. — The number of homeless and destitute men in Montreal has been reduced by 75 per cent this winter. Charity work undertaken by the city increased by 25 per cent during 1915.

The Catholic Social Service Guild in its report for December shows the lowest number of new applications for work in any month since the bureau was opened in June, namely, 49 new applicants, 126 renewed demands came in, mostly from men and women working by the day; 69 offers of work were received; 11 permanent positions were secured, and temporary work given to 35 persons.

The handling and classifying of unemployment and destitution has been greatly simplified since the creation of these central bureaus of the English and French speaking sections of the Saint Vincent of Paul Society; the former, as has been mentioned in previous reports, at 316 Lagauchetiere street west, the latter at 131 of the same street. All cases corresponding to the Saint Vincent

of Paul Society for relief coming under the notice of other organizations are referred to one or other of these centres.

The Charity Organization Society opened a new branch of its work at 1862 Notre Dame street west on January 13 in order to deal with the needs of the western part of the city. This society, in conjunction with the Police and Recorder's Court, is making an effort to stamp out the practice of begging on the streets. This decision has been taken owing to a number of unworthy cases having been discovered upon investigation.

During December 696 families applied for relief, an increase of 56 over the corresponding month of last year. 1,073 visits were made, 223 cases of unemployment, 57 cases of tuberculosis found.

A Social Workers' Federation has been formed to give social workers of Montreal the opportunity of meeting regularly. Membership is opened to both paid and volunteer workers. The meetings are held from 10.30 to 12.30 every Saturday morning in Room 106 of the Arts Building, McGill University.

Nurses. — The Victorian Order of Nurses has been unusually busy during the present season, many of the visiting nurses being obliged to prolong their hours of work each day. The Verdun section of the Victorian Order of Nurses held a "baby show" during January, the object being to encourage mothers to profit by the advantages offered by the Order; 175 took part and prizes were awarded.

Child labour.—An important section of the report of the Minister of Public Works and Labour is supplied by Mr. L. Guyon, chief inspector of industrial establishments in Montreal. His findings for 1915 show that children under 14 years are now employed much less than they were a year ago; but he says

that cases are often reported from surrounding municipalities where employers seem to think that being outside of Montreal makes them immune from the law. Mr. Guyon states that the presence of the idle child growing up in the streets in the shade of moving picture shows, of which there are so many in Montreal, is a sadder sight than finding the child prematurely removed from school and put to work in a factory. Reference is also made in the report of the Minister of Public Works and Labour to the result of "Hotel Inspection," which in its first year is declared to have produced much good, many objectionable features of hostels having been ordered out of existence.

Health and hygiene.—The series of conferences held during 1915 under the auspices of the City Health Department in its campaign against tuberculosis and infant mortality were attended by over 26,300 people. In all 147 lectures were given with an average attendance of 200. It has been decided by the department to continue these conferences during 1916. A new public bath was inaugurated during the month of January in St. Lawrence ward, one of the most populous of the city. There are now 14 public baths in Montreal under municipal direction, available to women on certain days of the week.

Welfare of youth.—The report of the Provincial Secretary made during the present session of the Legislature gives special mention to an increased demand for night schools throughout the province; 6,256 pupils are now enrolled. The Provincial Government is enabling school municipalities to construct boys' academies. Poorer districts have received over \$100,000 for new schools and the re-construction of old ones. Industrial schools of the province hold 538 children—324 boys and 214 girls. The number of children sentenced to reformatories is 534—443 boys and 91 girls.

Toronto.

Generally speaking, factory work was slacker during January than in December, though an improvement upon January of last year. A great deal of night work has stopped and labour has been more normal and steady. The William Davies Company have had most of their women and girls laid off for from four to fourteen days. A recent order has made a demand for the majority of these again and others have found work elsewhere. Biscuit factories have been advertising for more girls. Bag factories, knitting mills, overall and tent makers have had a busy month, and hat workers were busy again starting on straw hats for the spring trade.

Stenographers have been well employed for the past month,—the demand for first class stenographers has been greater than the supply. Nurses were reported all busy with a demand for more. About 12 women teachers from the occasional staff of the public schools have joined the permanent staff, filling the places of the men who have been given leave of absence to go overseas.

Winnipeg.

The improved conditions of December have been carried into the new year, and while many workers of the Christmas trade were laid off on December 24, many of these were sought to take positions in stores considerably before the middle of the month. While no new industries or factories are to be reported as giving employment to women, the latter have been replacing men in offices, particularly banks, thus creating a demand for the office girl. During the period of panic in employment circles, many teachers who had been working at other classes of work went back to their profession, and the number of students in business colleges became rather small owing to the apparent dearth of situations. Thus the present demand for office girls cannot be sup-

plied from the business colleges, and the demand for experienced stenographers is again fairly brisk.

While the passing of the bill granting the franchise to women may not belong properly in this report, still it is to be noted that this bill, through the passing of which the women of Manitoba expect to improve conditions affecting working women, became law in Manitoba on January 27. Further legislation is also before the House to improve matters governing the age of children employed in shops, to bring stores under the Factories Act and to reduce the hours of women working in such shop or factory.

Factory employment is reported as better than for previous winters, war contracts being the cause. Garment workers have been very busy, working increased staffs, full time and even overtime. Women in laundries are well employed, but are not working overtime.

Domestic service offers so many situations that experts say that if all women seeking employment would accept this work there would still be many vacancies.

Nurses have been exceptionally busy; at times during the month the Registry had not a single nurse available. However, as the month closes, they report 20 on the waiting list.

Vancouver.

A slight but steady improvement in labour conditions for women was maintained during the past month, even though most of the seasonal occupations were at their slackest period, whilst conditions were decidedly more favourable than during the corresponding period of 1915.

Increased activity was noted in several lines of factory work, one local firm of tin can manufacturers for the past month keeping their machines running

night and day with two shifts of workers alternating.

The present equipment and machinery of the firm being insufficient to turn out the orders already received, a new building has been started which will be fully equipped and the machines running by May 1 of this year.

Box factories were likewise reported as working overtime, whilst a new factory was opened recently for the manufacture of matches. Only four women and twelve men were employed, but the extension of the premises and employment of more women is looked for by the management in the near future.

A programme of the classes arranged by the Young Women's Christian Association recently published shows a wide range of subjects taught under the auspices of this organization, among which are: cooking, gymnastics, riding, swimming, singing, elocution, first aid, home nursing, dressmaking, and china painting. The classes are well attended.

The women's organizations of the city very strongly urge the appointment of a woman health inspector by the City Council. This position was left vacant by the former officer leaving for war service as a nurse some six months ago, and the vacancy has not since been filled.

Increased activity in other branches of employment has reduced the supply of domestic help and a slight difficulty was noted during the past month in obtaining competent domestic help. An increase in the average wage offered was also noted, the average for general domestic help increasing from about \$12.50 to between \$15 and \$18 per month.

Many women and girls, who during the worst period of financial depres-

sion, entered domestic service temporarily, are gradually reverting to the occupation they were previously engaged in, thus making a shortage in the supply of domestic help.

The majority of calls for work of this nature are for general domestic help, calls for cooks, housemaids or nurses being very infrequent.

Garment workers were fully occupied during the past month, one firm working overtime. Workers in knitting factories were also fully occupied partly on war orders and partly general trade.

Workers in candy and biscuit factories were not so fully occupied as before Christmas and hardly any of the few women who follow the trade of book-binding worked at all.

The month of January being the slackest period in the tailoring trade, very few tailoresses were employed. The fall season of 1915 being a very poor one, the slack period will be difficult for them.

Telephone operators were still taking one week off in four, and although the places of those who left their positions with the company have not been filled by new operators, no one has been discharged during the whole of the financial depression by the company through slackness of trade, all the operators sharing in one week off in four, without pay.

The Christmas trade followed by the January sales kept sales clerks occupied during the past few weeks, but book-keepers and stenographers were very little in demand except for substitute work, a number of stenographers being still unemployed. Nurses were more in demand during the past month than for a considerable period previously.

**INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—REPORT OF BOARD
IN DISPUTE BETWEEN STEAMSHIP COMPANIES TRADING
TO THE PORT OF ST. JOHN, N.B., AND LONGSHORE-
MEN'S ASSOCIATION OF ST. JOHN.**

THE unanimous report of the Board of Conciliation and Investigation which was established to deal with a dispute between various steamship companies trading to the Port of St. John, N.B., and their employees, being members of the Longshoremen's Association of St. John, was received by the Minister of Labour on January 24. At the time of writing the Department had received from the employees and from a number of the shipping companies concerned communications accepting the findings, and acceptances were being awaited from the remainder of the employing companies.

Application for a Board was received from the employees.

The differences related to proposed changes in wages and hours, as set forth in a draft schedule to replace an agreement under which the parties had operated during the previous year. The number of employees concerned was given in the application as 1,135. The list of shipping companies, etc., were named: Allan Line, Canadian Pacific Steamships, Limited, Elder, Dempster & Company, Head Line, New Zealand Shipping Company, Furness Line, Manchester Line (Furness, Withy & Company), Robert Reford Company, Donaldson Line, Royal Mail Steam Packet Company, also H. S. Gregory & Sons and H. W. Parlee, stevedores and contractors, and Wm. Thomson & Company, Limited, J. E. Moore & Company, Limited, J. E. Knight & Company, W. A. Mackay, Geo. McKean, J. B. Brand, R. C. Elkin and A. Watson, ship brokers and shippers. The Board was constituted as follows: Mr. J. H. Lauer, Montreal, for the shipping companies; Mr. J. E. Tighe, St. John, N.B.,

for the employees; and Mr. W. E. Fester, St. John, N.B., third member and chairman, appointed on the joint recommendation of the other Board members.

In addition to the schedule submitted by the Board the letter recommended the establishment of a Board of three members to deal with any questions arising between the parties during the continuance of the proposed new agreement.

Report of Board.

The text of the unanimous report of the Board in this matter is as follows:

St. John, N.B.,
Tuesday, January 18.

IN THE MATTER of "The Industrial Disputes Investigation Act, 1907," and of a dispute between various steamship companies trading to the Port of St. John, N.B., (employers) and the Longshoremen's Association of St. John (employees).

Hon. T. W. Crothers,
Minister of Labour.
Ottawa.

Hon. and Dear Sir,—

The undersigned members of the Board of Conciliation duly appointed by your Department in this matter beg to submit report as follows:

The first meeting was held on the twelfth instant, and continuous meetings have been held since to date. After a thorough investigation of the matters in dispute the Board has pleasure in stating that it has arrived at a unanimous decision and that its recommendations are set forth in the following clauses:

1. Ten hours shall constitute a day's or night's work from November 15 to April 20 inclusive, and nine hours shall constitute a day's or night's work from May 1 to November 15.

2. (a) Same men not to be ordered back to work either day or night while other men are available, except when ship is within reasonable time of finishing, or shifting from berth to berth.

(b) If any gang be required to work through the meal hour double time shall be allowed at the prevailing rate of wages for such meal hour and for such time thereafter until relieved.

3. The prevailing rate of wages to be paid for rigging and unrigging of gear, hauling, staging, handling hatches, etc.

4. Half time at the prevailing rate of wages to be paid the men for waiting when ordered out at 7 p.m. until 12 p.m., and when men are ordered out again at 1 a.m. they must be paid full rate from that time until regular knocking off time in the morning, or when ordered out to work during meal hours.

5. Double time at the prevailing rate of wages if required to work on Sundays or the following holidays, viz.: Dominion Day, New Year's Day, Good Friday, Christmas Day, and that these Sundays and holidays shall constitute of 24 hours from midnight to midnight. Should any of these holidays fall on Sunday, and the following Monday be declared a holiday by the Government, such Monday shall be considered a holiday under this section.

6. No work to be performed on Labour Day.

7. Five (5) cents per hour extra to be paid for sulphur in bulk and salt in bulk on week days, day or night, and pro rata on Sundays or holidays.

8. Any ship taking nothing else but deals after the discharge of her cargo shall be termed a deal boat. Any ship taking general cargo and deals shall be termed a cargo boat.

9. Fifteen (15) men to constitute a gang for loading and discharging cargo boats, except in the case of bulk coal, or bulk cargoes of salt, sulphur or maize, over side into scows, or carts or cars, when the number of men per gang shall be thirteen (13), extra two men to be otherwise employed; and in the case of deal boats, the number of men per gang shall not be less than ten (10).

10. No man shall stay in hold of any ship or vessel while grain is running.

11. All orders to the men must be issued through their respective foremen.

12. All freight when trucked outside between sheds must have two men to truck.

13. When working cargo out of one hatch and working winch of another hatch, to handle same a man be placed near the winchman to pass word from the hatchman to the winchman.

14. The rate of wages shall be thirty-five (35c) cents per hour by day or night during the winter season, and forty (40c) cents per hour day or night during the summer season, twelve and a half (12½c) cents per hour extra to be paid for handling bulk grain on week days, twenty-five (25c) cents per hour extra for handling bulk grain on Sundays and holidays over the prevailing rate of wages on such Sundays and holidays, until the thirtieth day of April, 1917, inclusive; and thereafter the wages shall be at the rate of forty (40c) cents per hour day or night without distinction for summer or winter and fifty (50c) per hour for handling bulk grain on week days and one dollar (\$1.00) per hour for handling bulk grain on Sundays and holidays.

15. Should the work on the steamer or ship begin during the summer months and continue into the winter months, or begin in the winter months and continue into the summer months, the schedule of wages for such steamer shall continue the same as at the beginning of the work until completion.

16. This agreement shall become effective from the present date of signature and shall continue in force until December 1, 1919, and thereafter from year to year unless or until either party serve notice to the other party to the contrary at least 30 days prior to the date above mentioned, or prior to the first day of December of any subsequent year.

17. The Board recommends that the respective shipping companies should enter into an agreement with the Longshoremen's Association to give preference in employment to members of said association, when available.

18. The rates and conditions awarded by this Board shall apply to the Port of St. John generally.

19. It is a recommendation of the Board that both parties hereto agree to be bound by the terms of the present award under clause 62 of the Industrial Disputes Investigation Act, 1907.

20. Schedule of the working conditions of the Port of St. John, approved by the Board as a general understanding for the handling of cargo, is appended hereto and forms part of this agreement.

Schedule of Working Conditions for the Handling of Cargo at the Port of St. John, referred to in the Agreement as Clause 16.

Pine and (or) spruce deals, per sling
14 pieces 3 inch.

Pine and (or) spruce deals, per sling
16 pieces 2 inch.

Where Spruce and (or) pine scantling or deals shall be slung together, not less than the equivalent of fourteen (14) or 3 inch deals.

Pine and (or) spruce 1 inch, 31 pieces per sling.

Pine and (or) spruce scantling, 20 pieces per sling.

Pine and (or) spruce deal ends, 30 (thirty) pieces per sling.

Sawn birch, per sling 8 pieces 4 inch.
Sawn birch, per sling 10 pieces 3 inch.
Sawn birch, per sling 15 pieces 2 inch.
Sawn birch, per sling 20 pieces 1 inch.
Not less than 12 men in gang.

Laths, per sling 20 bundles.

Flour, 140 lbs. sacks, 10 per sling, 5 per truck.

Flour, 280 lbs. sacks, 5 per sling, 2 per truck.

Flour, 98 lbs. bags, 15 per sling, 5 per truck.

Pig iron, large, 10 pieces per sling, 10 pieces per truck.

Pig iron, small, 15 pieces per sling, 15 pieces per truck.

Salt in sacks, 5 sacks per sling, 5 sacks per truck; when stacked in shed or when stacked outside of shed, two men per truck; when discharged and stowed into decked vessels, 7 sacks per sling, and when discharged into open scows, 9 sacks per sling and not less than six (6) men in steamer's hold to sling same.

Oilcake, 6 bags per sling, 6 bags per truck.

Oilcake, in bales, 6 bales per sling, 2 per truck.

Axles, large, 1 per sling, 1 per truck.

Axles, small, 2 per sling, 2 per truck.

Car rims, one shall constitute a sling whether large or small.

Apples in barrels, 6 per sling, 3 per truck.

Potatoes, in barrels, 5 per sling, 3 per truck.

Sugar, large, 5 bags per sling.

Sugar, small, 15 bags per sling.

Hay, 6 bales per sling.

In view of the many local questions which may arise regarding a fair interpretation of the working conditions contained in the schedule attached to this award, the Board strongly recommends the appointment of a permanent local Board to deal at all times during the currency of this agreement with such

matters. The Board to consist of three members, namely, a representative of the longshoremen, a representative of the shipping interests, and a chairman to be chosen by the preceding two parties so elected. Failing agreement of the two parties to arrive at a unanimous election of chairman, such chairman shall be appointed by application to a Justice of the Supreme Court of the Province of New Brunswick. All decisions of the Board so constituted shall be final and binding on both parties. The remuneration of the proposed permanent Board shall be decided at its opening session; such fees not to exceed \$10 per member for each daily session thereof, which fees shall be paid by the party found to be in default by the award of the Board.

In view of the complaints submitted with regard to loss or injury to life or property owing to absence of protective appliances at the cargo gangways, it is further strongly recommended that suitable nets or other devices shall be provided by the Port authorities during the operation of loading or discharging at the wharves, and that such protective measures be made effective without delay.

The Board regrets that its previous recommendation of November 12, 1913, with regard to supplying suitable shelters for the men at the various sheds in

West St. John, has been very inadequately carried out, and would again urge upon the Federal Government and the Port authorities of St. John to supply increased accommodation in better ventilated quarters than at present, which are quite unsuitable for the purpose in view.

The whole of which is respectfully submitted.

(Sgd.) W. E. FOSTER,
Chairman.

(Sgd.) J. H. LAUER,

(Sgd.) J. E. TIGHE,
Members of the Board.

Extract from Report of Board of Conciliation and Investigation which, in November, 1913, framed a Working Agreement as Between the Shipping Companies and the Longshoremen of St. John, N.B.

The Board recommends that the Shipping Federation, the Federal Government and the City of St. John co-operate in providing a shelter house at West St. John, in order that the men may be properly housed when waiting during nights. This recommendation is made on account of no means of transportation after 11.30 p.m. at nights from the west side of the harbour to the east side, where most of the men live.

ANNUAL CONVENTION OF THE BRITISH COLUMBIA FEDERATION OF LABOUR:

THE sixth annual convention of the British Columbia Federation of Labour was held in Labour Temple, Vancouver, on January 17, 18 and 19.

During the opening proceedings the chair was occupied by Mr. J. H. McVety, President of Vancouver Trades and Labour Council, who extended a hearty welcome to the delegates on behalf of the Council and local labour

unions of the city. During the course of a brief address he advised that the convention give special attention to the matter of Workmen's Compensation, with particular reference to the Bill introduced by the Attorney General at the last session of the Provincial Legislature. This advice was accepted and the greater part of the deliberations of the convention were centred on this subject.

President A. Watchman then took the chair and appointed the usual standing committees. The report of the Credentials Committee showed an attendance of 25 delegates eligible to sit in the convention. Ten were from Victoria, ten from Vancouver, and one each from New Westminster, Ladysmith, South Wellington, Cumberland and Fernie.

Following is a synopsis of the various official reports:

President's Report. — The matters dealt with were mostly of a legislative character and embraced a reference to the regulation of jitney busses, announcing that as a result of representations made to the Provincial Government power had been granted to municipalities to enact laws for their regulation. Suggested amendments to the Elections Act were "the abolition of the election deposit, extension of the franchise to women, election day to be a public holiday, provision to be made that will enable train crews to vote, and compulsory voting." It was stated that only one of these suggestions received partially favourable consideration. It was asked that election day be declared a public holiday. Instead the Act was amended requiring employers of labour to give to every voter in his employ one hour additional to the noon hour in which to vote, to be granted without deduction in pay. In the matter of Workmen's Compensation it was urged that every effort be made to secure such legislation as will ensure to those injured in industry and their dependents freedom from poverty. Reference was also made to the unemployment situation and the appointment of a relief officer by the Provincial Government. The Government was also urged to appoint a labour commissioner to gather reliable data as to the number of unemployed in the province, to aid in the distribution of labour and to relieve congested districts, and to furnish a reliable statement of conditions prevalent.

Report of Executive Committee. — Soon after the adjournment of last con-

vention all matters pertaining to legislation, of which the following is a summary, were taken up and discussed with the Premier and other members of the Provincial Government: Amendments to the Mines Regulation Act; amendments to the Truck Act; the examination and registration of plumbers, and the enforcement of sanitary conditions; amendments to the Master and Servants' Act; the enforcement of a minimum wage of \$3.00 per day on all relief work carried on by municipalities and cities with money loaned by the Government; a law to cover the inspection of construction, installation and operation of all electrical work, such as power stations, pole lines, etc.; the printing of all text books, etc., in the Government printing office; amendments to the Municipal Clauses Act that will give power to cities and municipalities to invest their sinking funds in short time debentures of their own, and to regulate the hours of opening and closing of barber shops; to amend the Factories Act, bringing all factories under the Act, irrespective of the number of employees; the better protection of the workers under the proposed moratorium; the unemployment problem; Workmen's Compensation Act, and an Act for the prevention of the employment of Caucasian women by Orientals.

Questions requiring Dominion legislation were referred to the Executive of the Trades and Labour Congress of Canada, chief amongst these being an amendment to the Criminal Code concerning picketing. Organization of the workers was referred to as being at a standstill, owing to trade depression.

Report of Secretary-Treasurer. — Total receipts for the year were shown to be \$1,127.13, and the total disbursements \$1,114.40, leaving a balance in the treasury of \$12.73. Regarding membership the Secretary states: "The per capita tax receipts speak for themselves, and show a decided decrease in the membership; not, however, because of withdrawals, but because of the de-

creased membership of affiliated organizations. While some withdrawals have taken place they have been due to the conditions prevailing. The per capita receipts give a good indication of the number of members affiliated, but some unions are still affiliated that have not been able to meet their obligations, and will in the near future request reinstatement." The Secretary urges the strictest economy in matters financial, and expresses the belief that the Federation will be able to weather the storm even with the reduced income.

Report of Special Committee on Compensation and Industrial Accidents. — This committee suggests a number of amendments to the Bill introduced by the Attorney General at the last session of the Legislature. Among the suggestions and objections offered the following may be mentioned: Exception is taken to the exclusion of "outworkers" and "casual labour" from the operation of the Act; also to the "waiting period" of two weeks before benefits can be secured, and to the scale of compensation in certain cases. The Government is asked to appoint a commission of three members, instead of a single commissioner, to administer the Act, one to be selected from the ranks of organized labour. It was also urged that no appeals from decisions of the commission be allowed. A protest is entered against Schedule 2 of the Act, placing individual liability on certain large corporations, urging that all industries be brought wholly within the scope of the measure. It was suggested that longshoremen be specifically mentioned in the list of industries covered by the Act; that the commission to be appointed be charged with the administration of the Factories Act and kindred laws for the safety of workers, and that employers who are found to be habitually negligent and careless for the safety of their employees be penalized in the rating. The inclusion of medical aid provisions was strongly recommended.

The report of the delegate to the Trades and Labour Congress of Canada gave a review of the proceedings of the late convention.

The British Columbia Federationist Trustees reported a marked decrease in the earnings of the company and a considerable loss on the year's business. However, the paper has maintained the standard of former years and a more generous support in the way of subscriptions was requested.

The foregoing reports were referred to the various standing committees and full concurrence in each was reported back to the convention, urging a continuance of work along the lines of the past year.

The Secretary reported the receipt of \$100.00 from the Trades and Labour Congress of Canada to help defray the expenses of the Federation in legislative work. The Secretary was instructed to acknowledge receipt of the money "on account."

The constitution was amended to provide that in future Vice-Presidents for the various districts be elected from the floor of the convention.

Vice-President W. F. Dunn was given credentials to represent the Federation at the Washington State Federation of Labour then in session at Yakima.

Resolutions.—Following is a synopsis of the various matters brought before the convention that received endorsement:

Declaring in favour of a six-day week for street railwaymen in British Columbia.

In favour of the enactment of a law for the examination and registration of plumbers.

In favour of the appointment of a provincial inspector of gear used in loading and discharging vessels.

In favour of the abolition of property qualification for public office.

In favour of placing longshoremen more distinctively within the scope of the new Workmen's Compensation Act.

That the convention requests the Provincial Government to appoint three commissioners for the administration of the new Workmen's Compensation Act and urges the appointment of Mr. J. H. McVety as a permanent member of the Board.

That men and women should receive equal pay for equal work.

That the Provincial Government be urged to extend the franchise to women.

Election of Officers.—The following were chosen:

President—J. H. McVety, Vancouver.

Secretary-Treasurer — A. S. Wells, Victoria.

Vice-Presidents—For Victoria, C. Sivertz; for New Westminster, W. Yates; for Vancouver Island, W. Head, South Wellington; for Fernie, A. J. Carter; for Vancouver, J. Brooks and E. Morrison. Appointments for the districts of Prince Rupert and Nelson were left in the hands of the Executive.

Trustees of British Columbia Federationist—A. S. Wells and A. Watchman.

Delegate to Trades and Labour Congress of Canada—A. S. Wells; with the question of an alternative left in the hands of the Executive.

Revelstoke was chosen as the next place of meeting.

REVIEW OF TRADE DISPUTES IN CANADA DURING 1915.

PRESENTED herewith is a statistical review of the trade disputes occurring in Canada during 1915. A table is given at the conclusion of the article showing in detail for each dispute the class of industry and locality affected, cause or object, method of settlement and result of each dispute, date of commencement and termination, the number of firms or establishments concerned, the number of employees involved and the estimated loss of time in working days to employees.

There were 43 trade disputes recorded as in existence during 1915, five of which were carried over from 1914. This was the lowest number of disputes recorded in the history of the Department. The number recorded in 1914, namely, 44, held the previous low record. In the

43 disputes, 96 establishments were concerned, 9,140 employees affected, with an approximate loss of time of 106,149 working days.

A comparison of the statistics for 1915 with those for 1914 shows that in the case of the number of establishments affected there was a decrease from 205 to 96; in the case of employees involved, an increase from 8,678 in 1914 to 9,140 in 1915; and in the estimated loss of time in working days a decrease from 430,054 in 1914 to 106,149 in 1915.

The number of disputes recorded as having actually begun in 1915 was 38. The five disputes mentioned above as carried over from 1914 were a strike of machinists at Amherst, N.S., moulders at Smith's Falls, Ont., sheet metal workers at Toronto, Ont., moulders at Owen

Sound, Ont., and brewery workers at Montreal, Que. In these five disputes five establishments were concerned, 129 employees affected and an estimated loss of 22,992 working days entailed.

The greatest number of disputes occurred in the metal trades, there being 13 recorded in this class of industry. Workers under the heading of miscellaneous trades were involved in seven disputes and miners in six disputes. The industry in which the greatest number of employees were affected was mining, there being 4,332 miners involved in 11 disputes. In the metal trades 2,842 employees were involved with the greatest loss of time of 40,812 working days. The lowest number of employees affected in any one group was in the printing trade, in which trade 21 employees were affected.

The greatest number of disputes occurred in the province of Ontario, 16 disputes being recorded from this province. There were eight disputes in Nova Scotia, five each in Quebec and British Columbia, four each in Manitoba and Alberta, and one dispute was recorded from New Brunswick.

A table is given below showing the yearly record of trade disputes since 1901, the year in which the Department began the collection of these statistics. From the figures under the different headings in the table it will be observed that the record for 1915 with the exception of the figures for employees involved was the lowest of any year since 1901. The chart accompanying the table illustrates the yearly comparisons from 1901 to 1915 inclusive.

TABLE SHOWING TRADE DISPUTES IN EXISTENCE IN CANADA, 1901-1915.

Year.	Number of Disputes	No. of establishments concerned	No. of Employees affected	Time losses in working-days
1901	104	273	28,086	632,311
1902	121	420	12,264	120,940
1903	146	927	50,041	1,226,500
1904	99	575	16,482	265,004
1905	89	437	16,223	217,244
1906	141	1,015	26,050	359,797
1907	149	825	36,624	621,962
1908	68	175	25,293	708,285
1909	69	397	17,332	871,845
1910	84	1,335	21,280	718,635
1911	98	475	30,094	2,018,740
1912	150	989	40,511	1,099,208
1913	113	1,015	39,536	1,287,678
1914	44	205	8,678	430,054
1915	43	96	9,140	106,149

Strikes and Lockouts, 1901-1915.

CHART SHOWING STRIKES AND LOCKOUTS IN CANADA YEAR BY YEAR FROM 1901 TO 1915 INCLUSIVE.

Magnitude of Trade Disputes.

There were approximately 9,140 employees directly involved in trade disputes in Canada during 1915. Of the total number of disputes, one affected 2,500 employees, one 2,000 employees and one 1,125 employees. In the matter of time losses, one dispute occasioned a loss of 15,000 working days, five disputes caus-

ed a loss of 38,775 days, eight disputes entailed a loss of 25,492 days and six disputes accounted for a loss of 12,188 working days. There were three disputes unsettled at the end of the year affecting 168 employees and effecting a loss of 15,309 working days. A table is given below, followed by a chart on the next page, illustrating the number of employees affected annually by trade disputes from 1901 to 1915.

TRADE DISPUTES IN CANADA, 1915.—CLASSIFIED ACCORDING TO MAGNITUDE.
(NUMBER OF EMPLOYEES)

Limits of Groups	No. of Disputes.	No. of establishments concerned.	No. of employees affected.	Estimated time losses in working days.
Under 25 employees.....	12	24	174	9,600
25 and under 50 employees.....	8	23	294	25,492
50 and under 75 employees.....	6	21	347	12,188
75 and under 100 employees.....	1	1	80	6,640
100 and under 125 employees.....	4	5	414	3,040
125 and under 150 employees.....	3	3	406	7,014

Number of Employees.

CHART SHOWING THE NUMBER OF EMPLOYEES INVOLVED IN STRIKES AND LOCKOUTS IN CANADA.
1901-1915.

Time Losses in Working Days.

From the viewpoint of working days lost to employees involved in the trade disputes of 1915 there was a great improvement over the previous year, there being only 106,149 working days lost in 1915 as against 430,054 in 1914, although the number of employees affected in

1915 exceeded by 432 the number involved in 1914. The chart on page 903 illustrates the extent to which employees were affected by loss of time through trade disputes in each year from 1901 to 1915.

The following table shows the magnitude of disputes according to employees affected:

TRADE DISPUTES IN CANADA, 1915.—CLASSIFIED ACCORDING TO MAGNITUDE.
(TIME LOSSES).

Limits of groups.	No. of Disputes	No. of establishments concerned	No. of Employees affected	Estimated time losses in working days

Time Losses.

CHART SHOWING BY NUMBER OF WORKING DAYS THE TIME LOSSES CAUSED BY STRIKES AND LOCKOUTS, 1901-1915.

Industries Affected by Trade Disputes.

The class of industry most affected by trade disputes during 1915 was the metal trades, there being 13 disputes recorded under this heading. In these 13 disputes, 15 establishments were concerned involving 2,842 employees, whose estimated total loss of time amounted to 40,812 working days. Workers placed under the heading of Miscellaneous Trades were affected by seven disputes, in which 14 establishments were concerned and 330 employees affected to the extent of 4,263 working days lost. Six

disputes occurred in the mining industry, through which 4,332 miners were affected and whose loss of time through these disputes amounted to 16,794 working days. Workers engaged in transport service were involved in four disputes to the number of 1,140, whose total approximate loss of time is calculated at 19,360 working days.

The table below shows the trade disputes of 1915 classified according to industries affected, together with establishments concerned, employees affected and the estimated loss of time to these employees.

TRADE DISPUTES IN CANADA, 1915.—CLASSIFIED BY INDUSTRIES.

Trade or industry.	No. of disputes.	No. of establishments concerned.	No. of employees affected.	Estimated time losses in working days.
Mining.....	6	11	4,332	16,794

Total.....	43	96	9,140	106,149

The diagram on the following page illustrates the extent to which employees in the various trades were af-

ected by loss of time through trade disputes during 1915.

TIME LOSSES BY OCCUPATIONS.

Diagram showing percentages of working days lost through trades disputes in the various trades affected, 1915.

Duration of Trade Disputes.

The majority of trade disputes recorded during 1915 were of short duration, 22 out of the 43 disputes recorded being in existence less than 15 days. Fourteen of these terminated in less than five days of their commencement, while seven lasted not longer than ten days, and one dispute was settled within 15 days of its occurrence. On the other hand there were 13 disputes whose duration exceeded 30 days, three of these disputes—one lasting 179 days, another 205 days, and the third 230 days—were disputes carried over from 1914. The duration of three disputes

was indefinite owing to there having been no settlement arrived at by the close of the year. In the disputes terminating within 15 days of their commencement the time losses amounted to 33,839 working days. In those disputes exceeding 30 days' duration the loss of time was 57,001 days, and in the disputes of indefinite duration a loss of time of 15,309 working days was entailed.

The table on the following page statistically explains the above, according to industries affected, while the second table classifies the duration of disputes according to their causes.

Localities Affected by Trade Disputes.

The province in which the greatest number of trade disputes occurred was Ontario, 16 disputes being recorded from localities within its boundaries. Localities in Nova Scotia were affected by eight trade disputes, while Quebec and British Columbia are credited with five disputes each and Manitoba and

Alberta with four disputes each. Only one dispute was recorded from New Brunswick. In the matter of time losses, Ontario again heads the list with 34,711 working days lost to employees through trade disputes. British Columbia comes next with 26,513 working days lost, Nova Scotia next with 24,025 days lost, and Quebec with 15,362 days lost. The following table shows the disputes classified by provinces:

TRADE DISPUTES IN CANADA, 1915.—CLASSIFIED BY PROVINCES.

Province	No. of disputes.	No. of establishments concerned.	No. of employees affected.	Estimated time losses in working days.

Disputes by Months.

The tables on the following page shows the monthly record of trade disputes. The first table takes into consideration only the trade disputes that actually commenced during each month of 1915, while the second table deals with the disputes existing during each month. From the first it will be seen that the greatest number of disputes commenced during March, in which month six disputes began and by which 18 establishments were concerned, 864 employees involved with an estimated loss of time of 24,703 working days. In each of the months of June and August five disputes commenced. In the five disputes commencing during August 3,535 employees were affected. This is the greatest number of employees involved in trade dis-

putes in any one month during 1915. The total loss of time entailed by these 3,535 employees amounted to 22,070 working days. With reference to the second table dealing with the disputes in existence during each month it will be noted from a glance at the table that there were more disputes in existence during the month of April than in any other month, 13 disputes being recorded. There were more employees affected by the disputes in existence during August than in any other month, namely, 3,681, whose loss of time amounted to 19,091 working days. Twelve disputes were in existence during March, 11 in August and 10 in June.

A chart follows the two tables above referred to illustrating the time losses by months.

CHART SHOWING THE NUMBER OF EMPLOYEES AFFECTED BY STRIKES AND LOCKOUTS DURING EACH MONTH OF 1915.

Causes of Disputes.

Differences between employers and their employees over the question of wages was responsible for 26 out of the 43 trade disputes recorded during 1915. In the 26 disputes, 5,118 employees were affected with loss of time estimated at 62,527 working days. Eleven of these disputes arose as a result of the refusal of employers to grant increased wages; 11 were caused through employers reducing the wages of their employees;

two were due to a reduction in wages accompanied by other changes in working conditions, and one each as a result of a demand on the part of employees for increased wages and other changes and for the adoption of a minimum wage scale. The following table shows the classification of trade disputes according to causes; while the diagram on the following page illustrates the percentage of working days lost in proportion to the various causes of the disputes.

TRADE DISPUTES IN CANADA, 1915.—CLASSIFIED BY CAUSES.

TIME LOSSES BY CAUSES.

Diagram showing percentages of working days lost according to causes of trades disputes, 1915.

Methods of Settlement.

With regard to the methods of settlement of the various disputes, it will be observed from the following table that 11 of the disputes were either indefinite in their outcome or remained unsettled at the close of the year. The settlement of 11 of the other disputes was brought about by negotiation between the parties

concerned. Six disputes were settled by mediation and in six others settlements were effected through employees accepting the terms of their employers. In five cases, the striking employees left the establishments where the disputes arose and obtained work elsewhere. The following table shows the disputes classified according to the different methods of settlement:

METHODS OF SETTLEMENT OF TRADE DISPUTES, 1915.

Method of Settlement.	No. of disputes.	No. of establishments concerned.	No. of employees affected.	Estimated time losses in working days.
Mediation.....	6	11	5,633	33,989

Unclassified, indefinite and unsettled.....	11	16	1,478	34,830
Total.....	43	96	9,140	106,149

Results of Disputes.

The result in the majority of the disputes in which a settlement was reached was in favour of the employers, the number resulting thus being 16. Fifteen of the disputes, however, resulted in favour of the employees, while in six others the result was either indefinite or the dispute remained unsettled at the end of the year. In six of the disputes a compromise arrangement was effected

between the parties. In the fifteen disputes resulting in favour of the employees 52 establishments were concerned, 7,332 employees were affected and a loss of time amounting to 45,651 working days entailed. The table on the following page classifies the trade disputes according to causes and results, while the diagram following the table shows the percentage of working days lost in proportion to the results of the different disputes.

CHANGES IN RATES OF WAGES AND HOURS OF LABOUR IN CANADA DURING THE LAST QUARTER OF 1915.

IN the accompanying statistical table detailed information is presented relating to changes in wages and hours of labour reported to the Department during the last quarter of 1915, including the months of October, November and December. Three changes were reported during this quarter, all of which were in the nature of increases, and affected persons engaged in the mining industry only. During the first quarter of 1915, 17 changes were reported; 15 were recorded for the second quarter; and 13 during the third, making a total of 48 changes during the year. The number of employees affected by these changes in the last quarter was 5,449, as compared with 4,021 involved in the 27 changes of the corresponding period of 1914. In a table following are shown the changes in rates of wages and hours of labour according to classes of workmen affected, with the number affected in each case, the date from which each change took effect, and the particulars of changes in so far as could be ascertained.

Changes by Industries and Trades.

The following is a statement of changes in wages and hours of labour according to the industry affected:

Mining. — Twenty-five hundred employees of asbestos mining companies of

Thetford Mines, Que., received an increase of 25 cents per day. This change was brought about as a result of a strike.

On November 1, coal miners, employed in collieries of the Nova Scotia Steel and Coal Company at Sydney Mines, N.S., to the number of 480, were granted an increase of 5 cents per day. The same company granted an increase of 5 cents per day to about 630 shiftmen, timbermen, tracklayers, etc., on the same date. This increase was given under an arrangement brought about by the Provincial Workmen's Association after some week's negotiations with the company. The company agreed to give an increase of 10 cents per day to all its employees at the collieries who were getting less than \$2.00 per day. The rest of the increase will be given on April 1, 1916.

Another change which took effect on November 11 was one which affected over 2,000 employees of the Canadian Copper Company of Copper Cliff, Ont. On that date the smelters, shops and mechanics were placed on an eight-hour day. In nearly all cases where the employees did not have their working hours reduced, they were given an increase in wages. This change was entirely voluntary on the part of the company. Particulars in regard to the principal classes affected are given in the table.

[illegible]

**PRICES, RETAIL AND WHOLESALE, CANADA,
JANUARY, 1916.**

THE movement in prices continued upward, there being further increases in many lines of goods and no important decreases except in the wholesale price of eggs. In metals and in chemicals general advances continued. Further important rises in wheat and oats occurred, due to a good export demand in spite of high prices and difficulties in shipping. Flour advanced both wholesale and retail, while bread prices began to rise. Eggs declined in the latter part of the month in wholesale prices, but at the middle of the month retail prices were lower than in December in only 11 cities, and were higher in 25. Butter began to ease off on wholesale markets, but in retail stores was higher than in December in 19 cities. At Winnipeg prices eased off and dairy butter was down in retail prices in Montreal and Kingston. Boots and shoes showed important advances in wholesale prices as hides and leather rose somewhat above the high levels already prevailing. Potatoes rose to very high levels, retail prices being over \$2.00 per bag in many localities in Eastern Canada at the middle of the month. By the end of the month wholesale prices had risen to \$2.10 per bag in car lots. The scarcity was due to loss through rot and to the short crops in Eastern Canada. In Western cities prices were also higher, although the crop had been large. Shipments to Eastern Canada had been made, notably from British Columbia to Ontario. Local shortage on account of bad roads also developed in some localities. Beans and evaporated apples advanced in some cities, owing to a shortage in the crops last year.

In retail prices the cost of a list of 29 staple foods averaged \$8.282 in the 60 cities as compared with \$8.128 in December, \$7.967 in January, 1915, and \$7.729 in January, 1914. Slight in-

creases for the month appeared in beef, mutton, eggs, butter, flour, beans, sugar and potatoes.

As compared with January of last year increases appeared in lard, eggs, butter, cheese, evaporated apples, sugar, tea, coffee and potatoes. Prices were lower, however, in milk, bread and flour. Coal and wood also averaged slightly lower. Rent was 40c per week lower in the average. As compared with January, 1914, prices were higher for beef, bacon, eggs, butter, cheese, bread, flour, rolled oats, beans, sugar, tea, coffee and potatoes, but were slightly lower in veal, mutton, pork, lard, and milk. Coal, wood and coal oil were down slightly, while rent averaged 85c per week lower.

In wholesale prices the Department's index number showed another steep rise, standing at 172.0 for January, as compared with 162.4 for December and 139.3 for January, 1915. The chief advances for the month occurred in grains and fodder, animals and meats, fruits and vegetables, miscellaneous groceries, textiles, hides, leather, boots and shoes, metals, building materials, and drugs and chemicals.

As compared with January a year ago, prices were higher in animals and meats, fruits and vegetables, miscellaneous groceries, textiles, hides, leather, boots and shoes, fuel and lighting, building materials, house furnishings, drugs and chemicals, raw furs, and sundries. Prices were lower in grains and fodder. All groups were considerably higher than in both January, 1914 and 1913, except fish, fuel and lighting, lumber, raw furs, and liquors and tobacco.

More detailed information as to prices movement for the month appears in the accompanying tables and in the following notes.

*Coal, wood and coal oil. No allowance is made for the varying extent to which these are used in the different localities and provinces.

The list of commodities for which retail prices are obtained at the middle of each month by the correspondents of the *Labour Gazette* in the 60 localities of the Dominion has been increased by the addition of several lines of meat, fish, canned vegetables, tapioca, etc. As the quotations for these commodities have not been obtained back to 1910 they are not included in the calculation of the budget of weekly family expenditures, but the quotations are now given in the table of retail prices appearing from month to month.

In wholesale prices the quotations for grains, animals and meats, dairy products, and potatoes are obtained at the first of each week as heretofore since 1910. For other commodities prices are obtained now on the fifteenth day of the month instead of at the first of the month as before.

Retail Prices.

Prices of meat tended upward in several localities throughout the Dominion, but some decreases also occurred. Beef was higher in Cobalt, Ont., in Edmonton, Alberta, and in New Westminster and Vancouver, B.C., but declined at St. John's, Que., Peterborough and St. Thomas, Ont., and at Fernie, B.C. Veal was higher at Cobalt, Ont., but lower in Fernie, B.C. Mutton advanced at Halifax, N.S., Montreal, Que., Guelph and Cobalt, Ont., in Vancouver and Victoria, B.C., but declined at St. Thomas, Ont. Pork advanced at Newcastle, N.B., Hull, Que., Ottawa, Ont., Brandon, Man., Vancouver and Victoria, B.C. The price was lower in St. Thomas, Ont., Saskatoon, Sask., Edmonton, Alberta, and Fernie, B.C. Bacon was higher in Newcastle, N.B., Brockville, Belleville, Guelph, Berlin, London, St. Thomas and Cobalt, Ont., and at Vancouver, B.C. Lard was higher in Orillia, Hamilton, Port Arthur, Ont., and Vancouver, B.C. The rise in pork was reported due to the demand for military supplies. In Cobalt, Ont., and Vancouver, B.C., general advances in meats appeared, but in

Fernie, B.C., there was a general decline, and this had been in progress since October, the total decline being from 33½ to 50 per cent in beef, 20 per cent in pork and 10 per cent in mutton and veal. At New Westminster, B.C., meat prices, especially hog products, were rising in the last two weeks of the month.

Prices of fresh fish were lower at Newcastle, N.B., Owen Sound, Ont., Saskatoon, Sask., and New Westminster, B.C. The lower prices at Saskatoon were reported due to lower freight rates from British Columbia. Canned salmon was higher at London, Ont., and at Vancouver, B.C.

Eggs were higher at the middle of the month than in December in 25 of the cities, but were lower in 11. Wholesale prices of eggs had declined slightly in the early part of the month, and toward the end of the month fell steeply, as a result of mild weather in Eastern Canada. Butter advanced in 19 cities east of Winnipeg, but declined in two. The wholesale price of butter had been unusually steady for some weeks, having reached a high level in December. Cheese advanced in eight cities in Ontario and also in Fernie, B.C.

Flour advanced in 15 cities in the east and six cities in the west in sympathy with the wholesale market and the high price of wheat. Prices of bread were also beginning to rise toward the end of the month.

Beans advanced in five cities in Eastern Canada and in Moose Jaw, Sask. Great scarcity was reported owing to the short crop in Canada and United States in 1915 and the exports of military supplies. Evaporated apples also began to advance further, the wholesale price having risen owing to a smaller production in 1915. Prunes declined in some localities, the California yield having been good. Sugar also showed some advances.

Potatoes advanced in 25 cities in the east and eight cities in the west, and were still upward. Owing to short

b. Dairy prints.

c. Calculated from the price per 100 lbs.

d. Calculated from the price per wagon load.

e. Natural gas used.

f. Allowing \$1.00 per ton for delivery.

g. Lignite.

h. Tamarac, jack pine, poplar, etc.

yields in Ontario and other parts of Eastern Canada great scarcity developed in spite of shipments from New Brunswick and Western Canada. Some local scarcity was reported in Western localities, owing to difficulties in shipping, on account of the frosty weather and snow-bound roads.

Coal prices were not raised appreciably on the whole in the Prairie Provinces, although there was a slight tendency to advance in some localities on account of the difficulty in getting supplies over the snow-bound roads. The scarcity was reported acute in some cities at times. At St. John, N.B., all grades of American hard coal advanced \$1.00 per ton owing to the shortage of coal carrying vessels. Prices of hard and soft coal were higher at Halifax, N.S., and soft coal was also higher at Moncton and St. John, N.B. At Stratford, Ont., both hard and soft coal were also higher. Soft wood was higher at Halifax, N.S. At Brandon, Man., a slight decrease in the price of poplar wood was reported owing to keen competition. At Victoria, B.C., soft wood advanced from \$3.75 to \$4.50 per cord, as the former price was considered to be too low. Coal oil was lower at Vancouver, B.C.

At Quebec City a decided increase in rents for the coming season was reported. Houses were being let for the ensuing 12 months at \$35.00 per month for a desirable house in a good locality of seven rooms and bath-room. The average workingman's dwelling, having from three to six rooms, will cost from \$3.50 to \$4.00 per room per month. Increases in taxes and decreases in insurance rates were reported, but a scarcity of dwellings was also said to exist.

Wholesale Prices.

Grains and fodder.—Manitoba wheat advanced from \$1.13 per bushel to \$1.29 toward the end of the month, but declined to \$1.23. The demand for export had increased in spite of the advance in prices, high freights and diffi-

culties in shipping. Ontario winter wheat rose from \$1.04-1.06 to \$1.14-1.16. Oats rose in sympathy with wheat and a good demand for export. Western oats rose from 39½¢ to 46½¢ per bushel, and Ontario oats from 39-40¢ to 44-45¢. Western barley advanced from 63¢ to 69½¢ and Ontario barley from 58-62¢ to 64-66¢. A fair demand appeared, and only a moderate amount was offered. Flaxseed advanced under good demand for flax and linseed products, rising from \$1.92½ to \$2.18½ per bushel. Corn rose from 79½¢ to 85¢ per bushel. Peas fell from \$1.90 to \$1.75, but later recovered to the former level. Rye advanced from 87-88¢ to 92-95¢. Hay, baled No. 1, rose to \$21.00 per ton at Montreal and to \$17.50-18.00 at Toronto. Bran and shorts rose \$2.00 to \$24.00 and \$25.00 per ton respectively.

Animals and meats.—There was a good demand for good butcher cattle at Winnipeg, and the price advanced \$1.00 per cwt., best butchers rising to \$6.25-6.50. At Toronto the price rose to \$8.15, but eased off to \$7.00. Hogs rose from \$8.65-9.00 at Ontario points to \$9.40-9.50, as there was a good demand from packers and deliveries were light. Dressed hogs, bacon and ham were higher in sympathy with the hog market. Sheep rose from \$6.50-7.75 to \$7.50-8.50 per cwt., and dressed lamb from \$16.50-18.00 to \$17.50-19.50. Poultry was upward, turkeys rising from 24-26¢ to 27-28¢ per lb., and fowl from 12-14¢ to 17-20¢.

Dairy products.—Butter rose by 1¢ to 3¢ per lb. at Toronto, but eased off to the previous level at 33-34¢ per lb. for creamery solids. Finest creamery butter at Montreal declined ¼¢ per lb. The mild weather was reported to have reduced consumption and stocks were larger than a year before. Eggs declined from 48-52¢ per dozen to 35¢ for strictly fresh grades at Montreal, and storage eggs fell from 30-31¢ to 28-29¢ at Toronto. Cheese was steady at the high level reached at the end of December.

*Nine commodities off the market, fruits, vegetable, etc.; one line of spelter has been dropped.

Fish.—In dried fish a fair demand was reported from Cuba, but the Porto Rico market was quiet, having been overstocked. A good demand for salt herring was reported and mackerel were scarce. The lobster catch was interrupted by unfavourable weather. The price to fishermen was from $\frac{1}{2}$ c to 1c per lb., more than last summer for small lobsters, and the packers received from one to two dollars per case more. A larger pack than during last winter was expected.

Fruits and vegetables.—A feature of the market was the great rise in potatoes owing to scarcity as a result of short crops and the prevalence of rot in the 1915 crop. Prices advanced to \$1.85-2.10 per bag at Toronto and Montreal in car lots. Onions advanced to \$3.50 per cwt. at Montreal. Apples rose to \$4.00-6.00 for winter varieties. Lemons were up 25c per case and bananas 25c per bunch. Oranges, however, declined \$1.00 per case. Evaporated apples rose to $10\frac{1}{2}$ c per lb., the production last year showing a decrease. The market, however, then eased off. Currants declined from 13-14c to $12\frac{1}{2}$ -13c per lb. Raisins were lower at 9- $9\frac{1}{2}$ c per lb. for California Valencias.

Miscellaneous groceries.—Flour rose from 40 to 60c per barrel at Montreal. Manitoba patents reaching \$6.90 and winter wheat patents \$6.50 per barrel. Rolled oats advanced to \$2.25 per bag. Rio coffee advanced to 17-20c per lb. at Toronto. Glucose rose 20c per cwt. in sympathy with the higher prices for corn. Honey advanced from 10c to $12\frac{1}{2}$ c per lb. Cream of tartar recovered from the recent decline and reached 50-55c per lb. again. Pepper rose to 25-26c per lb.

Textiles.—Wool was stronger at the London sales, all grades being up from 1d. to 3d. per lb. Raw cotton fluctuated considerably, being down early in the month as a result of heavy sales and recovered rapidly on account of the demand and the shortage of supplies, compared with the previous year. Raw silk

continued to rise, Italian classical advancing from \$4.95-5.00 to \$5.75 per lb. Japan silk eased off slightly. Silk thread, machine twist, rose from \$8.00 to \$8.25 per lb. Jute rose to 6.63c per lb., a higher level than at any time during the year, while hessians advanced to 10.66c per yard, there being a good demand and supplies being short. Flax products continued to rise, tow being up 3c per lb., fibre 4c per lb., and linen rope 4c per lb. Floor oilcloth rose 2c per square yard.

Hides, leather, boots and shoes.—Calfskins advanced from 15c to 18c per lb., and beef hides from 18c to $18\frac{1}{2}$ c per lb. Sole leather rose 2c to 44-48c per lb. Prices of boots advanced on account of the rise in sole leather, also in dyes, linings, thread and wages. Box calf boots were up 10. to 15c per pair and kid boots 10c per pair.

Metals.—Nearly all metals were rising under a good demand. Pig iron advanced from \$22.00 to \$24.00 per ton and iron bar by 10c per cwt. Black sheets rose 30c per cwt., reaching \$3.40, and galvanized sheets advanced \$1.00 per cwt. to \$6.40. Wrought iron, old material, rose from \$10.50 to \$13.00 per ton. Steel billets advanced to \$40.00 per ton. Brass rose from 33c to 41c per lb., and copper from $20\frac{3}{4}$ c to $26\frac{1}{2}$ c. Lead rose 1c to $8-8\frac{1}{2}$ c per lb. Quick-silver rose from \$110.00 to \$225.00 per flask. Bar silver was up to $56\frac{7}{8}$ c per ounce. Spelter was slightly higher and solder advanced 1c per lb. Tin was 1c higher at 48c per lb. Zinc sheets were also higher at $27\frac{1}{2}$ c per lb. Soldering irons rose to 33-35c in sympathy with the higher price of copper.

Fuel and lighting.—Gasoline rose to $24\frac{1}{2}$ c per gallon in sympathy with the higher market for crude oil, owing to great export to Europe, which was further increased by the difficulty in getting oil from Russia to Western Europe. Coke rose to \$3.00 per ton at the ovens, in sympathy with the demand for steel.

Building materials.—New Brunswick spruce deals advanced from \$16.00 to \$21.00 per thousand as supplies were scarce and mills were closed down. Stocks of lumber at Liverpool, however, were reported much larger than a year ago. Prospects for a firm and steady lumber market in the spring in Ontario were reported good. Wholesale trade was quiet owing to stock-taking. The export of lumber from Ottawa to United States was reported to be hindered by the inability of railways to carry the stocks. In Northern Ontario the cut was being reduced seriously by unfavourable weather. Miscellaneous building materials were higher in sympathy with metal markets. Lead pipe rose from 9½c to 10½c per lb., and iron pipe, one inch, from \$4.76 to \$5.10 per 100 ft. Cut nails advanced from \$2.70 per keg to \$2.90 and wire nails from \$2.75 to \$3.05. Hinges, iron wire and barbed wire were also higher. Sash cord advanced from 27½c per lb. to 31c. White lead rose from \$10.05 to \$10.55 per cwt. Turpentine rose 2c per gallon. Glass rose from \$5.20 to \$5.46 per box. Putty was 15c per cwt. higher at \$2.75. Linseed oil rose from 85c to \$1.06 per gallon. White rosin was up from 3¾-5c per lb. to 4-6c. Benzine advanced 2c per gallon in sympathy with gasoline.

House furnishings.—No changes were reported.

Drugs and chemicals.—Numerous advances continued to occur in many lines as stocks could not be renewed on account of the war conditions. Bleaching powder and soda ash were steeply upward and advances occurred in muriatic acid, sulphuric acid, alum, borax, copperas, baking soda and caustic soda.

Miscellaneous.—Gunpowder advanced again in sympathy with potash. Raw rubber rose to 80-82c per lb. Manilla rope rose from 16c to 17½c per lb. The pulp and paper market continued firm, there being heavy orders for book and writing mills. Prices for some lines of

paper were upward on account of the scarcity of rags and the high price of dye. Newsprint advanced to \$1.95-2.05 in car lots. Sulphite pulp was steadily advancing, bleached reaching \$68.00 per ton. High prices for bleaching powder, sulphur and other chemicals were factors in the rise, as well as the lack of imports from Northern Europe.

Prices in Other Countries.

The accompanying tables show the latest findings of currently published index numbers of prices in other countries.

The *Economist*, London, January 8, 1916, reports on wholesale prices in Great Britain at the end of December as follows:

In the majority of markets two main considerations are responsible for the advance—first, the rise in freights and transport delays and difficulties arising out of the shortage of labour and the commandeering of tonnage; secondly, the abnormal demand for war purposes. Of these two potent causes the first affects practically all markets in varying degrees, while the latter chiefly concerns special commodities, such as minerals, rubber and oils, leather, wool, etc. Among cereals and meats the rise is substantial, foreign wheat, flour, potatoes, mutton and pork being quoted well above November prices. . . . In the subsidiary group of foodstuffs sugar and tea are higher, but their advance is almost counterbalanced by a remarkable fall of 27s. per cwt. in Danish butter, which is now lower than it has been since June. This collapse is due partly to the widespread substitution of margarine both for cooking and for eating purposes, partly to the improvement in the Scandinavian exchanges and partly to the Danish agreement. . . . Textile prices have hardened considerably during the month. . . . Practically all the metal markets have hardened, and coal has advanced. . . . In our last group rubber provides the sensation. . . . In addition, oils and seeds appreciated. . . .

The *Statist*, London, January 8, 1916, continuing Sauerbeck's index number, reports the following:

In December there has been a further advance of 5 per cent in prices and the index number has now risen to 118.4, in comparison with 113.1 at the end of November and 81.2 before the war. Altogether there has been an advance in prices since war began of 46 per cent. Of this rise a large part is due to the abnormally high freight rates now prevailing. But for this rise the advance would probably not exceed 30 per cent. The chief rise has been in vegetable foodstuffs, where there has been an advance of nearly 4 per cent in December and of nearly 77 per cent since the war began. Animal foodstuffs have risen over 6 per cent in December and 31 per cent since

war began. Sugar, coffee and tea were slightly higher in November, and now show an advance of nearly 35 per cent since June, 1914. Minerals have risen nearly 4 per cent, and show an aggregate rise of nearly 41 per cent, while raw textiles in December have risen nearly 7 per cent, showing an aggregate rise of nearly 39 per cent, while sundry materials advanced nearly 4 per cent in value in December, and show an aggregate advance of over 50 per cent. For the whole of 1915 the index number is 108 in comparison with 86 in 1914, thus showing an advance of 25.6 per cent. It was not quite up to the level of 1873, when it touched 111. In 1825, 117 was reached. If prices throughout 1916 are maintained at the December level they will be substantially higher than in 1873 and slightly higher than in 1825.

On retail food prices in the United Kingdom at January 1, the British Board of Trade *Labour Gazette* for January reports:

Retail prices of food on January 1 were higher than on December 1 by less than 1 per cent. Fish showed an advance of about 5 per cent; the prices of flour, cheese and potatoes continued to rise to the extent of about 2 per cent, and bread also increased somewhat. Meat, bacon, tea, sugar, milk and margarine showed practically no change in price, and there was a slight fall in the average prices of butter and eggs.

In Germany the level of food prices at Berlin in November, as shown by returns in the Prussian official journal *Statistische Korrespondenz* was reported in the British *Labour Gazette* as follows:

Allowance being made for the relative consumption of the various articles in working class households in Berlin, the general level of retail food prices would appear to have fallen in November by 6.6 per cent, as compared with the previous month, but to have been 82 per cent above that of July, 1914.

Thus, for the first time since September, 1914, the index number of retail food prices registers a fall between two consecutive months. This is primarily due to the operation of recent Orders of the Federal Council, under which, for such important foods as butter, lard, pork and bacon, maximum retail prices have been fixed in Berlin well below those locally current for these articles in an uncontrolled market. It follows that the drop of about 6½ per cent in the general level of food prices based on the latest Prussian official statistics does not necessarily imply a corresponding relaxation of the strain due to short supplies; the German press, indeed, affords plenty of evidence of the difficulty of purchasing in November the usual supplies of the newly controlled articles at the officially reduced prices.

In Austria the level of food prices at Vienna in October as based on returns published by the Austrian Minis-

tries of Commerce and Agriculture in *Warenpreisberichte* was reported in the British *Labour Gazette* as follows:

October prices, being compared with those for the preceding month, considerable advances are seen to have taken place in the case of lard, bacon, butter, margarine, rice, eggs and onions. Beef, pork and milk were also somewhat dearer than in September. The only article which fell in price was potatoes. The relative consumption of the various foodstuffs being assumed to be the same in Vienna as in Berlin, it is calculated that on the whole the cost of food was between 10 and 11 per cent higher in October than in September.

If the figures for October be compared with those for July, 1914, every article (with the exception of potatoes) is found to have increased in cost, the rise varying from nearly 9.0 per cent for sugar to 342 per cent for lard. The general level of prices showed an advance of over 117 per cent.

Similarly it is found that food prices in October were on the whole about 111 per cent higher than in the corresponding month of 1914.

In Italy, in the Bulletin of the Labour Office, the prices of seven foods in November were reported 22.2 per cent higher on the average than a year before, the greatest rise being in beef, 41.2 per cent, bread being only 14.4 per cent higher. For the city of Milan the index number of the prices of nine foods, as given in the Bulletin of the Municipal Statistical Office, for December stood at 120.36 as compared with 117.33 for November, 114.38 for October, 94.57 for December, 1914, and 91.87 for July, 1914.

In the Netherlands *Maandschrift*, the journal of the Dutch Statistical Office, the index number of retail prices of 29 foods and groceries stood at 148 for November as compared with 145 for October, 90 for the half year August-December, 1914, and 80 for the half year January-July, 1914. The chief increases for November as compared with October were in beans, green peas, rice, soda and soft soap. Decreases occurred in oats, wheat flour, and granulated sugar. As compared with a year before the chief increases were in buckwheat flour, butter, rape seed oil, rice, soda, starch, syrup, sugar, vermicelli and soap.

For Norway, in *Sociale Meddelelser*, the index number of prices including

a. July of each year. b. At the first of each year. c. Foods.

24 articles of food and coal, coke and coal oil stood at 140 for last October and September, as compared with 115 for October a year before. The chief rises were in meats, dairy products, flour and fuel.

In Sweden prices of thirty foods and five lines of fuel in forty-four towns are reported monthly in *Sociala Meddelanden*. Increases over price level in the corresponding months of 1914 and 1913 are noted. The principal advances by October over the same month in 1913 were in butter, yellow peas, brown beans, flour, oats, rye bread, meat, especially in pork, salt herring, coal and coke.

For the United States *Bradstreet's Journal*, New York, Jan. 15, reported the rise in the index number of whole-sale prices for January 1 to be due to rises in breadstuffs, live stock, provisions, textiles, metals, coal and coke, oils, building materials, and chemicals and drugs, while slight declines occurred in fruits, hides, naval stores and in the miscellaneous group.

Dun's Review, New York, Jan. 15, reported rises in breadstuffs, meats and provisions, clothing, metals, leather, and in the miscellaneous group, the only important declines being in butter and eggs.

REPORTS OF EMPLOYMENT BUREAUS.

THE reports of the philanthropic employment bureaus include returns from 12 Young Women's Christian Associations, the Women's Patriotic League of Toronto, and three hostels. These bureaus reported 1,672 vacancies notified and 328 women and girls placed during the month ended December 31, 1915. Ten public employment bureaus co-operating with the Department reported 4,149 vacancies notified and 2,997 individuals placed. Eleven employment bureaus of the Salvation Army reported the distribution of 974 casual jobs to 396 persons. Individual returns are given in the following tables:

FAIR WAGES CONTRACTS, JANUARY, 1916.

THE Department of Labour received during the month of January for insertion in the *Labour Gazette* information relating to eight fair wage contracts. Six of these contracts, one of which contained a fair wages schedule, were awarded by the Department of Public Works, and two, one of which also contained a fair wage schedule, were awarded by the Department of Railways and Canals. Five of the contracts awarded by the Department of Public Works and one awarded by the Department of Railways and Canals contained the general fair wage clauses providing for the rates generally accepted as current in the locality where the work is being carried on. A statement is added for supplies given by the Post Office Department, subject to the regulations for the Suppression of the Sweating System.

Fair Wages Schedules.

DEPARTMENT OF PUBLIC WORKS.

Construction of temporary station "A," Toronto, Ont. Name of contractor, Wm. Williamson, Toronto, Ont. Date of contract, January 26, 1916. Amount, \$21,774, and for any additional work: excavating, 90 cents per cubic yard, and concrete foundations, \$7.75 per cubic yard.

Trade or Class of Labour.	Rate of wages.			
	Not less than the following:			
Masons.....	55c	per hr.,	8 hrs.	per day
Bricklayers.....	55c	"	8	"
Carpenters.....	45c	"	8	"
Plasterers.....	55c	"	8	"
Electrical workers.....	40c	"	8	"
Plumbers and steamfitters.....	45c	"	8	"
Painters and glaziers.....	35c	"	8	"
Cement finishers.....	45c	"	8	"
Plasterers' labourers.....	35c	"	8	"
Builders' labourers.....	30c	"	8	"
Ordinary labourers.....	25c	"	8	"
Driver, 1 horse and cart.....	45c	"	9	"
Driver, 2 horses and wagon....	60c	"	9	"

DEPARTMENT OF RAILWAYS AND CANALS.

Construction and completion of two double track transfer bridges, one for Cape Tormentine, in the Province of New Brunswick, and the other for Carleton Point, in the Province of Prince Edward Island, in connection with the car ferry to ply between said places. Name of contractors, Dominion Bridge Company, Limited. Montreal, Que. Date of contract, January 18, 1916. Amount, \$94,328.

Trade or Class of Labour.	Rate of wages per day of 10 hours	
Structural steel workers.....	\$0.35	per hour.
Carpenters.....	2.25	per day.
Machinists.....	3.00	"
Hoisting engine drivers.....	2.50	"
Blacksmiths.....	2.50	"
Painters.....	2.00	"
Electrical workers.....	3.00	"
Labourers.....	1.50	"
Driver, 1 horse and cart.....	2.50	"
Driver, 2 horses & wagon....	4.00	"

Fair Wages Clauses.

A number of contracts were awarded which did not include a fair wages schedule, but contained the following clauses providing for the payment of wages current in the district where the work was to be carried on:

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the above clauses follow:

Supply and delivery of 300 metallic four cap drawer vertical filing cabinets,

No. 14 C.V. public buildings-generally.
Name of contractor, Office Specialty Manufacturing Company, Ltd., Ottawa, Ont. Date of contract, December 30, 1915. Schedule of prices.

Alterations and additions to Post Office and Customs interior fittings on the ground and first floors of public building, Saskatoon, Sask. Name of contractor, The J. T. Schell Company, Alexandria, Ont. Date of contract, January 4, 1916. Amount, \$753.

Post Office fittings in public buildings, Bassano, Alta. Name of contractor, The Interior Hardwood Company, Ltd., Berlin, Ont. Date of contract, January 5, 1916. Amount, \$1,097.

Electric light wiring and fittings in public building, Portage la Prairie, Man. Name of contractor, Houston & Company, Ltd., Winnipeg, Man. Date of contract, January 11, 1916.

Electric light wiring and fittings in Post Office building, Berlin, Ont. Name of contractor, A. Lockhart & Company, Berlin, Ont. Date of contract, January 12, 1916. Amount, \$830.

DEPARTMENT OF RAILWAYS AND CANALS.

Erection, complete in place, ready for use, of a radial brick chimney, including a concrete foundation 23 feet square and 12 feet deep, with lightning protection and ladder, for the power house of the Intercolonial Railway shops at Moncton, in the Province of New Brunswick. Name of contractors, Custodis Canadian Chimney Company, Ltd., Toronto, Ont.

Date of contract, December 21, 1915.
Amount, \$7,657.

POST OFFICE DEPARTMENT.

During the month of December, payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages, and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount for Orders.
Making metal dating stamps and type and making other hand stamps and brass crown seals.....	\$ 1,048.74
Making and repairing rubber dating stamps and type; also other stamps.....	116.70
Supplying stamping material and repairing stamping pads.....	1,409.19
Supplying new mail bags.....	15,960.68
Repairing mail bags.....	2,624.32
Supplying mail bag fittings.....	13,752.53
Making and repairing miscellaneous articles of postal stores.....	15.45
Repairing railway mail clerks' tin travelling boxes.....	25.00
Making and supplying material for letter carriers' uniforms; also articles of official uniform.....	594.50

TRADE DISPUTES DURING JANUARY, 1916.

THERE was one trade dispute recorded as having commenced during January. Three disputes were carried over from December, one of which, however, was settled during the month, making a total of four trade disputes in existence during January, compared with six disputes in existence during January, 1915. In the new dispute, one firm and 27 employees were involved, while in the three disputes carried over from the previous month there were eight firms concerned and 168 employees affected or a total of nine firms and 195 employees involved in the four disputes existing during January. In the six disputes on record during January, 1915, there were six firms and 169 employees concerned.

Duration of trade disputes.—The estimated time losses to the 27 employees affected by the new dispute of the month were 81 working days, and these when added to the working days lost through trade disputes carried over from December give a total of 2,481 working days lost through trade disputes in existence during January, compared with 3,945 working days lost through trade disputes in January, 1915.

Disputes beginning before January.

There were three disputes carried over from December, one of which was settled during the month. These were:

- (1) *Plumbers and steamfitters, Victoria, B.C.* Dispute commenced February 16, 1915.
- (2) *Boilermakers, iron workers and helpers, Halifax, N.S.* Dispute commenced August 2, 1915.
- (3) *Iron workers and helpers, Esquimalt, B.C.* On December 21, 1915, 100 iron workers and helpers, employees of the shipbuilding firm of Yarrows, Ltd., Esquimalt, B.C., went on strike to enforce their demand for a fortnightly pay-day and an increase in wages. Negotiations between the parties resulted in the institution of a fortnightly pay-day and also an increase in wages being granted to the helpers and rivet heaters.

Disputes beginning during January.

Machinists, London, Ont.—On January 27, twenty-seven machinists in the employ of the London Machinery Company, London, Ont., went on strike as a protest against a reduction in piece-work rates. The dispute had not been settled at the end of the month.

TABLE OF TRADE DISPUTES IN EXISTENCE DURING JANUARY, 1916.

DISPUTES BEGINNING DURING JANUARY, 1916.									
<i>Metal—</i> Machinists.....	London, Ont.....	Reduction in piece-work rates....	1	27		Jan. 27, 1916....	Unsettled at end of month.....	

*Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where, after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF JANUARY, 1916.

Under this heading, account is taken of such accidents only as were sustained by male and female workers in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the Dominion or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Department of Mines of Nova Scotia, Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

THERE were recorded by the Department of Labour as having occurred during the month of January 46 fatal and 289 non-fatal industrial accidents. As a result of these accidents 75 workpeople were killed and 315 injured in the course of their employment. The record for December was 55 workpeople killed and 268 injured, while the record for January, 1915, was 34 killed and 166 injured. It will be seen on comparing the January record with that for December that there were 20 more killed and 47 more injured in January than in the previous month, while there were

42 more killed and 149 more injured in January than in January, 1915.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE

IMMIGRATION—EMIGRATION—COLONISATION.

(1) Movement of British Subjects between the United Kingdom and British North America.

Immigration to British North America from the United Kingdom.—Of the 3,122 British subjects previously resident in the United Kingdom who departed during December to take up permanent residence in places out of Europe, 713 were destined for British North America as compared with 650 in November and with 906 in December, 1914. The number departing in the twelve months ending December, 1915, was 76,914, and of these 16,765 were destined for British North America as compared with 78,570 destined for British North America in the year 1914.

Emigration from British North America to the United Kingdom.—Of the 5,663 British subjects previously resident in places out of Europe who arrived in December to take up permanent residence in the United Kingdom, 4,038 were from British North America as compared with 4,089 in November and with 4,394 in December, 1914. The number arriving in the 12 months ending December, 1915, was 91,960, and of these 38,811 were from British North America as compared with 33,684 for the year 1914.

Balance.—It appears from the above that in the movement of British subjects between the United Kingdom and British North America, the latter had an outward balance of 3,325 in December as compared with an outward balance of 3,439 in November and an outward balance of 3,488 in December, 1914, and that for the year ending December, 1915, British North America

had an outward balance of 22,046 as compared with an inward balance of 44,886 for the year ending December, 1914.

(2) Movement of Persons other than Citizens of the United States between the United States and British North America.

Immigration to British North America from the United States.—According to the December Bulletin of the Bureau of Immigration of the United States Department of Labour, alien residents of United States to the number of 1,186 departed to take up permanent residence in British North America during December as compared with 1,468 in November and 1,099 in October.

Emigration from British North America to the United States.—During December, 8,209 persons (not including citizens of the United States) left British North America to take up permanent residence in the United States as compared with 9,938 in November and 7,305 in October.

Balance.—It appears from the above that in this movement between the United States and British North America the latter had an outward balance of 7,023 in December as compared with an outward balance of 8,470 in November and 6,208 in October. For the year ending December, 1915, 84,886 persons left British North America for the United States and during the same period 16,931 aliens departed from the United States to British North America leaving the latter an outward balance of 67,955 for the year 1915.

Lands patented.—According to the Department of the Interior's statement of letters patent covering Dominion lands in Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory for the month of December, 1915, the number of patents was 923 and the number of acres 156,704.54. These numbers compared with 1,195 and 199,918.69 respectively in December,

1914. For the calendar year 1915 the number of patents was 19,692 patents and 3,189,335.25 acres, as compared with 29,301 patents and 4,850,559.84 acres in 1914.

The following statement gives details of lands patented during the last quarter of the calendar year, 1915, with a comparison of the figures for the same period in the preceding year.

REVIEWS.

U. S. Labour Report.

United States.—Third Annual Report of the Secretary of Labour, fiscal year ended June 30, 1915; 86 pages. Washington, 1915.

IN two particulars—labour distribution and mediation in labour disputes, the work of the Department of Labour was especially important and successful during the fiscal year.

Mediation in Labour Disputes.

Forty requests for mediation came in during the year and two cases were pending in the beginning of the year. Out of these, 26 amicable settlements were effected. In ten cases, settlements proved impossible and six cases came over unfinished into the fourth fiscal year. The forty cases handled during the year were distributed among different industries as follows: railroads, 5; street railways, 2; machinists, 7; textile workers, 6; paper mills, 7; coal mining, 2; miscellaneous, 11.

Labour Distribution.

With a view to the further development of the Department's work of labour distribution a national conference with state and municipal officials engaged in this work was held under the auspices of the Department at San Francisco, August 2, 1915. Following the successful outcome of two experiments, one concerned with the distribution of harvest help and another with the placing of the factory workers thrown out of employment by the disastrous fire on

June 25, 1914, at Salem, Mass., the Department began to organize public employment exchanges upon a national scale. Eighteen employment zones were established, with a public employment branch station in each zone under the charge of an immigrant inspector, and in addition to these sub-branches to the number of 22 were established, and since then others have been added. Through the co-operation of the Post Office Department it became possible to bring to the aid of this labour-distribution service some 60,000 post offices. The Department of the Interior, the Department of Agriculture and the Department of Commerce have also co-operated. The Secretary of Labour, however, is of the opinion that it will not be enough to hunt "manless jobs" for "jobless men." He states, "the labour-distribution work of this department should extend to some such development of the natural resources of the country as will tend to make opportunities for workers greater than demands for work and to keep them so." To this end it is proposed that the Government should retain public lands it now holds and should acquire privately owned lands which should be made available for settlement for persons of small means. Congress might provide a "rotary fund" for lending purposes, that is a fund to be used over and over again, for making loans and to be maintained by repayments of loans. Out of this fund the Department of Labour would make loans to settlers placed by the Depart-

ment upon the lands set aside for that purpose; the Departments of Interior and Agriculture by their educational purposes could make efficient farmers of inexperienced but otherwise competent workers; and the Department of Agriculture through its marketing plans could guard borrowers from the "rotary fund" against commercial misfortune in disposing of their crops.

Office of the Secretary.

The total appropriations for the Department for the fiscal year ended June 30, 1915, amounted to \$3,940,482. An unexpended balance of \$78,412.05 was reported. The total number of employees of the Department at the beginning of the fiscal year 1916 was 2,126.

Bureau of Labour Statistics.

During the fiscal year this Department published 25 serial bulletins and one non-serial volume. The Bureau has in course of preparation bulletins in continuation of its statistics of prices and wages and hours of labour, but more particular investigations relating to industrial accidents and accident prevention, industrial disputes, hygiene, morbidity and mortality of wage earners, regularity of employment, unemployment, and employment of street railway labour in the United States, profit sharing, foreign labour legislation, administration of labour laws, effects of compensation legislation, etc.

Bureau of Immigration.

Owing to the war immigration is reported as at the lowest level in several

decades. Alien arrivals, both immigrant and non-immigrant, numbered 434,244 during the year, as against 1,403,081 for the previous year, a decrease of 968,837 or 69 per cent.

Children's Bureau.

The Children's Bureau began the third year of its operation July 1, 1914, with a staff increased by Congress from 15 to 76 persons and an appropriation increased from \$25,640 to \$164,640. The investigations of the Bureau during the year dealt with the methods of enforcing street-trades regulations, infant mortality, child hygiene, baby-saving campaigns, birth-registration, the mentally defective and kindred subjects.

Bureau of Naturalization.

Since Federal enforcement of the naturalization law was established in 1906 and down to the close of the fiscal year 1915, the number of foreigners admitted to citizenship was 520,898 and 74,069 petitioners were denied admission out of a total of 594,967 petitions filed.

Departmental Recommendations.

Among the departmental recommendations there are two which aim to improve the Department's work of labour distribution. One of these recommends legislation with reference to the utilization of public lands and community credits and the other that the Interstate Commerce Commission should be vested with authority to authorize exceptional rates of railroad fare for unemployed persons in cases approved by the Department.

Industrial Canteens.

United Kingdom.—Ministry of Munitions. Health of Munit'ion Workers' Committee, Report on Industrial Canteens. 7 pages. London, 1915.

The Health of Munit'ion Workers' Committee, whose report on Sunday Labour in Munit'ion Works was reviewed in the last issue of the *Labour Gazette*, has submitted a report on Industrial Canteens. This report emphasizes the importance of proper nutrition in securing the physical fitness of the workers upon which the quantity, amount and speed of the output is largely dependent. The importance is noted of providing the quantity and kind of food best suited to the requirements of the worker in his particular employment whether sedentary or active, and adapted to the worker's age, sex, weight and constitution. The statement is made that "there can be no doubt that 'industrial alcoholism' is in part due to the lack of cheap, good food."

Workers are getting a better type of food than formerly, but large numbers do not obtain such a dietary day by day as will fit them for hard, long or rapid work. At present the prevalence of night labour and the necessity of taking meals away from home have increased the difficulties of securing adequate food. If food is brought from the worker's home it is limited in quantity, cold and liable to be stale. If the worker warm or cooks his food at the factory much valuable time is lost and warmed-up food is generally not so nourishing as freshly cooked food.

There has been a variety of efforts to deal with this problem, but the most hopeful has been the establishment by the employers of industrial canteens or

workpeople's dining rooms, in or near the factory. Generally speaking, the accommodation provided accords with one or other of the following types: (a) an available room for the workers to eat their prepared food; (b) a room furnished with a "hot plate" or "warming cupboard," or provided with hot water; (c) a refreshment barrow to perambulate the workshops at appointed hours (particularly useful for light refreshments during long spells or night shifts); (d) a fixed refreshment bar or buffet; (e) a dining room supplying cheap hot and cold dinners; and (f) such a dining room associated with an institute or club, with facilities for rest and recreation. Some of these types may be suitably combined, and although arrangements indicated in (c) and (d) may prove sufficient and satisfactory in certain circumstances, the provision of proper meals seems obtainable only in the types (e) and (f).

In order to ensure effective results the canteen must be attractive and situated in or near the works; there should be ample dining-room with separate accommodation for men and women; food should be varied, fresh and good and obtainable at low prices; service should be prompt and hours convenient.

As to the benefits of industrial canteens the committee find that they have effected a marked improvement in the health of the workers, less absence and broken time, less tendency to alcoholism and an increased efficiency in output. Further, the committee find that "there is a body of men and women (averaging at least 25 per cent) who in the interest of physical health and vigour need canteen provision at the factory. They are convinced that this group of ill-fed work-

ers accounts in a large degree for such inefficiency as exists and that its energy and output is reduced in the absence of suitable feeding arrangements." The committee understand that the Central Control Board (Liquor Traffic) appointed under the Defence of the Realm Act, 1915, No. 3, is empowered by the Treasury to make grants in aid of capital expenditure for the erection of canteens approved by the Board, in Controlled Munition Works.

Employment Statistics.

British Columbia.—Annual Report of the Municipal Labour Bureau, Victoria, for the year ended Dec. 31, 1915.

The number of men who had registered at the Bureau on July 31, 1915, was 2,639. On November 17, a new registration was begun. During the year 3,891 men were sent to employment, casual and otherwise. The number of women placed in more or less permanent positions was 429, and 443 women were supplied with day work.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

Workmen's Compensation Act.—Well-digging falls under the Act.

THE plaintiff's husband, on June 24, 1914, was in the employ of the defendant as a labourer and was engaged in digging a well, when he was asphyxiated to death by fumes of natural gas escaping from the sides of the well. His widow took an action for an indemnity amounting to \$2,025, under the Workmen's Compensation Act of the Province of Quebec. The defendant pleaded that the Act did not apply to the work in question. The Superior Court, however, held that death brought about under circumstances such as those in the present case constituted an industrial accident within the meaning of the Act, and sentenced the defendant to pay the plaintiff the sum of \$2,025, to be divided as follows: \$1,225 to the plaintiff and \$800 to her minor children, said sum to

be paid to her as guardian of said children. (*Larouche v. Jobidon.*)

Workman's lien.—It cannot be enforced against a public road, said road being part of the public domain.

The plaintiff had been engaged, with his team, in macadamizing a public road in the town of Beaconsfield during the months of August and September, 1911. His wages not being paid by the contractor for the building of the road, he immediately notified respondent, the town of Beaconsfield, to that effect, and on October 25 following caused to be filed a statement, according to Article 2013 of the Civil Code, by which he asked that the road in question be affected to the payment of the lien and that the respondent be bound to relinquish said road or pay the debt. In an action against the contractor and the town, the latter denied the existence of the lien and moved the dismissal of the action as far as it was concerned, on the ground that the plaintiff was not entitled to any lien for the kind of work he had been performing. Mr. Justice

Beaudin, who heard the case, "considering that it is admitted by both parties that the road mentioned in the plaintiff's statement is a public road and was such a road on the dates mentioned in the statement; considering that said road was and is part of the public domain, and that consequently the respondent could be bound to relinquish it for the purpose of its being sold at law, as said road is inalienable as long as it is used according to its destination," dismissed the case with costs as far as the respondent was concerned. (*Desrosiers v. Leedham and Town of Beaconsfield*, respondent.)

Workmen's Compensation Act.—City labourer.—Application of the Act.

An action was taken, under the Workmen's Compensation Act, by a joiner who was employed by the City of Montreal in building a shed at the intersection of two streets in the City of Montreal. On April 1, 1915, the shed having collapsed, he suffered thereby a broken leg and was in a hospital for a month. He sued the city for an indemnity. The defendant claimed that the Workmen's Compensation Act did not apply to an employee of the City of Montreal, and this view was upheld by Mr. Justice MacLennan, who dismissed the plaintiff's action with costs. (*Trudeau v. City of Montreal*.)

THE LABOUR GAZETTE

MARCH, 1916.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

THE record of the month with respect to industrial disputes was a little less favourable than during recent months, but most of the disputes reported were arranged within a few days, and the month closed without any evidence of wide industrial unrest. One of the most important disputes reported was that of transport workers in Toronto, where a considerable increase in wages was demanded, about 350 drivers being concerned; the men were out two weeks when a compromise was effected, the terms including a slight wage increase. A dispute affecting steel workers occurred at Hamilton, a wage increase being demanded by nearly 400 employees, not organized; after a strike of two weeks the men returned to work without any change in wages. The only other difficulty of importance was that occurring in one of the shipyards of Canadian Vickers, Limited, at Maisonneuve, where nearly 300 carpenters struck for an increase in wages; other sections of the establishment were not affected by the strike. The dispute was unsettled at the close of the month, but a number of the workmen had returned to work.

* * *

THE conference mentioned last month in these notes as affecting coal miners and railroad employees to the extent of about three-quarters of a million men proceeded during February. At the close of the month the outlook in the case of the coal miners pointed to a

favourable settlement both as to bituminous and anthracite workers; the prospect of an amicable settlement in the case of the railroad workers, where the train operatives are demanding an eight-hour working day, was less promising. In the case of the bituminous or soft coal workers, numbering about two hundred thousand men, wage increases estimated at the heavy figure of eight and one-half million dollars have been conceded, to take effect as from April 1. Among the concessions is that touching the run-of-mine system of wage payment, a demand of many years' standing; this concession will bring part of the wage increase which has been arranged. The miners had urged an eight-hour day from bank to bank, with an "idle day" for every other Saturday, but these demands are said not to have been conceded. At the close of the month negotiations in the case of anthracite workers were continuing and the situation was hopeful.

In the case of the railway workers, where overtime wages are asked for hours worked over eight, the negotiations were at the close of the month continuing, but some of the four organizations involved, including engineers, firemen, conductors and trainmen, were already proposing to take a strike vote. The leaders of the railways and unions concerned were, however, still in touch and an agreement is not impossible. No public pronouncement has been made with respect to the bearing of the negotiations in this case on the conditions in the Dominion, where the railroad employees concerned are members of the

same trade union organizations, but there is believed to be some ground for the view that the Canadian railroad workers interested have reached an informal understanding that the demands now under consideration between the unions and railroads in the United States will not, during the continuance of the war, be taken up for negotiation on this side of the line.

* * *

THE Report of the Board of Inquiry into the Cost of Living, which was tabled in the House on February 17, is reviewed in a special article in this issue. The members of the Board were Messrs. John McDougald, C.M.G., (chairman), C. C. James, C.M.G., R. H. Coats, F.S.S., and J. U. Vincent. Mr. Thomas J. Lynton acted as secretary. The report consists of two volumes, which are accompanied by a reprint of the "Summary" with which Volume II is concluded. The report proper, appearing in Volume I, consists of 79 pages, and is signed by Messrs. McDougald, Vincent and James. This volume also contains 43 appendices. Volume II is a supplementary report, being an Exhibit by the Statistical Branch of the Department of Labour prepared under the direction of Mr. R. H. Coats, chief statistician of that Department, and since appointed Dominion statistician and controller of the census. The volume is divided into three parts: (1) "Facts," (2) "Causes," and (3) "Summary." It also contains memoranda on "Fish" and "Dairy Products."

* * *

PART I of the Report of the Ontario Commission on Unemployment, to which reference was made in the February issue of the *Labour Gazette*, is reviewed at length in this number. The review takes the form of a synopsis of each section of the report, and the recommendations under each head are

given, verbatim. Already there is evidence that the Ontario Government intends to take action along the lines recommended by the Commission. A bill entitled "The Trades and Labour Branch Act" has been introduced, which recommends the establishment of a Trades and Labour Branch in connection with one of the Departments of the Public Service. It is proposed that the Branch shall administer the Bureau of Labour Act, the Stationary and Hoisting Engineers Act, the Building Trades Protection Act, the Factory, Shop and Office Buildings Act, the Steam Boilers Act and such other acts as may from time to time be designated by the Lieutenant-Governor-in-Council. Among the duties of the Branch are included the collection of statistical and other information respecting trades and industries in the province, the establishment of employment bureaus to assist in the distribution of labour, inquiry as to the advisability of establishing new industries because of the availability of raw material for such industries or the immigration of persons skilled in the same, reporting upon labour laws in other parts of the Empire and foreign countries, the consideration of any suggested changes in the labour laws of the province and the preparation of an annual report. The commissioners, in their report, suggested that these duties be undertaken by a new Department rather than by a branch of one of the existing Departments, and they also favoured the appointment of a Provincial Labour Commission.

* * *

EMPLOYMENT during February continued to be adversely affected in some branches of industry by very cold weather and heavy snowfalls. In outside construction generally, and in lumbering and mining operations in British Columbia, opportunities for employment were less and some men were laid off, but this condition was offset by the addi-

tional work afforded unskilled labour in the clearing of railway tracks and city streets. Ice-cutting also continued to give employment to many men. Employment in factories was well maintained, and in quite a number of manufacturing centres a shortage of labour, both male and female, was reported. A shortage of farm help also existed in practically all agricultural districts.

* * *

PRICES continued to rise in February, but not so steeply as in January, except in potatoes, the higher prices of which had the effect of adding to the cost of the weekly budget of staple commodities. Flour and bread were also higher in some localities, but began to decline with the lower prices of wheat. Rents were lower when compared with the figures for the same month in 1914 and 1915. In wholesale prices the index number stood at 173.7 as compared with 172.0 for January, 142.5 for February, 1915, and 136.6 for February, 1914.

* * *

AS these pages are going to press, word reaches the Department of the death on Tuesday, March 14, after a short illness, of one of the oldest members of its staff, Mr. Victor DuBreuil, senior Fair Wages Officer. Mr. DuBreuil had been with the Department almost from its inception, having been appointed in February, 1901. His work fell largely within the province of Quebec, but required him also frequently to visit the Maritime Provinces. Mr. DuBreuil had been for many years well and favourably known in industrial circles all over Eastern Canada. During his connection with the Department of Labour his good offices had been used on many occasions in the adjustment of industrial difficulties, his wide experience, courtesy and general tactfulness bringing him many successes in these matters. Mr. Du-

Breuil was popular with his fellow officers and faithful in the performance of his duties.

TECHNICAL Schools recently formed the subject of questions in the Quebec Legislature, and some interesting information was given by the Provincial Registrar in regard to these schools in Quebec. There are now five technical schools in the province, those found namely at Montreal, Quebec, Shawinigan Falls, Sherbrooke and Beauceville. At Montreal there are eight professors and eight foremen; at Quebec, five professors and four foremen instructors. Shawinigan Falls has a teaching staff of seven, Sherbrooke three, and Beauceville five religious professors. The number of students attending the various technical schools is as follows: At Montreal, 720; Quebec, 319; Shawinigan Falls, 184; Sherbrooke, 11; and Beauceville, 40. Forty-five students obtained diplomas at Montreal, and in addition 211 certificates of capacity were given to students who followed the night course. At Quebec 19 students obtained diplomas. The Shawinigan Falls school has no graduates as yet as none of the students have been there four years. Thirteen students obtained diplomas at Beauceville. Sherbrooke gives only certificates of capacity. Graduates of the Montreal school are now engaged in industry as machinists, electricians, joiners, blacksmiths, foundrymen and draftsmen, and the statement was made that many already have enviable situations considering their age. It was stated also that as a rule the students are appreciative as may be seen by the many applications for former students sent to the school this year. All those who graduated at Quebec are engaged in industry, either as foundrymen, draftsmen, machinists, etc. Students from the schools at Shawinigan Falls and Beauceville became engaged in industry. After fol-

lowing the course for two years those who obtained certificates of capacity from the Sherbrooke school went to the various technical, polytechnic, surveying or forestry schools or found places in workshops as draftsmen. Five are engineers, four are surveyors, three are assistant bridge engineers, 32 are draftsmen, two are caricaturists, and seven are soldiers. The cost of the building, furnishing and plant at Montreal was \$636,187; at Quebec, \$405,359. A grant of \$10,000 was given the Beauceville school as aid towards the cost of building it. The other schools are private institutions subsidized by the Government. The Government has paid out for the maintenance and other expenses of the Montreal school \$228,000, and for Quebec \$197,411. Expenditures on account of the schools at Shawinigan Falls, Sherbrooke and Beauceville have been \$12,500, \$8,000 and \$3,000 respectively.

THE March number of the Canadian Fishermen, the official organ of the Canadian Fisheries Association, contains a number of important references to various phases of the fishing industry in Canada. A full account is given of the annual convention of the Canadian Fisheries Association held at Montreal, January 31. Amongst important questions dealt with by the Association was the sending of samples of fresh frozen, smoked and cured fish to the British fish trade. This action, it was stated, had been accompanied with satisfactory results, and it was expected that considerable shipments of Canadian fish to British markets would result. The action of the Association in taking up the question of supplying fish to the soldiers in training at concentration camps in Canada and to Canadian soldiers in England and France was dealt with, as well as other work of the Association in the way of promoting the interests of the Canadian fisheries. The scale of annual membership fees was re-

duced so as to encourage fishermen and small dealers to become members. A number of addresses were delivered by experts in fishery matters, and at the banquet of the Association the Hon. J. D. Hazen, Minister of Marine and Fisheries, gave an address in which he outlined the work of the Fisheries Department and generally what had been done by the Government in aid of the industry.

Another important happening in connection with the fishing industry was the formation of the Lake Erie Fishermen's Association at St. Thomas on February 10, at which addresses were given by the Hon. Finlay G. MacDiarmid, Minister of Public Works, and others interested in or associated with the fishing industry on the Great Lakes. Various questions dealing with better protection to the fishing industry were discussed.

* * *

AT the present session of the Manitoba Legislature quite a number of measures affecting both male and female labour have been introduced, some of which have already passed the third reading of the House. Amongst these may be mentioned an Act to amend "The Bureau of Labour Act"; an Act to amend "The Manitoba Factories Act"; an Act to amend "The Shops Regulation Act," and an Act to amend "The Bake Shops Act." The Act amending "The Bureau of Labour Act" provides for the appointment of a Secretary of the Bureau of Labour, and also inspectors and administrative staff. The Act instructs the Bureau of Labour to see that the following Acts are properly observed and enforced: "The Shops Regulation Act," "The Bake Shops Act," "The Public Buildings Act," "The Manitoba Factories Act," and "The Building Trades Protection Act." The Manitoba Factories Act amendment makes the number of employees constituting a factory three instead of

five as formerly, includes laundries owned or operated by Chinese, makes the total hours of labour per week "sixty" instead of "seventy-two and a half," and forbids the operation of factories on statutory or legal holidays without special permission from the inspector. The Shops Regulation Act brings any retail or wholesale shop, store, booth, stall or warehouse under the inspection of the Bureau of Labour. It provides that no girl under 14 years of age and no boy under 13 shall be employed in any shop, and no boys under 14 shall be employed longer than 48 hours. No females of any age, and no

boys over 14 and under 17, shall be employed more than 14 hours in any one day, or 60 hours in any one week. The Act also provides for a full hour to be allowed at noon, sufficient number of separate closets for each sex, sanitary and ventilation requirements, also fire escapes with unencumbered approaches. The Bake Shops Act provides for inspection by the Bureau of Labour, and that no person under the age of 14 shall be employed in a bake shop.

A complete review of labour legislation passed or to be passed by the Manitoba Legislature will be given in a later issue of the *Labour Gazette*.

INDUSTRIAL CONDITIONS DURING FEBRUARY, 1916.

GENERAL SUMMARY.

EXCEPTIONALLY severe weather conditions characterized the month of February, and in practically all parts of the country outside building and other construction work was interrupted or impeded, and railway operation rendered very difficult. The effect on employment, however, on the whole was favourable. Large numbers of unskilled labourers were given work in the clearing of streets and railway tracks, and ice-cutting continued to provide employment for many men. In some localities a scarcity of help for this work was reported. Farmers all over the country were snowbound for several days at a time and markets were poorly attended. A scarcity of farm help was reported, though wages offered were considerably higher than for the same period last year. Fishing, owing to cold weather and storms, was quiet throughout practically the whole of the month. Lumbering was fairly active, with some quiet in parts where adverse weather condi-

tions prevailed. Coal and metal mining continued active, though a number of metal mines in British Columbia were obliged to cut down operations for a time owing to heavy snowfalls, frosts and mountain slides. Manufacturing continued fairly active with a scarcity of help reported from several localities. Railway construction was quiet. Railway transportation continued to be interrupted by heavy snowfalls, but work for railway workers was accelerated rather than diminished on this account. Fairly active conditions prevailed at winter ports.

The Department's record of prices showed further advances for February, but not so steep as for the previous month. The weekly family budget of staple foods rose from \$8.28 to \$8.40, chiefly as a result of a rise in potatoes, but flour and bread were higher, while eggs were lower. The same list a year before cost \$7.99. Rent averaged \$3.87 per month in 1915 and \$4.85 in 1914. In wholesale prices the index number

stood at 173.7, as compared with 172.0 for January, 142.5 for February, 1915, and 136.6 for February, 1914. The chief increases for the month were in animals and meats, metals and implements, but decreases occurred in dairy products, lumber, paints, oils and glass.

Changes in Wages and Hours of Labour.

Wages changes were not very marked, though some changes went into effect during the month. Printers in Quebec in all offices except one, where the men went on strike, were given an increase of \$1.50 per week in accordance with an agreement entered into in 1914. Fifty teamsters at Hamilton secured an increase of \$2 per month, to date from January 1. The men also receive an extra allowance when required to feed horses on Sundays. Painters and decorators at Regina, as the result of a strike, secured an increase of 5 cents per hour.

In South Vancouver the wages of labourers engaged in laying sewers for the city were reduced from \$3 to \$2.50 per eight hour day. About 150 men were affected by the change. At New Westminster all civic salaries from the mayor down were reduced.

Agriculture.

As is customary at this season of the year agricultural operations were comparatively quiet. Heavy snowfalls in many parts of the country blocked the roads and restricted farm work practically to the feeding of stock. In the West, in the Lethbridge district, fine weather was reported, and farmers were getting ready for spring operations. Some farmers commenced threshing again. In Manitoba it was estimated that 25 per cent of the grain crop was yet to be shipped and that a fairly large amount of that percentage was still to be threshed.

The question of securing farm labourers for spring work was reported from many districts a serious one, and it was

expected there would be difficulty in securing the men required. In the Hamilton, Ont., district, farmers were offering wages far in excess of what had been paid the previous year, but little or no help was available. At Woodstock, also, farmers reported a scarcity of help, with the prospect for spring very poor. At Berlin farmers were ready to sign contracts for six, eight or twelve months at from \$25 to \$30 a month and board, but claimed it was hard to get experienced help. At Belleville, also, the question of farm help was reported a serious problem.

In the West it was reported that a serious shortage of farm labour was expected. Medicine Hat reported farmers planning to seed on a large scale this year, but expecting a shortage of help. Saskatoon reported a heavy demand for agricultural labour, and it was stated that the province was seeking farm help from the relief department of Vancouver. Regina reported farmers already looking for help for the spring, which it was expected would be difficult to secure, although high rates were being offered. The majority of the young men were said to have enlisted and married men were not anxious to leave their families and go to the country, believing there was a prospect of work in the city in the spring at good wages. At Lethbridge, where mild weather prevailed, help was expected to be scarce. Farmers were already seeking men, but very little hiring was done.

Fishing.

Reports from Canso stated that the winter haddocking on account of unusually favourable though somewhat windy weather of the early days of the month, was kept up with fair success considerably later than for many years past, and that high prices were obtained for the fish taken. Lobster fishermen and packers on Prince Edward Island were making preparations for the opening of the season on April 26. Supplies were being procured, traps made and equipment over-hauled. It was expected

there would be an increase in the number of traps this year over last, but that there would be about the same number of canneries in operation. A shortage of male help was reported.

At Digby the fishing industry was reported quiet. Fish had left the shores and boats which were not engaged in lobster fishing were hauled up, to remain so until about the middle of April, when they will start fishing for cod, haddock and pollock. The overhauling of boats and tackle occasioned considerable activity. At Yarmouth adverse weather conditions caused a decline in operation of all branches of the fisheries, especially lobster fishing. The catch, however, was reported fair considering the number of men engaged. Smelt fishing in some parts of New Brunswick was extended for seven days, but was not up to the average.

Fishing was being carried on to some extent in Northern Saskatchewan lakes, though consignments out were reported small. During the month a convention of Lake Erie fishermen was held at St. Thomas, Ont., at which methods to protect fish spawn and other means of increasing the fish supply were discussed.

On the Pacific Coast cold weather with high gales interfered with fishing and vessels had to remain in port or seek shelter for many days at a time. At New Westminster there was very little fishing on the Fraser River. At Nanaimo but little fishing was done outside of herring fishing, most of which is in the hands of Japanese. At Prince Rupert the industry was reported quiet owing to cold and rough weather. The whaling season on the Pacific Coast was expected to commence earlier this season than was the case last year. Whaling vessels were being made ready for the season's work, which is expected to commence about April 1.

Lumbering.

Lumbering in Nova Scotia showed more active conditions than were reported last month and heavy shipments of deals were made from many points.

A greater amount of snow enabled lumbermen to proceed more expeditiously with the hauling of logs. At Newcastle, N.B., operations in the woods continued busy and large crews of men were employed. Heavy snows helped the work of hauling to the landings. In Charlotte county a firm which has secured a contract to supply five thousand cords of pit props for an English firm had a number of men in the woods getting these into shape. At Woodstock, N.B., one company started its mill, giving employment to 25 men.

Logging operations in Quebec districts also continued active. In districts adjacent to Quebec City conditions continued good with enough and not too much snow for hauling purposes. While the number of men employed in the woods this winter has not been so great as last year, conditions have been better and the output, it is expected, will be up to a good average. In the Sherbrooks district lumbering conditions were not so good on account of rains taking away the snow. In the Three Rivers district lumbermen were busy and expected to turn out more logs than for some years past.

Ontario districts also showed activity. From Peterborough lumbering was reported active and sawmills were being overhauled and put in shape for the coming season. In the Port Arthur district a good number of men were employed in lumber, tie and pulp wood camps. In this district reports were conflicting as to the number of men open for employment. Lumber merchants claimed the supply was limited, but employment agencies stated they could get plenty of men provided the wages were right.

In Northern Saskatchewan lumbering operations continued to be carried on, though it was expected these camps would soon be closed with a consequent release of large numbers of men.

Conditions in British Columbia were active. In the Fernie district activity was confined to logging operations, but

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trade and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favorable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

CANADA DURING THE MONTH OF FEBRUARY, 1916.

present issue and is intended to present, in brief and accessible form, a generalized statement as to the state the amount of employment prevailing, no account being taken as to wage changes, trade disputes and kindred terms employed are divided into two groups, the order indicating in each the degree to which general condition.

at New Westminster and Nanaimo saw-mills were working steadily. At New Westminster the prices of all grades of lumber were reported to have increased by at least \$1 a thousand. The big mills near Vancouver were reported to have orders enough to keep the mills running all summer, the demand being chiefly from the Prairie Provinces. Orders from foreign countries were also reported brisk, but lumbermen found it difficult to take advantage of these owing to lack of tonnage. In this connection the question of building ships for the lumber trade in British Columbia received considerable attention.

Mining.

Coal mining continued busy in practically all coal producing districts in the country. In the Sydney district the industry was very busy and less coal, it was expected, would be placed in the heaps this winter than for many years past. Some doubt was expressed as to the ability of the larger companies to maintain their shipments during the coming season on account of lack of tonnage. A considerable shortage of labour for the coal mines was reported. At Westville the Intercolonial Mining Company operated steadily and increased its output to nearly 600 tons per day. The Acadia Coal Company plants worked full time and averaged about 2,000 tons a day during February. From Amherst, coal mining was reported active with a shortage of labour. Coal cutters were reported to be making as high as \$150 a month.

Western coal mines also were busy. Active conditions were reported from Nanaimo, the exceptionally cold weather having created an increased demand for household coal. Mines at Cumberland, however, were not so busy, and were shut down for some time, owing to heavy snowfalls, which blocked the railroad line for some days between Union Bay and Cumberland. Activity in metal mining was fairly well maintained,

though unusually severe winter conditions somewhat hampered mining operations in British Columbia districts situated at elevations where snow falls freely.

In the Sherbrooke district asbestos mines were running full time. Both at Thetford and Black Lake considerable chrome iron mining was also being done with good results. At Cobalt up to the end of the month there had been no signs of any slackening in the production of silver and gold mines. Shipments were lighter but this was due to the mines holding bullion for higher prices. No trouble was expected this year, there being good heads of water in all streams supplying power plants. A number of prospectors and miners left Cobalt during the month for Le Pas, Man.

In East Kootenay, the various mining divisions of West Kootenay, and the copper mining camps of the boundary district, were all affected by heavy snowfalls and very sharp frosts, and difficulty was experienced in keeping some of the mines in operation. The interruption of railway transportation, owing to mountain slides, also had an effect in reducing operations at some mines. The mines of the Canadian Consolidated Company at Rossland were well employed and recent development work has disclosed large ore bodies which will increase very considerably the ore reserves of these properties. The smelter at Trail was running steadily and handling a considerable quantity of zinc ore in its new zinc smelter. In mining districts north of Prince Rupert operations were comparatively quiet although preparations were under way for considerable development work in the spring.

During the month correspondence was tabled in the House of Commons between the Prime Minister of Canada and the International Nickel Company, in which the statement is made that the International Nickel Company will erect in Canada a plant for the refining of nickel, such plant to be designed in units in order that the plant may be added to as future requirements may determine.

Manufacturing.

There was little change from the active conditions which existed in manufacturing industries during February, although there was in a number of cases a noticeable shortage of factory help. The Sydney and Sydney Mines steel plants were running to capacity, and at Truro all industries were reported busy. At Newcastle, N.B., local industries were working steadily with full staffs, and at Moncton and Fredericton most of the factories reported business active or fairly so. At Sorel and Three Rivers manufacturing establishments were busy and in some cases adding to the number of their hands. At Sherbrooke woollen and cotton mills were busy. At Montreal textile trades reported the demand increasing, with difficulty, however, in getting raw materials and labour. Several important orders were almost completed, but orders for spring delivery were expected to keep plants operating at full time. Woollen mills were fairly busy, although suffering somewhat from lack of material. Most of the boot and shoe factories were well employed. With tanners, also, business was steady. Manufacturers of agricultural implements reported business good. Paper mills reported a good demand for all lines of output and were working at capacity with the prospect in some instances of additions to plants.

In Ontario activity continued in most manufacturing districts. At Toronto furniture and piano factories were fairly active and leather manufacturers had a good month. Textile factories were generally active. At Berlin several furniture factories were working overtime, as well as shirt factories. Button factories, foundries, trunk and bag factories, rubber and clothing factories, whitewear and felt factories were all busy. Planing mills were working full time. A shortage of female labour was reported in whitewear, shirt and rubber factories. There was also a shortage of experienced shirt ironers and pressers and of hand stitchers on trunk and bag

work. Rubber factories were busy and shoe factories were working full time. At Niagara Falls manufacturing conditions were reported excellent and some of the factories were advertising for help. At Welland a large steel and foundry company re-opened its plant and was engaged in making large additions. The payroll, it was announced, would be increased from 300 to 700 men. At Woodstock a serious scarcity of labour was reported, and some factory managers were looking for women to take the places of men who had enlisted. At Brantford manufacturers were reported in a far better condition than they were a year ago, and a lack of men rather than of orders was feared. There was a shortage of skilled men in some branches of industry. Textile factories were busy and constantly advertising for help, both skilled and unskilled. At Guelph foundries and textile factories were very busy. At Galt knitting mills and some departments of shoe factories were working overtime. Other industries were fairly active. At Peterborough foundries and machine shops, flour and woollen mills were active. A good demand was reported for machinists and iron workers, also for female help. Windsor reported the automobile industry very active, although difficulty was experienced in shipping owing to a shortage of cars. At Chatham foundries, machine shops, flour mills and woollen and textile factories were all very active. At Hamilton, Stratford, Owen Sound, St. Thomas, Brockville and Ottawa, manufacturing establishments on the whole were busy.

At Calgary flour mills and harness and saddlery firms were busy, and at Medicine Hat foundries, rolling mills and flour mills were active.

Railway Construction.

Railway construction was comparatively quiet throughout Canada during February. On railways being constructed in Northern Alberta and in British Columbia bridge building and some

track-laying was carried on. In most other parts, however, railway construction was confined to maintenance work. On the Lake Erie and Northern Railway some work was continued in the neighbourhood of Brantford, but little will be done until spring. On this line, between Brantford and Galt, a two-hour service went into effect during the month.

On the Central Canada Railway, being constructed in Northern Alberta, surveys have been made for an extension to the main line from Peace River Crossing to the Alberta-British Columbia boundary, distance of ten miles, and a branch line is under construction from mileage 101 on the Alberta and Great Waterways Railway easterly for ten miles. Surveys are also being made for an extension of this branch from mileage 10 to the Alberta-British Columbia boundary.

During February some statistics in regard to the Hudson Bay Railway being constructed by the Dominion Government were given in the House of Commons. Statements showed there had been expended on account of this railway to January 6, \$15,465,304.70. Of this amount \$10,446,592.90 was expended upon the railway proper, including \$683,166.75 on bridges, trestles and culverts, while there had been expended on harbours and approaches \$5,018,711.74, including \$163,012.30 expended upon bridges. There were 378 miles of grading completed and steel had been laid to mileage 242. It is expected that steel will be laid to Port Nelson early in 1917, and that the harbour will be ready for traffic, though incomplete, about the time the railway will be ready for operation. The Marine Department had expended \$21,293.96 on the project.

Delivery was commenced of 10,000 tons of 80 lbs. steel rails ordered for this time last year from the Algoma Steel Corporation and was expected to be completed by the end of March. The rails are being shipped by rail from Sault Ste. Marie to Le Pas, Man.

Replying to a question in the House of Commons February 17, the Minister of Railways said the cost of the new ocean terminals at Halifax, N.S., to December 31, 1915, was \$4,745,632.56.

The Kootenay and Alberta Railway, which runs from the Canadian Pacific Railway Crow's Nest branch, about a mile west of Pincher, to the coal mines of the Western Coal and Coke Company, Beaver Creek, Alta., about 13 miles, formed part of the Canadian Coal and Coke Company's property sold at auction at Calgary recently for \$3,000,000, the purchaser being the Northern American Collieries, Limited. The line was built in 1911-12 and was operated solely for coal traffic.

General Transport.

Exceptionally heavy snowstorms in the early part of the month in the Prairie Provinces and British Columbia seriously interfered with steam and electric railway traffic. On many lines trains were stalled and others were badly delayed. In parts of Eastern Canada, also heavy snowfalls which occurred at times throughout the month badly disorganized railway traffic, and it was not until the close of the month in many parts that normal conditions began to be restored. The work of shovelling out yards and tracks occasioned a heavy demand for unskilled labour and large numbers of men secured employment over a large part of the month.

At Westville, N.S., railroad traffic was busy during the whole month. Truro reported conditions exceptionally busy, with a shortage of trainmen. At St. Thomas, Ont., railroad traffic was reported busy. The weather being colder had a tendency to reduce the number of cars making up trains and this, together with the fact that two or three trains were added to the service, made an increase in the number of men employed. The Michigan Central advertised for trainmen and the locomotive department was short of firemen. Railway shopmen were busy. At a number of

other railroad centres in Ontario activity was reported, with a shortage of help in some instances.

Winnipeg reported that the severity of the weather early in the month impeded transportation, but that the difficulties in this regard were overcome and large quantity of grain and merchandise was shipped during the latter part of the month. At Brandon there was a big demand for all kinds of labour for the railways, and every available man was pressed into service to assist in operating and keeping the lines clear. Some difficulty was experienced in obtaining coal, though no real hardship was caused. For three weeks the Great Northern Railway was unable to operate either passenger or freight trains from Brandon to St. John, N.D. The Brandon street railway was obliged to discontinue its service for several weeks. At Calgary also the severity of the weather delayed trains and interfered with the transport of coal. The Canadian Pacific Shops again resumed full time. From Vancouver it was reported that melting snow and rains caused considerable trouble on the Great Northern Railway lines south of the city and the service was handicapped for several days.

Conditions at the winter ports continued fair, and there was considerable activity at points on the St. Lawrence in getting ready for the opening of navigation. At Quebec between 300 and 400 men were employed in overhauling boats and vessels and at Sorel active conditions prevailed in the shipyards.

The Trades.

Building.—Building trades, both outside and inside, in practically all parts of Canada remained quiet. Plumbers and steamfitters, however in some parts were fairly busy.

Metal.—Machinists continued active in practically all parts of Eastern Canada, though quiet was noticeable in many parts of the West.

Woodworking.—Woodworking trades were reported fair to active in most cities of the East, but quiet and very quiet in the West.

Printing.—Printers for the most part were actively engaged, though quiet in some parts of the West.

Textile.—Textile trades in practically all localities where this branch of manufacturing is carried on were very active.

Clothing.—Tailors on the whole were quiet. Garment workers enjoyed a fair amount of activity.

Food and tobacco preparation.—Trades engaged in food preparation were on the whole busy. Cigarmakers and tobacco workers were usually quiet, with some special activity noticeable in a few Quebec and Ontario cities.

Leather.—Leather workers were fairly busy.

Transport.—Activity continued in railway work. Heavy snowfalls during the month interfered with the operation of trains in many parts, but in these districts a great deal of employment was given to railway workers in clearing the line and keeping trains moving. In other parts where weather conditions were favourable freight traffic was usually good and passenger traffic fair.

Unskilled.—The severe weather noticeable in January was continued in February, and several very heavy falls of snow furnished considerable employment to unskilled workers, particularly in the cities, in clearing street railway tracks and streets. Ice-cutting also continued to furnish employment in many parts of the country.

Canadian Trade.

The total imports of merchandise for consumption in Canada during January, 1916, amounted to \$61,887,513, compared with \$30,938,331 in January, 1915, an increase of \$30,949,182. Domestic exports of merchandise for January, 1916, amounted to \$83,731,184, as compared with \$28,595,598 for January, 1915, an increase of \$55,135,586. Increases in the exports of the products of the mine, the fisheries, the forest, animals and their produce, agriculture, manufactures and miscellaneous merchandise, are shown.

The following table gives the latest official summary of Canadian foreign trade:

IMPORTS AND EXPORTS, JANUARY, 1916.

Imports entered for consumption.	January.		Exports. (Domestic.)	January.	
	1915	1916		1915	1916
Dutiable goods.....	\$18,183,179	\$27,504,149	Mines.....	\$3,508,769	\$4,654,815
Free Goods.....	12,116,978	22,666,516	The Fisheries.....	1,703,443	2,437,715

Victoria.....	5,209,323	5,998,874	- 789,551
Saskatoon.....	4,163,761	2,830,671	+ 1,333,090
Moose Jaw.....	3,377,220	2,377,649	+ 999,571
Brandon.....	1,898,712	1,607,722	+ 290,990
Brantford.....	2,519,061	1,837,122	+ 681,939
Fort William.....	1,692,064	1,558,750	+ 133,314
Lethbridge.....	1,611,981	1,123,192	+ 488,789
Medicine Hat.....	1,176,089	760,431	+ 415,658
New Westminster.....	771,176	1,048,074	- 276,898
Peterborough.....	1,861,847	1,414,762	+ 447,085
Totals.....	\$675,757,387	\$496,420,738	+ \$179,336,649

Canadian revenue for January, 1916, amounted to \$17,522,091.40, as compared with \$9,897,664.18 for January, 1915, an increase of \$7,624,427.22. The expenditure on capital account for January, 1916, was \$14,220,856.78, compared with \$12,672,158.34 for January, 1915. The expenditure for January, 1916, comprised \$12,237,788.24 for war purposes and \$1,983,068.54 for public works, including railways and canals.

The bank statement for January, 1916, showed the paid-up capital stock

of the chartered banks of Canada to be \$113,989,854, as compared with \$113,987,577 for the month of December, 1915. Deposits payable on demand for January amounted to \$387,002,926, compared with \$423,690,384 for December, 1915. Notes in circulation for January amounted to \$110,029,572, as compared with \$112,199,582 in December. Loans to cities, towns, municipalities and school districts during January amounted to \$32,015,371, as compared with \$30,878,028 during December, 1915.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

The condition of the labour market for February was very satisfactory and was better than for the same month of the previous year. This was largely due to enlistments and to activity in special lines of manufacture.

The snow, although not very heavy, has enabled the lumbermen to get well along with the hauling of their logs.

Coal mining was very active, with still a shortage in help. Coal cutters were making as high as \$150 per month.

Halifax.

Conditions generally were very fair in industrial and commercial circles. Building operations fell off somewhat, but were fully up to an average February. Cold weather and shortage of material resulted in practically no work for bricklayers. Other crafts in the building trades were fairly well employed, in fact more so than in the past two years.

Longshoremen had some very active as well as quiet periods, and on the whole enjoyed a good month. Freight handlers were also actively employed.

The demand for labourers has been

good. In addition to the needs for help in the ordinary channels, heavy snowfalls kept a large force at work clearing the snow from the streets. Ice cutters were hard at work harvesting the crop, the cold weather during the month assuring a plentiful supply of a good thickness.

Sydney.

General conditions of employment continued active over the entire district, and all classes of workmen with the exception of carpenters and allied trades were well employed. All the larger industries were busy, while the smaller works, the foundries and the railways, shared in the general prosperity. Heavy snowfalls occurred in the early part of the month, making good sleighing, which greatly helped the farmers, and increased the volume of business done in the different towns. To all appearances, prospects are bright in all industries. The coal trade was still suffering from a lack of labour.

The Sydney and Sydney Mines steel plants were running to capacity.

Transportation by rail was fairly heavy.

A large volume of business was done by the wholesale and retail trades.

Truro.

Every person wanting work was quite well employed. Carpenters were busy, and painters, too. There was a good demand for unskilled labour and men to work in the lumber woods.

There was the usual winter quietness among bricklayers and stone cutters.

The Truro Steel Company, Limited, advertised for 100 skilled men, lathe hands.

Railway employees were exceptionally busy. There was a shortage of brakemen.

All industries worked full time.

Printers were very well employed, as were garment workers, electricians, blacksmiths, iron and sheet metal workers.

Business, both retail and wholesale, was reported satisfactory.

Westville.

Labour conditions continued the same as last month and there was an over-demand for all classes of labour.

Railway traffic was very busy during the whole month.

Wholesale and retail trades reported one of the largest month's business for many years.

Lumbering was decidedly more active than last month, and heavy shipments of deals were made from all parts of the district.

Conditions in the coal industry improved somewhat.

PRINCE EDWARD ISLAND.**Charlottetown.**

Labour conditions in general were fairly well up to those of former years, and all classes were well employed. Carpenters, machinists and other indoor trades were busy. One feature of importance to labour has been the fact that the new car ferry steamer, the "Prince Edward Island," has up to the end of the month made almost continuous con-

nections with this port, thereby giving the men employment which in former years they did not receive.

A public meeting—called by the Government—is to be held on March 7 to discuss means for the promotion of agriculture, the fisheries, transportation, immigration, technical education and kindred subjects.

A new lobster factory will be established at Maximville shore to be run by a company of five boats which will contribute proportionately to expenses.

Lumber mills were all busy and the outlook is bright in all industries for a brisk spring business.

NEW BRUNSWICK.**Fredericton.**

There was a slight improvement in labour conditions during February in comparison with the preceding month, and there were fewer unemployed than during the similar period of 1915. Most of the factories reported business fairly good, and all were looking forward to a good spring trade. The men unemployed were mostly labourers or those engaged in the building trades, and even in these branches of industry the conditions were as satisfactory as in previous winter seasons.

Moncton.

Labour and commercial conditions in February were on the whole very satisfactory and up to the average standard of activity for this season of the year. Building trades were naturally quiet, but considerable interior work upon several large contracts was in progress and quite a large number of mechanics found steady employment.

Manufacturing industries were for the most part very active.

A very disastrous fire occurred here February 20, when the main building of the Record Foundry and Machine Company, containing the company's offices, the fitting department and a moulding

shop, together with contents, were destroyed. The loss was over \$100,000. About 40 hands were at the time employed in the building, but as the company was operating a duplicate plant the larger number of these men were still continued at work.

The customs collections for the Port of Moncton for January shows duty \$10,334 as against \$6,770 for January, 1915.

Newcastle

The labour market remained firm during the past month. There was no exceptional demand for any particular class of labour, but all were busy, and there was practically no unemployment. This is partially due to heavy enlistment for overseas service, and particularly due to the heavy demand for railway workers owing to heavy traffic over the Canadian Government Railways and business of local industries.

The lumber workers were still busy in the woods, large crews of men being employed in hauling off the yards to the landings. The heavy snows of the past month have helped the work considerably.

The smelt fishing season, which closed on the twenty-second inst., after an extension of seven days, was not up to the average, due largely to the lateness of the river freezing, which prevented the early setting of nets. Bass fishermen have been very successful.

The figures for the lumber shipments for the past year, just published, show a large increase in shipments from the north shore over those of 1914.

All local industries were working steadily and full crews employed.

St. John.

There was little work for building trades during February, but other branches of industry were well employed.

The season of 1915-16, up to February 19, has been the best since the

opening of the winter port. The amount of freight delivered by the Canadian Pacific Railway to the transatlantic steamers at West St. John has totalled 473,027 tons, against 284,086 tons last year. The grain shipments this year show an increase also, the exports being 4,100,295 bushels, as compared with 3,608,475 bushels last year.

Hard coal was scarce in St. John during February owing to the scarcity of coastwise vessels to bring coal forward from New York and Philadelphia. Freight from New York to St. John are \$3 per ton.

Rates on lumber to New York are reported to be steady at \$4, an increase of \$1 over the quotations of last year, and laths are carried for 80 cents, an increase of 20 cents.

The inland revenue receipts for January were \$20,496.44, and for the corresponding period last year \$19,054.51, an increase of \$1,441.93.

The savings bank transactions for January were: deposits, \$43,334.78; withdrawals, \$100,749.29.

The total number of animals killed at the public slaughter house during 1915 was 10,588, made up of 4,526 cattle, 686 calves, 5,376 sheep and lambs.

The Provincial Department of Agriculture is announcing a competition for boys and girls in swine raising and in poultry raising. Certain cash prizes are to be given in each county in the province in both of these contests. Particulars concerning this competition may be had on application to the Department of Agriculture, Fredericton.

QUEBEC.

Hull.

Labour conditions showed some improvement. A number of unskilled labourers were employed in removing snow from the streets and in ice-cutting. Wages in several cases were much lower than before the war, but all indications point to a gradual increase until a normal level has been reached, as the de-

mand for help is likely to be much greater than the supply next summer.

Trade in general was as good as during last month and the bank reports were satisfactory.

The cost of living has increased, especially as far as meats of good quality were concerned. Flour and hay also were higher.

Montreal.

The general situation in February remained unchanged. The larger steel plants have orders on hand that will keep them fully employed until February, 1917. Other forms of manufacture required of steel working plants, and at present on order, will sustain the general activity until autumn.

In the textile trades the domestic demand is increasing, but increased difficulty exists in getting raw materials and labour. Some important orders are almost completed, but the mills handling them find that bookings for spring delivery will keep their plants moving at full time.

Large manufacturers of dyed cotton goods advanced prices during the month. Cotton mills were working to capacity. The Montreal Cotton Company reports for 1915 an improvement of more than 30 per cent in sales and profits. The directors pointed out that the company manufactures almost exclusively cotton fabrics in solid colours requiring aniline dyes and chemicals extensively. As the price of these supplies had been raised enormously by the war, and the company had not been able to advance its price sufficiently to meet the increased cost and at the same time to consider its trade, the directors considered the showing satisfactory. They expect a very active manufacturing year as large orders for dyed goods are being received by large wholesalers, who are not so dependant on imported goods as they were through the fact that Canadian manufacturers are increasing their output.

Some woollen mills are short of material, and as a result delivery of manu-

factured articles is very uncertain. Some mills claim that the season's output is already contracted for at good prices, with higher prices looked for. Advanced quotations are reported by some knitting mills and glove factories. In the annual statement of the Belding-Paul Corticelli Silk Company it was stated that they had very poor business in the first half of last year, but an entirely different showing was made in the second half.

Most of the boot and shoe factories were well employed, and they expect to get a share of the new Government contracts being given out for 200,000 pairs of ankle boots and about 150,000 pairs of rest shoes. Tanners claim that business was steady.

The three plants of the Ames-Holden-McCready Company were operating to capacity, and the local plants have worked overtime. Most of the business being handled is for domestic use, and with Canadian orders and contracts for army shoes, capacity operations are assured for four months. The company would operate the plants on two shifts but for the scarcity of suitable labour.

Manufacturers of agricultural tools reported good business, and there were increased orders for both light and heavy hardware. There was an increased demand for paints and oils for spring delivery at high prices. On account of the inactivity in structural operations wholesale hardware houses report city trade in tools and builders' hardware, etc., as poor. The stove and furnace industries were more active at high prices.

According to their city offices Canadian paper mills are having a very strong demand for all lines of their output. They are working at capacity, and a number of them announce that there will be considerable immediate increase of capacity for production in their mills.

At the fourth annual meeting of the Imperial Home Reunion of Montreal on February 16, it was stated that 470 families, composed of 1,768 persons, had been brought to Montreal since the or-

ganization was started in 1912. During the past year \$2,397.85 had been repaid by the families brought over.

The Charity Organization Society report shows fewer people on its books in need of assistance than there were for December, and the situation in February was infinitely better than it was a year ago, according to a statement made at the February meeting. Their labour bureau also reports that there is less unemployment in the city.

At the annual meeting of the General Hospital it was shown that there had been an increase of 33 per cent in the number of patients treated, and an increase of 23 per cent in the cost of provisions, drugs and medicines, surgical instruments and salaries.

The lake steamship companies look forward, according to statements made, to very good business in the carrying of grain on the Great Lakes during 1916. The Canada Steamship Lines, Limited, has also made a number of bookings at satisfactory prices.

The city has opened two new anti-tuberculosis dispensaries where medical consultations will be given free by a physician connected with the civic Board of Health, and a third dispensary will be opened shortly.

At the annual meeting of Carriage Factories, Limited, on February 10, the directors report that the carriage business was smaller than in the previous year, but sales of harness, saddlery and blankets are considerably larger. Further improvement is expected this year.

Annual reports of companies given during February, with very few exceptions, show increases in net receipts with decreases in operating expenses, and in many cases increases in gross earnings as well. The railways maintain their record of good business. The customs receipts during January and February exceed those for the same two months in 1915 by \$1,368,584.58. The February bank clearings for Montreal totalled \$238,208,669, or 45.7 per cent, above the same month last year.

Quebec.

The month has been a fairly good one. Quite a large number of building permits were issued and preparations were being made to re-start working upon buildings that were shut down when the bad weather started. The severe cold and snowstorms of the early part and middle of the month retarded building operations, but as soon as fine weather sets in there will be a very marked activity in the building trades.

Work was also started at the refitting of boats and vessels for the navigation season and was affording employment to between 300 and 400 men.

In the lumbering industry conditions have continued good, with enough and not too much snow for hauling purposes.

The destruction of the Landry biscuit factory by fire threw out of employment some 74 hands.

Sherbrooke.

The labour market has not changed since last month. Mechanics of all kinds were in fair demand. Machine shops were busy, not only on special work but in regular lines as well. Woollen and cotton mills were busy.

Asbestos miners were running full time as last month both at Thetford and Black Lake. Considerable chrome iron mining was being done by small companies with good results.

Railroads are drawing considerable freight.

Sorel.

There has been no particular change in the condition of labour and the labouring classes during the month. Most of the industrial and manufacturing establishments in the district, especially in the city of Sorel, were active, and the number of hands employed has been somewhat increased. The same thing may be said of the various shipyards in Sorel, where hundreds of men have

been working at building new boats or repairing old ones.

Trade was generally satisfactory in spite of the bad weather prevailing during many days in the month.

St. Hyacinthe.

The general condition of the labour market during February was as good as during the previous month and better than during the corresponding month of last year.

There was not much to do for the building trades, but most of the men had found work in the various factories. Much activity is expected to prevail in building operations next spring, as houses are very scarce. Industrial conditions were good, all factories working full time and some working overtime.

Business, wholesale and retail, was very good, and banks reported an active month and satisfactory collections.

The cost of several necessities of life has been reduced during the month, but rents have been raised \$1 or \$2 per month on account of the scarcity of houses and the number of new arrivals each week.

St. John's and Iberville.

Industrial conditions remained about the same as during January. There was no unemployment in any of the factories. Building operations were practically at a standstill. Benevolent societies still helped a few families, but there is less poverty in St. Johns this year than last winter.

Retail business was fairly active. Dealers reported more trade than during the corresponding month last year. Banks reported a good month.

Customs receipts for January amounted to \$26,559.70, as compared with \$14,555.87 for January, 1915, or an increase of \$12,003.83.

Three Rivers.

The general condition of the labour market during February remained about the same as during the previous month.

Boot and shoe factories, cotton factories and pulp and paper mills were very busy.

Merchants generally reported a quiet trade. Railway traffic was also small.

Lumber firms have been very busy and expect to turn out a greater number of logs than the previous few years.

ONTARIO.

Belleville.

There was little change to note in the labour situation over the preceding month. In some branches there was beginning to be felt a scarcity of labourers owing to the fact that many from factories, shops and other avenues of trade are enlisting. In the farming community in this district it has already become a serious problem to farmers to secure necessary help to do the spring work.

The prospects are that this season will not be very busy in regard to municipal work. There is some uncompleted work from last fall upon some new sewer construction which will of necessity have to be completed, but there will not be any extensive additional work undertaken.

Berlin.

Labour conditions in Berlin and Waterloo for February were practically the same as the previous month and far better than the same month last year. Several furniture factories have been working overtime as well as shirt factories, and a couple of establishments were working double-shift. Button factories, foundries, trunk and bag factories, robe and clothing factory, white-wear and felt factories were all busy. Planing mills were working full time.

The only ones that were not employed were bricklayers, masons, building labourers and other outside unskilled labour. There was quite a shortage of female labour in whitewear factories, shirt factories and rubber factories. There was also a shortage of upholsterers in Waterloo, and of experienced shirt ironers and pressers in Berlin; also of hand stitchers for trunk and bag factory. Rubber factories were busy and boot and shoe factories were working full time.

Wholesale and retail trade was fair. Customs returns for January, 1916, were \$79,066.53; for January, 1915, they were \$30,749.00, an increase of \$48,317.53.

Brantford.

As far as employment is concerned, labour conditions were good. There was a shortage of skilled men in some branches of industry, and to make good the loss extra time was being worked.

The conditions existing are not due altogether to the volume of trade, although that is far superior to last year, but rather to the thinning of the ranks of labour by military service.

The textile trades were busy and constantly advertising for help, both skilled and unskilled, and also for homes in which the women workers could be boarded under good conditions.

The Lake Erie and Northern Railway ran a two-hour service during the month on its new line between Brantford and Galt.

Manufacturers were in a far better position than they were a year ago; some of them, instead of fearing dearth of orders, fear a lack of skilled men.

Building was practically at a standstill, with but little prospects for the year.

People were busy storing ice, but difficulty was found in securing men to do the work when there were so many opportunities in the factories.

Brockville.

There was unusual activity in labour circles, there being a greater demand for men than in the same month for many years. The supply has not been equal to the demand in some instances. All men wishing work were able to find employment readily.

There has been a demand for men harvesting ice.

Unusual activity prevailed in the steel, iron and brass trades.

Railway traffic has been very active, the railroads finding it difficult to secure help.

There were signs of trade expansion in Brockville during the present month as evidenced by the collections at the local customs port. There was an increase over the corresponding month last year of \$9,107.52.

Manufacturing establishments were busy, and in some instances were working overtime.

Chatham.

Labour of all kinds was fairly well employed. Some branches of manufacture were very active. Foundries, machine shops, flour mills and woollen and textile factories being the most active.

The building trades were showing some activity, a number of firms requiring skilled carpenters and machine hands.

All the city's unskilled labourers found ample employment at the Dominion sugar factory and the ice company's plants.

Dry goods merchants reported an increase of 25 per cent in sales over the same period of 1915.

Railway passenger traffic was not as good as in the previous month.

Customs returns for January amounted to \$75,589.73, being \$56,738.79 over January, 1915.

Rentals remained firm, although real estate deals in the city were few.

Cobalt.

Up to the end of the month there had been no signs of any slackening off in production of the silver or gold mines. The mines producing bullion have not been shipping as heavily as usual, but this cannot be taken as an indication that production is falling off. The reason is that many of the mines are storing bullion for higher prices. The power question which had the effect of curtailing mills and mining operations in the camp last year will not give trouble this year for the reason that there are good heads of water in all rivers supplying power plants serving the mines both in Cobalt and Porcupine camps.

The labour market was good throughout the entire month. There were very few idle miners and the demand for unskilled help showed an improvement, although at no time during the winter were there many idle men, and in cases where men had no work the reason was as a rule that they could not obtain the wages desired. A number of prospectors and miners left Cobalt for the Le Pas district for work there.

Galt.

General labour conditions remained the same as in last month—everybody working.

Knitting mills were still working overtime. Shoe factories were also working overtime in some departments; in others, however, they were not so busy.

The Lake Erie & Northern commenced making regular two-hour trips between Galt and Brantford during the month.

All minor industries were fairly active and there were very few, if any, out of employment.

Guelph.

Industrial conditions during February continued satisfactory, labour on the whole being well employed.

Foundries, textile factories and sewing machine factories were very busy.

Building trades were quiet, with the outlook for the coming season not encouraging, but there were few building tradesmen idle as a considerable number have enlisted for overseas service, and the balance have obtained employment in the factories.

The City Relief Department reported that the amount of relief dispensed was 50 per cent less than it was for the corresponding month of last year.

The Guelph Co-operative Association held their half-yearly meeting, and the committee presented their report, which shows a net profit of \$1,984.48 for disbursement. A dividend of three per cent was declared to shareholders.

Customs receipts for January were \$29,460.59, an increase of \$18,187.65 over the corresponding month of last year.

Wholesale and retail merchants reported trade fair.

Hamilton.

Labour conditions generally were satisfactory during February, there being less idleness than has been customary in February for many years, due largely to a great number of workers enlisting for overseas service. Skilled machinists were scarce, the demand being far in excess of the supply. Conditions in job printing offices showed a marked improvement over the previous month.

Considerable difficulty was being experienced by team owners in securing teamsters, and as a result much work which has heretofore been carried on by contractors at this season of the year preparatory to spring building, such as the hauling of sand and other supplies, has not been done.

The committee of the Hamilton Recruiting League, which is looking after the returned soldiers, has been successful in placing in positions all returned soldiers who have made application for employment. In all more than 100 men have been placed.

Customs collections for the port of Hamilton continue to show large increases over those for corresponding periods a year ago. In January of this year the collections amounted to \$382,954.59, as compared with \$220,608.90 for the corresponding month a year ago.

Ice cutting operations were under way towards the end of the month. The ice this year is not as thick as usual, but the quality is fair. Some dealers found it hard to get sufficient men to carry on ice-cutting operations.

Manufacturing, like the previous month, was far better than during the corresponding period a year ago.

Kingston.

There was very little change in labour conditions during February. If anything, labour was more in demand than in the previous month, owing to the ice harvest and snow shovelling. In many cases it has been hard to get labour for this work owing to the fact that there were very few idle men. All factories were working full time and in some cases overtime.

Exports to the United States from Kingston for January totalled \$139,226.48.

London.

Industrial conditions, except in regard to outdoor trades, were good. Factories and foundries were all rushed with orders. On the railroads freight traffic was exceptionally heavy, with some congestion of traffic in the district. Commercial travellers reported business good, and retail business was active.

The number of those out of work was far less than last winter, and there were very few people asking for work or relief. About the only ones out of employment are building tradesmen, who never expect to work much at this time of the year.

Two mills are to be put on the city taxes to raise money for Patriotic Fund

purposes, instead of raising it by voluntary subscriptions as formerly.

A large force of men and teams were engaged in the ice harvest, and a good supply has been secured.

Niagara Falls.

Industrial conditions during February were excellent. There was an improvement over January as well as over February of last year, and the outlook for the remainder of the winter and for spring was good.

Financial, commercial and transportation conditions were generally good.

Manufacturing conditions were excellent and some factories advertised for labour.

The Pollard Manufacturing Company has united with the Dominion Safe and Vault Company of Farnham, Que. The plant of the latter concern is being brought here and the Pollard works will add safes, vaults and milling machinery to its products. The buildings will be enlarged.

Welland.—Canadian Steel Foundries Company announced an enlargement of its plant here to cost \$100,000, and work was commenced. The rolling mills were re-opened, a third open-hearth furnace commenced and other extensions undertaken. All the work is to be done in four months. The pay-roll will be increased from 300 to 700 men. The company has several years' work in sight.

Port Colborne.—The Maple Leaf Milling Company had to shut down its mill temporarily owing to a car shortage.

Orillia.

There was a steady tightening of the labour market as the result of the growing number of men who have enlisted. All industries and commercial enterprises are affected, none more, perhaps, than the stores, from which a number of clerks have gone into the ranks. Their places have largely been taken by girls, wherever this is possible.

Retail business is as good as is usual at this season of the year. There have not, however, been the usual stocktaking sales.

Ottawa.

Some improvement was marked in the local labour situation during February, though for the most part it was of a temporary nature. The decision to promptly clear up the ruins of the Parliament Buildings resulted in many men thus securing employment, while particularly heavy snowfalls also considerably relieved the situation among the unskilled unemployed.

The annual ice harvest also demanded workers, and on the whole the situation was considerably better than in the preceding month.

The printing trades were busy with the exception of the bookbinders. Pulp and paper makers were fully employed. The building trades were again reported dull.

Through the representations of local unions, the hours worked by men engaged in clearing up of the Parliament Buildings' fire debris, have been reduced from ten hours a day to nine,—the same period worked by the employees of the Public Works Department.

A renewal of the agreement between local plumbers and employees was effected during the month. The renewal is for a period of a year and no changes in hours, wages or conditions are included. The agreement is to extend for another year (1917) if notice of intention to secure a new arrangement is not served by either party before the last three months of the year. The old agreement expired at the end of 1915, and the plumbers have since been working without any general agreement.

Local lumbermen are in demand for a forestry battalion, requested by the British War Office, to fell trees in Great Britain.

Public school teachers, despite opposition on the grounds of war conditions,

have been granted the annual scheduled salary increases.

The local Federal Union of Bank Note Employees (female) increased its membership by 30 during the month.

Owen Sound.

Supply and demand in the labour market were fairly well balanced. One factory report a shortage of skilled labour owing to enlistments for overseas service. Factories generally reported business as good.

The Northern Bolt and Screw Works report that owing to a shortage of raw material they were prevented from running night and day as they otherwise would.

The Union Cement Works has secured the contract for 100,000 barrels of cement from the city of Toronto.

Owen Sound will be the terminus of the Steamer Manitoba (Canadian Pacific Railway line) for the coming season. A parlour car will be run over the Canadian Pacific Railway line from Toronto to connect with the steamer.

Peterborough.

Labour conditions during February were fairly good in most branches of industry.

Foundries and machine shops were particularly active; also flour mills and woollen mills.

There was a good demand for machinists and iron workers, also for female help.

The building trades were quiet, but men who work at these trades find employment in the factories or at other work.

A good number of unskilled labourers find work at cutting ice and sewerage construction. The city is building an outfall sewer, and with other civic work most of those who want work have no trouble in getting it.

The Waterworks Department, which is owned by the city, show a profit for

last year of \$6,535.45. The revenue amounted to \$58,547.60.

The Hydro Electric Department report for the first year shows a surplus of \$3,718.30. Total earnings were \$98,042.12.

Retail merchants report business fairly good.

Lumbering was active, the sawmills were being overhauled, and put in shape for the coming season.

Cobourg.—A new company has purchased the Cobourg felt mills and are putting it in shape to manufacture felt shoes.

Lindsay.—A large chemical plant is being constructed for the manufacture of wood alcohol and by-products.

Campbellford.—The Northumberland Paper and Electric Company will put up a new up-to-date mill to replace the one lost by fire last month.

Port Arthur and Fort William

There has been practically no change from last month in labour conditions, but the general situation was more normal than in the corresponding month of last year. The opportunities of employment are very scarce.

During January the Fort William City Council distributed \$480 worth of groceries to necessitous cases and Port Arthur about \$350 worth, in addition to distribution of clothes and rent free houses for the winter months.

In the lumber, tie and pulp wood camps there was a good number of men employed, though there were conflicting reports as to the number of men open to employment of this character. The lumber merchants claim that the supply of men is limited, while at last one employment agent stated he could get all the experienced men needed provided the wages were all right.

Sault Ste. Marie.

Industrial conditions in Sault Ste. Marie remained quiet, activity being noted only in the case of a few fac-

tories engaged on special orders. No building was going on, and there was no demand for mechanics. Recruiting has drawn off most of the idle men, and calls for municipal and other assistance have been reduced in consequence.

Stratford.

During the month labour of all kinds continued to be fully employed.

The Grand Trunk Railway shops, the foundries and the woollen and knitting factories were running night and day shifts working on special orders.

There was no particular activity in building trades, though the majority of men following these trades were employed.

A number of men and teams were engaged in cutting, hauling and storing ice, which is from 10 to 12 inches in thickness and of good quality.

Wholesale and retail trade was very good.

The customs returns for January amounted to \$20,686.85, compared with \$10,416.99 in January, 1915.

The excise returns for January totalled \$5,041.02.

St. Catharines.

Labour conditions showed but little change from those of the previous month. There were very few unemployed in the city owing to the many vacancies left by men who have enlisted and the rush in the factories.

The ice harvest was very good, and icemen were busy filling their houses.

St. Thomas.

The labour situation in February was very satisfactory. Labour was in good demand, especially unskilled labour. In a general way the month was better than the previous one and decidedly better than the corresponding month of last year.

Railway traffic employees were busy throughout the month.

A convention of Lake Erie fishermen was held in St. Thomas, at which methods of protecting fish spawn and other means of increasing the fish supply were discussed.

Local industries were well employed.

Toronto.

Labour conditions during February showed little change as compared with the preceding month. Both skilled and unskilled workers were well employed, excepting in the building trades, which continued quiet. Owing to the large number of enlistments there was a shortage of skilled workers in some lines, more especially in the metal trades and those engaged on war orders. Several firms have been employing women in the manufacture of special lines with satisfactory results. Structural steel workers, electrical workers, sheet metal workers and brass workers were active. Jewellers and silversmiths were well employed. Furniture workers, upholsterers and piano makers were fair. Box makers were active. Harness and leather workers had a good month. Printers, bookbinders and lithographers had steady work. Custom tailors, garment workers and boot and shoe workers were active. Textile workers were generally well employed. Hotel and restaurant help had rather a quiet month. Railway employees and others engaged in transportation were fair.

At the annual meeting of the Labour Temple, Limited, on the twelfth, the financial report showed receipts of \$11,508 and expenses \$9,772, leaving a balance of \$1,816. The assets were given as \$49,829, and the surplus of assets over liabilities at \$32,384. A dividend of 5 per cent was declared. D. A. Carey was elected president, Ald. Joseph Gibbons vice-president, and James Simpson secretary-treasurer.

Representatives of the labour unions, on February 25, organized the committee to receive and entertain the delegates to the convention of the Labour Congress of Canada to be held here in

September. The following were elected officers of the committee: chairman, Walter Brown; vice-chairman, F. C. Cribben; secretary, T. A. Stevenson; and treasurer, James Ralph.

On February 7, the City Council awarded a contract for the supply of cement at \$1.38 per barrel to the Union Cement Works, of Owen Sound. The Canada Cement Company had put in a lower bid, but as the fair wage clause had been omitted in their tender the contract, after much discussion, was given to the company which had complied with the regulations specifying that fair wages should be paid.

The earnings of the Toronto Railway for January amounted to \$474,784, as compared with earnings of \$471,226 for January, 1915.

The outdoor relief branch of the House of Industry showed a decrease in work of 79 per cent during the month, as compared with February, 1915. Only 152 persons were sheltered in the casual ward, a decrease of 74 per cent from last year.

Windsor.

Labour conditions during February remained about the same as in the previous month. There was practically no unemployment.

The customs receipts for January amounted to \$100,972.35, an increase of \$5,068.27 over December.

There has been a good demand for factory and shop labour of all kinds. Skilled and unskilled labour has been very active along these lines.

The automobile industry has been very active, but companies were having difficulty with shipping facilities and car shortages.

The building trades have been kept active. Although there has been plenty of work in and about Windsor it has been confined mostly to small buildings such as houses, etc., and the surplus in these trades have found employment in Detroit. This city being in a very flourishing condition at the present

time adds considerable to the activity on the Canadian side of the river.

Woodstock.

Everywhere the need has been for men. The scarcity of labour has become a serious problem with many employers. Some factory managers have been looking for women to take the place of men who have already enlisted, and there has been at least an attempt to organize the women of the community for the purpose of filling vacancies and releasing other men for military service.

There was a demand for both skilled and unskilled labour.

Farmers were becoming very much worried about the scarcity of farm help. Though in no great distress at the end of the month they said they were at a loss to know what to do when the spring work opened.

Business conditions were reported fair in ordinary lines of industry. Most factory managers stated that while they were not doing all they would like to do they were doing about all they were able to do with the available supply of labour.

Shopkeepers reported business fairly good.

MANITOBA.

Brandon.

During February there was a considerable demand for all kinds of outdoor labour. The extremely cold weather and heavy snowfall made the operation of the railroads exceptionally difficult. Every available man was pressed into service to assist in operating and keeping clear the road. Great difficulty was experienced in obtaining coal, though no real hardship was caused. For three weeks the Great Northern was unable to operate either passenger or freight trains from Brandon to St. John, N.D.

The street railway had to cease running cars the last week in January and at the end of the month had been unable to resume service.

Winnipeg.

Labour generally was employed to about the same extent as in January. Building trades continued to be slack, though prospects for a fairly good season this year in the building trades were bright. Engineering trades were well employed, and a very large majority of machinists in the district were working full time. Printing, clothing, leather and miscellaneous trades were steadily employed. The severity of the weather early in the month impeded transportation, but the difficulties in that regard were overcome, and a large quantity of grain and merchandise was shipped during the latter part of the month.

Unskilled labour was well engaged during February, and in some instances difficulty was experienced in obtaining help.

The number of positions filled by the Civic Free Employment Bureau were: in the city, 526 males, and out of the city, 11 males.

The amount of grain shipped through Winnipeg during the month was (in bushels): wheat, 9,225,600; oats, 3,639,000; barley, 334,800; flax, 151,800. It is stated on the authority of an official of the Manitoba Grain Growers' Grain Company that 25 per cent of the 1915 crop is yet to be shipped and a fairly good amount of that percentage of grain has to be threshed.

SASKATCHEWAN.

Moose Jaw.

There was practically no demand for labour during February. Some work was necessary on the street car tracks and city streets to clear away the snow. Otherwise the weather has been too cold for outdoor work of any kind. Nothing

was done on farms outside of looking after stock.

Prince Albert.

There was little change to report in the general conditions of the labour market. All available spare labour was being absorbed by the numerous military units being recruited in the district.

Fishing was being carried on in the northern lakes, but consignments to the city were small.

Lumber camps were expected to close down soon and large numbers of men released.

Regina.

Labour conditions have been very quiet during February, and a large number of men were out of employment, especially unskilled labour.

About 25 steel workers arrived from the Pacific coast to work upon the construction of a new plant for the Imperial Oil Company.

Factories, implement warehouses and wholesale houses were quiet, the spring business not having fully commenced.

Farmers were looking for their spring help, which according to reports is going to be very hard to secure, although wages never heard of before were being offered. A majority of the young men have enlisted and married men are not very anxious to leave their families and go to the country, especially when the prospects are so bright for lots of work in the city at good wages in the near future.

Saskatoon.

There was a demand for farm labour, although the building trades were quiet there could not be said to be any unemployment problem. The city has taken on a large number of men to remove snow and ice from the streets.

The coal business has experienced a winter of steady activity on account of the cold weather.

Retail business has been very steady compared with a year ago.

There was considerable activity on some of the farms getting grain cleaned and getting ready for spring work.

There have been some fishing operations carried on in the northern lakes. Lumbering in Northern Saskatchewan was active.

ALBERTA.

Calgary.

Conditions in the labour market were much the same as the preceding month. Compared with the same month of last year a decided improvement is noticed. There were still quite a number of unemployed and very little demand for labour, skilled or unskilled. Owing to the severity of the weather last month the demand for coal exceeded the supply. Lack of coal was due entirely to inadequate transportation facilities and not to a shortage of labour as reported in the press.

Flour mills, also harness and saddlery firms, were active. A general improvement was also reported in wholesale and retail trades.

A list of the membership of the local Trades and Labour Council, recently compiled, who had volunteered for active service, shows that over 500 members are now in uniform.

The Associated Charities reported relieving 101 British families and 19 foreign families to date this month.

The Canadian Pacific Railway shops at Ogden have again resumed full time work.

Edmonton.

There was very little change in labour conditions. There was no local demand for labour. A number of carpenters were employed, but other building trades' mechanics found very little work at their respective trades. At the close of the month there was an increase in

the demand for farm help and wages offered were slightly higher.

Very warm weather during the month lessened the demand for coal, also putting a stop to ice cutting, which threw a considerable number of men and teams out of employment.

On the fourth of the month fire destroyed the plant of the Emery Manufacturing Company at a loss of about \$30,000. About 50 girls engaged in the manufacture of ladies' wear were thrown out of employment. Work on the reconstruction of the building was going on and the factory will be reopened at the earliest possible date.

Retail stores reported satisfactory sales of winter merchandise and wholesale trade was fair.

Coal miners had a fair month.

Lethbridge.

With the exception of coal mining, which was very active, conditions remained as during January. The winter has apparently broken up and farmers were looking out for help for seed time, but little hiring was being done.

There was no word of any building being done this coming season. Building tradesmen were all idle or engaged in employment outside their trade.

Customs returns for January were \$13,647.91, compared with \$6,805.67 for the same month in 1915.

Farmers were getting busy preparing for spring work. The snow is all gone and the frost will soon be out of the ground when seeding will commence. Some farmers were commencing threshing again as the weather has been very fine. Farm help was expected to be very scarce. Market gardeners were very busy.

Coal mining was very active and was expected to continue so for some time.

Medicine Hat.

Labour conditions continued favourable. A shortage of men for seeding purposes in the surrounding district was

expected as most farmers plan to seed on a large scale this year.

Flour mills, foundries and rolling mills were all busy.

Building prospects looked fairly bright considering the conditions. Two business blocks were in prospect and several smaller buildings and residences were also under consideration.

BRITISH COLUMBIA.

Fernie.

The month of February, in relation to the general extent to which labour has been employed, remained about the same as during January. The principal industries gave steady employment and operations were not handicapped to the same extent owing to climatic conditions as during the preceding month.

The gradual improvement in commercial activity, which has been noticeable for the past few months, continued during February.

Activities in lumbering continued to be confined to logging operations, which have been carried on this season under extreme difficulties. It is evident, however, that activity in this industry will be considerably stimulated with the advent of spring when the mills commence operations.

The condition of the coal mining industry throughout the district remained equally active as during January, the demand for both coal and coke being exceptionally brisk.

Nanaimo.

Labour conditions during February have shown a slight improvement over the previous month, there being fewer men around looking for work in the mines, but other branches of labour have not shown much improvement.

Wholesale and retail merchants reported business very quiet.

Sawmills were working steadily preparing for an expected demand for ship-

ments. The logging camps were not very active.

The coal mines of the district, with the exception of those in Cumberland, worked steadily, the exceptionally cold weather having created an active demand for household coal.

Nelson.

Industrial conditions in February were about normal. There was a slight increase in unemployment over the preceding month, owing to the closing down of some small mines, also to the great amount of snow and cold weather, but the prospects were that these mines would be opened again very soon.

The Rosebery mill, which was compelled to shut down, has opened again, as the railway line has been opened up.

Conditions look better at the Lucky Jim mine since the fall of snow. The continuous cold weather, together with the slides of several weeks ago, and the heavy fall of snow, has made the shipment of ore in large quantities a difficult matter. Conditions are improving and the mill will soon be running full capacity. A large quantity of ore was ready for shipment at this mine, and it was expected shipments would go out regularly.

Underground development in the group of mines owned by the Canadian Consolidated Company, which include the Centre Star, Se, Ray and the War Eagle groups, has located new ore shoots and the ore reserves of the camp have been increased very considerably.

The smelter at Trail was running to its full capacity.

The Hudson Bay mine at Salmo employed 60 men and was shipping 50 tons of zinc ore daily.

If there were any facilities at hand for smelting zinc ores the Hudson Bay could ship 500 tons each day for an indefinite period. Most of the ore goes to Oklahoma, but the Trail smelter is tak-

ing some since they got their zinc smelter plant in operation.

New Westminster.

The severe weather and deep snow which began early in January prevailed during the greater part of February, causing the mills to remain closed and keeping the fishermen off the river. During the last ten days of the month the weather moderated and the snow was practically gone, the water, increased by heavy rains, causing flood conditions for a few days throughout the valley. The ensuing bright spring weather has restored everything to normal conditions, and the mills have again begun operations and timber camps were opening up again.

Outside of this there was no renewed activity along industrial lines, and business on the whole was quiet.

A general cut in wages of all the civic employees from the mayor down was inaugurated by the new City Council. The wages of city labourers were fixed at \$2.50 per day of eight hours.

There was very little fishing on the river during February.

Prince Rupert.

Labour conditions during February showed less activity than ever before. Practically no work of any kind was under way. The dry dock was completely closed down. Business men throughout the city were discharging employees for want of trade. The City Council has reduced its working staff and also the wages of a few of the remaining employees. The mayor's salary has been reduced \$500 per annum and the aldermen \$100. The city market has been put on a commission instead of a salary basis.

Fishing was quiet owing to cold and rough weather.

Mining also was quiet, but preparations were under way for large development work in the spring.

Vancouver.

Industrial conditions in general were still very quiet. The unemployed were not so numerous as at the same time last year, but there were still far more men available than there was a demand for. Recruiting has of late been carried on more energetically, and the number of men out of work has been substantially reduced as a result.

Relief is being given by the city to 594 families and 143 single men. The cost of relieving the former from February 5 to 18 was \$1,531.40. The single men are all either aged or physically infirm. Meals and beds are provided them. These cost \$711.95 for the same period.

For the current year the estimate for relief as adopted by the civic authorities is \$40,000. Through the relief department applications have been received for farm help from Saskatchewan.

Very severe weather, with unusually deep snow, prevailed at the end of January and the beginning of February, causing a temporary stoppage in some industries. Many men were hired by the city to handle the snow.

Coal went up in price \$1.00 per ton on January 26. The reason given by the dealers was the heavy weather, which it was stated had increased the cost of haulage and of bringing the coal to the mainland from Vancouver Island. The price of lump coal is now \$7.50 to \$8.00 per ton according to the distance it has to be hauled.

The total expenditure of the city for fire protection last year was \$245,017.

Building during January was very quiet. Very few building tradesmen were employed.

Owing to bad weather fishing has been greatly handicapped. Vessels have had to remain in port or seek shelter for many days at a time, and one has been so long overdue that it is given up as lost.

In South Vancouver the wages of

men working on sewer building have been reduced from \$3 to \$2.50 per eight hour day. About 150 men are affected by this reduction.

The arrears of taxes owing to the city now total \$3,137,423. Of that amount \$1,771,247 represents unpaid taxes for 1915. In view of this civic expenditures are being kept as low as possible.

A new bread by-law is being considered by the City Council. Its main features are: registration and inspection of all bakeshops making bread for sale in the city, whether the bakeshop be situated within the city or not; the labelling of all bread with the maker's name and the weight of the loaf, and the prevention of the practice of dealers exchanging old bread for new.

A general revival in the logging industry is predicted for the coming summer. Mills have been shut down during the winter, and logging camps closed, with the result that the supply of manufactured lumber is very low. Lumbermen state that they have orders enough to keep the mills running all summer. The increased demand is chiefly from the prairies; due, it is stated, to the big harvest of last year. Mill owners also report that they could book very large orders for foreign countries, but are not in a position to do so owing to lack of ships to take it away. This condition has become a very serious one of late, and steps are being taken for the building of ships. The Provincial Government has promised assistance at the coming session of the Legislature, which opens March 2.

It is stated in shipping circles that the operation of the new Seamen's Act in the United States may cause some British shipping companies whose boats now call at Pacific coast ports in the States to cease doing so, and that they will only touch here instead. If that course is taken it is believed it will greatly increase business on the waterfront and the railways going south from here.

Victoria.

Labour conditions continued dull in most occupations, due chiefly to the continued cold weather which prevailed, especially during the first half of the month.

The Provincial Government has commenced work again on the old Indian Reserve, about 125 men being employed, this work being carried on as relief work.

The Victoria Soldiers' Aid Employment Office has succeeded in getting employment for 40 returned soldiers. At all the local bureaus in the province (26) 114 men have applied for work, employment being found for 79.

Owing to the constantly increasing demand for boxes and shooks of all kinds, one of the lumber firms in this city has been working 24 hours a day,

turning out from 9,000 to 10,000 boxes daily, which are exported to various parts of the world.

Owing to the rush of work in the ship-building yards of Great Britain, Yarrow, Limited, of Esquimalt, have received an order to build a steel river steamer for use in India. Work will be commenced at once, and will give employment to a number of extra men.

The whaling season will start much earlier this season than was the case last year. The whaling vessels are now being made ready for the season's work, which it is expected will commence by April 1.

Owing to stormy weather, work on the Ogden Point breakwater has been retarded during the past month or two.

During the year 1915 the City Works Department expended \$987,074 on various public works.

REPORTS OF WOMEN CORRESPONDENTS.**Montreal.**

Conditions affecting female labour remained unchanged during February and compared favourably with those of the corresponding month of 1915.

Business experts state that, considering war times, conditions are sufficiently satisfactory to create confidence.

Unemployment is lessening according to the experience of the Charity Organization Society. During the month of January 662 families were aided as against 696 in December. The report of the labour bureau of the society shows that in December there has been 223 out of work, and in January the number had been reduced to 205. Women had found 24 permanent positions through this bureau and 766 temporary ones.

The fact that the city authorities are not overwhelmed with demands for work at the time of snow removing is further proof of the reduction in the number of idle hands.

Women on School Boards.—In the report of its Committee on Education, the Montreal Synod recommended that women be given the right to sit on school boards; this principle was also agreed to by the Protestant Committee of Public Instruction during its session held recently in Quebec. The initial step in this matter was taken by the Protestant Teachers' Association at its annual convention in October last, and was supported at the time by the Local Council of Women, who approached the School Board on the subject. It is hoped that the special bill necessary to make this measure final will soon be presented before the Legislature.

Milk Inspection.—The municipal inspection of the milk brought into Montreal is seen to at the railway stations. In order to increase the efficacy of the work the Department has installed tabulated forms of instructions to milkmen as to the care and handling of milk. These forms are hung in railway sta-

tions, hotels, public halls and places most frequented by the dealers when in the city.

Child Welfare.—To the regular medical school inspection established in Montreal has been added the services of an oculist to whose special care all children with defective sight will be placed. With the aid of the card system each case will be followed up. After a time interesting statistics will be obtainable as to the progress made by each child since wearing glasses and as to the effect of the treatment on the eyes.

The Health Department in its last annual report gave a detailed account of conditions found in the various schools of the city as regards ventilation, lighting, cleanliness, etc. The figures given in the table showing the work done by trained nurses in the treatment of scholars at their homes and at school show the importance of this branch of inspection. 30,306 children were treated during the year, many of course for minor ailments. Attendance figured 94,706 pupils: 48,218 boys and 46,488 girls.

During the summer the nurses of the staff visit the homes of the scholars; the result showed that only 43 homes were pronounced "dirty."

Playgrounds.—The annual meeting of the Montreal Parks and Playgrounds Association showed that \$17,543 had been spent for the upkeep and superintending of the playgrounds. These were frequented by 43,000 children. Owing to the present financial conditions it was thought that vacant lots could be bought at a very reasonable figure; a resolution was therefore taken to the effect that the city be requested to purchase two or three such spaces where new playgrounds were most needed.

Infant Mortality.—The improved hygienic conditions existing in Montreal have had a direct effect upon reducing the death rate among children; thus in 1913 the figures were 21.52 per 1,000; in 1914, 19.78, and in 1915, 17.95.

Ste. Justine Hospital.—At the annual meeting held on February 21 the committee of management of this hospital gave an account of its year's work; over 10,000 prescriptions were filled during 1915; there were 840 admissions; 586 children returned home cured, and 8,000 were treated at the dispensary; 800 operations were performed.

Social Service Workers.—An active worker on the staff of the Juvenile Court stated recently that juvenile crime could be as a rule attributed to poverty and squalor. At least 75 per cent of the children brought before the Juvenile Court, it is said, are children of men earning less than \$9 a week, while many were those of women who had to be away from home working all day.

Nurses.—The eighteenth annual meeting of the Local Association of Greater Montreal of the Victorian Order of Nurses took place on February 25.

The report showed that during 1915 there was an increase of 663 over the number of cases nursed in 1914. The total number of visits paid was 14,906; of these 4,816 were night cases; 4,628 maternity cases, and 1,307 surgical ones.

The number of nurses working last year was 103. Those who enlisted for service abroad numbered 22, of whom eight went with the Laval Hospital.

Local Council of Women.—Readers wishing to obtain a complete idea of the organization and scope of work undertaken and accomplished by the Montreal Local Council of Women can have no better opportunity than by perusing the booklet published of late by the Council to commemorate its "coming of age."

This pamphlet contains an interesting sketch by Prof. C. M. Derick, past president, which is an historical account of the work done by the Council, especially in regard to public health and laws affecting women and children.

Reports read at the various annual meetings and addresses given upon these occasions offer instructive reading. The

work done by the special committees such as the Reformatory Committee, the Milk Station Committee, etc., is clearly stated. A short account is given of the 47 societies affiliated to the Local Council. The spirit of co-operation which has always animated the Council is specially exemplified in its relations with la Fédération Nat. St. Jean Baptiste. These two bodies, upon many occasions, have used their joint efforts in bringing about some necessary change in municipal or provincial legislation.

Women and the Practice of Law.—The decision of the Quebec Legislature, given on February 29, proved adverse to the admission of women to the practice of law in the province. A delegation from Montreal representing the Local Council of Women and La Fédération Nationale St. Jean Baptiste pleaded before the Legislation Committee in favour of the principle in question. Upholders of the bill intend to renew their appeal, hoping eventually for success. (See for reference *Labour Gazette*, June, 1914, page 1408, and March, 1915, page 1059.)

Toronto.

Telephone girls and stenographers were regularly employed, and milliners were busy in preparation for the spring season.

Women teachers are being taken from the occasional to the permanent staff to fill the positions of men who have leave of absence to go overseas.

Trained nurses had a busy month during February. Only 12 were registered in at the end of the month. Twenty-two Toronto nurses were sent to Parry Sound because of a typhoid epidemic there.

The Women's Emergency Corps has already a registration of about 90 women who are prepared to take men's work for the duration of the war, in order to leave men free to enlist.

Among women garment workers a general cut in wages still exists. After continued unemployment many have taken work in the knitting mills and other factories, where there is extra work, chiefly military. Trade is dull in the shops having civilian orders only, but at present six firms were busy with Government orders.

No factories were reported slack. Knitting mills, biscuit and bag factories, and the William Davies Company were working two and three nights a week. All operators were busy, the whitewear firms were advertising for more, and the Dominion Paper Box Factory needed inexperienced girls.

Winnipeg.

Demand for female labour continued good, very much better than a year ago, and female labour was more extensively employed during February than in January, particularly hotel help, store and office staffs.

Domestic work offers so many openings that women are beginning to feel exceedingly fortunate if they can secure competent help. The young nurse girl is difficult to secure, but this class of girl is applying at the stores for work, and is apparently anxious to avoid domestic service. The great difficulty is the long hours of labour and inability to have evenings off. Because of this it has not been difficult to secure girls for factory employment, as the latter at least provides time for recreation and sociability.

Factory help has been well employed. There has not been much fluctuation in laundries and small concerns, but from the garment makers' union comes the report of full staff, working full time, and frequently increased staffs and overtime necessary. Bookbinders were busy, working overtime.

Women are beginning to take the place of men in the stores more than at any time since the tide turned in the

question of employment. In fact, some of the stores find it necessary to commence training women as saleswomen and office clerks in entirely new lines, in anticipation of further enlistments and dearth of male applicants. Milliners and dressmakers were quite well employed.

Telephone girls have been increased in number.

Stenographers were finding employment easily. One employment office stated that it was next to impossible to secure them. Temporary stenographic work is proving more remunerative than the \$50 and \$60 positions frequently offered, which the agencies have been unable to fill.

Nurses have been so busy that on several days there have been absolutely none on the registry, while six or three or thereabouts is the usual number.

Advertisements for school teachers have appeared frequently and long lists still appear in the papers. The Department of Education stated it could place 15.

Vancouver.

General labour conditions for women remained very similar to last month, but comparison with conditions during February, 1915, shows a decided improvement for the past month.

Whilst the demand for domestic help showed an increase, with a decrease in the supply available, this was balanced by the unemployment among many working in seasonal occupations, and who were not active during the past month, the spring season not having yet commenced in such occupations as dressmaking, tailoring and millinery.

A conference was held during the month between representatives of the City Council, Board of Trade, Manufacturers' Association and the Vancouver Trades and Labour Council, the object being to make a united effort to

obtain more "war" contracts for British Columbia, particularly for Vancouver, such as uniforms, sweaters, shirts and boots. The meeting, however, was adjourned for a few days to allow of more information to be obtained before taking action.

The report of the annual meeting of the Young Women's Christian Association just received shows: "That the association residence has been the home of about 40 girls and women during the past year and has also accommodated 1,606 transient guests. Room and board have been given free for different periods of time, totalling in all some 60 weeks, a great many meals having also been served free of charge. The summer camp was visited by 216 women and girls for varying periods of time, some one, some two, and some three or four weeks' vacation. The report of the Travellers' Aid branch of the association shows that 1,866 trains and 926 boats have been met during the year and 1,400 travellers been assisted.

"Through the employment bureau positions have been found for 510 women and girls, 1,716 have been advised and helped in the employment office, and 333 letters relative to this department have been received and answered."

An increasing demand for domestic help was reported during the month, which a somewhat inadequate supply made difficult to meet. A slight increase in wages offered was also noted, amounts ranging from \$15 to \$25 per month, a decided increase to the amount offered during February of 1915, which ranged around \$8 to \$15 per month. The most frequent demand was for general domestic help, there being very few calls for cooks, housemaids or housekeepers.

Tailoresses, dressmakers and milliners were unemployed or working on short time during the month, it being between seasons in those trades. Garment workers were fully occupied, the spring trade for the manufacture of ladies'

suits and garments having commenced, the Government order of one firm employing all the overall and shirt workers not regularly working previously.

Boot and shoe workers were fully occupied, and working overtime on Saturdays, on a war order; laundry workers, candy workers and waitresses, while not fully occupied, were not to a great extent unemployed.

Sales clerks and telephone operators were active, and workers in knitting factories were fully occupied.

Stenographers were seeking employment, also bookkeepers and office assistants, the demand for help in these lines of work increasing very slowly. The number of stenographers seeking employment was considerably less than during the early months of 1915, many having left the city, the decrease in the number of women seeking employment during the past year, being due not so much to increased business absorbing them as to the unemployed women leaving the city.

A number of married women, with husbands out of work, were reported as seeking "day" work during the past month.

The report of the Free City Employment Bureau for Women shows:

	Registered.	Placed.
General servants	14	30
Housekeepers	5	10
Nursemaids	4	4
Cooks	3	1
Chambermaids	1	..
Waitresses	1	1
Companion help	2
Nurses	3	2
Office assistant	1	..
Day work	6	25
Total	38	75

No record is kept of the positions which could not be filled through lack of applicants for work.

All employment bureaus reported a slight difficulty in filling domestic positions with skilled help.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907.—PROCEEDINGS DURING FEBRUARY, 1916.

ON February 28 an application was received in the Department for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, for the purpose of dealing with a dispute between the Toronto, Hamilton and Buffalo Railway Company and its employees in the locomotive and car department, being members of the Toronto, Hamilton and Buffalo System, Federation No. 36, International Association of Machinists and Helpers, No. 414, International

Brotherhood of Boilermakers and Iron Ship Builders and Helpers, No. 421, and the Brotherhood of Railway Carmen of America, No. 94. The application stated that the dispute affected 105 employees directly and 12 indirectly, and grew out of the employees' demand for a schedule of agreement, providing for increased wages, reduction of working hours, and improved conditions of employment.

At the time of writing the application was under consideration by the Minister.

ANNUAL CONVENTION DISTRICT No. 18, UNITED MINE WORKERS OF AMERICA.

THE Thirteenth Annual Convention of District No. 18, United Mine Workers of America, opened at Fernie, B.C., on February 21, and continued in session until February 26. Every local union in the district was represented, together with the resident officers and members of the Executive Board, making a total of about 30 representatives of the coal miners' organization present.

There was no working agreement to be negotiated at the convention, but the delegation, in anticipation of what will be required when the next annual convention convenes, passed several resolutions dealing with scale matters, with a view to preparing the way to have incorporated or deleted such clauses as will be beneficial or otherwise to the mine-workers.

One feature of the present working agreement, which was unanimously declared unsatisfactory in its present form, was the method of settling disputes by an independent chairman, whose deci-

sions are final and in this connection the recent incumbent of this office was subjected to some criticism.

The importance of having more equitable compensation enacted was taken up and the convention went on record as being satisfied with the action taken in this respect by the provincial government of British Columbia. The desire was also expressed that the Provincial Government of Alberta should adopt improved legislation in this connection and authority was granted the Executive Board to urge that this matter be given early consideration by the Alberta Government.

Certain constitutional amendments, and a programme of more effective organization methods in new fields, as well as maintaining the same in those already organized were duly acted upon, the purport of all of which was for the advancement of the mineworkers' interest, and after six days' deliberation the convention concluded to re-convene in Fernie during February, 1917.

COST OF LIVING IN CANADA.—REVIEW OF REPORT OF THE BOARD OF INQUIRY.

THE report of the Board appointed in December, 1913, to make an investigation into the increase in the Cost of Living in Canada and into the causes occasioning or contributing to the increase, was tabled in the House of Commons on February 16. The Board, commonly known as the Cost of Living Commission, consisted of permanent officials of the Government: Mr. John McDougald, Commissioner of Customs, chairman; Mr. C. C. James, Agricultural Commissioner; Mr. R. H. Coats, Chief Statistician of the Department of

Labour, and Mr. J. U. Vincent, Deputy Minister of Inland Revenue.

The report consists of two volumes of 951 and 1,108 pages. The first volume contains the digest of the evidence and material collected by the Board or presented to it with memoranda on conditions affecting the cost of living included in the form of 43 appendixes. Volume II consists of a supplementary report by Mr. R. H. Coats on the Rise in Prices and the Cost of Living in Canada from 1900 to 1914, "a statistical examination of economic causes."

In making the investigation the Board availed itself of materials collected by the various departments of the Government as well as of other material presented or available. Meetings were held and data and information obtained in the following cities: Halifax, in the province of Nova Scotia; St. John, in the province of New Brunswick; Quebec and Montreal, in the province of Quebec; Ottawa, Hamilton, Toronto and Port Arthur, in the province of Ontario; Winnipeg, in the province of Manitoba; Regina and Saskatoon, in the province of Saskatchewan; Calgary and Edmonton, in the province of Alberta; Vancouver and Victoria, in the province of British Columbia. It is noted that the report deals with conditions only up to the outbreak of war, August 1, 1914.

REVIEW OF VOLUME I.

It is pointed out that the term "cost of living" involves not only the prices of commodities but the relation to incomes and standards of living but that it is the advance in commodity prices and in cost of service in recent years which has chiefly attracted attention in Canada and in all countries, the advance in prices being world wide. Tables giving expenditures and incomes of 13 families in Winnipeg, receiving from \$50 to \$114 per month, including in some cases income from lodgers and children's earnings, show that in only three cases were substantial savings effected, and in two of these the income from lodgers practically equalled the rent. A deficit of \$10.75 appeared for the family with an income of \$50 per month, although no rent was paid, there being \$3 per month for taxes.

The more important of the conditions affecting prices and cost of living analysed were as follows:

Movement of Population from the Land.—It is pointed out that farm products and foods have advanced more than manufactured goods, probably due to the fact that the demand for food has increased relatively faster than pro-

duction as urban population has increased in greater proportion than rural, while exclusive wheat growers on the prairies are to be classed in this respect as consumers of foods rather than as producers.

Standards of Living—Necessities and Luxuries.—"The demand for better conditions and the general advance of the standard of living throughout all the ranks of the population are manifestly most potent causes of the increase of the demand for commodities, and therefore of the advances of prices.

"The wants of the people have been multiplied and diversified on every side. They demand more and better things. Their requirements are larger, more varied and more exacting.

"In itself the improvement in the standard of living is a sign of progress, but if not rationally guided and safeguarded the advance threatens to bring about a decline of the standard to a lower level.

"Reasonable creation and reasonable luxury may be necessary for modern progress, but the price has to be paid and the bill is found in our high cost of living."

The expenditure of \$12,000,000 a year on automobiles in Canada is given as an illustration of great expenditure on and the increased cost of luxuries.

Industrial Efficiency—Service, Production.—"The opinion is widely shared throughout this Dominion that inefficient service through lack of vocational training is one of the notable causes which have brought about the recent advance in prices of commodities, and that the teaching in the public schools should be supplemented by courses in vocational training, in order to promote and maintain industrial efficiency.

"The cost of production is affected by the supply and efficiency of service.

"With equal efficiency, no standard of living made possible by the wealth produced by ten hours of labour in the factory or on the farm could be main-

tained with fewer hours, unless wages or the value of the product be increased.

"In this Dominion we are proportionately working fewer hours than ever before, and we have a greater number of the inefficient and the idle in our midst.

"The result of proportionately fewer men working shorter hours with more valuable land has been an increased cost for which labour-saving devices have not compensated. These are underlying economic conditions which through the law of supply and demand have contributed to the increased cost of the necessities of life.

"Under-production in many lines of agricultural products in Canada appears to be an important cause in the rise of prices."

Adulteration and Inspection of Staple Commodities.—It is stated that adulteration has been conspicuously prevalent during the recent period of advancing prices, as in many instances the quality has been lowered or the quantity of goods reduced instead of the price being raised, but that this adulteration has probably affected the community more by reason of illness and disease than in direct addition to the cost of living. Also pure food laws have added unquestionably to the cost of commodities, but that the money spent in the prevention of disease is doubtless saved in other ways.

Waste and Extravagance.—Food waste through inefficient marketing, poor cooking and waste of supplies is analyzed; education in food values and better cooking of standard foods are mentioned as possible remedies. Advertising designed to exploit the public rather than to make known the merits of commodities is mentioned as one of the many forms of waste in the distributive process. Fire waste is stated to be disproportionately larger and an item in the increase in the cost of living through insurance rates, rent, taxes, additional cost of keeping up fire departments, waterworks systems, etc. The appendix on fire waste suggests legislation requir-

ing better building and involving the responsibility for fires.

Uneconomical Household Expenditures.—The increased use of package goods instead of food bought in bulk is given as an item of increased expense, particularly as the fancy package and advertising must be paid for by the consumer while the net contents are often less than supposed.

"It is desirable, in the opinion of this Board, that packages containing food products should be required by law to be labelled distinctly with a statement giving the net contents, in terms of weight, measure or numerical count of goods, when they were packed."

The greater cost of frequent delivery and of small packages, increased by the growing use of the telephone in ordering supplies, is regarded as uneconomical expenditure. A memorandum by Mr. E. O. Way, Chief Inspector of Weights and Measures in the Department of Inland Revenue, recommends that deception in the net weight of package goods and as to the prices per pound or other unit of goods should be prevented by laws providing that "all commodities other than liquids shall be sold by weight." It is also pointed out that milk bottles inspected are usually too small, from $1\frac{1}{4}$ to 3 per cent. It is stated that strict laws and their enforcement would probably raise the cost of the bottles, owing to the difficulty of making bottles of exact size, and finally of the milk to the consumer more than the increased cost at present owing to short measure.

Rents.—"Rent is one of the large factors in the cost of living. The classes having the smallest incomes have the largest proportional expenditure for rents. Thus rent is not only one of the largest items in the family budget, but its weight falls heaviest on those whose incomes are least able to bear this burden."

"The increase in rents is due largely to the following causes (apart from over-speculation in real estate): 1. The increased cost of building material. 2. The

increased cost of labour. 3. Higher standards of construction fixed by more stringent building laws. 4. General demand for conveniences which a few years ago were luxuries.

"The opinion was very generally expressed by representative workmen that in the cities the organized efforts to provide comfortable homes for workingmen at low rentals were progressing at a very slow rate.

"The working people of to-day demand and are justified in demanding better habitation than they had 20 or 30 years ago."

A memorandum by Mr. G. Frank Beer, of Toronto, gives the following causes for the advance in rents: increase in the price of land, due to the cost of local improvements as well as to the growth of the city; the construction of small houses being less profitable than formerly owing to the high price of land; lack of rapid transportation facilities; more severe housing by-law restrictions, thus putting a premium on existing cheap houses; cost of material and labour; absence of wise city planning, involving undue and wasted expense for ill planned works. City planning, including the provision for rapid transportation and the proper laying out of the surrounding country, is the chief remedy suggested by Mr. Beer. Tax reform, involving the partial exemption of improvements from taxation, in order to affect the cost of land, is also suggested. The report of the Toronto Housing Company for 1913 is included with illustrations of houses designed for workingmen at low rates with grass courts and all conveniences and with arrangements for the sale of houses on easy terms. The bonds of the company were guaranteed by the city under provincial legislation providing for and facilitating such projects in the province.

Cold Storage.—"The use of cold storage in the preservation of food products, which has been developed greatly in recent years, has been connected in the

popular mind with the recent advance in prices.

"Impartial inquiry into the methods of cold storage leads, however, to the conclusion that the general principle is sound and beneficial.

"It is a great advantage to be able to purchase perishable products when they are low and place them in cold storage where they will keep. If we had no cold storage and could not keep meat at all in that way, it would tend to raise the price, because there would be no way of doing it, except keeping the animals alive.

"The cold storage process is simply the application on a large scale of the principle of food preservation, as used in the cellar of the farm, or the ice-chest of the home. The principle is the storing of food in the time of plenty for its later use in time of scarcity.

"The supply is reduced by the storing of products in time of plenty, and the price consequently does not fall so low. The supply is increased by the marketing of storage products in time of scarcity, and the price consequently does not rise so high."

Statistics of supplies of food in cold storage are given and it is pointed out that the quantities were comparatively small and not in excess of the reasonable requirements of the people. It is recommended that cold storage warehouses should be subject to Federal inspection and also to inspection by health officers. The text of the Cold Storage Warehouse Act, passed in 1914, which provides authority for the supervision of all cold storage warehouses (including the requirement of returns showing quantities) is given in an appendix.

Monopolies, Industrial Combinations, Mergers and Trusts.—"It is impossible from the information acquired by the Board to measure the extent, as expressed in percentages, to which trusts, monopolies and combines have raised prices in Canada, but there is no doubt that some prices have been appreciably raised

at times through the operations of these bodies.

"During the last few years more, perhaps, has been said regarding the increased cost of living from the increased price of meat than about any other cause.

"It has been popularly supposed that for a number of years the large packing houses in Canada have controlled the price of meats and likewise the price of cattle and hogs.

"We do not find that there has existed any combination in restraint of or affecting trade in cattle, sheep or meat in Canada, such as would infringe on the laws of the Dominion.

"The conditions, however, seem to have developed in some respects to a semi-monopoly, semi-trust condition, with competition largely eliminated as a regulating principle.

"The causes contributing to the increased prices of meats are dealt with in the chapter on live stock, meats and dairy products. We do not find that in the past the causes are chargeable to the operations of the large packing houses."

A memorandum on industrial amalgamation and capitalization by Mr. Fred. W. Field, Editor of the Monetary Times, included in the report, points out that the numerous amalgamations in Canada in recent years have been characterized by the issues of watered stock of doubtful value with profit to the promoters and loss to the purchasers and investing public rather than by the direct effect of such mergers in raising prices, as most of these mergers experienced financial difficulties and had to be reorganized and that there was no likelihood of any of them securing a monopoly in any field so as to enable it to raise prices.

Leather and Boots.—Among the comments on rises in the prices of different commodities the causes assigned to the rise in the prices of leather and boots by Mr. S. Morley Wickett, Toronto, are interesting: increased demand for war,

automobiles, and other new uses as well as a general growth of demand; destruction of cattle and hides in Russo-Japanese war; decrease in cattle following two bad seasons and the increased cost of fodder; advance in labour and tanning materials from 30 to 75 per cent; manipulation by packers in the United States who control important tanneries there.

Cereals, Flour and Bread.—From evidence it appeared that whereas the western farmer received only 65c per bushel for wheat on the average in recent years and it cost 60c to produce it so that it did not pay the farmer an adequate profit on his investment and labour nor make any return for the loss of fertility to the land nor to the country for the costly development of the West. In reference to the complaints that flour is dearer in Canada than in the United Kingdom, evidence was given that only the highest grades can be sold in Canada and the balance must be sold abroad and that in England blends and inferior flours were more readily used. The bread in England was also reported to be of different quality from that in Canada.

Fish.—The possibilities of fish as a cheap and valuable food are emphasized in view of the great resources of Canada in this respect. Greater demand and consumption would make possible better facilities for transportation and distribution, causing better quality and lower prices.

Live Stock, Meats, Dairy Products, Etc.—"It is in the cost of farm products that the source of the higher level of prices is to be found.

"The increase in prices being much greater on products coming directly or indirectly from the farm than on any other products, with the exception of forest products, it seems obvious that the main cause of the high price of food will be found by a study of agricultural conditions.

"The price of manufactured articles does not show the same ratio of in-

crease, new equipments having met the strain of higher wages.

"Agricultural development has lagged behind industrial—science having been apparently less helpful, or less applied, on the farm than in the factory.

"A feature of this situation is that the vast sums that have been paid on better communications and improved machinery are not always showing the expected result of an increased production at lower cost. The improvements in transport have been enormous, but they have had to be paid for heavily, and wherever they have been made the price of land has gone up.

"The increased cost of live stock is due to under-production. The increase in cattle has not kept pace with the increase in population in the principal cattle raising countries, except Australia.

"Farmers tell us they have found dairy work and some other productions of the farm more remunerative than raising live stock, and that these conditions have tended to a falling off in the supply of cattle.

"The high cost of fresh meats by retail in cities is attributed in a large measure to the general demand for the 'best cuts,' heavy charge for delivery, telephone and other services, including the expense of 'attractive' meat stores."

A statement by Mr. J. W. Flavelle of the William Davies Company, Ltd., Toronto, on prices of bacon in England and Toronto is quoted to show that the cheaper cuts are not in demand in Canada and the prices quoted in England are for different bacon and on a different basis from quotations in Canada.

For the high prices of milk a dealer suggested cheaper distribution through a clearing house or by the municipality.

In eggs, statistics show greater consumption due to the larger supplies throughout the year as a result of cold storage. A memorandum by Mr. W. A. Brown of the Live Stock Branch of the Department of Agriculture emphasizes

more efficient marketing, speedy gathering and marketing by the farmer, grading and payment according to quality so as to eliminate the great divergences in prices due to the uncertainty of quality at every stage, causing excessive prices for good eggs and the waste of many eggs through improper handling.

The decline in sheep raising was found to be principally due to lack of marketing facilities and standardization for wool and mutton. The high prices recently prevailing were found to be offsetting this, there being a considerable increase in the western provinces in sheep raising.

Co-operation in marketing and in distribution of farm products is recommended as an important remedy. Memoranda on this movement in Saskatchewan, Nova Scotia, France and California are given in the appendices.

Markets.— "Markets regulate and tend to make fair and reasonable prices.

"The lack of a comprehensive and aggressive policy for the development of the market along modern methods constitutes a considerable factor in the needless expense of the necessities of life to consumers in the cities and towns of Canada.

"Modern appliances with terminal and other facilities are required for the prompt and economical handling of incoming and outgoing commodities and to enable merchants and traders to render satisfactory and efficient service to the consuming public."

A pamphlet by Mr. John Wanless of Toronto on the provision of market facilities is included and commended. Attention is also directed to the need of educating women in marketing and economic housekeeping and of encouraging the householder to cultivate a garden plot.

Stock Yards, Abattoirs, Packing Plants, Refrigerator Cars and Refrigeration on Steamers were recommended as necessary for the livestock industry.

Land Settlement and Mixed Farming.

—It is recommended that farming be made more attractive that the country may keep pace with the city growth. An "agricultural survey" is suggested as one means, to show by maps, charts and other information the characteristics of the soil and climate of the various localities and the kind of farming most suitable.

Agricultural credit is recommended as a factor in greater production, especially in the West. Various articles on methods of providing finances for farmers are given in appendixes.

Customs Tariff.—"One of the objects of a protective tariff system on this continent is to maintain a wage scale and standard of living above that found in other continents. This element in the system tends to increase the selling price for commodities in the home market, subject to modification in prices according to extent of production. By securing a remunerative home market, Canadian producers expect to sell a portion of their products abroad, although at a lower rate than they otherwise could, and so increase their output to its highest economic capacity.

"It is undeniable that protection with its corollaries does give the protected competitors a great immediate economic advantage over unprotected ones. Whether this pays or does not pay a protecting country as a whole or in the end is a question which we leave to the controversialists."

Gold Production.—It is held that the increased production of gold has been to some degree responsible for the rise in prices.

Conclusion.

The chief causes mentioned are: increased gold supply, the great expenditure on railways, public works and non-productive lines, the extravagance and wastage, increasing expenditures on luxuries, the withdrawal of population from the land, and uneconomic meth-

ods of distribution. The chief remedies are land settlement, more mixed farming, increased production, standardization and improvement of quality in farm products, together with co-operation in their distribution. The furtherance of these objects through the educational campaigns now carried on by the Dominion and Provincial Departments of Agriculture and through teaching in agricultural schools and colleges is confidently hoped. Extension of the parcel post and good roads and the satisfaction of the demand for "working capital" in the West particularly are also recommended as remedies, together with vocational training to supplement public school instruction to promote and maintain industrial efficiency.

Included in the appendixes of Volume I are the sections from the Department of Labour Exhibit in Volume II on Prices, Wholesale and Retail in Canada and Other Countries, Prices of Services, Rents, Wages and Salaries in Canada.

REVIEW OF VOLUME II.—DEPARTMENT OF LABOUR EXHIBIT.

The supplementary report was in the form of an exhibit, prepared in the Statistical Branch of the Department of Labour, under the direction of Mr. R. H. Coats, Chief Statistician, on the "Rise in Prices and the Cost of Living in Canada." Mr. Coats has since been appointed Dominion Statistician and Controller of Census in the Department of Trade and Commerce. The exhibit is divided into three parts with an introduction and two additional memoranda on Fish and Dairy Products.

Part I gives the "Facts" in the form of statistics of Prices of Commodities, Wholesale and Retail in Canada, and in Other Countries, Prices of Services, including Water, Electric Light and Power, Gas, Municipal Tax Rates, Freight Rates, Hospital Costs, Rents in Canada and in Other Countries, Wages and Hours of Labour and Salaries in Canada, 1900-1913, Prices of Securities, Stocks, common and preferred, and

Bonds, industrial and government, and Interest.

Part II treats of the "Causes," Section (1) covering Monetary Conditions in General and in Canada, including Gold and Prices, The Quantity Theory of Money, Historical Sketch of Prices, Stocks of Gold, Currency, Credit, Circulation and the Control of Prices by Currency Devices. Section (2) on General Economic Conditions in Canada from 1900-1913, deals first with Growth and Distribution of Capital, including a treatment of the Balance of Trade, Distribution of New Capital, Growth of Capital in other Countries. Then follow The Growth and Distribution of Labour Force, Production in the Principal Industries, World Production of the Principal Commodities, Distribution, Internal and External Trade, Consumption and the Standard of Living.

Part III is a summary on the Rise in the Cost of Living and its Economic Causes, co-relating the findings of Part I and Part II.

In the introduction the term "Cost of Living" is analyzed, the relations of prices, wages, and standards of living being shown. It is then pointed out that in investigating the rise in prices by separate groups the field is so vast and the factors to be dealt with so intricate that confusion is apt to be engendered. The method chosen is therefore that of proceeding from the general to the particular, beginning with the fact that the recent rise in prices has been world wide, has been greater in some countries than in others, and greater in some commodities than in others, so that the general tendencies and essential characteristics of the situation may be discovered and answers found to the questions: (1) what has been the world rise in prices and its causes? (2) wherein is the rise which has taken place in Canada peculiar in its nature and extent and to what may we attribute this peculiarity?

PART I.—"THE FACTS"

Prices in Canada.—In wholesale prices tables give the yearly averages from 1890-1913 for the 272 commodities included in the index number of the Department of Labour, and of several additional commodities not yet included in the index number. In retail prices the prices of the 30 foods and starch, coal, wood and coal oil, published monthly in the *Labour Gazette* since January, 1910, were given for December, 1900 and 1905, and also 1909-1913. From these quotations index numbers and family budgets were calculated to show the rise in retail prices of food and fuel. The average cost of a family supply of 30 staple foods for a week showed a rise from \$5.48 in 1900 to \$7.75 in 1913, an advance of 38 per cent. The rise was least in Nova Scotia, where prices remained on lower levels than in most of the other provinces, and in Saskatchewan and British Columbia, where prices continued relatively higher than in the other provinces.

Prices in Other Countries.—Statistics of prices, wholesale and retail, from 1900 to 1913 are given, with index numbers for the United Kingdom, the United States, Australia, New Zealand, South Africa, India, France, Germany, Austria-Hungary, Italy, Belgium, Holland, Denmark, Norway, Russia, Argentina and Japan. The rise in each country is compared with that in Canada in the same commodities. The index numbers of prices of 145 commodities for the twelve countries are combined to form a world index number of prices, the rise for 1900 to 1913 being 21.2 per cent. In Canada these 145 commodities rise 28.7 per cent. The greatest rise in the world index numbers appeared in animals and meats, 55.5 per cent., the next in hides, leather, boots and shoes, 40.4 per cent. Metals and implements and drugs and chemicals were up the least, 4.3 per cent and 5.8 per cent respectively. It is interesting to note here that these two groups have advanced most

steeply in all markets since the war began. A similar world index number for retail prices of 24 commodities, including 21 foods, rose 40.5 per cent, while in Canada the same articles rose 31 per cent. A table, originally published by the British Board of Trade in 1912, showing the rise in food prices in fifteen countries for 1900 to 1911 and 1912, showed that the greatest advances had occurred in the United States, Japan, Hungary and Canada, with a rise in Germany a little less steep, the least advances appearing in the United Kingdom, Norway and Australia.

A comparison of the rises by classes of commodities shows a world rise in foods of 34 per cent by 1912, as compared with 14.7 per cent in materials, and 25.8 per cent by 1913, as compared with 17.8 per cent in materials, since foods had declined in 1913. Comparing raw materials with manufactured products, by 1913 the former had advanced 30.4 per cent, and the latter 18.3 per cent. "The above bears out the conclusion already fairly apparent that the rise of the past few years has been half again as great in food as in materials, and more than half again as great in raw products as in manufactured articles. It is clearly in food production and in the primary processes of production generally that the chief factors causing the rise have been at work."

Prices of Services.—Tables are given showing the cost from year to year during the period 1900 to 1913 for cities in Canada of a population of 10,000 and upward for water, gas, electricity, municipal taxes, etc. Index numbers were calculated to show the changes by percentages. Water rates in Canada averaged 4.4 per cent lower in 1913 than in 1900, having risen only in Alberta and Manitoba. Electric light averaged 29.3 per cent lower, illuminating gas averaged 23 per cent and fuel gas 18 per cent lower. Index numbers of tax rates showed an average rise of 21.6 per cent, the greatest rise appearing in Nova Scotia, 39.3 per cent, and the least in

Saskatchewan, 2.8 per cent. In a subsequent chapter a table of assessed values for municipal purposes showed an average rise for the Dominion of nearly 500 per cent, 46.5 per cent in Nova Scotia, 31.1 per cent in New Brunswick, 20 per cent in Prince Edward Island, 316.5 per cent in Quebec, 215.5 per cent in Ontario, nearly 1,000 per cent in Manitoba, nearly 6,000 per cent in Saskatchewan, and nearly 8,000 per cent in Alberta. In British Columbia on real property only the rise was 737.2 per cent. It is noted that the figures are considerably affected by increases in city areas as well as by growth in population and valuation, while in the western provinces there are few small towns included in the computation, as compared with the provinces east of Winnipeg.

Freight rates show a decline of 4.8 per cent in certain commodities and 6.4 per cent in class rates. Increase of railway lines, improvements in grades, equipment, capacity of cars, engines, etc., account for the decreases.

Hospital charges in nearly all the hospitals in Canada are shown in tables, each institution being given a number instead of its name. The charges for public ward patients averaged 54.9 per cent higher in 1913 than in 1900, semi-private wards 60 per cent, private wards 50.7 per cent, operating room charges 30.9 per cent. The average cost per patient daily averaged 44.7 per cent higher in 1912 than in 1900, the greatest rise appearing in Ontario 50.8 per cent, and the least in British Columbia, 14.7 per cent.

Rents in Canada.—Tables showing rates for typical stores in first and second business sections, down town offices, and six-roomed dwellings in workmen's sections with and without sanitary conveniences in some 60 cities in Canada are given for the years 1900, 1905 and 1913. Tables of index numbers of these rates show considerable advances in each province, the least rise being 25 per cent in Prince Edward

Island for first class stores, the greatest average increase appearing in the province of Quebec for second class stores. The causes of higher rents in Canada mentioned are: 1. The enhanced cost of building due to (a) the rise in prices of materials; (b) the rise in the wages of building mechanics; (c) the increasing stringency of building and sanitary regulations. 2. Increasing taxation due to the extensive scale of local improvements. 3. The demand for additional conveniences. 4. The enhanced demand due to increase in population. 5. Speculation in vacant suburban properties. A reference to the tables of prices and wages shows that lumber advanced 55 per cent since 1900, birch 80 per cent, paints 15 per cent, and wages in the building trades about 50 per cent. It is pointed out, however, that rents do not rise where population is stagnant or declining, but that when there is a rapid growth in population, as in many Canadian cities, rents are directly influenced by the cost of building as well as by the speculative value of land which is then peculiarly liable to inflation. It is further pointed out that rent fell during 1913 in certain localities as a result of the check to speculation, though materials, labour and contractors' rates were as high as ever.

Rents in Other Countries.—A special investigation in the United Kingdom by the Board of Trade showed that between 1905 and 1912 rents for workmen's houses were practically stationary. In the United States the Massachusetts Cost of Living Commission in 1910 found rents had advanced about 12 per cent in the average throughout the state. In Australia the index number of rents computed by the Commonwealth statistician showed a rise of 40 per cent from 1901 to 1912. The Cost of Living Commission in New Zealand in 1912 found a rise of 20 per cent in the preceding 15 years. The Economic Commission of South Africa, reported in January, 1914, that rent was the chief factor in the high cost of living, costing about half as much for a

family as food. In France working class rentals went up about 8 per cent between 1900 and 1910. Norway experienced a rise of 5 per cent in rent between 1901 and 1912. In Argentina workmen's rent increased between 1904 and 1912 by 86.1 per cent.

Wages in Canada.—From tables of changes of wages published quarterly in the *Labour Gazette* since 1902 and from selections from unpublished statistics collected by the Department of Labour, the rise in wages in Canada since 1900 is shown. Rates of wages and hours for certain classes of labour are given for 1900 to 1913 and index numbers showing the rises by percentages since 1900. The average thus ascertained was 42.9 per cent, the greatest advances being in domestic service 71.9 per cent, agriculture and the printing, clothing and building trades having advanced about 50 per cent.

Hours of Labour.—Out of 712 series of returns, 461 showed no change in the number of working hours per day or per week, 239 showed shorter hours and only two showed increases. There were 55 changes from 60 to 54 hours per week, 52 from 52 to 48 hours per week, 21 from 60 to 48, 17 from 60 to 55, 13 from 52 to 49, 9 from 52 to 48, and 19 involving the 44 hour week. The tables of changes in wages compiled from the *Labour Gazette* also indicated that the decline in hours was strongest between 1903 and 1907 and again from 1910 to 1913. The securing of the eight hour day was particularly noticeable among printers in 1906 and at different times among the building trades, especially in western cities and in some of the large eastern cities. In mining also the eight hour day had been brought about to a considerable extent by legislation in several provinces. Hours for women and children in various trades have also been restricted by law. "Fair wage" policies in Government contracts have been adopted by the Dominion Government, by eight of the provinces, and by over 40 municipalities since 1900.

Wages and Cost of Living.—As statistics of unemployment were not available no calculation of changes in actual earnings was possible, but it was estimated from the figures on retail prices and rents, and on rates of wages that on the average the rise in the latter had only kept pace with the former, while in many unskilled trades this would not be so, and owing to the prevalence of unemployment in 1908 the average fall in earnings would probably be greater than the fall in prices, while for 1913 and 1914 a somewhat pronounced drop in earnings as compared with the high prices would be expected. In taking up the question of *Wages and Prices in Cost of Production* the question of how much labour organizations by securing advances in wages have caused prices to rise is taken up. It is then shown that wages follow rather than lead prices in the upward trend and also tend to remain up in time of trade depression and falling prices. In the opening years of the present century the trade and industrial boom was well under way before labour could get wages advanced materially, the pleas of good times being gradually followed by that of increased "cost of living" in the demands for higher wages recorded in the *Labour Gazette*, "though the two were intermingled from the outset by the fact that the lead in the price rise was taken by the common foods."

Wages in Other Countries.—The upward tendency in wages was most pronounced in Canada and the United States. In the United Kingdom the index number of wages computed by the Labour Department of the Board of Trade showed a rise of 2.98 per cent from 1900 to 1912, including agriculture, and 2.46 per cent, excluding agriculture. Textile workers, however, had wages advanced by 10.67 per cent, engineering trades by 4.24 per cent, building trades by 1.11 per cent, agriculture by 5.08 per cent, while miners' wages had declined by 6.2 per cent. For the United States, index numbers of wages constructed by Mr. I. M. Rubinow from

the records of the Federal Department of Labour showed a general rise from 1900 to 1912 of 27.5 per cent in full time weekly earnings, wages per hour having risen 35.1 per cent. For Australia the index number of wages computed by the Commonwealth showed wages in 1912, 23.9 per cent higher than in 1900. For Argentina a rise of 24.3 per cent occurred from 1904 to 1911.

Salaries in Canada.—Statistics of the salaries of school teachers and of the clergy in certain religious denominations indicated an average rise of 46.7 per cent in the former and 30.3 per cent in the latter. It is pointed out, however, that customs and individual qualifications determine salaries to a large extent so that tendencies are difficult to measure with accuracy.

Prices of Securities.—The significance of the prices of stocks and bonds is that changes indicate commercial and industrial conditions, the supply of money, rates of interest, the state of credit, etc. When industry and trade are flourishing prices are high, but there is a good demand for money, and interest rates advance. Prices of bonds, therefore, fall as they have a fixed rate of interest. Common stocks, however, which reap higher dividends from the commercial prosperity tend to rise. Preferred stocks, which have a limited dividend rate but not a guaranteed rate of interest like the bonds, tend to rise, but not so steeply as the common stocks, and when depression appears fall considerably. A considerable influence was exerted on the prices of bonds since 1900 by the increase in the cost of living as bondholders found it necessary to sell their bonds and invest the money in securities paying higher rates of interest in order to get an increased income. The chief example of this is the fall in prices of British Consols from 99 in 1900 to 72 in 1913, 2½ per cent being the rate of interest. The rise in common stocks during a period of expanding trade is illustrated by the course of prices of the stocks of the Canadian

Pacific Railway from 86 in 1900 to 277 in 1912, falling, however, in 1913 to 217 when depression was experienced and the earnings of the company were expected to fall appreciably.

Interest.—The rise in the rate of interest, "the price of money," as differentiated from the profits on investments, is shown by tables of rates on farm mortgages and city mortgages, yields to loan companies, rates paid by governments on loans, and rates charged by banks. The increases in such rates add to the cost of buying, building, and carrying on business, thus affecting the prices of commodities. Rates on city house mortgages were higher by 17 to 21 per cent and on farm mortgages by 12 per cent. Bank interest on loans rose by nearly 10 per cent, and call money at New York cost 20 per cent more in 1913 than in 1900.

PART II.—"CAUSES."

Monetary Conditions.

Gold and Prices.—The relation of the supply of gold to prices is taken up in an elaborate note on the "Quantity Theory of Money" in its recent phases, with extracts from economic writers showing the recent trend of opinion on the subject. It is pointed out that, while the brief statement of the theory is simple, namely, that prices rise when the supply of money increases faster than the supply of goods, "other things being equal" and vice versa, the consideration of what is involved in "other things," which affect the supply of money or of goods, or are in turn affected by either or both, becomes involved in intricacies. In addition the term "supply of money" includes credit paper, bills of exchange, etc., as well as gold and other coin, and is affected by the rapidity with which the money is passed from hand to hand. The effect of the increased supply of gold in raising prices is therefore probably not as important as the expansion of credit which marked trade and industrial conditions since 1900 and other commercial

conditions which exerted a similar influence.

Historical Sketch of Prices.—This section describes the rises in prices of goods: 1, following the discovery of America and the consequent increase in the supply of gold and silver in Europe; 2, later during the Napoleonic wars; 3, after the great gold discoveries about 1850; 4, after the discovery of the cyanide process and the great South African production on from the latter part of the nineteenth century. A table showing the rises in prices of certain commodities in Canada from 1848 to 1858 when there was a development in Ontario similar to that in Western Canada in recent years is also given.

Monetary Conditions. — This section gives statistics of the production and stocks of gold and silver from 1492 to 1913, the uses of the metal in industry and for currency, issues of paper money and banking statistics for many countries. Similar statistics for Canada are given with figures as to the operations of financial institutions, failures, clearing houses, etc.

General Economic Conditions in Canada, 1900-1914.

The Growth and Distribution of Capital, 1900-1914.—The amounts of capital invested in Canada by capitalists in the United Kingdom, the United States and in Canada, as recorded and estimated by financial authorities, are given and calculations made to show interest payments abroad, involving trade balances, how the new capital comes in among imports and how the payments are made among the exports or out of the new capital borrowed. It is ascertained that, allowing for remittances abroad by immigrants, for the spending abroad of Canadian tourists, for ocean freights, earnings of Canadian ships, etc., the balance of trade from year to year accounts for the great import of capital for investment recorded as loans by financiers. The distribution of this capital among the industries of the Do-

minion, agriculture, fishing, manufacturing, transportation, etc., is shown, as well as the estimated expenditures on buildings, city streets, public works, etc.

The Growth and Distribution of Labour Force in Canada.—The increases in population, urban and rural, immigration, destination by provinces and distribution by occupations are shown by tables and diagrams. It is found that the population of Canada increased in greater proportion than of most countries and the urban population showed an increase from 14 per cent of the whole in 1871 to 45.5 per cent in 1911, the increase in the urban population from 1901 to 1911 being 1,258,645, and in the rural population only 574,878.

Production.—Quantities and values of products in the principal industries are shown so far as available. A calculation is also made to ascertain the extent to which the increases in value were due to advances in prices, not to increases in quantity, and to estimate the value of the 1911 production at 1901 prices. In the five primary industries, farming, mining, lumbering, fishing and hunting, the increase in the value of production was from \$479,613,328 in 1901 to \$850,796,888 in 1911, but the value of the latter at 1901 prices was estimated to be \$668,410,440, the increase in prices thus accounting for a great part of the increase in value. Figures as to the world's production of cereals show increases in production since 1901 of 48 per cent in wheat, 49 per cent in barley, 55 per cent in oats, and 80.50 per cent in corn. In livestock, horses increased by 6 per cent, pigs by 3.7 per cent, sheep by 6 per cent, but cattle decreased 2.2 per cent. The world production of sugar increased by 35 per cent; wool, 50 per cent; silk, 35 per cent; coal, over 60 per cent; iron, 70 per cent; copper, over 100 per cent.

Distribution.—Tables of exports and imports of Canada show that the proportion of food to total imports rose from 18.7 per cent to 27.2 per cent between 1905 and 1913, while the propor-

tion of materials rose from 14.2 per cent to 20.2 per cent, and that the exports of many foods fell, especially in cattle, beef, eggs and butter. The great rise in food prices is therefore accounted for by this change from a food exporting basis to a food importing basis in many important commodities, owing to the development of the country, great immigration and expenditure of labour on construction instead of food production.

The Standard of Living.

"In dealing with the standard of living in its bearing upon the price level, it is particularly difficult to distinguish between cause and effect. A rise in the standard of living may without doubt be responsible for an increase in prices; on the other hand a rise of prices, by increasing profits and wages, plays an important part in raising the standard of living and thus increasing consumption.

"The 'extravagance of the age' is a common subject of popular discussion, and it is important for this reason as well as others to set forth briefly a few of the evidences of the standard which Canadian life has attained since the opening of the century."

Increases in the per capita consumption of wheat, butter, milk and eggs are shown, but there was a decrease in that of cheese and apples. In meats an increase was estimated in beef and a greater increase in pork, with a decrease in mutton. Increases in per capita consumption also were indicated in tea (slight), coffee, cocoa, sugar, rice, dates, figs, prunes, raisins, bananas, oranges, pineapples, spices, etc. In apples a decrease from three bushels to two bushels appeared. In housing the number of families living in one room increased by 74 per cent, and the number in over 11 rooms by 60 per cent between 1901 and 1911, while in three and four roomed houses the percentage was almost unchanged. The percentage of population in five roomed houses increased by 18 per cent.

"Summing up, it would seem that while there has been a strong tendency at work in the direction of greater comfort in housing for the mass of the people, there has been at the bottom of the scale a movement towards very undesirable conditions. Speaking in terms of the working class; while the skilled mechanic has perhaps improved his standard, the unskilled and immigrant class in the larger cities are crowded together to a degree that is new in the experience of the country."

In luxuries the consumption of liquors and tobacco increased by over 50 per cent, and imports of jewellery, perfumery, furs, etc., increased from 200 to 700 per cent. Per capita expenditure on education also increased in every province. A calculation of the proportionate advances in wages and prices of food and rent in Canada indicates that rents rose so greatly as to compel a lowering of the standard of living for the poorer families, either in housing, diet, clothing or by increasing the family income from earnings of the children or mother. The general conclusion drawn is that a greater per capita consumption appears in necessities as well as in luxuries, while expenditure on education, for churches, and other aspects of the higher life, has also increased.

"The final criterion of economic change is in the lives of the people. Has the standard of living risen or fallen since 1900? The common impression is that it has risen, so greatly as to make it a primary factor in the advance of prices. That the true key of economic progress is the development of new activities, rather than of new wants, as Alfred Marshall states, and that, in the words of the same authority, 'it is necessary to bear in mind the distinction between a rise in the standard of life, which implies an increase in general efficiency, and a rise in the standard of comfort which may suggest a mere increase of artificial wants among which the grosser wants predominate even though it does to some extent imply a

rise in the standard of life,' makes the subject of first importance.

"It (the change in living standards) is primarily a reflection of an era of boom and of the fact that the distribution of the resulting prosperity has not been uniform. . . . In this margin of great profits in the operations of the financial and commercial classes—including real estate dealers, promoters, bankers, brokers, agents, . . . is to be found the root of the 'extravagance of the age'—in that and in the fact that the individual's standard is to a degree determined by that of the community in which he lives."

SUMMARY.

The Rise in the Cost of Living in Canada and its Economic Causes.

"During the past fifteen years there has been a rise in the cost of living in Canada that may be set down approximately as 50 per cent. The prices at wholesale of 272 representative articles, selected over the entire field of production and consumption, have risen 48 per cent since 1900. The retail prices of over 30 articles which enter chiefly into domestic consumption have advanced, say, 40 per cent. Rents are up 60 to 70 per cent. The main purpose of the present investigation has been to explain from an economic standpoint the conditions which have produced a change so revolutionary in its effect upon the individual and the community.

"At bottom, the phenomenon we have to examine is the drawing of Canada at an exceedingly rapid pace into the world-trade scheme as a source of supply for raw materials, particularly cereals. This is the economic impulse underlying what is popularly called the Discovery of the Last Best West. Around this hinges the general scheme of economic progress in Canada during the last twelve years, and in its various manifestations are to be sought perhaps three-fourths of the explanation of the course that has been followed by prices.

"The superficial phenomena are familiar enough. A spirited immigration policy drew thousands of people to the country, primarily to occupy the new lands. An immense railway and town-building programme was begun, also for the service of the West. The work of locating settlers, providing lumber for their houses, agricultural machinery for their fields, elevators for their crops, drew the entire economic life of Canada out of its accustomed orbit to a greater or less degree. The East in particular turned to industrialism, the people flocking from the farms to the centres of secondary production and distribution, whither also a considerable portion even of the immigrant tide was diverted. In earlier times, before western wheat growing had assumed the lead in Canadian agriculture, the smaller Canadian towns and cities were supplied from the adjacent country. Once, however, the above change took place,—and while it was taking place—they were compelled to go further afield for their supplies. New freights and the various other expenses incidental to distribution over a wide area accordingly began to appear as charges in the food bill, at the same time that Canada began to be drawn upon more and more by world markets as a source of supply. Concurrently the familiar features of an intense speculative boom, especially in land, added their demoralizing influence. . . .

Conclusion.

"The great rise in prices that has taken place in Canada is accordingly found to centre largely in the new distribution problem which has been created by the lessening of local food supply during an era of heavy expenditures on capital account. The incident is not new to Canadian history; almost an exact counterpart is to be found in the experiences of the provinces during the 1850's while the original railway and canal systems of the country were under construction. That the tendency recently has been the same in several other

'new' countries has intensified the Canadian situation. 'The rise in the cost of living,' says Sir George Paish, 'came from the remarkable credit the world enjoyed in the past ten years and the greatly increased consumption of the nations that were able to borrow.' In the manifestation of this to a very pronounced degree in Canada is to be sought the explanation of the rapidity of the Canadian price-list. . . .

"The Order-in-Council appointing the Board does not call for suggestions as to remedies, but it may be stated that the remedial lines which this inquiry indicates are the encouragement of food production and the removal of every possible economic weight in the distribution process. Many concrete suggestions have been made having reference to particular phases of the problem, such as industrial education, co-operation, the amelioration of labour conditions on the farm, the expansion of rural credit, etc., etc., and though the excellence of these does not depend on the price level, and though they will not prevent the pendulum of prices from swinging in obedience to economic attraction, their introduction as *new* influences would undoubtedly mitigate the effects of the high prices. . . . The reorganization of Canadian official statistics may perhaps be mentioned in this connection, for without comprehensive and up-to-date measurements of the kind it is impossible to grasp the significance of current phenomena. That the process of development which has created the great rise has been over-rapid is frequently stated, but when it is remembered that all such developments are necessarily against the future, it will be seen that the answer depends on what is made of the future. The situation has been pronounced sound by Sir George Paish, one of the most practical of observers, and speaking from the quarter from which most of the outside capital now invested in Canada has come,—provided the country turn its energies to production, against which the great outlays of the past ten years have been made."

REPORT OF THE ONTARIO COMMISSION ON UNEMPLOYMENT.

IN the following pages the *Labour Gazette* aims to give its readers a convenient resumé of Part I of the Report of the Ontario Commission on Unemployment, which was issued late in January. It is understood that Part II—Data Regarding Unemployment in Ontario, Part III—Studies of Representative Women's Employments, and Part IV, consisting of evidence taken before the Commission and appendices, are not yet ready for distribution. (For personnel of the Commission see *Labour Gazette*, February 1916, page 854.)

Introduction.

In dealing generally with the findings the Report states that the Commission was appointed "not to consider conditions arising out of the war, or even of the passing season of commercial depression, but to examine into the permanent causes of recurring unemployment in Ontario, and to recommend measures to mitigate or abolish the evil." The Commissioners were impressed with the fact that the depression of 1914 and 1915 was "but a phase of the movement alternating between inflation and depression, which is a characteristic feature of modern industry," and they point out that widespread unemployment is likely to recur in future. Young countries such as Canada depend for their continued development on imported capital, and they must always suffer when events in Europe check investment. As their growth is rapid in times of prosperity they are subject to depressions more violent than those of older countries. We should, therefore, be careful to make preparation during good times for periods of depression although in spite of preventive measures, there will at all times be some unemployment, and

to meet such, a scientific system of organized relief should be adopted. Attention is drawn to the fact that the common interest of consumer and producer, employer and employed has sometimes been obscured by consideration of the needs of special classes. "Yet the welfare of each depends on the general well-being; and whatever does not make for general well-being, reacts on other classes in the community. The greater the general well-being the greater the demand for commodities and so for labour."

The conclusions in this connection are as follows: (1) that the cutting down of production, which means the power to purchase, is detrimental both to capital and labour; (2) that the larger the power to purchase possessed by labour, the greater will be the ultimate advantage of the manufacturer who caters to his wants; (3) that the greater the prosperity of the labourer, the less necessity will there be for him to overwork and, consequently, the greater will become the demand for the labour of others.

In giving an outline of its proposals the Commission states that since the problem of unemployment arises from so many and such varied causes a remedy must be sought in many lines of action. Heretofore, personal causes of unemployment have received a disproportionate amount of attention. The causes are economic and industrial as well as personal and the general problem of Proportionate National Development is deserving of greater recognition than it has yet received. Then follows a summarized statement of the Commission's recommendations. In this connection the reader is referred to the closing paragraphs of each of the following sections in which the recommendations are given verbatim.

I.—Provisions Dealing with the Prevention of Unemployment.

Section 1. — *Proportionate National Development as a Means of Securing Stability of Labour Conditions.* — Obviously the one genuine remedy for unemployment is a proper adjustment between work and the number and qualification of the workers. The Commission's investigation proved that in Ontario there is room for such adjustment. Returns of employment from Ontario manufacturers show that during 1915 the decrease in the volume of employment was equal to the full working time of, at least, 30,000 persons. Moreover, industrial plant in many lines has outgrown normal requirements and many factories would be closed down but for the war orders. Since Canada had in 1914 large unoccupied areas of accessible agricultural land and a considerable accumulation of idle capital while its industrial plant and working force were underemployed it would seem evident that the governing factors on the unemployment problem were somewhere within the field of organization or of markets. The importance of organizing our industrial forces has been overlooked and a study of our imports and exports shows a lack of adjustment in Canadian production. The importation of food products since 1900 has increased from \$5.00 to \$10.00 per capita. If a foreign market could be found for a larger proportion of our industrial products many industries would have opportunity to overcome seasonal fluctuations and secure capacity output and the reserve of skilled labour would soon be absorbed.

"By overcoming seasonal fluctuations and securing capacity output, the unit cost of production would practically, in all cases, be lowered. The additional cost would be represented by additional raw materials, additional labour and slightly increased depreciation, due to making greater use of the plants. Overhead expenses and charges on capital invested would remain practically the same. The saving would be so consider-

able that an export market for the surplus could be reasonably assured."

It is urged that united action on the part of the Government, the Manufacturers' Association, Labour Organizations, Bankers, Transportation Managers and Educational Authorities along these lines should be taken immediately in order that Canadian industry may more readily reabsorb the thousands of industrial workers who will return at the close of the war. One of Canada's greatest needs is that of proportionate development — that there should be a proper balance between the portion of national income devoted to the production of commodities whose production occupies a long time and whose utilities are yielded very gradually over a long period and the portion of the national income expended upon the kind of production which yields more or less immediately realizable utilities. A well adjusted system of proportionate production for home consumption is the only natural economic equivalent for export trade as an agent in stabilizing the demand for labour.

It is recommended:—

1. That, during a period of great national activity, problems of proportionate development, as they relate to production and markets, call for continued study with a view to safeguarding labour from violent fluctuations of demand;

2. That much unemployment has resulted from the cessation of expenditure upon the building of railways, the creation of industrial plants and other secondary industries, without provision being made for equal employment upon works of a speedily productive character, and that, at least for the immediate future, our borrowings should be confined, apart from war expenditures, to money for purposes immediately productive;

3. That since a demand for skilled labour must precede any large increase in the demand for unskilled labour, ad-

ditional markets should be obtained for the product of Canadian factories, along with an increased use of existing transportation facilities in order to employ profitably the capital locked up in such plants. These objects will be obtained not only by increasing the proportion of population engaged in primary industries—and so lessening the pressure upon the labour markets in our cities—but, also, and possibly more rapidly, by creating an efficient national organization for the express purpose of developing foreign trade.

4. That a system of national statistics designed to form the basis for a comprehensive study of Canadian economic and social problems is indispensable to wise guidance in matters which, like unemployment, are of wider than provincial or local scope.

Section 2. *The Effect of Public Spending upon Unemployment.*—The Commissioners here recommend that the Dominion, Provincial and Municipal Authorities should co-operate in dealing with unemployment resulting from general business depression. Public works and expenditures should be planned for such periods in order that public employment may compensate as far as possible for a lessened private demand for labour. As public authorities control a very large expenditure of capital they could, in this way, prevent unemployment on a large scale. This policy would prevent the creation of an excessive and artificial demand for labour in times of great business activity and would have the effect of storing a demand for the periods of lessening industrial activity. It would involve no expenditure save of thought and forethought and in proportion as the scale of its operation was sufficient, would remove the principal legitimate cause of dissatisfaction of the genuine workman with industrial conditions.

Sections 3. *The Regularization of Employment by Employers.*—Irregularity of employment is perhaps not so great in Canada as in the United States. Nevertheless, it exists and different Can-

adian industries are attempting to overcome seasonal work in as far as possible. Few firms, however, realize the extent of their own turnover of labour and there is all too little effort directed to its reduction. There follows an outline of evidence given before the Commission by Mr. J. H. Willits of the Wharton School of Finance and Commerce, University of Pennsylvania, as to employment conditions in the United States and the efforts made by individual firms to regularize employment through studying the facts of lost time in each plant, endeavouring to reduce the high labour turnover, striving to co-ordinate the manufacturing and selling departments and through various ways of reducing the burden of unemployment, such as giving advance notice of lay-off and by distributing work in times of depression among as many individuals as possible.

Recommendations:—That the Provincial Labour Commission confer with the Canadian Manufacturers' Association, with a view to its co-operation in impressing upon all employers of labour, their share of the responsibility for lessening the extent and burden of unemployment. It is believed that employers of labour in every department would more fully recognize the division of responsibility for the evils of unemployment if they were pointed out by industrial leaders who command the confidence of employers, and your Commissioners have reason to believe that in this way the objects desired would be measurably procured.

Section 4. *Land Settlement in connection with Unemployment.*—Under this head the Commissioners recommend community and assisted settlement with Provincial Farms and Agricultural Training Schools at selected points as the basis of Provincial Land Settlement.

The Provincial Farms are designed (a) to carry on the Settlement Policy to be adopted; (b) to supply agricultural guidance and supervision to the districts in which they are located; (c) to conduct Training Schools for farm labour; (d) to serve as centres for public

services which otherwise are necessarily confined to towns and cities; (e) to raise live stock for settlers as a part of Settlers' Loans.

It is recommended that the Government should assist immigrants and others having small capital, but with satisfactory experience in agriculture, to settle in Ontario. Some form of loan should be adopted. Security covering the entire holdings should be taken and interest should be charged to return to the Government one per cent. in excess of the cost of the bond issues covering the advances. Necessary public works should be planned to provide part-time employment for settlers in order to tide them over the period of waiting for the first returns from their farms.

To make these plans effective the Government might set aside certain sections of the Crown lands which seem best suited for intensive settlement and it might be possible to expropriate dormant or abandoned farms and to re-grant the same to settlers who will develop the land and remain in the district. The Commission recommends that the responsibility for the work outlined should be placed under the control of a small non-partisan Board who, from their personal character, would be likely to carry out the plans and policies adopted by the Government under a strong sense of honourable responsibility.

II.—Provisions Dealing with the Mobility of Labour.

Section 1. Public Employment Bureaus.—The Commissioners unanimously favour some form of public employment office. With the recent development of Canada and the large volume of immigration, thousands of workers are engaged and discharged in the Province every week. Labour has not been guided direct to employment. Private employment agencies have made it their business to bring workmen and employers together. These have been a heavy charge on industry and they have gained much through fraud. They deal for the most part with the immigrant whose

need of help is greatest, and who can least afford to pay for assistance. The Public Employment agencies of Ontario have been ineffective. Undoubtedly, a centralized system of Public Employment Bureaus is most advantageous. The success of any Provincial System would depend to some degree on the development of similar systems in other Provinces. The Federal Government might subsidize Provincial systems as has been suggested in the United States or substantial help could be given by granting franking privileges for the correspondence of employment bureaus. Any such Federal assistance, however, should be given only to those Provincial bureaus which observe certain definite conditions. In this way the Dominion Government could co-ordinate the Provincial Systems and secure uniform statistical returns from every Province. The supervision and encouragement of Provincial Bureaus might enable the Federal Authorities at some time to help guide the movement of labour within the British Empire through the Labour Exchanges in Great Britain. Until a National System can be established a Provincial System of Employment Bureaus must be created in Ontario as an isolated unit.

Recommendations:—

1. That a Provincial Department of Labour be created, either as a separate Department or in connection with an existing Department of the Government.
2. That a Provincial Labour Commission be appointed composed of not more than eight (8) members, of whom two (2) shall be women; and upon which workmen and employers shall be fairly represented; that the members be paid their travelling expenses, and work without salary.
3. That this Commission shall organize and administer a Provincial System of Free Employment Bureaus; determine the test through which those to be appointed to positions in connection with the Employment Bureaus must pass; select those to be appointed and determine their promotion; control and

inspect all Private Employment Agencies under the Laws of the Province of Ontario; secure from employers and workmen such reports as may be thought necessary for the better understanding and treatment of employment problems; appoint Advisory Committees in connection with the Public Employment Bureaus to be established, with such powers and duties as may be determined from time to time by the Commission; and perform such other duties, recommended elsewhere in this Report, as the Legislature shall assign to it.

4. That Employment Bureaus be established first in the following seven urban centres: Ottawa, Belleville or Kingston, Toronto, Hamilton, London, North Bay, Port Arthur or Fort William, and that this system be extended subsequently, as required, to include other important industrial centres.

5. That the system of Employment Bureaus be managed by the Provincial Labour Commission through a Director with practical knowledge and understanding of employment, whose chief duty shall be to supervise the work of his staff and deal constantly with all matters related to the solution of employment problems.

6. That the Director shall have associated with him as Assistant, a woman of training and ability whose chief duties shall be the inspection of the Women's Department of the Employment Bureaus, and the study of employment for women.

7. That representation be given to women on the Local Advisory Committees.

8. That in such Employment Bureaus as the Provincial Labour Commission shall decide, separate departments for men, women and juvenile workers be maintained.

9. That the Employment Bureaus, in all cases of strikes or lockouts, remain neutral and notify applicants for work at the Employment Bureaus when such strikes and lockouts are in progress.

Section 2. *Transportation, Access to Land and Tax Reform.*—The Commissioners here record their opinion that special provision should be made to enable workpeople in the cities to engage in some form of rural occupation. The Homestead Commission of Massachusetts, has recently prepared an Act the object of which is to "establish and maintain schools for teaching to families and to individuals in day, part time and evening classes, gardening, fruit growing, floriculture, poultry keeping, animal husbandry and other branches of agriculture and horticulture, subject to approval by the State Board of Education." When industrial workmen are able to live in the country although continuing to work in the towns they can frequently tide over periods of unemployment through working on the land attached to their houses. Belgium has not been seriously troubled with unemployment mainly for this reason. Through its wonderful system of cheap and rapid transit facilities great numbers of city workers live in the country; but in Ontario the cost of transportation, the lack of facilities of transit and the freedom of speculation in suburban land stand in the way of such a movement. Ontario, however, has cheap electric power and it should be possible for the State to insure the needed cheap and rapid transit facilities. As to tax reform the Commissioners hold that it is both just and desirable that values resulting from the growth of communities should be available for community responsibilities.

Conclusions:—

1. That valuable alternative occupations in time of unemployment can be secured for urban workers by a system of cheap and rapid suburban transportation.

2. That a reform of the present system of taxing vacant lands appears indispensable to lessen the evils arising from speculation and which makes more difficult any satisfactory dealing with unemployment in industrial centres.

3. That the establishment of Agricultural Classes in urban centres is worthy of consideration by the proper authorities so that city children may have the advantages of rural occupations brought to their attention as well as the economic value and pleasure to be derived from the cultivation of small gardens.

III.—Provisions Dealing with Personal Causes of Unemployment.

Section 1. *Immigration.*—The Commissioners state that in the problem of immigration is involved that of unemployment and that the one cannot be solved apart from the other. The influx of artisans and labourers must be regulated during periods of industrial expansion and must be checked when a redundancy of labour exists. Many agricultural immigrants have come to Canada expecting to go on the land but have been diverted to employment in railroad construction and public works. Canada needs machinery whereby agricultural immigrants may be taken to the land on arrival and maintained there if necessary with the aid of agricultural credits extended by the public treasury. After the conclusion of peace, a proportion of the disbanded armies of Great Britain and her allies should be available for settlement on the land in Canada. If each Province would specialize in a particular kind of colonization, the newcomers would be attracted to those Provinces best adapted to their special needs and capabilities and the problem might in this way become easier of solution. It is held that defects in the immigration system have resulted in the admission of undesirables many of whom have become a permanent burden on the country. Experts are needed in the Immigration Service and the inspection of immigrants should be brought to a standard of modern efficiency. Information as to emigration is also required. As we have no statistics in this connection we cannot tell the number who drift to the United States or return to their own country leaving us in darkness as to the conditions of our assimilation pro-

blem. The importance of the education of adult immigrants is also manifested and it is stated that the present system of subsidizing booking and shipping agencies requires complete revision.

Proposals Relating to the Department of Immigration:—1. That in view of the important effect of immigration upon labour conditions, either the Immigration Department should be placed in the Department of Labour, or provision should be made for close co-operation between these Departments.

2. That more adequate provision should be made for inspection of immigrants; that appointments should be determined wholly by professional and practical qualifications; and that the officials so appointed should give their whole time and energy to the work.

3. That immigrants, upon arrival, should be provided with printed statements, in their own language;—explaining conditions in Canada; the advantages of learning English; their relation to banks, private and public employment agencies; the terms of land settlement in Canada; openings for agricultural labour, possible abuses to which they may be subject; and where they should go for advice.

4. That careful registration be made of all who leave the Dominion, as well as of immigrant arrivals.

Proposals Relating to an Imperial Migration Board:—1. That an Imperial Migration Board in London, representing the British Government, and the Governments of the Dominions, with such Provinces and States in the Dominions as desire to be represented on the Board; the cost to be borne jointly by all Governments concerned.

2. That the Board be responsible for the distribution of complete, impartial, and up-to-date information regarding opportunities in the Dominions, their demand for labour in the different pursuits, occupations and industries, and the facilities and cost of transport.

3. That the co-operation of the Labour Exchanges in the United Kingdom, and

of the Public Employment Bureaus and Immigration Authorities in the Dominions be secured with this in view.

4. That the Imperial Migration Board be given power to require returns and such other information as it thinks necessary, from agencies and individuals in the United Kingdom and the Dominions, dealing with immigrants.

5. That the Imperial Migration Board consider the whole question of inspection and report the best system to be adopted in the interests of the United Kingdom, the Dominions and the emigrants themselves.

Section 2. *A Survey of Unemployment in Women's Occupations.* — The investigations of the Commission reveal the fact that thousands of women wage earners in Ontario suffered from unemployment during the winter of 1914-1915. Unemployment among factory workers amounted to 8 per cent. and among stenographers to 2 per cent. There was also considerable unemployment among saleswomen and trained nurses. Among women who work by the day unemployment was acute, while in domestic service there was no unemployment. The depression had an effect in lowering wages in all the above employments with the exception of domestic workers. Wages were reduced by a percentage varying from 10 per cent. to even 30 per cent. Investigation showed that there was considerable seasonal unemployment in the Province and in most of the employment studied there was found a class of irresponsible workers below the average of the occupation who are the first to be dismissed in slack times. Mothers who are compelled to work by the day suffer most not only from the effects of unemployment but

from the necessity which is placed on them to work whether they ought to or not. Lack of training, indifference and inefficiency are given among the causes of unemployment in the Province. The importance of vocational guidance is emphasised. Some unemployment among women is the result of physical strain and of a few employments it is said that women are unable to engage in them longer than ten or twelve years because of their injurious effect upon health. In connection with domestic training for women it is stated that "a woman who can do housework well needs never to be unemployed. She can secure a position at good wages with ease. It is only fair to add, however, that conditions in household work other than wages are not as favourable." Attention is drawn to the hardship suffered by widows who have to support themselves and their children and by mothers with young children who have to go out to work by the day, and in this connection resolutions in favour of Mothers' Pensions passed by the Trades and Labour Congress of Canada and the National Council of Women of Canada are quoted as evidence of the necessity for the recognition of the care of children as an employment of women, and the need of special training for this employment. Statistics of infant mortality in different communities are quoted and the statement is made that "there can be no doubt that infant mortality can be reduced at least to one-half of what it now is, if the care of children is made the skilled occupation that it ought to be." In the inadequate education of girls is found the chief cause of unemployment and of unsatisfactory employment for women workers. Specialized training

with due regard to the demand for work in the occupation practically secures steady employment in Ontario.

Recommendations:—

1. That practical education be more fully provided for girls in the schools of the province, and that their training should include the study of food values, cooking, health, physical training, instruction in the use of money, thrift, home economics, and the care of children, some knowledge of the making of clothes, and other practical matters such as gardening and the advantages of self-help clubs.

2. That the Provincial Labour Commission take steps to encourage the organization of workers' associations among women in employment. These associations provide comradeship and recreation and are a means for promoting health, efficiency and co-operation among women, as well as helping to secure steady employment. The work accomplished by associations of trained nurses, and the remarkable achievements in good citizenship of Women's Institutes are indications of results, which can be obtained through women workers' associations.

3. That, since changes resulting from the development of many paid occupations are tending to interfere seriously with the position held by home-making occupations, recognition should be given by educational authorities and the State to home-making and the care of children as women's occupations which require training, skill and a high degree of efficiency. Your Commissioners believe that such recognition will be to the advantage of home-making and wage-earning occupations, and the community.

It is further recommended that legislation should be passed to secure the following:—

1. Training for house-workers. (a) Training schools to be established in connection with existing welcome hostels for immigrant women intending to be house-workers and certificates granted to competent workers. (b) Training classes (with certificates to graduates) to be established in connection with technical schools and in other schools where such arrangements are possible. (c) Part-time courses of training, with certificates, to be arranged for house-workers in positions. (d) The Provincial Employment Bureaux to co-operate with these training schools and classes.

2. Classes in salesmanship to be established in technical schools.

3. No business college to be allowed to teach without license from the Department of Education. Such schools and colleges to be inspected and required to maintain a standard of teaching to be fixed by the Department.

4. The prison farm system, which has been begun for women prisoners, to be extended as speedily and widely as practicable, with an indeterminate sentence. Prisoners and inmates of reformatories who have no trade to receive training in some skilled occupation.

Section 3. *Relation of Schools to Employment.*—The Commission is of the opinion that much unemployment occurs in the transition from the school to paid employment. Boys and girls drift in and out of occupations almost unsupervised and are finally left in the ranks of the unskilled.

*It is recommended:—*That the Act regulating attendance at school, subject

to the provisions of the Truancy Act, 9 Edward VII, Chap. 92, be amended in these respects:

1. To require all primary schools supported by the public funds to provide within a limited time facilities for domestic and manual or agricultural instruction.

2. To raise the school age, so as to leave with the parent the choice either,

(a) of leaving the child in school until the fifteenth birthday, or

(b) of placing the child in an industrial, agricultural or domestic school from the fourteenth to the fifteenth birthday, or

(c) of removing the child from school at the present school age for an industrial, agricultural or domestic pursuit, to be combined with part-time industrial, agricultural or domestic instruction until the sixteenth birthday.

It is further recommended:—That vocational guidance should be made a part of the school system of Ontario, under the Department of Education, and that the educational authorities be given power to establish:

1. In the country, committees to study and promote country employments with a view to finding occupation for young people in the country, and for the extension of manual, domestic and agricultural instruction in the schools of the district.

2. In the cities and towns, committees to assist in advising children as to choice of occupation and the need of further training for their work.

The committees referred to should co-operate with the Assistant Director in the organization and management of the Juvenile Department of the Local Employment Bureau.

While the initiative should rest in every case with the educational authorities there will be places in which these authorities neglect to use their power. In such cases power should reside with the Director of Employment Bureaux to establish such an organization as circumstances may demand.

Section 4. *Industrial Centres as a Means of Assisting the Handicapped Unemployed.*—The Commissioners recommend the establishment of industrial centres by the Government for the following classes: 1, the physically handicapped, for whom specially designed occupations are possible; 2, the aged, destitute, but not infirm, who are able, under proper surroundings, to earn, at least, a portion of the cost of their support, and 3, casual workers, who, on account of the uncertain nature of their employment, are always more or less destitute and, in times of general depression, are unable to find work by which to provide food and shelter. The object of these centres is to provide opportunity for as large a measure of self-support as the capabilities of such workers will permit, and by co-operation with the Provincial Employment Bureaus to secure suitable employment for them as speedily as the nature of each case admits.

Section 5. *Vagrancy.*—The Commissioners are of the opinion that there should be province-wide co-operation in taking wastrels and vagrants off the street, and subjecting them to such treat-

ment as may restore them to useful citizenship. The Commission's investigation proved that in periods of depression the shelters for homeless men are frequented by a number of more or less able-bodied men whose only ambition is to escape labour. Their influence is bad, their idleness is contagious, and they demoralize the employment agencies and labour bureaus. If assigned to work by an employment bureau they default or display such incompetence that the bureau is seriously discredited. For this class the Commission recommends the extension of the existing system of industrial farms. These should be linked with the Provincial Employment Bureaus so that those released may readily secure employment.

Recommendations:—

1. The adoption of such measures as will remove the vagrant from the labour market, take him off the street and away from charity.
2. Centralized State control of all authorities and agencies dealing with vagrants and homeless men.
3. Extension of the industrial farm system, with such training as will make for their reformation, inculcate habits of industry, and prepare them for earning an honest livelihood.
4. Such instructions to magistrates as will ensure uniform treatment of vagrants all over the province.
5. The segregation of vagrants from criminals.
6. Such connection between the industrial farms and the Provincial Employment Bureaus as will enable officers of the Bureaus to help vagrants on release to secure employment.

IV.—Provisions for the Relief of Unemployment.

Section 1. Insurance Against Unemployment.—From the Commission's investigation of the extent of the fluctuation of unemployment in 1914 it would appear that the average period of unemployment for not fewer than 70,000 industrial operatives was about 15 weeks. These figures do not include workers engaged in transportation, merchandising, personal service, or the building trades. To meet these conditions the Commissioners are of the opinion that some form of unemployment insurance is advisable. The difficulty in this connection is that there are no reliable statistics from which to calculate the risk of unemployment. Compulsory insurance against industrial accidents is demanded by law in Ontario, and capital bears the whole financial burden, but insurance against unemployment differs from Workmen's Compensation in that "bad risks" may be deliberate. Any successful scheme of unemployment insurance may therefore be contributory. The British National Insurance Act may be taken as a model, but in Great Britain statistics extending over many years were furnished by the unions. Moreover, the system is administered by the Board of Trade through the Labour Exchanges, so that the men who prefer unemployment benefit to wages are challenged when work is available with offers of employment. In the voluntary systems of unemployment insurance this difficulty does not arise as the burden of eliminating "bad risks" is thrown on the workmen themselves.

The Commission is of the opinion that it would be inadvisable, with the statistics and experience available, for the Government to establish a compulsory scheme of insurance against unemployment. The Employment Bureaus must first keep unemployment at a minimum and the Department of Labour must collect such information as will make possible the calculation of the risks.

They also are of the opinion that in assisting voluntary associations of workmen the province should provide subventions equal to one-fifth of the sum paid in benefits.

Recommendations:—

1. That financial assistance be given by the Government of Ontario to those voluntary associations of workingmen which undertake to provide unemployment benefits for their members.

2. That the assistance to such associations equal 20 per cent of the sums disbursed by them in unemployment benefits, under regulations approved by the Lieutenant-Governor in Council.

3. That the collection of statistics relating to the causes and risks of unemployment be entrusted to the Department of Labour, recommended in Part I, Chapter II, Section I.

Section 2. *Organization of Charitable Relief.*—In this connection the Commission points out that in the administration of relief no central control exists and no authority is charged with the duty of studying the best methods of relief and preventive measures, nor is there any authority which gives direction and leadership in the vast yearly expenditures of time, money and effort for charitable ends. The Commissions are of the opinion that "our present

methods of charitable relief do not aid in preventing unemployment, and do unfortunately help to create unemployables." The Commissioners believe that a provincial official or Board corresponding to the Provincial Board of Health should have charge of this work and other related matters. Through a tax on the sale of tickets for professional amusements the province could afford financial support to worthy charitable institutions, and through such support could secure a measure of public control. The State might provide a school for social workers in order that its institutions may be efficiently administered. One outstanding conviction in reference to charity, arising from the information secured from the Commission, is that the present system of relief is not sufficiently supplemented by preventive activities, and the Commission is of the opinion that the cost of charities to the province and the community must continue to increase until a vigorous, State-guided effort is made to replace the existing agencies of relief by agencies definitely directed to remedies and prevention. Charitable relief must be sufficient to solve the problem of each separate case assisted, and overlapping and duplication must be prevented. The Commissioners place emphasis on the necessity for considering personal factors before a plan of remedial relief can be made successfully for any family or individual.

BUILDING OPERATIONS IN CANADA DURING 1915.

THE present article deals with the extent to which building construction was carried on in the more important centres of the Dominion during the year 1915. Similar articles covering the years 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913 and 1914 have appeared in previous issues of the *La-*

bour Gazette. The Department is greatly indebted to city and town clerks, city and town engineers, building inspectors and other municipal officials for their kindness in supplying the information on which the article is based.

Information was obtained from 82 localities, for which the total value of building permits issued during 1915 was

\$37,064,100. For 80 of these 82 localities the Department had comparative figures for the year 1914 and the comparative totals for these localities were: 1915, \$36,939,734; 1914, \$103,331,972, a decline of \$66,392,238 or 64.2 per cent. The localities for which information for 1914 is lacking are Saskatoon, Sask., and South Vancouver, B.C.

From the table given below it will be seen that building construction for localities in the Maritime Provinces for which comparative figures were available showed improvement over 1914, while the figures for localities in Ontario, Quebec, Manitoba, Saskatchewan, Alberta and British Columbia show enormous declines from those of 1914.

	1915	1914	Increase (+) Decrease (—)
Nova Scotia (6).....	\$ 1,593,087	\$ 1,407,693	+ \$ 185,394
Prince Edward Island (1).....	62,000	39,000	+ 23,000
New Brunswick (4).....	986,389	951,105	+ 35,284
Quebec (9).....	12,688,414	25,681,485	— 12,993,071
Ontario (32).....	15,954,405	41,647,258	— 25,692,853
Manitoba (2).....	2,039,560	12,965,602	— 10,926,042
Saskatchewan (8).....	784,387	4,244,853	— 3,460,466
Alberta (8).....	541,383	7,207,323	— 6,665,940
British Columbia (10).....	2,290,109	9,187,653	— 6,897,544
Totals for 80 localities for which comparative returns were received.....	\$ 36,939,734	\$ 103,331,972	— \$ 66,392,238
Grand total, 82 localities, 1915.....	\$ 37,064,100		

Below are shown the localities where the total value of building permits issued during 1915 amounted to \$100,000 and over:

Montreal, Que.....	\$7,486,221

*Including \$50,000 for alterations and additions.

**PRICES, RETAIL AND WHOLESALE, CANADA,
FEBRUARY, 1916.**

THE chief advances in prices were in metals, but important increases occurred in cattle, hogs, sheep, meats, poultry, potatoes, flour, bread, tapioca, soda, textiles, building materials, drugs and chemicals. Grains declined steeply from the high levels reached early in the month, and flour and bread began to fall as a result. Great scarcity developed in potatoes and prices reached record levels. Supplies were low and winter roads made transportation difficult. On the prairie losses occurred owing to frost.

In retail prices the average cost of a supply of 30 staple foods in 60 cities rose from \$8.28 per week in January to \$8.40 in February. The chief advance was in potatoes, but flour and bread were also higher, while eggs were lower. For February last year the cost of the same foods was \$7.99, the chief advances being in meats, eggs, beans and potatoes, but bread and flour were lower. As compared with February, 1914, prices were higher in butter, cheese, bread, flour, rolled oats, rice, beans, evaporated apples, sugar, tea, coffee and potatoes. Fuel averaged slightly lower than a year ago. Rent declined in the average for 60 cities from \$4.85 per week in February, 1914, to \$4.26 a year ago and to \$3.97 last month.

In wholesale prices the Department's index number for February stood at 173.7, as compared with 172.0 in January, and 142.5 for February, 1915, and 136.6 for February, 1914. The chief increases during the past month occurred in animals and meats, metals and implements, but decreases occurred in dairy products, lumber, paints, oils and glass. Compared with February last year, price levels were lower in grains and fodders and fish, but were higher in all the other groups. As compared with

February, 1914 and 1913, all groups averaged higher except fish, fuel, lumber and raw furs.

More detailed information as to the prices movement may be seen in the accompanying tables. The table of retail prices shows the prices of some 40 foods at the middle of the month in the 60 localities of Canada, having a population of 10,000 or over. The quotations are obtained by the correspondents of the *Labour Gazette* from dealers doing a considerable trade with workmen. The prices of fuel include the cost of delivery. The rates for rent are for houses in districts inhabited by workmen.

Retail Prices.

Meats showed numerous advances in Montreal and Hull, Que., St. Thomas, Cobalt, St. Catharines, Guelph and London, Ont., Calgary and Edmonton, Alta., Fernie, Vancouver, New Westminster and Nanaimo, B.C. Meat prices showed declines in Sydney, N.S., St. John, N.B., Sorel, Que., and London and Chatham, Ont. At Lethbridge, Alta., beef advanced as many cattle were dying owing to the deep snow covering the grass. Mutton was higher as farmers were keeping the sheep on account of the high price of wool. Pork was rising to the highest prices on record owing to the great foreign demand. At Vancouver fish rose on account of rough weather.

Eggs declined in several localities owing to the larger supplies due to mild weather. Butter was steady in price, but supplies were smaller than a year ago. Cheese was advancing as stocks were low and there was a big demand.

Bread advanced 1c per loaf at Moncton, N.B., owing to the higher price of

flour. The price also advanced at St. John and Newcastle, N.B., St. Hyacinthe and Hull, Que., and Ottawa, Ont. The price declined at Port Arthur and Fort William, Ont. Flour was higher in several cities on account of the advance in wheat at the end of January. Rice was higher in several localities.

Canned tomatoes advanced in several cities, while peas and corn were also upward. Beans and evaporated apples continued to advance.

Sugar was higher at Charlottetown, P.E.I., Hull, Que., Sault Ste. Marie, Port Arthur and Fort William, Ont., Brandon, Man., Regina, Sask., Calgary and Lethbridge, Alta., New Westminster, Victoria and Prince Rupert, B.C.

Potatoes advanced in many localities throughout the Dominion. At Halifax the supply was reported insufficient for the demand during the remainder of the season. At Brockville supplies were scarce and it was reported that potatoes were being used to make flour for military supplies. At Regina shipments were being brought in from British Columbia at high prices. At New Westminster the mild weather and heavy snow prevented farmers from bringing in potatoes to the cities. Considerable stocks were also frozen. Scarcity was also reported at Victoria.

Coal, anthracite, advanced in price at Moncton, St. John and Newcastle, N.B., and at Hamilton, Ont., owing to higher freights and a possible shortage. Soft coal was higher at Vancouver and Fernie, B.C., owing to the heavy snow and increased cost of hauling. Soft wood was higher also at Victoria, B.C. Coal oil advanced at New Westminster and Vancouver, B.C., but declined at St. John,

N.B., Sorel, Que., and Sault Ste. Marie, Ont.

Wholesale Prices.

Grains and Fodder.—Manitoba wheat, No. 1 Northern, declined from \$1.23 per bushel to \$1.05½. Lack of export business at the high prices prevailing toward the end of January led to decreases in prices, but considerable business was done as the market fell. Heavier shipments from Argentine were also expected. The mild weather prompted heavy deliveries from farmers and the movement of grain by the railways was greater. Oats declined in sympathy with wheat, but experienced a good demand. Western oats fell from 43c to 37c. Barley was lower as buyers could not obtain sufficient shipping facilities. Western barley fell from 68c to 60c. American corn eased off from 81c. to 78c. Flaxseed declined from \$2.09 to \$1.99. Ontario peas fell from \$1.90 to \$1.40 per bushel. Rye declined from 94c. to 88c. Baled hay rose at Toronto from \$18.00 to \$18.50 per ton.

Animals and meats.—Western butcher cattle declined from \$7.75 per cwt. to \$7.25. Choice butchers at Toronto fell from \$8.25 to \$8.15. Dressed beef, hind-quarters, declined from \$14.00 to \$13.50. Veal advanced from \$7.00-14.00 to \$7.50 14.50. Hogs had risen to \$9.95 in the first week, but declined to \$9.15 as the demand from packers fell off. Dressed hogs rose from \$12.50 to \$13.50 per cwt. Breakfast bacon advanced 1c. per lb. and hams rose ½c. per lb. Barrelled pork rose from \$28.00 to \$29.00 per barrel. Sheep advanced from \$8.75 to \$9.50 per cwt. Mutton rose from \$11.00 to \$13.00 per cwt. Fowl had advanced to 17-20c. toward the end of January but at the

†Revised

middle of February fell to 15-17c. Turkeys rose to 25-29c. per lb. at Montreal, but eased off 1c.

Dairy products.—Finest creamery butter at Montreal declined from 34¼-35c to 33¾-34¼c. At Toronto creamery solids fell from 32-34c to 31-32. Dairy prints fell from 28-31c. to 26-30c. Cheese advanced to 18¾c.-19c. Eggs declined from 37c. to 30c. at Montreal, but firmed in the last week. New laid eggs at Toronto fell 34-35c. to 31-32c. Storage eggs declined from 28-29c. to 25-27c.

Fish.—Fresh halibut declined from 10c. to 8c. per lb. on the Atlantic coast. Stocks of dried fish in Nova Scotia were smaller but demand was light owing to the high prices. Pickled fish was in good demand but stocks were low. Lobsters sold in Boston for good prices.

Fruits and vegetables.—Apples continued at high prices at \$6.00 for the best. Bananas advanced from \$2.25 to \$2.75 a bunch. California oranges were firmer. Currants rose ½c. Potatoes advanced at Montreal from \$1.80 to \$1.85 a bag. At Toronto the price also reached \$1.85 a bag. Canned tomatoes declined from \$1.10 to \$1.07½ a dozen.

Miscellaneous groceries.—Flour was higher than in January but returned to the former level and was still declining. Tapioca advanced 1c. per lb., to 8-8½c. Honey eased off to 11½-12c. per lb. Barbados molasses declined from 51c to 48c. per gallon. Maple sugar was firmer at 13-14c. per lb. Table salt rose 5c. per barrel. Pepper dropped 1c. per lb. Baking soda advanced 25c. per cwt.

Textiles.—Wool prices were higher at the London sales by five to fifteen per cent. Russian purchases were features of the market. Merinos sold for 80c. Canadian wool prices were steady. A line of knitted woollen underwear advanced 25c. per dozen garments. Raw cotton declined at New York from 12.50c. to 11.95c. per lb. Export had been declining. Grey cottons and prints

averaged higher. Italian raw silk was firm and rose to \$5.30 per lb., at New York. Japanese silk, however, was easier as a large stock was put on the market. Jute advanced nearly 1c. per lb., to 7.43c. and Hessians advanced to 11.82c. a yard, owing to the great demand for bags and packing. Flax fibre advanced from 22c. to 23c. per lb. Flax sewing twine rose 1c. per lb.

Hides, leather, boots and shoes.—Sole leather rose 4c. per lb.

Metals and implements.—Nearly all lines continued to advance. Pig iron rose 50c. per ton. Iron and steel products continued to advance in sympathy with the markets for raw materials. Black sheets rose 10c. and galvanized sheets 25c., tin plates 50c., and boiler plates 10c. per cwt. Wrought iron scrap rose \$1.00 per ton, steel bar advanced 25c. per cwt. Aluminium rose from 56c. to 58c. per lb. Antimony rose to 50c. per lb. Brass was up 2c. and copper 5c. per lb. Lead rose to 8¼-8½ per lb. Quicksilver reached \$300 per flask as compared with \$38 before the war. Spelter advanced 1c. per lb., and solder bar was upward. Tin was firmer. Anvils rose 2c. per lb., and vises 3½c. Soldering coppers rose 2c. per lb.

Fuel and lighting.—Foundry coke advanced 50c. per ton at the ovens at Connellsville. Gasoline rose 1c. per gallon.

Building materials.—N. B. spruce deals eased off to \$20.00 per M. British Columbia lumber markets, however, showed great improvement and prices advanced. The lumber trade in Ontario was quiet. The cessation of the orders for shell boxes caused a loss in the demand for spruce and hard wood. The trade in Montreal was also quiet, but business with the United States was satisfactory. Black iron pipe advanced 34c. per 100 feet. Red lead rose to 10½c. per lb. Nails rose 10c. per keg. Copper wire rose 2½c. per lb., and iron wire 15c. per cwt. Wire screen advanced from \$1.80 to \$1.87½ per 100 square

feet. White lead rose to 11.45c. per cwt. Linseed oil eased off 3c. to 6c. per gallon. Benzine rose 1c. Prepared paints were expected to advance on account of the higher cost of materials. Window glass was reduced by an increase in the discount.

House furnishings.—Glass tumblers advanced in common with other glass products. Earthenware was firmer in price.

Drugs and chemicals.—Bleaching powder, caustic soda, copperas, glycerine and soda ash were advanced further. Quinine, however, declined from \$1.50 to \$1.25 per ounce.

Miscellaneous.—In raw furs, mink advanced from \$3.00 to \$3.25 per skin. Canadian hops rose from 15c. per lb., to 20-21c. B. C. hops and English hops were also higher. Malt was easier at Montreal. Raw leaf tobacco was higher in price for the 1915 crop than for the previous year by 1c. per lb. Manilla rope rose from 17½c. to 21c. per lb. Raw rubber eased off to 80c. per lb.

Prices in Other Countries.

The accompanying tables show the latest available returns of currently published index numbers of prices in other countries.

On retail food prices in the United Kingdom the *Labour Gazette* of the Board of Trade for February reported:

Retail prices of food advanced about 1½ per cent in January. Flour and bread increased in price to the extent of about 6 per cent—½d. per 3½ lb. flour and per 4 lb. bread. As regards meat, frozen mutton increased in price about 3½ per cent and imported beef by 2 per cent. British meat, however, did not advance so much. The average rise in the retail price of granulated sugar, consequent on an advance in wholesale price, amounted to about 5 per cent.

Fish was dearer by about 5 per cent on the average, cheese by 4 per cent, and margarine by 3 per cent. Prices of potatoes showed a seasonal advance of 2 per cent, and of eggs a reasonable fall of 17 per cent. Bacon, milk, butter and tea showed little or no change on a month ago, less than ¼d. per lb.

On wholesale prices in the United Kingdom the *Economist*, London, February 5, 1916, reported as follows:

Our index number this month is the most sensational record in the whole history of modern prices. . . . Since the end of the year wholesale prices have taken a fresh jump upwards, the rise in January being greater than for any month during the war. In fact, out of the 44 commodities upon the prices of which our index number is based, there are only three which show a decline during the month. Rubber has lost most of the sensational December rise. Steel rails are 2s. 6d. a ton lower, and beef has declined 1d. per 8 lbs. On the other hand, 32 commodities show advances on the month of varying degree, leaving nine with prices unchanged. Consequently our index number has risen 206 points to 3,840, and the percentage figure has advanced from 165.1 to 174.5. It is now higher than it has ever been since it was first calculated by Newmarch for the year 1850, the nearest approach being in 1864, when the figure was 3792. . . . The rise is fairly evenly spread over the five groups, which all reflect the influence of abnormal freight rates. . . . In the textile group, raw cotton, cotton yarn and cotton cloth are all higher. . . . Many of the same influences are at work in the wool trade, and labour scarcity is becoming more and more marked in the West Riding. . . . In the minerals section the large Government requirements, which are pressing heavily on all the leading coal-producing areas, have caused a further advance in coal prices. The same remarks apply to pig-iron, the demand for which for war purposes naturally shows no sign of abating. . . . In the miscellaneous group, the principal movement is a sharp rise in soda crystals. Oils and oil-seeds are also higher, but rubber, as already mentioned, has fallen almost to the end of November level.

The *Statist*, London, February 12, continuing Sauerbeck's index numbers, reports:

In considering the rise in the cost of living in this country, it is essential to recollect that a substantial part of it comes from the rise in freight rates, the advantage of which accrues in part to British ship owners and in part to the British Government. Apparently about one-half of the advance in prices since war has been due to the rise in freights. The greatest advance during the past month has been in vegetable foods, of which the index number now stands at 125.7, against 66.5 in June, 1914, a rise for the month of nearly 7 per cent and of 89 per cent since war began. There has been a slight decline in prices of animal food. Nevertheless, since war began the advance has been 31 per cent. Sugar, coffee and tea are dearer at 72.8, an advance of 4.8 per cent for the month and of 40.5 per cent since war began. Minerals are also substantially dearer, with an index number of 143.1, which is 5.2 per cent higher than in December, and 48 per cent above the pre-war level. A rise of 6.7 per cent has occurred in textiles in January, notwithstanding a slight decline in the price of cotton, the advance in flax and jute having been marked. The aggregate rise in textiles since war began has been nearly 48 per cent. There was further marked increase in prices of oils and tallow, while soda was again dearer. On the other hand, leather and timber were cheaper.

a. July of each year. b. At the first of each year. c. Foods.

For Germany food prices in Berlin for December were reported in the British *Labour Gazette* from returns in the Prussian official journal *Statistische Korrespondenz*, the rise since November being slight, increases appearing in butter, coffee, eggs, beef, mutton, veal and rice, while prices declined in lard, bacon, split peas, beans and lentils. In these, however, except in bacon, it appears that supplies were practically unobtainable.

In Austria, prices of food in Vienna appeared lower in December by 3.3 per cent, but were still 112.9 per cent higher than in July, 1914. As compared with November, increases appeared in veal, milk, margarine, split peas, haricot beans, onions and sugar, with decreases in beef, pork, bacon, butter and rye bread.

In Switzerland, reports on prices of foods have been issued by the Swiss League for Reducing the Cost of Living. In December, 1915, prices appeared 26 per cent higher than in June, 1914, while in September, 1915, the level was only 20 per cent higher. The chief increases since the beginning of the war appeared in fats 32.3 per cent, bread and flour 37.4 per cent, peas, beans, etc., 30.5 per cent, meat 23.2 per cent, eggs 90 per cent, sugar and honey 36.7 per cent, and in necessities other than food 22 per cent.

For the United States retail food prices have been recorded for the period January to June, 1915, as compared with previous years back to 1907 in a bulletin issued by the Bureau of Labour Statistics. From June, 1915, the index numbers were brought up to December, 1915, in the Bureau's Monthly Review for March. In June, 1915, the average price level of 17 foods was the same as in June, 1914, the index number standing at 97, but by December, 1915, had risen to 106. The chief increases

from June, 1914, to September, 1915, appeared in flour and sugar. Bread, however, is not included in the calculation, but out of 260 series of quotations of prices and weights 237 brands were lighter in weight.

On wholesale prices in the United States, *Bradstreet's*, February 12, reports:

Nine groups moved up during the period January 1 to February 1, while three declined and one remained stationary, viz., naval stores, an advance in the price of turpentine having been offset by slight declines in rosin and tar. Breadstuffs ascended on all-around strength. Most kinds of livestock, save beeves, advanced, the movement in this respect being of a progressive character. In the group comprising hides and leather, three grades of leather quoted scored additional gains. Coal and coke became dearer. Textiles scored a sharp advance because of higher prices for wool, hemp, jute, flax, ginghams and standard sheetings. Oils gained ground in a price sense, linseed and cottonseed as well as castor oil having moved up, the advance in castor oil being noteworthy. Building materials ascended on advances in brick, lime, glass, nails and yellow pine. Chemicals and drugs took on further strength, and the miscellaneous group turned upward because of higher prices for tobacco and hay. Provisions slumped, thanks to cheaper quotations for butter and eggs. Fruits declined, and metals moved off a shade, owing principally to the lower price of tin.

Dun's Review, February 12, 1916, reports:

There is no better evidence of the prosperous condition of the country than the persistent advance in commodity prices. During the last five months the upturn in the leading articles of consumption has continued unchecked, and on February 1 *Dun's* index number of wholesale quotations touched \$142.260—the highest level reached since the early '70's. These figures compare with \$137.666 at the opening of the previous month, \$125.662 on February 1, 1915, and \$121.641 two years ago. The enhanced purchasing power of the masses is reflected in sustained buying of the staple necessities, and disproportion between supply and demand has had a strengthening effect on numerous commodities, while speculative influences have accelerated the rise in some quarters.

Among the classes embracing many articles used in manufacturing as well as the finished products, previous strength in quotations was accentuated and the metals group reached the highest point in years. In several departments of iron and steel demand continues to exceed supply, and frequent complaint is heard of tardy deliveries, transportation problems aggravating the difficulties in making prompt shipments.

REPORTS OF EMPLOYMENT BUREAUS.

THROUGH the co-operation of the Immigration Branch, arrangements have been made by which the Department will receive monthly returns from the larger commercial employment offices in the principal centres of labour distribution. A summary of these returns for the month ended January 31 indicates that 7,153 persons were placed by 72 such bureaus. Reports were received from 11 public employment bureaus; according to the returns of the nine of these which were comparable 1,069 persons were placed. Returns from 16 philanthropic employment bureaus for women, in which number 11 Young Women's Christian Associations were included, show a total of 328 persons placed. Twelve Salvation Army bureaus and three other agencies reported 846 individuals placed in casual employment.

FAIR WAGES CONTRACTS, FEBRUARY, 1916.

THE Department of Labour received for insertion in the *Labour Gazette* information relating to four fair wage contracts, three of which were awarded by the Department of Public Works and one by the Department of Railways and Canals. These four contracts contained the fair wage clauses provided for the rates generally accepted as current in the locality where the work is being carried on. A statement is added for supplies, given by the Post Office Department, subject to the regulations for the Suppression of the Sweating System.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the above clauses follow:

DEPARTMENT OF PUBLIC WORKS.

Fair Wages Clauses.

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in such district then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

Interior fittings for examining warehouse, Montreal, Que. Name of contractor, The Berlin Interior Hardwood Company, Ltd., Berlin, Ont. Date of contract, February 5, 1916. Amount, \$19,500.

Post office and customs fittings, public building, Murray Bay, Que. Name of contractor, The Berlin Interior Hardwood Company, Ltd., Berlin, Ont. Date of contract, February 5, 1916. Amount, \$1,347.

Post office fittings in public building, Shawville, Que. Name of contractor, The Berlin Interior Hardwood Company, Ltd., Berlin, Ont. Date of contract, February 5, 1916. Amount, \$775.

DEPARTMENT OF RAILWAYS AND CANALS.

Supply and erection of the electrical equipment required for the highway swing span bridge over the Trent Canal at Dundas street, Trenton, Ont. Name of contractors, Northern Electric Company, Ltd., Montreal, Que. Date of contract, Feb. 19, 1916. Amount, \$5,-136.

POST OFFICE DEPARTMENT.

During the month of January payments were made by the Post Office

Department for the supplies below mentioned, subject to the Regulations for the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages and the performance of the work under proper sanitary conditions.

TRADE DISPUTES DURING FEBRUARY, 1916.

THE number of trade disputes beginning in February was six, in which nine firms and 1,072 employees were involved. Three disputes were carried over from January, making nine disputes on record as in existence during February. Through these nine disputes 17 firms were involved and 1,167 employees affected. In the month of February a year ago, two disputes occurred by which six firms were involved and 128 employees affected.

New disputes in February, 1916.—In the following table the disputes beginning are summarized according to the trades affected:

TRADES.	No. of disputes.	No. of employees involved.
Building	1	14
Metal trades.....	3	689
Printing.....	1	16
Transport.....	1	353
Total	6	1,072

Duration of trade disputes.—The time losses resulting from the disputes which began during February amounted to 11,508 working days, and, through the disputes which were carried over from January, 1,700 working days, totalling altogether 13,208 working days lost through the nine disputes in existence during February, 1916, compared with 4,450 working days lost through trade disputes in February, 1915.

Disputes beginning before February.

There were three disputes carried over from January, in one of which a settlement was reported during February. These were:

Plumbers and steamfitters, Victoria, B.C.—Dispute commenced February 16, 1915.

Boilermakers, ironworkers and helpers, Halifax, N.S.—Dispute commenced August 2, 1915.

Machinists, London, Ont.—On January 27, 1916, 27 machinists, employees of the London Manufacturing and Machine Company, Ltd., went on strike as a protest against a reduction in piece-work rates. After several conferences between the company and representatives of the machinists a compromise settlement was arrived at on February 5, 1916.

Disputes beginning during February.

Painters, Regina, Sask.—On February 18, fourteen painters in the employ of W. R. Talbot & Company, building contractors, Regina, Sask., went on strike to enforce their demand for an increase in wages. The painters were granted an increase of 5 cents per hour and they returned to work on February 26, 1916.

Machinists, Hamilton, Ont.—On February 14, ten machinists in the employ of the Canadian Cartridge Company went on strike on account of the dismissal of a fellow employee. As a result of conferences between the company and the men arranged by the Department of Labour the dispute was amicably settled on February 19, 1916.

Steel workers, Hamilton.—On February 15, 385 steel workers in the employ of the Steel Company of Canada, Ltd., went on strike to enforce their

demand for an increase in wages. The company refused to grant the demand and a majority of the men returned to work on February 28.

Teamsters, Toronto, Ont.—On February 11, 353 teamsters in the employ of four cartage companies, namely, the Dominion Transport Company, the Shedden Forwarding Company, Hendrie & Company, Ltd., and the Canadian Northern Transfer Company, went on strike to enforce their demand for an increase in wages. After several conferences arranged by the Department of Labour between representatives of the above firms and the teamsters an amicable settlement was arrived at on February 25, by which the teamsters were granted an increase of wages.

Carpenters, Montreal, Que.—On February 23, 294 carpenters employed by the Canadian Vickers, Ltd., Montreal, Que., ceased work to enforce their demand for a higher minimum wage. No settlement had been reported at the end of the month, but some of the strikers had returned to work. Other departments of the establishment were not affected by the strike.

Printers, Quebec.—On February 14, sixteen printers in the employ of L'Action Sociale, Ltée, Quebec, went on strike, the alleged cause being the refusal of the publishing company to grant the printers an increase in wages in accordance with an agreement signed in 1914 by which they were to receive an increase of \$1.50 per week from the fourteenth of February, 1916. The dispute was still in progress at the close of the month.

DEPARTMENT OF LABOUR, CANADA,
STATISTICAL TABLE, SERIES C. No. 150.

TABLE OF TRADE DISPUTES IN EXISTENCE DURING FEBRUARY, 1916.

Occupation.	Locality.	Alleged Cause or Object.	No. of Firms or Establishments affected.	Employees affected.		Date of Commencement.	Date of termination.	Method of settlement.	Result.

TABLE OF TRADE DISPUTES IN EXISTENCE DURING FEBRUARY, 1916.

Occupation.	Locality.	Alleged Cause or Object	No. of Firms or Establishments affected.	Employees affected.		Date of Commencement.	Date of termination.	Method of settlement.	Result.
				Male.	Female.				
DISPUTES BEGINNING DURING FEBRUARY, 1916.—Continued.									
<i>Metal</i> —Continued. Steelworkers	Hamilton, Ont.	Demand for increased wages	1	385		Feb. 15, 1916.	Feb. 28, 1916..	Men returned to work without wage increase.	In favour of employers.
Carpenters	Montreal, Que.	Demand for increased wages	1	294		Feb. 23, 1916.		Unsettled at end of month	
<i>Printing and Allied Trades</i> — Printers	Quebec, Que.	Demand for increased wages	1	16		Feb. 14, 1916.		Unsettled at end of month	
<i>Transport</i> — Teamsters	Toronto, Ont.	Demand for increased wages	4	353		Feb. 11, 1916.	Feb. 25, 1916..	Direct negotiations	Some increase in wages granted but the working agreement essentially a compromise.

*Considerable difficulty has been experienced by the Department of Labour in making an exact classification of existing trade disputes, particularly in cases where, after the declaration of a strike, some of the original strikers have returned to work or had their places filled with new hands, or where establishments affected have found that for either of these reasons, or both, or for other causes, their business is no longer seriously affected. In such cases while, in one sense, it may be true a strike may be regarded as still in existence because of no formal declaration by either of the parties of its termination, yet so far as the actual effect upon the business interests of the community is concerned a record of the continuance of such a dispute may be misleading. The list of trade disputes published in the present table, therefore, includes mention only of such disputes as during the month or at its termination affected, to an appreciable degree, the carrying on of the industrial or business operations of the firm or establishments concerned. Mention, moreover, is not made of disputes involving less than six employees, or of less duration than 24 hours.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF FEBRUARY, 1916.

Under this heading, account is taken of such accidents only as were sustained by male and female workers in the course of their employment, and resulted in loss of life or limb or other serious impairment to industrial efficiency. The accidents are such as have come to the notice of the Department through the press of the Dominion or correspondents of the *Labour Gazette*. The Department is also indebted to the Board of Railway Commissioners, the Department of Mines of Nova Scotia, Quebec, Ontario, Alberta and British Columbia, the Ontario Railway and Municipal Board, the offices of the factories inspector of Ontario and Manitoba, the Provincial Building Inspector of Manitoba, and the Bureau of Labour of Saskatchewan, for their kind assistance in furnishing the Department with statements of returns of accidents reported to them.

ACCORDING to the record of industrial accidents maintained by the Department of Labour, there were 56 workpeople killed and 290 injured in the course of their employment during February. During January there were 75 workpeople killed and 290 injured, and during February, 1915, there were 56 workpeople killed and 133 injured. Comparing the February record with that for January it will be seen that there were 19 fewer workpeople killed and 25 fewer injured in February, and

a comparison of the February record with that for the same month last year shows there to have been the same number killed (56) and 157 fewer injured.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF FEBRUARY, 1916, BY INDUSTRIES AND GROUPS OF TRADES.

".....	Montreal, Que.....	" 24	1	Fell from a platform.

TABLE OF NON-FATAL ACCIDENTS DURING FEBRUARY, 1916.

[illegible]

IMMIGRATION—EMIGRATION—COLONISATION.

IN the present article statistics in regard to immigration and emigration are given only for the United States, information respecting the movement of British subjects between the United Kingdom and British North America not having been received up to the time of going to press. These statistics when received will be given in a later issue of the *Labour Gazette*.

(2) Movement of Persons other than Citizens of the United States between the United States and British North America.

Immigration to British North America from the United States.—According to the January Bulletin of the Bureau of Immigration of the United States Department of Labour, alien residents of the United States to the number of 1,014 departed to take up permanent residence in British North America during January as compared with 1,186 in December and 1,468 in November.

Emigration from British North America to the United States.—During January, 1916, 7,354 persons (not including citizens of the United States) left Bri-

tish North America to take up permanent residence in the United States, as compared with 8,209 in December and 9,938 in November.

Balance.—It appears from the above that in this movement between the United States and British North America, the latter had an outward balance of 6,340 in January, 1916, as compared with an outward balance of 7,023 in December and 8,470 in November, 1915.

(3) Homestead Entries and Land Patents.

Homestead entries.—In January, 1916, there were 184 homestead entries in Manitoba; 268 in Saskatchewan; 339 in Alberta, and 9 in British Columbia, a total of 800, as compared with 901 in January, 1915, a decrease of 101.

Lands patented.—According to the Department of the Interior's statement of letters patent covering Dominion lands in Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory for the month of January, 1916, the number of patents was 1,476, and the number of acres 234,484.84. These numbers compared with 1,281 and 213,416.12 respectively in January, 1915.

BUILDING PERMITS DURING FEBRUARY, 1916.

THE total value of building permits issued during February in the municipalities shown in the table on the following page amounted to \$878,527 as

compared with \$708,093 in January and \$1,640,925 in February, 1915, for the same localities.

REVIEWS.

Coal Workers' Benefit Society.

Nova Scotia.—Sixth Annual Report of the Dominion Coal Company Employees' Benefit Society, Glace Bay, Nova Scotia, for the year ending December 31, 1915.

THE Society, at the close of 1915, had a membership of 9,789, a decrease of 434 since 1915. The receipts for the year amounted to \$143,378.41, of which \$60,-395.82 was received from members; \$60,-421.82 from the company; \$12,842.38 from the Province of Nova Scotia, and \$9,718.39 from interest. The expenditure for the year amounted to \$150,-433.80.

The number of deaths during the year was 95. This placed on the fund 61 widows and 145 children, making a total of 202 widows and 452 children at December, 1915, an increase of 28 widows and 68 children over December, 1914.

During the year the Society paid 11,107 claims, 2,493 persons received indemnity, 227 widows were paid and 452 children.

Since the Society was reorganized on July 1, 1910, \$427,500 has been paid for weekly indemnity, and the amount of liabilities assumed on account of the death of 443 members was \$302,500.

Free Employment Bureaus.

Massachusetts.—Ninth Annual Report on the State Free Employment Offices for the year ending November 31, 1915. Commonwealth of Massachusetts.

The four State employment offices located at Boston, Springfield, Worcester and Fall River have reported nearly 200,000 positions filled since the first office was opened in Boston nine years ago. The Boston office filled

139,479 positions; the Springfield office, opened September, 1907, 36,886; the Fall River office, opened October, 1907, 11,798, and the Worcester office, opened September, 1913, 8,878.

All offices have found conditions somewhat similar in their various departments. In the Boston office, during the first few months, the men's unskilled department was handicapped with a lack of orders, also with a number of skilled mechanics who were unable to secure work at their own trade. Since the Italian reservists left, the demand for able-bodied labourers has been heavy and the supply small. In the men's skilled department business was dull during the first month of the year as in the other departments, but later the demand for machinists of all kinds has dominated. The demand for clerks and stenographers has been quiet. In the boys' department attention has been given to vocational guidance. Nearly every morning from 75 to 100 boys line up anxious to get work. Perhaps less than three per cent of the boys placed are under 16 years owing to the laws regarding the employment and school attendance of minors. In the women's unskilled department a number of women are placed daily as charwomen, cooks, hotel workers and in house work. In the women's skilled department a decided increase is shown over the year 1913-14. The offices at Springfield and Worcester make a special effort to aid the farmer. The total expenditure for the maintenance of the four offices was \$33,420.51 out of an appropriation of \$35,500.

The following table gives a summary of business of the four State offices for the year ending November 30, 1915, compared with 1914:

CLASSIFICATION	1915			1914	Per cent of Increase (+) or Decrease (—)
	Males	Females	Totals	Totals for division by sex, see Report for 1914	
Applications from Employers.....			28,456	26,935	+ 5.65
Individual Employers who applied for help.....			10,613	10,210	+ 3.95
Persons Applied for by Employers.....	18,300	15,606	33,906	31,555	+ 7.42
Offers of Positions.....	30,182	21,395	51,580	53,858	+ 4.23
Positions reported filled.....	14,653	12,036	26,689	24,710	+ 8.01
Individuals for whom one position was only secured.....	6,928	3,365	10,293	10,250	+ 0.42
Individuals for whom more than one position was secured.....	2,048	1,963	4,011	3,394	+ 18.18
Total for whom positions were secured.....	8,976	5,328	14,304	13,644	+ 4.84

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

Condemns Employer of Fellow-Workman who was Responsible for Mishap.

THE plaintiff was the victim of an accident while at work on the construction of a building in Montreal. He was foreman in the employ of a bridge company, which had charge of the steel construction portion of the work, when it is alleged an employee of a fireproofing company, another fellow-sub-contractor, dropped lime into his eye with the result that he lost the sight of one eye, whilst the other was seriously injured. He sued the fireproofing company, claiming that the accident was due to the sole fault of the servant of that company, and hence of the company. The jury found that the defendant was at fault for reason that it had not taken requisite precautions to prevent the falling of the lime. The award for the plaintiff was fixed at \$4,000. (*Lapointe v. National Fireproofing Company.*)

Negligence.—Death.—Workmen's Compensation Act.

A judgment which was rendered recently in Montreal awarded the plaintiff, widow of a deceased employee of a rubber company \$927 for herself and \$500 and \$400 respectively for two minor children, for the death of her husband while in the employ of the defendant company. Action was taken against the company by the widow under the Workmen's Compensation Act, the claim being for \$2,025. Deceased died from injuries received in an elevator accident on February 26, 1915. The defendant company raised the defence that the deceased had been forbidden to use the freight elevator on which he met his accident, and in actually using it he was not discharging his duties as a servant of the company. The judge, in rendering judgment for the plaintiff for \$1,827, said that the deceased had been instructed by his foreman to expedite the shipping of certain goods, and in doing this he took the freight elevator which met with an accident. There was no evidence to show that the man had been forbidden to use the elevator. (*Brown v. Canadian Rubber Company of Montreal, Limited.*)

ONTARIO CASES.

**Master and Servant.—Injury to Servant.
—Application under Workmen's
Compensation Act.**

The plaintiff, who was employed by the defendants, was injured by falling into an elevator shaft in their store or warehouse, and brought action to recover damages for his injuries.

The defendants set up that the Workmen's Compensation Act applied, and that the plaintiff had no right of action. The judge pointed out, however, that the plaintiff's claim was not one which required him to go before the Board. The jury found negligence on the part of the defendants and contributory negligence on the part of the plaintiff, and took the latter into account when assessing the damages. Judgment was entered for the plaintiff for \$500 with costs. (*Garment v. Charles Austin Company, Limited.*)

Master and Servant.—Injury to Servant.

The plaintiff, a teamster employed by a certain teaming company, was sent by them to work in the yard of the defendants with his employer's team; and, while there, he was to perform such services in the way of team work as the defendants might require or direct. The plaintiff was injured while working in the defendant's yard, by reason of their negligence, as he alleged, and brought this action to recover damages for his injuries, under the Workmen's Compensation Act.

The defendants raised the question whether the plaintiff could maintain this action, or whether he was limited to obtaining compensation as a servant of the teaming company out of the accident fund.

It was finally decided that aside altogether from the Act the plaintiff was not entitled to recover damages by action. Leaving open the question what his rights might be against his employers, upon proceedings taken under the Act, the plaintiff, upon the evidence, could not maintain the action against the de-

fendants. He knew of the defect which caused the injury to him, and must be taken to have voluntarily assumed the risk, with a knowledge of it. The action was dismissed without costs. (*Caplin v. Walker Sons.*)

BRITISH COLUMBIA CASE.

**Industrial Disputes Investigation Act.—
Alleged Infringement of Lockout.**

In the November, 1915, issue of the *Labour Gazette* an account was given of an action under the Industrial Disputes Investigation Act before the police magistrate of Vancouver, in regard to the alleged infringement by the British Columbia Electric Railway Company, Limited, of the provisions of the Industrial Disputes Investigation Act by declaring a lockout with regard to a number of its employees, being electrical workers, while a dispute between the company and that class of its employees was before a Board of Conciliation and Investigation for consideration. The police magistrate, in giving judgment, dismissed the case, but suggested at the time that, if he were wrong, either party could test his decision before an Appeal Court.

The case was brought up in the County Court at Vancouver during October, 1915, but was adjourned several times until, on December 16, the case was called and partially heard and an adjournment again taken until December 18. At this Court the case was further adjourned until January 7, 1916, when it came on for hearing. At the trial a technical objection was taken by counsel for the British Columbia Electric Railway Company that because no order for an adjournment had been made in either the November or December Courts the case had lapsed and the Court had no jurisdiction. After a lengthy argument between counsel, this objection was sustained and the presiding judge (Judge McInnes) declared that he had no jurisdiction. The action was accordingly dismissed. (*Morrison v. British Columbia Electric Railway.*)

THE LABOUR GAZETTE

APRIL, 1916.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

A DEBATE of some interest took place in the House of Commons on Monday, March 27, on the subject of technical education and growing out of a resolution moved by the Honourable Rodolphe Lemieux, a former Minister of Labour, as follows: "That, in the opinion of this House, measures should be taken at the earliest opportunity to give effect to the report on technical education." Mr. Lemieux in his remarks dealt at some length on the nature of the recommendations of the Commission and urged co-operation between the Dominion Government and the Provincial Governments with respect to a policy based thereon. The Minister of Labour in a statement in reply drew special attention to correspondence between his predecessor, the Honourable W. L. Mackenzie King, under whose authority the Commission had been appointed, and the Prime Ministers of the various provinces. Mr. King's initial letter of Dec. 13, 1909, it was pointed out, had included the following statement: "It is intended that the Commission shall be solely for the purpose of gathering information," etc. The communications written in reply to his predecessor's letter seemed, in the Minister's view, to show an agreement that the Commission was for the purpose of gathering information; the order-in-council establishing the Commission had, however, instructed the commissioners to make such recommendations as might seem expedient to them. Re-

ference was also made to the further correspondence which arose between the present Minister of Labour and the various provincial Prime Ministers when, in March, 1914, complete copies of the report of the Commission having become available for distribution, the Minister had forwarded a copy to each provincial Premier, together with a covering letter inviting "an expression of your views as to the general nature of the report and especially concerning the recommendations contained therein." The Minister admitted the importance of the question raised and that the time would come when Canada should aid the provinces, but was inclined to the view that the matter should stand over until after the war. After some further discussion the resolution was withdrawn. The text of the Minister's statement appears in this issue of the *Labour Gazette*.

* * *

THE working agreements affecting several hundred thousand men employed in the coal mines of Pennsylvania and eight other states of the United States expired on March 31. The negotiations which have been for several weeks under way for new agreements as between the coal operators and the United Mine Workers of America, both as to anthracite and bituminous miners, were not concluded, but fortunately arrangements had been made whereby work was continued on the

terms of the expired agreements and pending the outcome of negotiations. As was indicated in these pages last month, the operators and workmen in the bituminous districts had practically, though not technically, reached common ground early in March, although the agreement remained unsigned at the close of the month.

The anthracite negotiations were proving more difficult and the officials of the U.M.W.A. were more insistent on the 20 per cent wage increase originally demanded. President John P. White of the U.M.W.A. is credited with the following official statement on this point: "Comparison of bituminous wages with those of the anthracite workers will prove to the satisfaction of the most careful observer that the hard coal miners are entitled to a much larger increase, and I feel confident that our wage negotiations will bring anthracite rates up to the bituminous wages." The fact that by amicable arrangement a substantial agreement has been reached in the case of the bituminous miners and that it has been possible to have work proceed continuously, despite lapse of agreements, in both bituminous and anthracite mines, seems to give good ground for expecting a successful outcome of negotiations.

* * *

THE negotiations in the case of the four railroad brotherhoods continued also throughout the month, and the end was not clearly in sight at the close of March, though each of the unions concerned had notified the railways that a reply in writing was expected by April 29. The employees number in this case also about 400,000, and the negotiations affect 528 different lines of railway in the United States. The organizations are those including respectively locomotive engineers, firemen, conductors and trainmen. The question at issue, it will be remembered, is substantially that of an eight hour

day with time and a half for overtime. What may be called the interim reply of the railways has been already submitted in identical form by all the railroads of the United States to the local branches of the different unions concerned. The general position of the railways is set forth in the preliminary paragraph of their circular reply, namely: "The present standards of rates and working conditions have been very largely fixed by mediation and arbitration, and this company feels that they are adequate and even liberal to the employees. This company has no desire to change either the existing rates of pay or the working rules, nor to reduce the earning possibilities of the employees under their existing rules, but, inasmuch as your proposals contemplate fundamental changes in operating methods and practices on which the schedules have been built up, this company hereby gives notice in conformity with the schedules now in effect that in connection with and as a part of the consideration and disposition of your proposals, there shall be open for consideration and disposition those provisions in the schedules or practices thereunder governing compensation in the classes of service affected by your proposals or those in conflict with the following principles as they apply to such classes," (certain points being then enumerated.)

* * *

IT will be remembered that in the parliamentary session of 1913-14 the Minister of Labour secured the enactment of a statute prohibiting the use of white phosphorus in the manufacture of matches, also prohibiting the importation, sale or use of matches made with white phosphorus. The statute came into operation on January 1, 1915, so far as concerned the prohibition of manufacture and importation of white phosphorus matches, but the prohibition of the sale and use of such matches did not become operative until one year

later, January 1, 1916. During the present session the Minister of Labour has introduced a bill amending this statute. The Minister explained that, while importation and manufacture ceased on the date required by the Act, the additional period allowed for sale and use had proved insufficient to dispose of the stock of white phosphorus matches which had accumulated before the new law had become effective. This situation was thought to be an injustice, and the Minister's amending bill accordingly extends (a) until July 1, 1916, the period up to which white phosphorus matches may still be sold lawfully, and (b) until January 1, 1917, the period up to which white phosphorus matches may be used lawfully. The amending bill had not become law at the time of writing, but the measure had passed through the House of Commons and had received a second reading in the Senate.

* * *

AN Order-in-Council extending the provisions of the Industrial Disputes Investigation Act to disputes between employers and workmen engaged in the manufacture of munitions was passed on March 23. Here and there in Canada, during recent months, strikes of workmen engaged on munitions contracts have occurred on account of alleged grievances and the difficulty of securing adequate inquiry into the same by the usual process of direct and amicable negotiation. It is intended by the extension of the statute to afford opportunity in such cases of full inquiry before a Board of Conciliation and Investigation, thus averting so far as possible the danger of strike or lockout. It will be remembered that under the terms of the statute a Board of Conciliation can be established by the Minister of Labour only on receipt of an application in due form from one or other of the parties concerned.

The terms of the Order-in-Council are as follows:

(P.C. 680.)

Privy Council, Canada.

At the Government House at Ottawa.

Thursday, the 23rd day of March,
1916.

Present:

His Royal Highness

the Governor General in Council.

His Royal Highness the Governor General in Council is pleased, in virtue of the War Measures Act, 1914, to order that the provisions of the Industrial Disputes Investigation Act, 1907, other than Section 63 thereof, shall specifically apply in the case of any dispute between employers and any employees engaged in the construction, production, repairing, manufacture, transportation or delivery of ships, vessels, works, buildings, munitions, ordnance, guns, explosives and materials and supplies of every nature and description whatsoever, intended for the use of His Majesty's military or naval forces or militia, or for the forces of the nations allied with the United Kingdom in the present war,—if such dispute threatens to result in a strike or lockout.

(Sgd.) RODOLPHE BOUDREAU,

Clerk of the Privy Council.

The Honourable

the Minister of Labour.

* * *

EMPLOYMENT during March showed little change from the conditions of the previous month. There was some falling off in opportunities for employment in lumbering camps in Eastern Canada and in coal mining in some western fields, but this was offset by greater activity in lumbering in British Columbia and by very active conditions in Nova Scotia coal fields. Unskilled labour was, if anything, some-

what better employed owing to the large numbers of men required in cities breaking up accumulations of snow, opening drains, etc., and to the increased demand for farm help. Quiet in building trades due to the continuation of winter weather was offset to some extent by the increased demand for factory operatives, many of the building trades securing employment in this way. Preparations for the opening of navigation also afforded considerable employment to a number of mechanics, and the signing on of crews for lake vessels absorbed some labour. A great scarcity of men for this work was reported. From a great many parts of the country a scarcity of farm help was reported, though in a few districts the supply was believed to be sufficient for local needs, with some surplus available for other localities.

* * *

THE tendency in prices during March was upward in many lines of materials, but the cost of a number of foods declined. Grains, dairy products and some fruits, flour and oatmeal showed a decrease. There was in consequence a slight reduction in the cost of a family budget of staple foods when compared with the prices for the previous month, though the figures for March of the present year showed a noticeable increase over the figures for the same month in 1915. The index number of wholesale prices advanced again, being 176.4 for March as compared with 173.7 for the previous month and 145.4 in March, 1915.

* * *

IN the present issue of the *Labour Gazette* is reprinted from the Canadian Law Times, a legal journal published in Toronto, an article from the pen of Mr. F. A. Acland, Deputy Minister of Labour, dealing with industrial disputes legislation and indicating in outline the incep-

tion and operation of the Dominion statutes bearing on these matters. Inquiries in considerable number still reach the Department requesting information on the points discussed in the article in question, and the reprint will therefore, it is thought, serve a useful purpose and will be at the same time of special interest to the readers of the *Labour Gazette*.

* * *

IN the March issue of the *Labour Gazette* there appeared a summary of Part I of the Report of the Ontario Commission on Unemployment, which outlined the Commission's conclusions and recommendations. Parts II, III and IV, presenting the data on which the conclusions of Part I were based, are now being distributed. Part II—Data Relating to Unemployment in Ontario—treats of the extent and duration of unemployment in the province, vagrancy and the distribution of labour, and discusses such measures as public employment bureaus, the control of public expenditures and settlement schemes. Part III—Studies of Representative Women's Employments—which is largely the work of Miss Marjory MacMurchy, one of the secretaries of the Commission, is a particularly valuable section of the report. There has been a dearth of information as to the conditions affecting the large number of women wage earners in Canada—175,000 in Ontario alone—but here are presented chapters on the houseworker, the factory worker, the saleswoman, the stenographer, the trained nurse and women who work by the day. There is also an analysis of cases of unemployed women sent to country positions and a chapter dealing with technical, educational and vocational guidance as factors in minimizing the problem of female delinquency. Part IV presents evidence taken before the Commission and is, in the main, a series of monographs dealing with various phases of the problem of unemployment.

PRESIDENT Samuel Gompers, of the American Federation of Labour, has issued an address which will be of interest to organized labour as a whole in Canada, but particularly to the large number of Canadian trades unionists affiliated with the American Federation of Labour. Mr. Gompers addresses himself "to the organized labour movement of all countries" and calls on trades unionists to attend the "Labour's World Peace Congress." The address is the outcome of a resolution adopted at the convention of the American Federation of Labour in November, 1914, which provided for calling the Labour Congress for the same time and place that the General Peace Congress shall be held which shall determine the conditions and terms of peace at the conclusion of the war.

The plan approved for such congress was outlined by the Executive Council of the American Federation of Labour at the thirty-fifth annual convention, held at San Francisco in November, 1915, and is now endorsed by President Gompers, whose address concludes with the following remarks:

"You will note these suggestions are to facilitate the holding of such a congress. This communication to you constitutes the necessary official invitation and notification to participate in that congress. An additional announcement through the press that the general World Peace Congress will be convened in a certain place at a certain time will constitute the only notification necessary for sending your representatives to the Labour Peace Congress.

"The plan of the American labour movement for this Labour's Peace Congress has to do solely with the organization of that congress. We do not offer any programme or any theory as to what the members of that Labour's Peace Congress shall do. It seems best to leave representatives free and unhampered to use whatever opportunity shall be available and to take advantage of any opportunity to promote the interests of the workers in accord with their best judgment. We recognize full well that no conventional agencies or plans or devices for the maintenance of peace can be of any use if there does not exist in each nation the will and the understanding to maintain justice, which is the basis of all real peace."

INDUSTRIAL CONDITIONS DURING MARCH, 1916.

GENERAL SUMMARY.

THE severe weather which characterized the month of February was continued during the greater part of March in many parts of the country. Continued cold and heavy snowfalls had an adverse effect on building and other outside operations and on business generally. Building trades were unusually quiet even in parts of the country, such as the Maritime Provinces, where a fair amount of activity is usually notice-

able during March. Towards the end of the month, however, milder weather gave promise of greater activity in building, and a considerable amount of employment was afforded unskilled labour in the removal of snow, the opening of drains, street cleaning, etc. Reports from many localities indicated a scarcity of farm and factory help, but general unskilled labour appeared plentiful except in a few localities. Agricultural operations

were quiet owing to backward weather preventing farmers getting on the land. From nearly all parts of the country reports of a scarcity of labour despite high wages offered were received. Fishing during March was very quiet owing to continued rough weather. Lumbering continued active in many districts, though some quiet prevailed in parts where roads were breaking up and stream driving had not commenced. Coal mining was active in Nova Scotia fields, quieter in Alberta, and fairly active in British Columbia. Metal mining showed no diminution from the active conditions of the previous month, and in some parts of British Columbia where snow and landslides had been cleared up, was more active. Manufacturing in most industrial centres continued busy, with a growing scarcity of factory help indicated in several localities. Railway construction was quiet. General transport conditions were somewhat improved owing to better weather in many districts and preparations for the opening of navigation. Conditions at winter ports were fair.

The Department's index number of wholesale prices advanced again, being 176.4 for March as compared with 173.7 for the previous month, 145.4 for March, 1915, and 137.0 for March, 1914. The chief increases appeared in the groups: Metals and Implements, Building Materials, Drugs and Chemicals. Increases also occurred in Animals and Meats, Fish, Textiles, Hides, Leather, Boots and Shoes, Fuel and Lighting, House Furnishings, and Raw Furs. Decreases appeared in Grains and Fodder, Dairy Products and Breadstuffs. As compared with March, last year, Grains and Fodder only were lower and all groups were higher than in March, 1914, except fish. In retail prices the budget of staple foods stood at \$8.36, as compared with \$8.40 in February and \$7.88 in March, 1915. Eggs were lower, but several foods were slightly higher.

Changes in Wages and Hours of Labour.

Quite a number of changes in rates of wages or hours of labour were reported to the Department during March, and in all but one instance the changes brought about increase in wages or a decrease in hours. At Brantford, Ont., some 170 moulders and coremakers, as the result of a strike, secured an increase of five per cent, bringing the average daily wage up from \$3 to \$3.15. The men were also promised another increase when business improved. The same classes to the number of 45 in the employ of another firm received a ten per cent increase, raising the average wage from \$2.90 to \$3.20. About 80 bricklayers, masons and plasterers at Galt secured a three-year agreement with their employers, by which the men will receive 45 cents per hour for the first year (instead of 40 cents, the previous rate) and 50 cents an hour for the next two years. The agreement also provided for a change from nine to eight hours per day. Fifteen street railway employees at Guelph received an increase of 1 cent per hour. At Hamilton 125 moulders and coremakers employed by a number of different firms, received an increase of 25 cents per day, with a decrease in working hours from ten to nine per day. The change in rate brought wages up to \$3.50 per nine-hour day. Sludge workers in the employ of the civic sewage disposal works at Hamilton were given an increase of 3 cents per hour, the former rates being 22 cents to 26 cents, and the increased rates 25 to 29 cents per hour. Civic firemen in the same city were given an increase of about ten per cent. Freight checkers employed by the Grand Trunk Railway Company at London, as the result of a threatened strike, secured an increase of \$5 per month. Some 800 employees of the American Cyanamid Company at Niagara Falls were given an increase of ten per cent all round. About 70 employees

of a woodworking establishment at Ottawa had their hours reduced from 60 to 48, with a corresponding reduction in wages.

A general increase in pay has been announced for all shop employees in the service of the Michigan Central Railway, amounting to 1 cent per hour. Four hundred men are affected in the locomotive department and 200 in the car department. Salaried men will receive an increase of \$5 per month. Office clerks in other departments will also receive increases.

Agriculture.

Agricultural operations still continued quiet, backward weather in most parts of the country preventing farmers getting on the land. In some parts of Eastern Canada the making of maple syrup and sugar occasioned some activity. The question of securing farm help was an important one in nearly all parts of the country, and from many points reports of difficulty in securing men were received. This difficulty was not so strongly felt in the Maritime Provinces or in Quebec, though reports of a scarcity of help in some localities in these provinces were received, but in Ontario and the Western Provinces a great scarcity of experienced men was reported. At Berlin, Ont., wages offered were stated to be from \$25 to \$35 per month with board and washing, and in some cases even higher rates were offered. A shortage of labour was expected in this district. Farm help was also reported scarce around Hamilton, with an unpromising outlook. Toronto also reported a shortage. A heavy demand existed at Niagara Falls. St. Thomas, Peterborough and Guelph also reported that a scarcity of farm help was expected.

At Brandon there was a heavy demand for agricultural labour, with a shortage of supply. At this point it was expected that wages would be higher than during the past two years. At

Saskatoon, also, high wages were being offered. At Moosejaw farmers were endeavouring to hire men for the entire season and were offering exceptionally high wages. The supply, it was stated, had fallen off one-half. The class of men seeking work was reported below the usual standard physically and with little experience of farm work. In this district it was not expected that operations on the land would commence before April 15, but in the meantime farmers were busy overhauling machinery and getting seed cleaned. At Lethbridge men were being hired, the demand being met, although there were many idle but inexperienced men. At Medicine Hat the demand for farm labour was expected to be greater than the supply. Calgary expected a shortage of farm labour, and that a large number of men would be required as a less amount of fall plowing was done than in previous years. At Edmonton applications for farm help were increasing and many farmers were engaging their spring help much earlier than in former years. In other lines there was very little demand for labour, and it was expected that with proper distribution the supply would meet the requirements of the farmers of the district and leave a surplus for outside points. Men in some cases were sent out to farmers more than 300 miles from Edmonton.

In reply to a question in the House of Commons the Minister of the Interior stated that representations had been made to the Government from various sources in regard to the Government assisting in procuring farm labour from the United States to meet the demand of the farmers through Canada, but that previous to the receipt of these representations the Government had, on account of conditions, undertaken to assist materially in bringing farm labourers from the United States. The Government had taken action and was advertising in 5,500 newspapers in the United States, and had arranged with

TABLE SHOWING STATE OF EMPLOYMENT IN

This table is based largely on the reports of the correspondents of *The Gazette* as published in the of employment in the several trade and industries throughout the Dominion. This table has reference only to phenomena treated under separate headings in *The Gazette*. In tabulating the information in question, the tions were favorable or unfavourable, as follows: (1) fair, active and very active; (2) quiet and very

transportation companies for a one-cent per mile rate for farm labourers from the international boundary to destination. Immigration agents throughout the United States had been given full instructions in order that they might help to assist the general movement of obtaining a larger immigration of farm labourers. In common with other railways the Canadian Pacific Railway was making known the special rates offered farm labourers from the United States. The Dominion Government had accepted the estimates of the provincial governments as to the demand for farm help. A militia order was also issued, allowing non-commissioned officers and men in training one month's furlough to enable them to take part in the spring seeding, etc., the men to be provided with transportation to and from any locality not exceeding 300 miles distant. The provincial governments also took steps to secure farm labour, and in Ontario the question of rendering available for farm help public and high school students was given some attention by the Provincial Government.

Fishing.

Fishing was quiet during March. At Digby the weather was very bad and little fishing was done. At Lunenburg, also, adverse weather conditions prevailed, and operations were practically confined to fitting up vessels. At Yarmouth heavy winds and snow interfered seriously with fishing and very few fares were landed. Lobster fishermen took advantage of the few clear days, but catches were small. At Charlottetown fishermen were busy getting boats and gear in shape for the opening of the season. From St. John, N.B., fresh fish were reported scarce owing to unfavourable weather. Newcastle also reported fishing very quiet.

At a number of points on the lakes fishermen were busy getting boats and gear in shape. Some fishing was reported in lakes north of Prince Albert, a

good part of the catch being disposed of to lumber camps.

On the Pacific coast, owing to continuous rough weather, fish were scarce and dearer. Much frozen fish was being sold. From New Westminster it was reported that a few fishermen were out, but that fishing was poor. Weather conditions at Prince Rupert and a dispute of fishermen employed by American fishing vessels had the effect of lessening shipments during the latter part of the month. Whaling vessels at Victoria commenced taking on crews and were expected to leave for the whaling grounds early in April.

Under a recent Order-in-Council of the Dominion Government, American fishing vessels fishing on the Pacific coast may take on bait and supplies at Canadian ports, if an undertaking is given to land the fish they may catch during the voyage following such outfitting at a Canadian port. Formerly an American vessel was obliged to deliver its catch at a Canadian port before it could take on bait or supplies.

Lumbering.

Lumbering conditions throughout Canada on the whole were active, though in a number of districts there was some quiet in the interval between finishing up logging operations and the commencement of stream driving and sawing. At Truro, N.S., it was expected there might be a scarcity of labour for the drives and the mills. In the Fredericton, N.B., district, operators had completed the cut of logs, and, although this was not as high as in previous years, conditions were generally satisfactory. On the Miramichi river it was reported that practically all firms except one had cut more logs than was originally intended. At Newcastle lumbermen had about finished operations in the woods and were getting ready for stream driving.

In the Quebec district winter roads continued good for hauling and opera-

tions in the woods still continued. Although a smaller number of men were engaged on account of the length of the season, it was expected the cut this year would be as large as that of the previous season. From Sherbrooke it was reported that operations in the woods were about finished as the roads had commenced to break up. Busy conditions were reported from Three Rivers.

At Peterborough, Ont., lumber camps were breaking up and men were getting ready for the drives. A large cut of cedar ties was taken out and a fair cut of other lumber.

In Saskatchewan lumbering districts camps were breaking up at the end of the month and many men were being released. Mills at Prince Albert were expected to start up as soon as the ice was out of the river and to employ a larger number of men, in view of the good demand for lumber on the prairies.

In British Columbia there was increased activity in lumbering. Logging camps were opening up in many localities, though the presence of snow delayed operations in some quarters. Loggers were leaving coast cities in considerable numbers for the interior. Lumber mills, some of which were closed in the winter, were becoming busier. There was a lack of tonnage which prevented many firms from accepting large export orders. From Victoria it was reported that some logging camps which closed down during the winter had commenced operations, giving employment to a considerable number of men. Activity was also reported from the Prince Rupert district. At Fernie, also, lumbering companies and post and pole dealers were busy. At New Westminster it was reported that camps were opening up and mills running full time. Cars for transportation to the prairies were also reported more readily available. In the Nanaimo district sawmills were working steadily, though not to capacity. Logging camps were beginning to show more activity

than for some time previously. Box manufacturers in British Columbia were particularly active, many plants working 24 hours per day in order to keep up with orders from Great Britain, Australia and the Orient. Lack of freight space was hampering the trade to some extent.

Mining.

Coal mining was active in Nova Scotia, but fell off in some parts of Alberta owing to finer weather lessening the demand for domestic supply. In the Sydney district operations continued active, but were hampered in output by the scarcity of miners. At Newcastle conditions were practically unchanged from those of the previous month. There was a decrease in output by some companies, accounted for by the scarcity of labour. From Amherst it was reported that coal miners were still in demand and the different companies were finding it difficult to fill their orders.

At Lethbridge coal mines were not getting so many orders, and were working about half time. Quite a number of miners were idle. In the Edmonton district, also, coal miners were less active than in the previous month, although the demand for coal was fair. At Fernie conditions continued satisfactory, although some interruptions occurred owing to car shortage. Coke manufacturing continued brisk on account of increased activity in metal mines in West Kootenay. From Nanaimo it was reported that the coal mines in the city and district, with one or two exceptions, were operating steadily. There were, however, still a number of miners looking for work. One company laid off some men and the number of idle miners was added to by the return of men from the northwest owing to slackness in the mines there.

Metal mining continued active. In the Sherbrooke, Que., district copper and asbestos mines were running steadily.

From Sault Ste. Marie increased activity was reported at Bruce Mines and Michipicoten. New companies took over some of the mines and put on more workmen. Cobalt and Porcupine mines were well engaged, and in British Columbia conditions continued active. The clearing of railway lines which had been blocked by snow and land slides enable a number of mines to resume operations and make shipments. The mines at Rossland continued busy, and the smelter at Trail was running to full capacity with the prospect of adding still further to its plant. It was reported that the large zinc smelter at Frank, which has been idle for a number of years, would be re-opened, and that a large coke company at Coleman was enlarging its plant in view of the probable increased demand for coke to be used in zinc smelting. In mining districts north of Prince Rupert activity was becoming marked. Alice Arm camps were attracting attention and a number of Prince Rupert business men made arrangements to open branches. In the Hazelton and Surf Inlet district, also, there was promise of considerable activity. The Anyox mines were working to full capacity.

Manufacturing.

Manufacturing continued active in most industrial centres, with a shortage of help reported in some localities. At Sydney the large industries were busy and the steel industry was working to full capacity. Amherst industries were also reported busy. Charlottetown reported all local industries busy, and at Newcastle and Fredericton, N.B., the various industries were well employed.

In the province of Quebec in most manufacturing districts manufacturing was actively carried on. At Sherbrooke all factories were running full time, with overtime in some special industries. Three Rivers reported every factory in the city working steadily, some of them working at night also. At Sorel activ-

ity was also reported, and some establishments put on more men. Montreal reported that the majority of the boot and shoe factories were busy and leather manufacturers were doing a fair business. Textile manufacturers were busy, with some difficulty in guaranteeing delivery.

From the chief industrial centres of Ontario, also, came reports of continued activity in the factories. At Toronto woodworking establishments were fairly busy, also leather manufacturers. Clothing and shoe-factories were active. Cigar factories were quiet. At Berlin furniture factories were working full time. Button factories were busy, while shirt and collar factories were working overtime in some departments. Trunk and bag factories, rubber factories, felt factories and breweries were busy. Some shoe factories were working overtime. A shortage of boys and girls in button, shirt and collar and whitewear; shoe and rubber factories was reported. At Galt, machine shops, shoe factories and woollen mills, foundries and various other factories were running double shifts and working overtime. A scarcity of machinists, textile workers, carpenters, excavators and shoemakers was reported. At Guelph foundries and textile factories were working full time, and in some cases overtime. Manufacturing generally was active. Stratford reported manufacturing industries generally working to full capacity, with vacancies for girls in knitting and woollen mills. Manufacturing at Hamilton was steady and several establishments would have put on more hands had they been available. At Niagara Falls nearly all manufacturing concerns reported conditions busy or very busy. At St. Thomas most local industries were busy. Iron workers reported conditions good and knitting mills and shoe factories busy. The St. Thomas Biscuit Works closed down during the month owing to financial difficulties. Forty women and ten men were thrown out of employment. At Woodstock organ and

piano factories reported trade busy, but the furniture trade continued quiet. There was a shortage of skilled men for some lines of factory work which it was found hard to meet.

At Brantford, Belleville, Windsor and Kingston active conditions were reported. Owen Sound reported factories busy with a shortage of male and female labour. A sash and door factory was being fitted up for the manufacture of toys.

A New Westminster factories were running full time in most cases, though sash and door factories were quiet. Box manufacturers were exceptionally busy. Two new box factories, a leather belt factory and a valve factory were started at Port Moody, near Vancouver.

Railway Construction.

Railway construction continued quiet. Steel laying on the branch line of the Edmonton, Dunvegan and British Columbia Railway to Grande Prairie was completed during the month. The total distance from Edmonton is 407 miles, all of which has been built within the last two years. This district is well settled and cultivated, and it is expected there will be large quantities of grain to be shipped as soon as the road is in operation. There was some activity in connection with work by the Canadian Northern Railway at Port Mann. Over 100 men were being put to work constructing a turn-table, a ferry landing, and converting two schooners into tug boats for car ferry service. The Northern Pacific Railway were making good progress track-laying on the line from Patricia Bay to Victoria, and it was expected the road would be in operation in a few months.

Plans of the Harbour Commission of Toronto for the work of the season contemplate the expenditure of \$700,000. In addition to other operations the old harbour will be transformed, a 17-acre industrial area to be established at the

foot of Bathurst street, to be served by 800 feet of dock with a depth of 20 feet of water.

General Transport.

Transportation conditions improved owing to better weather, though in a few parts of the country there were heavy snowfalls which impeded traffic but at the same time furnished considerable employment to men employed in maintenance work. Railway traffic returns showed increases over the same period in the previous year. Considerable activity was occasioned in the fitting up of vessels in readiness for the opening of navigation. Reports indicated a possible scarcity of sailors for vessels on the lakes.

At Sydney transportation by rail was reported heavy, though snowstorms the latter part of the month caused delay to traffic. Along the waterfront at Halifax conditions were fair. Longshoremen had a good month and freight handlers were also fairly busy. At Westville railway traffic during the first part of the month continued busy, but heavy snowfalls seriously hampered the movement of freight during the latter part of the month. At Quebec the fitting up of docks, boats, etc., for the opening of navigation continued to give considerable employment. At Three Rivers railway and transport workers were reported not so busy on account of the breaking up of the roads interfering with hauling and shipments. At Sorel conditions were active in the shipyards. At Montreal, also, active conditions prevailed in connection with preparations for the opening of navigation.

At St. Thomas railway traffic employees were busy. A number of men were taken into service on the Pere Marquette Railway. At Peterborough railway traffic was reported active, with a shortage of trainmen. At Toronto navigation companies were busy preparing for the opening of the season and

were encountering difficulty in securing crews, the shortage of sailors being reported as unprecedented. At Port Arthur car repairers of the Canadian Northern Railway Company were put on a nine instead of an eight hour day. Ice breakers were busy breaking a passage from Thunder Bay to open water.

Western conditions were fair. Passenger traffic was reported improving at Regina. Shipyards at Victoria and at Prince Rupert were becoming busy. New schedules have been announced for the Alaskan run by steamship companies, and the Grand Trunk Pacific will run a steamship service in connection with its railway line to eastern points. This with increased activity at a number of mining centres gave promise of an improvement in freight shipments and passenger traffic.

The Trades.

Building.—Building trades in practically all parts of Canada remained quiet so far as their usual occupation was concerned, but numbers of these trades secured employment in factories.

Metal.—Machinists continued active, though some other branches of the metal trades were quiet.

Woodworking.—Woodworking trades were fairly active in Eastern cities, but quiet in the West.

Printing.—Printers were fairly well engaged.

Textile.—Textile trades continued active.

Clothing.—Tailors with the approach of spring were slightly more active. Garment workers in some lines were busy.

Food and tobacco preparation.—Food preparation trades were busy. Cigar-makers and tobacco workers were on the whole quiet.

Leather.—Leather workers were fairly busy.

Transport.—Railway workers were well engaged. Longshoremen at winter ports were fairly busy, and on the lakes preparations for the opening of navigation occasioned a fair amount of activity.

Unskilled.—Unskilled labour continued to be fairly well employed. Street cleaning and opening of drains afforded some work, and an active demand for farm labour absorbed some general unskilled labour.

Canadian Trade.

The total imports of merchandise for consumption in Canada during February, 1916, amounted to \$53,764,936, compared with \$36,201,826 in February, 1915, an increase of \$17,563,110. Domestic exports of merchandise for February, 1916, amounted to \$57,931,168, as compared with \$28,881,876 for February, 1915, an increase of \$29,049,292. Increases in the exports of the products of the mine, the forests, animals and their products, agriculture, manufactures and miscellaneous merchandise are shown, while a decrease is shown in the fisheries.

The following table gives the latest official summary of Canadian foreign trade:

IMPORTS AND EXPORTS, FEBRUARY, 1916.

Imports entered for consumption.	February.		Exports. (Domestic.)	February.	
	1915	1916		1915	1916
Dutiable goods.....	\$21,9569,97	\$29,007,441	Mines.....	\$3,274,626	\$4,896,026
Free Goods.....	13,955,913	22,557,527	The Fisheries.....	1,800,710	1,782,071
			The Forest.....	2,342,590	2,595,420
			Animals and their products...	4,816,610	5,492,339
			Agriculture.....	7,616,411	13,898,856
			Manufactures.....	8,982,639	28,606,680
			Miscellaneous.....	47,691	659,776
Total.....	\$35,912,910	\$51,654,963	Total Merchandise.....	\$28,881,277	\$57,931,163
Coin and bullion.....	\$ 238,916	2,109,963	Coin and bullion.....	99	
Grand Total.....	\$36,201,826	\$53,764,936	Grand Total Exports....	\$28,881,876	\$57,931,163
Duty collected.....	\$6,919,560	\$10,489,586			

The following are the returns of Canadian bank clearing houses for March, 1916, with increase or decrease over March, 1915:

	March, 1916.	March, 1915.	Changes.
Halifax.....	\$ 8,659,520	7,375,290	+ 1,280,230
St. John.....	6,719,912	6,349,112	+ 370,800
Montreal.....	264,580,604	198,451,527	+ 66,129,077
Quebec.....	13,250,146	11,439,078	+ 1,811,068
Brantford.....	2,529,318	2,067,332	+ 461,986
Fort William.....	1,657,554	1,967,524	- 309,970
Hamilton.....	14,768,780	10,873,859	+ 3,894,921
London.....	8,452,952	6,811,196	+ 1,641,756
Peterborough.....	1,897,365	1,794,369	+ 102,996
Toronto.....	186,521,542	143,765,630	+ 42,755,912
Brandon.....	2,051,131	1,874,818	+ 176,313
Winnipeg.....	123,883,432	100,143,890	+ 23,739,542
Moose Jaw.....	3,654,556	3,310,186	+ 344,370
Regina.....	7,117,057	5,248,883	+ 1,688,174
Saskatoon.....	4,193,942	3,224,124	+ 969,818
Calgary.....	15,410,550	13,995,258	+ 1,415,292
Edmonton.....	9,008,980	9,242,814	- 233,834
Lethbridge.....	1,909,819	1,282,143	+ 627,676
Medicine Hat.....	1,493,754	1,033,314	+ 460,440
New Westminster.....	908,811	1,154,672	- 245,861
Vancouver.....	25,216,415	21,833,220	+ 3,383,195
Victoria.....	6,619,812	6,635,016	- 15,204
Total.....	\$728,065,164	\$578,749,319	+ \$149,315,845

Canadian revenue for February, 1916, amounted to \$14,798,896.19, as compared with \$10,523,344.71 for February, 1915, an increase of \$4,275,551.48. The expenditure on capital account for February, 1916, was \$15,992,945.59, compared with \$9,366,951.51 for February, 1915. The expenditure for February, 1916, comprised \$38,079,429.01 for war purposes, \$3,179,028.04 for public works, including railways and canals, and \$182,260.71 for railway subsidies.

The bank statement for February,

1916, showed the paid-up capital stock of the chartered banks of Canada to be \$114,216,719, as compared with \$113,989,854 for the month of January, 1916. Deposits payable on demand for February amounted to \$389,825,667, compared with \$387,002,926 for January, 1915. Notes in circulation for February amounted to \$113,528,237, as compared with \$110,029,572 in January. Loans to cities, towns, municipalities and school districts during February amounted to \$35,149,915, as compared with \$32,015,371 during January, 1916.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

There was very little change in the labour situation in March as compared with the previous month. Two heavy falls of snow made considerably more work for trackmen and civic employees. A number of the manufacturers continued busy in the filling of special orders.

Wholesale and retail merchants reported a drop in business as compared with March of last year.

But very little calls have been made upon the relief associations as compared with the past year. This has been largely due to enlistment.

Coal miners were still in great demand, and the different companies were finding it difficult to fill their orders.

Halifax.

Building and construction work was not carried on as extensively during March as in the preceding month. Weather conditions greatly interfered with all branches of outside work, and caused a good deal of unemployment in the mechanical trades.

Conditions have been somewhat better with unskilled labour, and the demand

at times was very active. In addition to work offering through the usual channels, the Halifax Electric Tramway Company have employed a large force practically the entire month clearing snow from the streets. The removal of snow also required the services of quite a number of extra men.

Along the waterfront conditions have been very fair, longshoremen have had a very good month, and freight handlers have also been kept pretty busy.

Fire was responsible for considerable property loss, as well as loss of life, during the month. Old pier 2, deep water terminals, was completely destroyed on the night of March 12, and in addition to the loss of the wharf property the Red Cross Society lost considerable supplies. One employee was drowned.

Sydney.

Labour conditions continued active, and labour generally was well employed over the entire district. All the large industries were busy, and were expected to continue so for months to come. The railways were carrying to their capacity, the freight being largely steel material and military supplies.

The coal trade was very busy, and was

only hampered in output by the scarcity of miners. The steel industry worked up to full capacity.

Transportation by rail was heavy. In addition to this heavy snowstorms during the latter part of the month caused much delay of traffic. The outside trades were quiet, but there was no want of employment for these workmen. Wholesale and retail trades did a large volume of business.

The Mines Department of Halifax asked the coal managers of the province to meet representatives of the workmen and the mine inspectors, for the purpose of discussing the prevention of mine accidents. The meeting was held in Halifax, and was well attended by representatives from the different classes. A committee was appointed for the purpose of continuing such meetings in the future.

Truro.

All kinds of labour were well employed and in some branches of industry a scarcity existed.

Farmers were also seeking help, while there was a brisk demand for railway operatives, owing to the unprecedented amount of work offering.

All industries operated full time.

The outlook for building operations was only fair, though owing to the scarcity of houses to rent it was believed there would be a great deal of that kind of work carried on during the summer.

Owing to severe storms and bad roads, spring business did not open up briskly, but the month end brought improvements in both weather and road conditions.

A good deal of real estate changed hands.

The chair works at Bass River was forced to close down owing to scarcity of cars.

Lumbermen were closing up a fairly successful winter's work, with prospects of a scarcity of labour for the drives and the mills.

There was plenty of work for everybody that wants employment.

Westville.

The demand for labour continued, and most of the industrial plants in the locality reported being seriously handicapped in their operations owing to the scarcity of help.

Railway traffic for the first part of March was practically unchanged from the conditions of last month, though heavy snowfalls seriously hampered the moving of freight during the latter part of the month.

Wholesale and retail trades reported continued heavy business in all lines and somewhat in excess of March month last year.

Lumbering continued very active during the first half of the month, but weather conditions during the latter part caused an almost total suspension of operations.

Coal mining conditions remained practically unchanged. The Intercolonial Coal Mining Company, working steadily, averaged about 500 tons per days. The decrease in output is largely accounted for by the great scarcity of labour at the present time. Acadia Coal Company worked full time, raising about 1,900 tons per day during March.

PRINCE EDWARD ISLAND.

Charlottetown.

The spring outlook for all the different trades, including unskilled labour, was good. Carpenters, painters and paperhangers reported prospects for a brisk season never looked better.

During the last week in March commercial activity was somewhat interfered with from the fact that winter boats have been tied up in the straits in heavy ice.

Heavy storms during the last week of March completely tied up all traffic on the Prince Edward Island Railway; at the end of the month, however, the

road was clear and the usual activity prevailed.

NEW BRUNSWICK.

Fredericton.

A slight improvement was noticeable in the labour market during March, and prospects looked bright for the coming summer in the building trades. With the advent of spring weather building operations will be resumed, with sufficient work for all. The various factories were well employed and in general there was less unemployment than during similar periods in previous years.

Trade in general has been active. Wages were up to the usual standard, and there was no change in the hours of labour.

There was little change in the cost of living, with most commodities at a high figure and showing few signs of a reduction in price.

Lumber operatives have completed cutting logs, and although they did not cut as much as in the previous year the conditions were generally satisfactory.

Moncton.

Industrial and commercial conditions continued very satisfactory throughout March, presenting no material change from those reported for February and fully up to the standard of the corresponding period of last year. Very little evidence of unemployment was noticed and no demands for relief of destitution on account of inability to obtain work have been made. Steadily active conditions prevailed in all local manufacturing plants and in railway and machine shops, which in all cases operated on full time and with full complements of employees. Specially active conditions exist in woollen and underwear factories.

Railway operation has also been exceptionally active and all available trainmen have been steadily employed. This was occasioned by the unusually

large amount of through freight in transit, and also by the additional work entailed by the very heavy snowfalls at different points upon the railway.

Building was naturally quiet, and during the coming season will be restricted principally to private enterprises, as the large amount of public building which has been in progress during the two previous seasons was nearly completed.

Customs returns for February amounted to \$12,808, as compared with \$9,449 for February, 1915.

Considerable activity in real estate was noted.

The annual session of the New Brunswick Federation of Labour was held at Fredericton, March 14-15. Amendments to the Workmen's Compensation Act and the Fair Wage Act were discussed and presented to the Provincial Executive.

Newcastle

Labour conditions during March were very similar to those of February, except in lumbering operations, where there was some unemployment due to cessation of work in the woods and streams not being open for driving.

There has been no special activity in any trade, with the exception of railway employees, who were especially busy.

Wholesale and retail trade continued good, and there was lots of money in circulation.

The fishing industry was very quiet.

Local industries are all working steadily.

St. John.

Labour generally was well employed during March, being about equal to February, and far in advance of the corresponding period last year. Exceptional activity prevailed among machinists, but in the building trades there was very little work being carried on.

Inland revenue receipts for February were \$24,726.53, and for the correspond-

ing period last year \$15,481.13, an increase of \$9,245.40.

Up to March 27 thirty-six steamers have cleared from St. John as against forty-five during February.

Harbour receipts for the year 1915 totalled \$118,534.83, the largest in the history of the port.

Customs receipts for February were \$247,565.66, and for the same period last year \$189,878.62, an increase of \$57,687.04.

Fresh fish were very scarce owing to the unfavourable weather. The catch on the Kennebecasis of herring and smelt has been small.

QUEBEC.

Hull.

All indications point to an active spring season for both skilled trades and common labourers as there is going to be more work at higher wages than before the war. Already from \$40 to \$50 per month with board are being offered for good drivers, and they are hard to find even at that price. Labour is very scarce on account of the recruiting done in this place.

Business in general was more active than during the same month last year.

The number of families helped by benevolent associations has decreased 70 per cent as compared with March, 1915.

Montreal.

The employment situation for March remained in the comparatively satisfactory condition which it had attained previously. The majority of the boot and shoe manufacturers reported their factories to be well employed, and leather men were having a fair business. One large company has secured another large order from the Canadian Government for soldiers' footwear. The new contract calls for 80,000 pairs of canvas rest shoes and 200,000 pairs of regular soldiers' walking boots. The new business is valued at nearly a million dol-

lars, and with business already on the company's books, assures capacity operations throughout the summer and well on into the fall as compared with the idleness prevalent during the corresponding periods of the last two years. The general manager stated that the company was turning out 10,000 pairs of shoes a day, a new record in production.

There has been activity in all lines of dry goods, and merchants have been unable to get all they wanted of imported stuff. On account of the large quantity of freight moving it has been difficult for many manufacturers to guarantee delivery at stated times.

Owing to a pronounced decline in foreign exports of braids, tapes, etc., to Canada, Belding-Paul Cortelli, Limited, has decided to enlarge its Coaticook plant and so take advantage of the increased business offering to Canadian manufacturers. This will increase the plant's output by about 30 per cent, and the addition is expected to be completed before September 1. Many of the departments of that factory were working night and day, there being sufficient orders on the books to assure capacity operations for the next four months. Operations at the local plants were also very active.

There is scarcely an article in the dry goods, hardware and paint trades which have not advanced greatly in price, and local manufacturers have withdrawn their prices on goods for future delivery.

Paint manufacturers reported good business, some of them working overtime. Fair orders from Australia and South Africa were reported.

Tanners were reported to be sold ahead as far as they could go, and stocks on hand were reduced to a minimum. Tanning materials and dyed stuffs have advanced so materially that tanners generally are not manufacturing much ahead.

Cheese makers in the district find their supplies of rennet running short. This used to be obtained from Germany.

One of the local sugar refining companies lately secured a large British Government order which will take some time to fill. It advanced quotations 40 cents a cental, but the other two refineries have only advanced their prices 10 cents a cental.

Many workmen were employed for two weeks in making fit for temporary occupation Bonaventure station, which was badly gutted by fire on March 1. There is not much renewal of activity in the building business. The Catholic School Commission has let contracts for a school to be built in Sacred Heart parish for \$154,080. The Bell Telephone Company have given contracts for the erection of two additional storeys on their main office building on Hospital street. This work, which will commence in the early spring, is of some magnitude.

On March 15 the Charity Organization Society opened its Confidential Exchange for the use of the various Protestant, Catholic and Jewish charitable institutions of the city. This is to prevent duplication of charitable effort and to protect families receiving help against unnecessary enquiry. The society has appealed for \$15,000 to help it get through its fiscal year to September 30.

Professor F. H. Sexton has started his new duties with the Military Hospitals Commission to teach new work to wounded men whose injuries makes it impossible for them to return to the work at which they were employed before they enlisted. So far the men are only receiving a preliminary education. The technical work will begin as soon as they are ready for it.

There still remains on hand a balance of \$2,500,000 for streets and sidewalks in the city. As soon as the frost is out of the ground this work will be started. This money has been voted as follows: Paving, \$981,419; sidewalks, \$294,738; macadam, \$219,426; miscellaneous, \$149,811; sewers, \$952,961; making a total of \$2,598,361. In addition \$1,000,000 had been voted for sewers, work on which has been progressing all win-

ter. This will supply work for two or three months. So far the city's engineering department has at its disposal only one-half as much for paving and one-third for sidewalks as last year.

Railway earnings reported here still maintain the ratio of increase shown by late months. An early opening of navigation is expected.

The end of the fiscal year for Montreal shows the customs returns to have been \$24,116,306.81, which is \$4,695,583.69 ahead of the previous year. The inland revenue receipts amounted to \$11,406,618.95, which is \$1,037,558.24 above the previous year. The bank clearings for Montreal were \$264,580,604 for March as against \$198,451,627 for the same month of 1915. This is a new high record. Annual meetings during the month have demonstrated that there is general prosperity in the steel industry and growing strength in the finances of the different companies. Power companies maintained a splendid position, which they have kept throughout the war.

Quebec.

Cold weather during March retarded outside building work, although a large number of building permits were issued. Fine weather at the end of the month gave promise of increased activity for the building trades.

The fitting up of boats, tugs, steamers, etc., for the navigation season occasioned renewed activity for engineers, machinists, boilermakers, etc.

On account of continued good roads the hauling of logs was carried on during the month, and with a lengthened season the cut was expected to be nearly as large as that of last season.

Sherbrooke.

The labour situation in Sherbrooke was still good. All factories were running full time and some night and day.

The contemplated addition to its plant of one factory was expected to give em-

ployment to a lot more men and the building will employ a number of bricklayers and others of the building trades.

The new city gas works was also employing a number of men and nearing completion.

A comparison of the aggregate bank clearings in the Dominion for the week ending March 16 shows that Sherbrooke was ahead of six other cities in the amount of business transacted.

Farmers have commenced making sugar and a good season is expected.

Copper and asbestos mining was about the same as last month.

Lumbering in the woods was about finished as the roads commenced to break up.

Sorel.

The month as a rule has been a very good one; work has, everywhere, been plentiful, and more men have been employed in the various manufacturing and industrial establishments in the district.

In Sorel, in particular, activity prevailed.

At the Government shipyard, and also at the other shipyards, several hundred men have been employed in repairing and fitting up boats and vessels.

Commercial activity has also been good. Quite an amount of business has been transacted. Sales have been considerable.

St. Hyacinthe.

The general condition of the labour market was very good during the month, and much better than during the same month last year. The demand for hands in several industries was not met by the supply. The building trades were rather quiet, but a very active season is expected to commence next month.

The various industries were busily engaged.

There was a material increase in the cost of necessities of life. Meats, but-

ter, potatoes, sugar, as well as rents, were higher.

St. John's and Iberville.

Labour conditions during March were fair in nearly all branches of industry and showed a considerable improvement over the corresponding month of last year. Local factories had a good month. The only ones to suffer from the lack of work were unskilled labourers and the building trades, not a single building permit having been taken out. There was, however, less unemployment than during former months, as a large number of young men have enlisted for the war.

Trade in general was more active than during last winter.

Customs receipts at St. Johns during February amounted to \$36,854.57, as against \$24,881.27 for February, 1915.

Three Rivers.

Labour in the city has been quite active, and in the building line work on two large factories, a new school and several other buildings has been going on. Work in most lines, especially in manufacturing, has been steady, and prospects all round were reported good.

Commercial conditions were satisfactory for the season. Railway and transport workers were not so busy as last month, but this was accounted for by the breaking up of the winter roads.

ONTARIO.

Belleville.

The labour situation continued about the same as in the previous month. Some manufacturing concerns were very busy. One concern worked day and night with a large staff making food supplies. The rolling mills which have been idle for some time were expected to start up again. Notice to this effect has been received from headquarters of the concern at Montreal.

The two lock works situated in the city are busily engaged at present in filling orders, and the prospects were for a busy season.

There will probably not be much building this year.

The city will do some sewer work in extension of that done last year, but it will not be an extensive undertaking.

Berlin.

Labour conditions for March were practically the same as last month. Furniture factories were working full time. Button factories were busy, while shirt factories were working overtime in some departments. Trunk and bag factories, both large rubber factories, felt factories and breweries were busy, while some shoe factories were working overtime. There was quite a shortage of girls and boys in button, shirt and collar, white-wear and shoe and rubber factories.

Bricklayers and masons, carpenters, builders' labourers and a few other labourers were out of work, but even in these classes a lot of men have taken work in the different factories where vacancies were made owing to men enlisting.

Customs returns for February were \$70,923.87, as compared with \$35,524.41 for the same month last year, an increase of \$35,399.46, or nearly double.

Brantford.

Labour in general was very active in all lines of trade, and the demand for workmen was greater than the supply.

Railway freight departments were taxed to capacity owing to a shortage of cars. Other lines were about normal.

Brockville.

Practically all classes of labour were well employed during March. All classes of trades not usually active at this season have found ready employment in the factories. The supply was not equal to the demand and the Canada

Carriage Company, the Brisco Motor Car Company and the Grand Trunk Railway were all short of men.

Unusual activity prevailed in railway traffic.

Chatham.

Labour conditions generally were fair considering the severe weather the greater part of the month. Bricklayers and all outside workmen were only able to work about two-thirds of the time.

All factories were running full time with one or two exceptions.

Work was held up at the new sugar factory for want of steel, which was the cause of a number of hands being out of work for a time.

Activity prevailed at the Dominion sugar factory at Wallaceburg. The company's imports of raw material from the South average 50 carloads a month.

Galt.

There was a scarcity of some classes of labour owing to recruiting. Machinists, textile workers, carpenters, excavators, general cleaners, moulders, shoemakers, etc., were freely advertised for, and could not be obtained.

The customs returns for Galt and Preston again showed a decided increase over the same month of the previous year.

Building trades were looking forward to a busy season, and some contractors in Preston had material for the erection of buildings on the ground ready to commence operations as soon as the weather permitted.

The Lake Erie and Northern has opened up its freight traffic and seemed to be doing well.

The big machine shops, shoe factories, woollen mills, foundries and various other trades were still running double shifts and working overtime, and there were no signs of an early abatement.

The waterworks department was hampered for the want of excavators, and the work in consequence was much retarded.

Guelph.

Labour conditions for March remained about the same as during the previous month and were on the whole favourable.

Weather conditions were unfavourable for the building trades. Up to the end of the month few permits had been granted and the outlook for the coming season was no better than last year.

Foundries and textile factories were all working full time, and in some instances overtime. Manufacturing generally was active.

The Guelph Radial Railway Board has granted an increase of 1 cent per hour to all motormen and conductors in their employ.

Customs returns for February were \$27,938.72, an increase of \$12,192.80 over the corresponding month of last year.

Wholesale and retail trade was reported fair.

Hamilton.

Labour generally was well employed during March, and was much more active than during the corresponding month of last year.

From present indications the building trades will have a busy season. House building promises to be considerably more active than it was a year ago.

Broom and whisk makers, who have been working on short time for nearly two years, commenced work on full time during the month. Cigar makers and tobacco workers were not as busy as during the previous month. There was still a demand for first-class machinists.

The supply of teamsters was not nearly equal to the demand, and as a result many teams were standing idle which could be actively engaged if help were available. Never before in the history of Hamilton have businesses of all kinds been so handicapped through lack of drivers.

Unskilled labour was more in demand during March than for some time.

Hamilton has secured another important steel industry in the Stanley Steel Company, which has been granted a federal charter with a capital of \$2,500,000. A large plant is to be erected and work commenced as soon as possible.

Work on the plant of the Hamilton By-Products Coke Ovens, Limited, was expected to commence as soon as weather conditions were favourable. The first cost of building and equipment will be \$2,150,000. Employment at the start will be given to 300 men working on night and day shifts.

February customs collections for Hamilton again show record growth. The figures are: February, 1916, \$445,816.20; February, 1915, \$300,039.96.

Kingston.

There has been very little change in labour conditions during March from those of February. There was very little unemployment. In fact the civic works department could not get the supply of street labour needed and had to plough the snow and ice off the streets instead of having the work done with pick and shovel as has been done in former years.

The ice in the harbour has shown signs of breaking up and sailors were busy getting their boats fitted out for the season's work. Quite a number have left the city to get out their boats, which are lying in other ports.

Factories were busily engaged, and prospects were bright for the coming year. It was felt that the shortage of labour would raise the wages of unskilled labour very high this year, indeed it was considered doubtful if the supply would meet the demand.

It was expected that a good deal of work would be done by the civic authorities this year.

Exports for the last three months totalled \$354,000. For the same period of last year the amount was \$102,000, showing an increase of \$252,000.

London.

Industrial conditions continued first class. On the railroads freight traffic was very brisk, with some congestion at divisional points owing to shortage of locomotives. A scarcity of unskilled labourers was noticeable, and numerous advertisements were appearing for this class of workmen. Building trades were quiet, with the exception of painters and paperhangers, who were in demand.

Both wholesale and retail trade increased in volume, and travellers reported sales much better.

Manufacturing conditions as a whole were never better.

Niagara Falls.

March industrial conditions showed but few changes from February. Manufacturing concerns continued busy, and transportation was active. The building trades, public works and agriculture were very seriously delayed by cold weather and snow storms.

The natural gas supply has been very poor at times. The Welland field is rapidly becoming exhausted.

Stamford township adopted a minimum wage of 22½ cents per hour for all employees, and a clause to the same effect will be placed in all contracts.

The late season and deep snow held farm and orchard work back. Even the trimming of trees and vines was delayed. Farm labourers for the season's work were in great demand. The great nurseries in Pelham township engaged numbers of men and prepared for a busy shipping season.

Nearly all manufacturing concerns reported "busy" or "very busy." Custom planing mills alone were dull.

Welland.—A planing mill and a small furniture factory were burned. Industrial conditions were generally good.

Port Colborne.—Lake steamers were fitting out. There was little activity in the dredging fleet as the late season will greatly delay the commencement of the season's work.

Orillia.

There has been an active demand for labour of almost all kinds. While there has been little or no building going on, those who ordinarily engage in the building trades have had no difficulty in finding employment in the factories.

The ratepayers of Orillia have ratified a by-law for borrowing \$35,000 to rebuild the municipal building destroyed by fire last summer. With the insurance money this will provide upwards of \$52,000 for the purpose. The work will be done by day labour.

Retail business has been fairly good.

Ottawa.

Improvement was shown in the local labour situation during March, particularly in regard to unskilled labour. Iron workers (moulders, machinists, etc.) continued busy, while leather workers, pulp and paper makers and the printing trades were, for the most part, fully employed.

The building trades remained slack, with but little prospect of any general activity, save in the rebuilding of the Parliament Buildings.

Retailers reported trade improved, with an inclination on the part of the public to make smaller and more numerous purchases.

Many men found temporary employment during the month through the heavy snowfalls and civic preparations to prevent local floods.

Owen Sound.

Factory managers generally reported a shortage of skilled labour. There was a shortage, too, of women employees. Unskilled labour was quite fully employed, though no shortage was reported.

The Union cement plant has begun operations on spring and summer orders. They intend running a single shift till the opening of navigation, and after that time a double shift.

A sash and door factory was being fitted up for the manufacture of toys.

A nut and screw company has closed a contract for the shipment of its products to New Zealand.

Soundings have been made in the harbour by the Government engineer, and while the harbour is generally quite deep enough for heavy draught boats some sections will be dredged deeper this year.

Retail business has been fairly good—better than at the corresponding period last year in most lines.

Building was very quiet.

Peterborough.

The general conditions of the labour market during March was satisfactory and showed a marked improvement over conditions existing during the corresponding period of last year. The building trades and outside workers were quiet. Most of the men, however, have found work in the factories or at other work. Machine shops, foundries and textile factories were very active and the prospect was good for the summer.

Lindsay.—All factories were well employed and busy conditions prevailed in most lines of business. Two new factories were being constructed.

Port Arthur and Fort William

Labour conditions have improved since last month and there has been a very great improvement over the conditions of the corresponding month of last year.

Nearly 300 men have been employed on repair work at the Western dry docks in addition to the 50 employed there in other work.

There has been no exceptional activity in any particular trade, but the car repairers in the Canadian Northern Railway shops have been working since the middle of the month a nine hour day instead of eight hours, which prevailed all winter.

All the engineering shops were busy on repair work in fitting out boats in the harbour, etc.

Ice-breakers have been busy breaking a passage through Thunder Bay to open water since March 25.

The Port Arthur Trades and Labour Council passed a resolution on March 2, and forwarded to the Soldiers' Aid Commission, in favour of all Government positions vacant, where possible, being given to returned soldiers.

Fishing tugs were being overhauled and repaired ready for the spring fishing as soon as the ice breaks.

Sault Ste. Marie.

The indications were that the worst of the long dullness which has been apparent in Sault Ste. Marie and district would soon be over. A new company, composed mostly of Americans, is taking over all the power rights in the St. Mary's river possessed by the Lake Superior Corporation, and was expected to commence to spend about \$2,000,000 in enlargements within a few weeks. The arrangement covers also the transfer of the ferry rights and street car franchises on both sides of the river. It was also expected that work on a drydock would be shortly commenced.

At Bruce Mines, also, conditions were becoming more active. New companies are acquiring some of the mines, also the trap rock industry, and all properties were being started up with increased numbers of workmen. Some mining properties at Michipicoten have also been purchased, and work was expected to commence without delay.

Stratford.

Labour conditions were about the same as last month and there were no idle men. The building trades were quiet owing to weather conditions, but the men in these trades and unskilled labour have secured work in the factories.

Manufacturing industries generally were working to full capacity. There were vacancies for girls in the woollen and knitting mills.

Wholesale and retail merchants reported a good month's business, far ahead of the same time last year.

Customs returns for February were \$23,796.60, an increase of \$3,698.39 over the corresponding month of 1915.

The local excise returns for February were \$5,642.78.

St. Catharines.

Labour conditions, taken upon the whole, were quite satisfactory, there being very few unemployed. Practically no building was being done.

Work on the canal was steadily progressing.

Labour conditions in Merritton, Thorold and Pt. Dalhousie continued about the same as during last month.

The Beaver Board plant at Thorold was closed down for a day on account of a small flood.

St. Thomas.

Labour conditions during March were as good as could be expected for the time of year. The building trades were very quiet, but labour generally was well employed. The month compared favourably with the previous month, and conditions were decidedly better than during the corresponding month of last year. Opportunities for employment were good, especially for unskilled labour.

The St. Thomas biscuit works closed down during the month. Financial difficulties were responsible for the failure. Forty women and ten men were thrown out of employment.

Local industries reported the month a very satisfactory one. Iron works reported conditions good. Knitting and shoe companies were busy.

A large deputation representing the Government, the city of London, the London and Port Stanley Railway and the city of St. Thomas paid a visit to Port Stanley during the month for the purpose of investigating contemplated improvements to the harbour. The fish-

ing industry also received the consideration of the delegation with a view to bettering conditions and affording further protection to the source of supply.

Railroad traffic employees were busy. A number of men were taken into service on the Pere Marquette Railway.

Toronto.

The principal feature of the labour situation during March was the shortage of workers in many lines of industry, more especially in the iron trades. Many of the plants are short-handed and deliveries have been considerably delayed in some cases on this account. Building trades continued quiet, but few contracts having been given out. The weather during the greater part of the month was unfavourable for outdoor work owing to severe cold and heavy snowstorms.

The metal and engineering trades were busy. Cabinet makers, furniture workers and upholsterers were fairly well employed. Piano workers were active and men in demand. Printers, bookbinders and lithographers were fair. The National Union organized among the bookbinders some years since has affiliated with the International Bookbinders' Union. Leather workers were busy. Garment workers, custom tailors, hat and cap workers and boot and shoe workers were active. The provision trades had steady work. Cigarmakers were quiet. Railway and street railway employees were active. Teamsters were busy, with a considerable shortage of men. Hotel employees were quiet. Restaurant help, barbers and laundry workers fair. Unskilled labour was well employed.

Navigation companies preparing for the coming season were encountering serious difficulties in securing crews, the shortage of sailors being unprecedented.

In reply to misleading statements as to the number of vacant houses in Toronto, Mayor Church announced, as the result of an investigation, that vacant houses

numbered only 3,500, equal to 3 or 4 per cent of the total number.

The return of customs collections for the port of Toronto during February established a new high record of \$2,535,517, as compared with \$1,387,040 for the corresponding month last year and \$1,532,959 for February, 1914.

The City Council has voted \$198,000 as the city's share of the cost of a double deck bridge on the Canadian Pacific Railway over the reservoir ravine in North Toronto.

A publicity campaign to advertise Toronto as a field for new industries will be undertaken. A representative committee was appointed to prepare a plan of campaign and an estimate of the cost to be submitted to a general meeting of the citizens.

Windsor.

Labour conditions have not improved during March, and in fact were not as good as in the previous month.

Although factories were busy, opportunities for outside labour decreased, owing to the larger buildings being about completed and no new buildings being commenced. This, however, has not increased the number of unemployed as most of the artisans and mechanics were finding employment in Detroit where industrial conditions were active.

The motor car industry was very active and all manufacturers of parts and accessories were busy.

Real estate conditions have improved, there being a large demand for houses, which were scarce.

Owing to inclement weather no civic improvements were commenced.

Woodstock.

During March there was employment for everyone, and the problem was to secure men rather than for men to secure work. The demand for skilled mechanics for special work has drawn very heavily on factories engaged in ordinary

lines, and recruiting has also taken a number of men. Some manufacturers complain of the shortage of skilled men.

Farmers, too, were complaining. Many of them have stated they will endeavour in some way to get in a crop, but that they have no notion of how it will be taken off.

Organs and piano manufacturers reported trade better than it has been in some years. The export trade has been seriously affected by the restrictions on British imports, but the Canadian trade was said to be healthier than it has been in a long time.

The furniture trade continued quiet.

Shopkeepers reported business very good and money fairly plentiful.

MANITOBA.

Brandon.

The general condition of the labour market continued to show improvement. It is some years since the number of unemployed was less than it was at the end of the month. There were no important works under way, yet practically all outdoor workers were absorbed by the normal demands of business.

The enormous fall of snow, over 80 inches, has made lots of work for railroad men keeping the tracks cleared, etc. The Canadian Pacific Railway main line has been kept clear all winter, but difficulty has been encountered on the branch lines.

The Great Northern Railway and the Canadian Northern Railway have had considerable difficulty in operating their roads, the former having been closed to traffic for weeks at a time. The street railway has been unable to recommence its service owing to the snow.

The demand for agricultural labourers and the lack of this help was causing considerable worry to the farmers in the district. It is expected that wages will rule higher than during the past two or three years.

Winnipeg.

Industrial conditions generally did not improve to a very noticeable extent. Not more than 15 per cent of those in the building trades were employed at any period during the month. The new building of the Ford Motor Company was nearing completion. The building is five stories high, and will be used for putting cars together, the parts of which will be brought from Eastern Canada. One hundred and fifty men will be employed, a considerable increase of the present staff. Three hundred men were fully engaged in preparing the erection of a portion of the addition to the Winnipeg store of the T. Eaton Company. The addition will cost five millions of dollars, and will take about eight years to complete.

Engineering and other trades continued to be well employed. The supply of unskilled labour was inclined to exceed the demand.

As a result of a plebiscite on the closing of bars and prohibiting the sale of intoxicating liquor in Manitoba, about 200 hotel employees will be out of work on and after June 1 next.

The amount of grain that passed through Winnipeg during the month was (in bushels) as follows: wheat, 22,843,200; oats, 6,154,400; barley, 8,627,850; flax, 2,357,500.

The civic free employment bureau has filled positions for 530 men.

SASKATCHEWAN.**Moose Jaw.**

The most pressing problem that the west has had to solve for several years is the securing of sufficient labour to put in the crops, do the summer-fallow and take off the crops in the fall.

Farmers were endeavouring to hire men for the entire season and were offering exceptionally high wages. The supply of men has fallen to one-half. In addition the class of men seeking work is below the standard, the men in most

cases being below the usual farm labourer physically and lacking experience in farm work.

The mild weather of the past week has started the snow melting and the land was gradually getting uncovered. As the snow was deep the past winter it will take a considerable time to dry the land enough for seeding operations to begin. In this district very little work will be done until April 15. However, the intervening time will be taken up with overhauling machinery and getting the seed cleaned.

Prince Albert.

Labour conditions were practically identical with those of previous month, the lumber and fuel camps employing any available men. The end of the present month will see the breaking up of the lumber camps and several thousand men will be released. The local mills will start up just as soon as the ice is out of the river, and will employ as many men as possible in view of a good demand for lumber on the prairie and the replenishing of depleted stocks in the lumber yards.

Generally speaking, the men working in the woods have had a good season and have been employed for a much longer period than during the previous winter, not a few having been at work for over five months continuously.

Trade in general was rather dull and little improvement was looked for.

The railroads were much the same as last month as regards transportation. continued snowstorms making operations very difficult.

There was little demand for farm help, and what help may be needed it was expected could be supplied locally.

The lumber industry promises a busy season, the companies operating figure on retaining as many of their men from the camps now breaking up as possible to work in the mills.

Fishing has been fair during the winter, and the lumber camps have taken over a good deal of the catch.

Regina.

Unskilled labour has been well employed, heavy snow storms having been responsible for the large amount of work in clearing the tracks of the railways and street car systems throughout the district.

The Imperial Oil Company has commenced work on its refineries and was employing about 150 men, including rivetters, boilermakers, helpers, carpenters and labourers.

Railway traffic has been fair. The Canadian Pacific Railway reported passenger traffic improving, with many inquiries regarding bringing in friends and relatives from the old country.

The Consolidated Rubber Company of Canada, which some time ago purchased property from the city in the warehouse district, under an agreement to construct a \$40,000 building on the property, has had its agreement revised by the City Council, and is to build a \$25,000 building this year.

Saskatoon.

There has been very little relief work necessary this winter, in fact less than for the last several years. The heavy yield of last year's crop in districts tributary to Saskatoon helped Saskatoon business, especially the wholesale trade.

There has been more or less repair work going on all winter. The heavy snow has caused many men to be used clearing the streets, and the street railway and the Grand Trunk Pacific have been carrying larger section crews than a year ago.

Farmers have been picking up men right along and offering large wages compared with other years.

A steady winter has been experienced in the northern lumber woods.

ALBERTA.**Calgary.**

Labour conditions were about the same as in the preceding month, there being very little demand for any labour

other than farm help, and this demand has been limited owing to the fact that the weather has not been at all suitable to the farmers. It is generally conceded that there will be a shortage of farm labour in this district, and probably a larger number of men will be required as a less amount of fall ploughing was done than in previous years.

The City Council has decided to expend \$250,000 to complete a bridge which has been under construction for some time. Work has already commenced and it was expected that about 100 men would be employed by the first of the month.

There was no movement in the building trades. Wholesale and retail merchants report continued improvement in their business.

The secretary of the Hospitals Commission reports that to March 16 there were 314 listed in the homes for returned soldiers in the province. Employment had been found for 181 men. There were many requests for farm labour, but the men were not all physically fit for that work.

The Associated Charities report giving relief to 94 British and 17 foreign families for the month.

Edmonton.

Labour conditions in the city remained about the same as in the two previous months, but opportunities of employment at farm work increased as the month advanced. While the weather conditions did not indicate an early spring, many farmers were engaging their help much earlier than in former years, fearing a shortage of experienced men. In other lines there was little or no demand for labour and it was thought that with proper distribution the supply would meet the requirements of the farmers of the district and leave a surplus for outside points. East along the Saskatchewan border the demand was brisk, and the superintendent of the municipal employment bureau reported shipping men out in some cases more

than 300 miles. Recruiting for ten different battalions during the last month has absorbed a large portion of the surplus labour supply and conditions as to numbers were much changed as compared with the corresponding period a year ago or even at the first of the present year.

Wholesalers report increased sales of dry goods, clothing, groceries and hardware. Retailers reported a fair demand for almost all kinds of staple commodities, while settled weather was expected to bring further improvement.

Considerable activity was displayed by farmers in making the necessary preparations for the spring work. Farm machinery dealers had a good month.

Coal miners were less active than the previous month, although the demand for coal was fair.

Lethbridge.

Employment in March was not so good as during February. The coal mines were not getting so many orders and were working about half time, so that many of the miners were idle.

There was very little work being done on farms, but some men were being hired. The weather has been unsettled but at the end of the month there was quite a demand for farm help.

Female help in the city and district was in great demand. About 25 persons could have been placed, but there were none on hand. This applies more particularly to cooks on farms.

Wholesale and retail trade remained steady. Shipments of wheat continued.

Farmers were getting ready for seed time. Help was expected to be scarce, although there were many idle but inexperienced men. Teamsters were in demand.

Medicine Hat.

Labour was very well employed and all local industries reported a fairly good month's work.

The demand for farm help will probably be greater than the supply this spring owing to the large number of farm helpers enlisting.

The total bank clearings for February amounted to \$1,176,089, compared with \$760,421 for the corresponding month last year.

Customs receipts for February totalled \$3,587.70, as compared with \$3,777.69 for February, 1915.

Business was reported brisk at the Land Office. There were 60 entries: 32 homesteads, 22 pre-emptions, and six purchased homesteads.

Wholesale and retail merchants reported an improvement in business over the previous month.

BRITISH COLUMBIA.

Fernie.

During March there was a slight improvement in some of the industries in so far as labour was employed generally, while in other industries conditions remained practically the same as during February.

There was little change in commercial conditions, although there was a noticeable improvement in railroad freight traffic.

From all quarters in the district reports were being received that activities in the lumbering industry were increasing.

Post and pole dealers, also a branch of the lumbering industry, were also very busy and reported good prices were being offered.

Conditions in the coal mining industry continued to be very satisfactory, although some interruptions in operations occurred during March, owing to car shortage.

Coke manufacturing continues to be very brisk, owing to increasing activity in metaliferous mining in West Kootenay.

Nanaimo.

Conditions in the labour market have not shown much change. The number of miners seeking work has shown an increase owing to one company laying off some men and others returning from the mines in the Northwest owing to slackness in work. The number seeking employment, however, was not so large as during the winter months.

Merchants, wholesale and retail, reported business very quiet.

Sawmills in the district were working steadily, though not to full capacity. Logging camps were beginning to show more activity than for some time past.

The coal mines in the city and district, with one or two exceptions, were operating steadily. There were still a number of miners looking for work in the district.

Nelson.

Some few of the sawmills were starting to operate again, owing to improved demand from the Prairie Provinces. The Cascade mill, which will employ the largest number of men (about 80), was expected to run all summer. The Edgewood mill, which has a crew of 65 men at the mill and about 200 in the woods, began sawing. The company reported a growing demand for lumber.

With the clearing of the line between the Lucky Jim mine and the mill at Rosebery, and the thawing out of these flumes, shipments will continue without interruption in future. The Golden Fawn mine at Sheep Creek has started again.

Kootenay and Boundary mines during February showed an increase of 1,245 tons over shipments during the same period in 1915.

New Westminster.

The labour situation for the greater part of March was much the same as during February, but towards the end of the month some improvement was noticeable.

The Canadian Northern Railway has begun operations at Port Mann, five miles up the river, upwards of 100 men being put to work constructing a turntable, a ferry launch, and in the conversion of two whaling schooners into tug boats for car ferry service. If the company's announced programme is carried out there will be considerable work at Port Mann during the summer. A company engaged in box making is arranging to put on a double shift and run night and day to keep up with orders, largely Australian.

Factories were running full time in most cases, although the sash and door establishments were still slack.

Prince Rupert.

Labour conditions in Prince Rupert were very quiet, with little prospect for betterment during April. Retrenchment is to be followed as far as municipal affairs are concerned. The City Council does not give any promise of any new work being started. Work on public works was at a standstill, and all trades were feeling the general depression.

New schedules are announced for the Alaskan run by steamship companies. The Grand Trunk announce that they will enter the field and run a service in connection with the Grand Trunk Pacific road through to eastern points. This with the increased activity at a number of mining centres gives promise of an improvement in the matter of freight shipments and passenger traffic.

The strike of the fishermen employed by the Vessel Owners' Association of Seattle is being watched with interest by other companies and men employed in that line of trade. A settlement is looked for in a few weeks. In the meantime numbers of the boats, after disposing of their catches in the city, clear for Seattle, where they will await settlement of dispute. The association own 90 vessels, carrying 334 dories and 877 men. The men with few exceptions are members of the Deep Sea Fishermen's Union, successors to the Halibut Fish-

ermen's Union. Prince Rupert is affected from the fact that many of these boats have been making this their port of call, disposing of their catches, purchasing bait and supplies, and in outfitting generally.

The mining industry was giving every evidence of becoming active. Numbers of parties were outfitting in the city and prospectors were bringing in good reports from a number of camps.

With the opening of spring increased activity in lumbering was expected in Prince Rupert district.

Weather conditions and the dispute of the men of one of the larger companies was having the effect of lessening shipments during the latter part of the month.

Vancouver.

The general labour situation showed but little change from the very quiet conditions which have prevailed through the past winter.

Relief was being given by the city to 522 families, in the form of rents, groceries and fuel, and to 127 physically infirm men in the form of meal and bed tickets, at a total monthly cost of \$4,500.

Steps are being taken through the civic relief department to secure cheap transportation from the Canadian Pacific Railway to take men experienced in farm work to the prairies. Three hundred and fifty men have applied for this privilege. The local Trades and Labour Council has protested to the Saskatchewan Government against labourers being brought into that province from the United States while there are men available here.

According to Provincial Government report, about 100,000 people have left British Columbia since the outbreak of war. The skilled mechanics included in that figure were largely building tradesmen.

Customs receipts for February were \$449,571.47, as compared with \$538,821.18 for February, 1915.

A proposal had been put before the Police Commissioners to establish the office of Public Defender, to defend poor prisoners in the city police court, but on grounds of economy the suggestion was left in abeyance.

Fire losses during February were \$5,017, as against \$93,725 for January.

Retail clerks and their employers are seeking to have a weekly half holiday established by law at the present session of the Provincial Legislature.

The new Workmen's Compensation Act, which has been promised by the Provincial Government at this session, is being strenuously opposed by the insurance companies.

The Trades and Labour Council has again protested before the Board of License Commissioners against the employment of Asiatics in hotels.

Large terminal works are projected by the Great Northern and Canadian Northern railway companies. Both are being pressed to proceed by the City Council in order to relieve the unemployed situation.

An outstanding feature of civic affairs is the drastic reduction of the estimates of the several departments, owing to a heavy drop in revenue.

Rents were showing an inclination to fall owing to the large number of vacant houses in the city.

A new shipyard has been established at Port Moody near here. Two new box factories, a leather belting factory, and a concern for the manufacture of pressure valve gauges for pneumatic tires have also been started.

Victoria.

With the coming of spring weather labour conditions have shown improvement in some classes of labour, a number of men having obtained employment at garden work, while others have secured work with farmers. The whaling company has commenced to sign on crews for the whaling vessels, which are expected to leave for the whaling grounds early in April. The logging camps,

which were closed down during the winter months, have, in a number of cases, commenced operations, giving work to a goodly number of men. The shipbuilding yards were busy, two of them running day and night shifts.

The building trades were very dull, a large percentage of the men who were employed at these trades having either enlisted or gone to other parts.

At the annual meeting of the Friendly Help Association it was stated that the total expenditure for the year amounted to \$5,584 for the relief of destitute families. In addition \$1,119 was expended on account of interned aliens, which amount has been refunded by the Dominion Government.

The Dominion Government has commenced the erection of buildings for the

Marine Department on the old Indian Reserve, a wharf having already been built for the accommodation of Government steamers.

The Provincial Legislature was opened March 2. Among the measures to be laid before the House are bills respecting Workmen's Compensation and loans to farmers at a low rate of interest.

Owing to cold, wet weather, farming operations on southern Vancouver Island are from two weeks to a month later than usual this season.

With weather conditions more settled, good progress was being made constructing the breakwater and piers at the outer docks, the number of men employed having been considerably increased.

REPORTS OF WOMEN CORRESPONDENTS.

Montreal.

Female labour has not been affected in any remarkable way during March. Conditions compared favourably with the corresponding month of 1915.

Women stenographers and bookkeepers, who have felt the effects of the war owing to the reducing of hands in offices, have of late been offered vacancies left through men enlisting. In one of the principal banks as many as 20 women clerks were taken on during March.

Milliners and dressmaking establishments have been fairly busy. In retail stores the spring trade has been encouraged by mild weather.

The manufacture of gloves has recently received a new development in Montreal. A factory has been started where a finer grade of gloves will be made than has hitherto been attempted. Some 25 women were employed and were being initiated by experts in the trade.

The toy industry.—The Canadian Handicrafts Guild has decided to hold another contest at which prizes will be offered for the best specimens of hand-

made toys. Anyone wishing to compete may communicate with "Canadian Handicrafts Guild," Room 33, Merchants' Bank Building, corner St. Catherine and University streets, Montreal.

Women's work in connection with the Patriotic Fund has grown owing to the ever-increasing number of men enlisting. Apart from the cashier, accountant and ten stenographers at the central offices, the 150 workers who help do so entirely gratuitously. The social service branch, established some months ago, has been doing very useful work. The visiting housekeeper (see *Labour Gazette*, Dec., 1915, page 694) has given demonstrations in domestic science, bread-making, buying and preparing food, sanitation and other matters. Many families are also helped with their sewing, the housekeeper gives instructions and directs the work when necessary. Red Cross war clubs have been started and much interest is shown by the women.

Women on School Boards.—Unanimous support was given by the Trades

and Labour Council at a recent meeting to the movement on foot to allow women to serve on school boards. The Protestant Board of School Commissioners, on the 8th inst., ruled as follows regarding the same question: "We declare ourselves in favour of such an alteration in the general law of the province as will make it permissible for women to become members of all public school boards."

Hygiene.—The Montreal Publicity Association has decided to hold a cleaning-up campaign under the direction of a special committee. A contest is to be established among school children as to who will keep yards, lanes and front plots adjacent to their homes in a suitable condition. Prizes will be awarded later.

Technical education. — The closing exercises of the present season were held in the Commercial and Technical High School at the beginning of March. Attendance at the evening classes has been more regular, but, owing to the war, smaller.

Forty-five classes, with 887 members, were held this season, as against 69 classes and 1,425 pupils last year.

The enrolment for the classes given specially for women was large. For cooking 11 classes were held and the enrolment was 211. Sewing and dress-making, eight classes; enrolment, 137. Millinery, four classes; enrolment, 110.

Toronto.

The advertising pages of the daily papers give a fair idea of the amount of employment available in offices and factories in Toronto. For the greater part of the month there have been seven full length columns of "Wanted—Female Help," three of these for domestics and four for factory and office help. The fact that many women and girls who entered domestic service during the period of depression have been returning to their previous occupations, in addition to the fact that no domestics

have been coming to Canada from England, will account for the extra demand for domestics. The two chief causes for the shortage in office and factory help are the numbers of men from these who have enlisted and whose places are to be filled by women, and the numbers of women, usually the most experienced operators, etc., who are marrying soldiers. As a rule it is the lack of help that is responsible for so much night work, and not that the factories are unusually busy. In many cases an increase in wages paid has been reported.

Employment for shoe workers has been exceptionally steady for the past few months, due largely to army orders.

All whitewear firms were busy and advertising for help, especially experienced operators.

In spite of night work the various biscuit factories have not been able to keep pace with their orders.

Knitting mills, paper box factories, candy factories, garment workers and laundries have been working from one to five nights a week, and a soap company every night till nine o'clock.

The Bias Corset Company has closed its factory temporarily. From 35 to 50 girls had been employed there. Dissatisfaction among some of these over hours and wages paid resulted in the closing of the factory, which will be re-organized and opened in a few weeks.

Winnipeg.

Demand for female labour was much in excess of the record of one year ago, owing to vacancies occasioned by recruiting being offered to young women in offices and stores, and to the increase in business in the stores over the same period last year. One large concern reported an increase of 1,000 over the number of hands employed a year ago.

Garment makers were busily engaged on war contracts, working full time with increasing staffs. Bookbinders were slack, and were working with reduced staff and short hours. Otherwise factory help was fairly well employed. The

agencies state they can always fill vacancies in this class of employment.

The domestic problem seems to be increasing. Of 175 positions reported at the Winnipeg Free Employment Bureau, only 37 could be filled by the Bureau during February.

Stenographers were in demand, and many good openings were being offered. It seems difficult to secure experienced stenographers. Some offices offering permanent positions at low salaries were finding difficulty in securing stenographers.

Bookkeepers and office girls are finding employment to take the place of men enlisting. The Business Girls' Club of the Young Women's Christian Association has started a course of instruction for the purpose of enabling the girls to make themselves efficient in the new lines of work they desire to follow. The course will consist of ten lectures, which will include principles of efficient handwriting, the study of banking methods, correspondence, handling complaints, memory training, and profits.

A bureau has been opened for the registration of such girls and women as are willing to take up men's labours.

Milliners were busy, also dressmakers. Telephone girls have been increasingly employed since New Year's.

Nurses were finding cases of longer duration than in the earlier months of the war. The number on the registry at the end of the month was 20. School teachers were well employed.

The T. Eaton Company, Limited, has opened a home where young lady employees of the company are offered most comfortable quarters. As the accommodation is limited, only a small percentage of their staff will be able to take advantage of the home in a permanent way, but the rest rooms are available to all at noon hours and each evening until ten.

Vancouver.

The slight improvement in labour conditions noted in February was maintained during the past month, and an

increased demand for workers in trades where the season was just commencing was apparent.

A decrease in the supply of domestic help made some difficulty in filling all positions offered, but it was considered by some that conditions were not such as to justify the importation of women labour and objection was made in various organizations to the proposal of the Salvation Army for bringing "war" widows from Britain to this province.

The report of the City Relief Officer for Vancouver shows that over 100 widows and deserted wives depend for support upon the city relief, owing to inability to obtain employment of a nature that their circumstances make it possible for them to accept.

Several local banks have filled vacancies made by the enlistment of their male clerks by employing women on work done hitherto by male clerks.

The question of a weekly half holiday for retail employees was brought before the public during the past month, both employers and employees taking steps to secure provincial legislation thereon.

In particular employments, reports show that while the demand for domestic help has not increased, a falling off of the supply has made somewhat difficult the filling of positions offered, while a slight increase in the wage offered was noted, the average being between \$15 and \$22 per month for general domestic help.

The report of the Free Civic Employment Bureau for Women shows:

	Registered.	Placed.
General help	11	27
Housekeepers	4	9
Nursemaids	2	4
Day work	2	20
Waitresses	1	1
Chambermaids	1	..
Nurses	1	2
Companion help	2	2
Cooks	2	..
Laundress	1
Stenographer	1
Dressmaker	1	1
	27	68
	—	—

Only 27 new applicants registered during the month, the remainder placed in positions were on the books at the beginning of the month. Comparison with the previous month shows that the demand has not increased, the registrations were less.

Garment workers were fully occupied, and the opening of the spring season caused increased activity in other needle-work trades, such as dressmaking, millinery and tailoring, and although the demand for sales clerks, laundry workers, boot and shoe workers and candy workers did not increase, those employed were fully occupied.

The demand for office assistants and stenographers remained very small, a number of each seeking and not obtaining employment; some remained unem-

ployed; others sought and accepted other lines of work temporarily.

Trained nurses were not fully occupied in spite of the fact that a number have left the city to take up work with the Red Cross Society in Britain and France.

The Graduate Nurses Association executive officers were actively engaged during the month making arrangements to obtain the enactment by the provincial legislature at this session of the "Registered Nurses Bill." The bill contemplates the establishment of a standard of efficiency, upon the attainment of which a nurse may use the abbreviation of "R.G.N." after her name. The object of the bill is to give to the Graduate Nurses Association of British Columbia the control and regulation of the nursing profession in this province.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907. — PROCEEDINGS DURING MARCH, 1916.

REFERENCE was made in the March number of the *Labour Gazette* to an application received from the employees of the Toronto, Hamilton and Buffalo Railway Company in the locomotive and car department for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, to deal with a dispute between these workmen and the employing company, growing out of the employees' demand for a schedule of agreement providing for increased

wages, reduction of working hours and improved conditions of employment.

A Board was established on March 13, Messrs. James Simpson, of Toronto, and George S. Kerr, K.C., of Hamilton, being appointed members thereof on the nomination of the employees and of the employing company respectively. The Board was completed on March 28 by the appointment of His Honour Judge Colin G. Snider, of Hamilton, as chairman. This appointment was made by the Minister in the absence of any joint recommendation from the other Board members.

REPORT OF BOARD IN DISPUTE BETWEEN CORPORATION OF EDMONTON AND STREET RAILWAY EMPLOYEES.

THE report was received on March 11 of the Board of Conciliation and Investigation which had been established to deal with a dispute between the Corporation of Edmonton and its street railway employees, members of Local No. 569 of the Amalgamated Association of Street and Electric Railway Employees of America. The report was signed by all three members and was accompanied by a signed agreement between the civic authorities and the employees' organization disposing of the various points at issue.

The Board in this matter was established at the employees' instance on November 17, Messrs. J. E. Wallbridge, K.C., and William MacAdams, both of Edmonton, being appointed members thereof on the nomination of the Corporation of Edmonton and of the employees respectively. The Honourable Mr. Justice McCarthy, of Edmonton, was appointed as chairman on December 4 on the joint recommendation of the other Board members. On account of his inability to act in this capacity, Mr. Frank Ford, K.C., of Edmonton, was appointed on December 20 in his place on Messrs. Wallbridge and MacAdams' recommendation.

Report of Board.

The text of the Board report and of the agreement between the parties is as follows:

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Corpora-

tion of Edmonton (employer) and its street railway employees, being members of Local Number 569, Amalgamated Association of Street and Electric Railway Employees of America.

All questions dealt with in the reference to us having been adjusted by a settlement arrived at between the parties, except the matter arising out of the dismissal of W. H. Clark, motorman, the cause of the dismissal being that, while running his car on the nineteenth day of December, 1915, he ran into or had a rear end collision with another car; this matter having been left to be adjusted by us as a Board of Arbitration under an agreement entered into between the City of Edmonton and the Association.

It is unnecessary to state the evidence which was given before us in view of the decision which we have arrived at.

We are of the opinion that the superintendent or traffic manager, Mr. Moir, was, in view of the serious consequences which might have arisen from such an accident, justified in dismissing Clark. It is possible, however, that had the evidence, as it was brought out before us, been available to the superintendent, he might have been justified in taking a more lenient view.

As all the other matters of dispute have been amicably settled, we are disposed to meet this case in the same spirit of compromise and find that the interests of justice will be fully met by relieving Clark from the dismissal and substituting for such dismissal a suspension from the date of the accident to the end of the present month, namely the thirty-first of January, 1916.

We do not consider that it is open to us to make any suggestion as to the policy to be followed in future by the superintendent, but think it wise to state that the ruling made by us on this reference should not be taken in any sense as a precedent which should govern future cases.

We find that Clark should be re-instated on the first day of February, 1916.

Dated at Edmonton, Alberta, this twenty-eighth day of January, 1916.

(Signed) FRANK FORD.

(Signed) WILLIAM MACADAMS.

(Signed) J. E. WALLBRIDGE.

AGREEMENT entered into this twentieth day of January, 1916, between the Committee of Council, on behalf of the City of Edmonton, and Messrs. Hoover, Clark and Ward, the committee representing the Amalgamated Association of Street and Electrical Railway Employees of America, Local Division No. 569.

It is agreed between us to accept the following settlement of the matters in dispute:

1. That the agreement between the City of Edmonton and Local Division No. 569, entered into on the thirty-first day of August, 1915, be amended by adding to clause three the following paragraphs:

"When it is necessary to curtail expenses by laying off workmen in any branch of the trades, the last man employed will be laid off first, and so on. When employing a man for service in

any of the respective trades, the man last laid off in that particular branch of trade, if available, will be given preference of employment, and a man shall not be considered a new man in re-starting.

"Where men in the car barns have been advanced to any positions, and in case such men are affected through a reduction of force, they shall be reduced to the position and rank from which last advanced in preference to being laid off.

"Seniority list to be available to the Association."

2. That Herbert Ward remain in the position he now occupies.

3. That Ernest Ward be placed as car repairer in his order of seniority on the day shift.

4. That G. Davis, who was laid off, be discharged.

5. That H. Meyers, who has been re-instated, be retained in the service.

6. That A. Collier be given his position on his return from active service.

7. That F. J. Knight be placed on the spare list of motormen and conductors.

8. That the award of the Board of Conciliation sitting as a Board of Arbitration in the case of W. H. Clark be binding on both parties.

Signed on behalf of the Committee of Council:

(Signed) R. N. FRITH,

Chairman.

Signed on behalf of the Amalgamated Association of Street and Electrical Railway Employees of America, Local Division No. 569:

(Signed) F. A. HOOVER.

INDUSTRIAL TRAINING AND TECHNICAL EDUCATION.

Statement by the Minister of Labour During a Debate in Parliament.—The Minister's Correspondence with Provincial Governments.

A DEBATE of much interest and importance occurred in Parliament on Monday, March 27, on the subject of technical education. The Honourable Rodolphe Lemieux, former Minister of Labour, moved the following resolution:

"That, in the opinion of this House, measures should be taken at the earliest opportunity to give effect to the report on technical education."

Mr. Lemieux spoke at considerable length in support of the resolution, discussing in some detail the recommendations of the Royal Commission on Industrial Training and Technical Education and strongly urging the adoption of these recommendations. Touching the matter of jurisdiction, Mr. Lemieux remarked that, while education undoubtedly fell within the sphere of the provinces, this did not prevent the Dominion co-operating with the provinces in industrial training as in other matters, and the Dominion, he urged, should make grants for industrial training on the lines recommended by the Commission. "When one reads the report," said the Honourable Mr. Lemieux, "and the conclusions, it is easy to gather the idea that no encroachment is made on provincial autonomy; that, although the Dominion Government aids by means of annual subsidies to the amount of \$3,350,000, yet the provincial jurisdiction over technical education is not lost and not encroached upon."

Statement by Minister of Labour.

The Honourable T. W. Crothers, Minister of Labour, made the following statement in reply:

I very cordially endorse every word that has been uttered by the hon. member for Rouville (Mr. Lemieux) concerning the advantages that would accrue to this country from a thorough and well-diffused system of technical education and industrial training. It seems to me that it requires no elaborate argument to make it clear that scientific knowledge of the properties of raw materials and a practical familiarity with the various processes of manufacture are essential to skilled workmen; that they increase efficiency, enlarge output, and improve quality. Other things being equal, knowledge and experience always triumph over ignorance and inexperience. The skilled workman commands the largest wage and produces the largest, finest and most valuable output. That is true in every walk and calling of life, whether it be that of farmer, artisan, merchant, chemist, or professor. As technical education and industrial training increase the worth and influence of the individual, so they enlighten the community and enrich and strengthen the State. These are mere truisms readily accepted by every thinking man. So that it seems to me that the question before us is not whether technical education and industrial training are desirable—indeed, are of the highest national importance, and should be brought within the reach of every youth in the land—but rather how best can these advantages be placed before them. The Government is quite alive to the importance of practical as well as cultural education, and realizes that inestimable advantages would accrue to Canada had every youth an opportunity of acquiring technical education and training in the particular vocation

chosen for his or her life work. Especially, I think, do we owe it to the mechanic, the artisan, and other wage earners, to provide them an opportunity to qualify themselves for larger earning power and to take a more prominent and influential place in the various activities in which our people are engaged. Mr. Speaker, I assure the House that ample arrangements are being made and will be made to provide facilities for disabled returning soldiers, in all suitable cases, to secure a training, and to be enabled, so far as possible, to maintain themselves in independence and self-respect. The motion brought before the House by the hon. member for Rouville calls upon us to give effect at the earliest opportunity to the scheme set forth in the report made by the Commission on Technical Education and Industrial Training. Important as we regard this work from a national viewpoint, and desirous as we are to see it extended and more vigorously prosecuted, we are unwilling, at least at the present time, to accept this motion, for the following among other reasons:

The Commission on Technical Education were not authorized or requested or invited to make any recommendations or to express any opinions as a basis for any action by this Parliament. The Provincial Legislatures, to which, by our constitution, the subject of education is exclusively assigned, have not expressed their approval of the scheme recommended in the report, and I believe, in many instances at least, do not approve of it. The scheme itself is very elaborate and would, I believe, prove impracticable and unsatisfactory.

A few years ago, as my hon. friend has said, the hon. member for South Wellington (Mr. Guthrie) brought this matter very clearly before the members of this House. The position taken by the Government of that day, of which my hon. friend from Rouville (Mr. Lemieux) was a member—and in stating their position I have no desire to find fault, but simply to state to the House,

as a fact, the position then taken—as expressed by my predecessor, the then Minister of Labour, is to be found in the Hansard of December 6, 1909. Speaking on the resolution presented by my hon. friend from South Wellington, which was to the effect, in substance, that a commission should be appointed to inquire into the needs of Canada, and also to devise ways and means for meeting those needs, my predecessor said:

The resolution asks only for a commission to inquire into the needs of this country. It suggests, however, that the commission should also report of ways and means. * * * * All of this raises a question which has been debated many times in this House, and one which we cannot consider too carefully—whether or not the good which might be done by the appointment of a body by this Government to further the work of technical education might not be in part undone by the mischief which the appointment of such a body might create were the motives and purposes of this Government in establishing such a commission not fully apprehended and understood. The hon. member for South Wellington has said that communications have already been received to the effect that there would be no objection on the part of the provinces to such a course. Well, Sir, it seems to me that before the Dominion Government should take the step suggested in the resolution there should be something more than this negative attitude on the part of the provinces. It should not be a case of no objection, but a case of an earnestly expressed desire which the Government should be asked to listen to. I think the risk should not be run of raising a great constitutional question in a matter of such great national importance until at least the exact position of this Government with regard to this question is fully and rightly understood by the different provinces and by the people in the country. To my mind the section of the British North America Act which says that “the legislature may exclusively make laws in relation to education,” undoubtedly gives to the provinces the right of legislation in all matters respecting education, and if this Parliament were to attempt to legislate on matters affecting education, as set forth in this section, I think this Parliament would be going beyond the powers which are given to it in the British North America Act.

Mr. Louis Lavergne, a prominent member of this House at that time, the representative of Drummond and Arthabasca, now a member of the Senate, used these words:

We know that everything relating to education is under the jurisdiction of the local governments, and for my part I would like the authority to remain vested with these governments. I do not want the Federal Government to interfere later on with our education affairs.

Just now we are secure from all danger with regard to education. I am anxious to keep for my province its self-government in its integrity, and I believe that all the other provinces are anxious also to preserve their autonomy. I would not, therefore, let anybody infringe upon it.

We have heard so much talk about the question of separate schools that we should not desire that matter to be brought up again. Our system is perfectly good, and I confess that I am against that motion if it is intended to deprive us of our rights with regard to education. If, on the contrary, the question is for the Federal Government to interfere only in order to give moneys with a view to assist provinces in the establishment of technical schools, I shall approve the motion, provided the moneys be given to the provincial governments and they have the right to control the appropriation of the funds and to manage them as they think proper, but not otherwise.

I think this motion is actually dangerous, because if it were adopted we in favour of separate schools would find ourselves, later on, in a very bad position.

As I have already said, if I were obliged to vote on the merits of this proposition, I would vote against it. But as the question is on the adjournment of the debate, I am in favour of this latter motion.

The motion to adjourn the debate was carried, and nothing further was done during that session. That was in December, 1909. Later on in the same month the Government appear to have thought favourably of the appointment of a commission to gather information only, but, before risking even that step, they thought it prudent to consult with the various provincial premiers to ascertain whether or not there was any objection to the appointment of a commission to gather information solely, and that was the only object of appointing that commission. This is the letter that was sent to the various provincial premiers:

Minister of Labour, Canada,

Ottawa, December 13, 1909.

Dear Sir,—The Dominion Government is considering the advisability of appointing a Royal Commission to inquire into the needs and pre-

sent equipment of the Dominion as respects industrial training and technical education, and into the systems and methods of technical instruction obtaining in other countries, particularly in Great Britain, France, Germany, and the United States. It is intended that the commission shall be solely for the purpose of gathering information, the information, when obtained, to be published in a suitable report to be at the disposal of the provinces and available for general distribution.

Hon. members will notice the emphasis placed upon that:

It is intended that the commission shall be solely for the purpose of gathering information, the information, when obtained, to be published in a suitable report to be at the disposal of the provinces and available for general distribution.

No invitation for any recommendations or any opinions, but an emphatic statement that it is proposed to appoint a commission to gather information for the benefit of the provinces. That was the position taken by this Government in writing the premiers of the various provinces:

This letter continues:

I may say that the view of the government is that a commission of the kind suggested might render valuable services to the Dominion as a whole, since it would be in a position to conduct an inquiry on a wider and more comprehensive scale than might be considered desirable or possible in the case of the different provinces, and which if undertaken by the provinces individually must lead inevitably to the duplication and reduplication of energy and expense.

It is recognized, however, that the work of such a commission, to be of national service, should have the hearty endorsement of the governments of the several provinces of the Dominion, and I am, therefore, writing to ask if the appointment by the federal authorities of a commission of the character and scope suggested.

Merely to gather information for the benefit of the provinces.

Would meet with the approval of your government, and to inquire, in particular, inasmuch as some doubt has been expressed on the point, whether exception to such a course would be taken on any ground of jurisdiction.

Yours faithfully,

(Sgd.) W. L. Mackenzie King.

That was the letter which went forward to each of the nine Prime Ministers.

The then Prime Minister of New Brunswick, my hon. friend who is now Minister of Marine and Fisheries, replied on December 16, as follows:

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I beg to acknowledge receipt of your favour of the 13th instant, informing me that the Dominion Government is considering the advisability of appointing a royal commission to inquire into the needs and present equipment of the Dominion as regards industrial training and technical education, and into the system of methods of technical instruction prevailing in other countries, specially in Great Britain, France, Germany and the United States.

I entirely agree with the view of the government to the effect that a commission of this kind might render valuable service to the Dominion as a whole, and I have no hesitation in saying that the appointment by the federal authorities of a commission of the character and scope—

To gather information merely.

—suggested in your letter would meet with the approval of my government and no exception would be taken to such a course on any ground of jurisdiction.

Yours very truly,

(Sgd.) J. D. Hazen.

On the same date the late Sir J. P. Whitney, Prime Minister of Ontario, wrote:

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I have your letter of the 13th instant.

I understand the object of the proposed commission, to inquire into the needs and present equipment of the Dominion as respect training and technical education, and into the system of methods for technical instruction obtaining in other countries, will be solely for the purpose of gathering information. This being so, I see no objection to the creation of the commission, and no exception will be taken to it on the part of the province of Ontario.

Yours very truly,

(Sgd.) J. P. Whitney.

On the same date, this letter was written by the then Prime Minister of Manitoba:

Winnipeg, December 16, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Sir,—I have the honour to acknowledge receipt of yours under date of December 13th, regarding the advisability of appointing a royal commission to inquire into the industrial training and technical education of Canada.

I appreciate the fact that education is a matter under the constitution entirely vested in the provinces and realize that it is a delicate question on which to give advice such as you solicit.

The matter is an important one and I think, in view of the rapid strides along industrial lines that the Canadian people are making, there is necessity for more attention being given to technical education than what has been the practice or custom in the past.

I shall certainly be pleased to see more interest taken in this matter and our young men better qualified for the opportunities that are offered along industrial lines by having a first-class technical education to qualify them for the responsible and important position that are awaiting men of that quality.

I have the honour to be, sir,

Your obedient servant,

(Sgd.) R. P. Roblin.

The Prime Minister of Prince Edward Island wrote on 18th December:

Charlottetown, December 18, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I beg to acknowledge receipt of your letter of the 13th instant regarding the advisability of the Dominion Government appointing a royal commission to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education and into the systems and methods of technical education obtaining in other countries, etc., with the request that the matter should be considered and approved of by the government of this province, and whether exception to such a course would be taken on the grounds of jurisdiction.

In reply I beg to say that your proposal meets with the approval of our government, and I wish to assure you that no exception will be taken upon the grounds of jurisdiction. We believe it would be in the interests of the

country at large that such a commission should be appointed, and that all possible information be obtained upon a subject of so much importance.

Yours faithfully,
(Sgd.) F. L. Haszard.

On 21st December, 1909, the Prime Minister of Saskatchewan wrote:

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Mr. King,—I have duly received your letter of December 13 on the subject of technical education and the proposal now under consideration by your government for instituting an inquiry by a royal commission and which asks whether the proposal meets with the approval of the Saskatchewan government and whether any exception would be taken by us on the ground of jurisdiction.

I may very readily state that the Saskatchewan government will raise no objection against the proposed inquiry by the Dominion government on any grounds; on the contrary we believe that the federal government is the proper authority to proceed in the matter in the way proposed, that it is a subject which can be more efficiently, economically and effectively dealt with by the central government than by the various provincial governments; and, in addition that, inasmuch as industrial training and technical instruction intimately affect trade and commerce, these branches of education ought to be viewed from the national rather than from the provincial standpoint.

Believe me,

Very sincerely yours,
(Sgd.) Walter Scott.

The Prime Minister of Nova Scotia on the 23rd of the same month wrote the Hon. Mr. King:

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I beg to acknowledge the receipt of your letter of the 13th instant, on the subject of the advisability of appointing a royal commission to inquire into the needs of technical education.

I would be delighted to see such a commission appointed by your government; in fact, I have long advocated such a course being taken and you can accept my assurance that such a course, if adopted, will meet with the hearty approbation of the government of Nova Scotia.

Yours truly,
(Sgd.) G. H. Murray.

On 28th December, on behalf of the Prime Minister of Alberta, the following letter was written to Mr. King:

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I am instructed by the Hon. Premier Rutherford to acknowledge receipt of your letter of the 13th in reference to the advisability of the Dominion Government appointing a royal commission to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education.

I am directed by the Premier to say that this subject meets with the hearty endorsement and approval of his government.

Yours faithfully,
(Sgd.) M. J. Macleod.

The Prime Minister of Quebec wrote to the Hon. Mr. King on 30th December:

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Sir,—I have submitted to my colleagues of the executive council the letter you were kind enough to write to me on the 13th inst., asking me whether the government of the province of Quebec would approve the appointment by the federal authorities of a commission to make an investigation concerning technical instruction in this country.

We are of the opinion, my colleagues and myself, that anything pertaining to public education—whether the subject be special teaching or general teaching—belongs to the provinces exclusively, and I want to write you so, in order that there may be no misunderstanding on that point. As, on the other hand, you give me the assurance that the federal authorities, in instituting a commission of investigation, would simply do it with a view to help the provincial governments by having collected information which they would later on put at the disposal of the latter, we see no objection to the appointment of such a commission.

Please accept, sir, the expression of my highest regard.

(Sgd.) Lomer Gouin,
Prime Minister.

The members of the House will notice how emphatically the Premier of Quebec deals with the question of jurisdiction. On the 15th January, 1910, the then Premier of British Columbia wrote to the Hon. Mr. King:

Dear Sir,—I beg to confirm my telegram to you of January 10, as follows:

Owing to absence of Minister of Education with whom I wished to confer, regret being unable to reply sooner to your favour regarding technical education. He has now returned and an answer will be sent you promptly.

Having since then had an opportunity of consulting with the Minister of Education, I beg to state that the appointment of a commission by the Dominion to inquire into the subject of industrial training and technical instruction meets with the approval of this government.

It is not the intention of the government of this province to take exception to the course you propose on any grounds of jurisdiction.

I might add that this government will gladly afford any facilities in its power to assist in carrying out the object in view.

Yours very truly,

(Sgd.) Richard McBride.

Before the commissioners entered upon their work, and at the time the commission was handed to them, they gathered together in the office of the Minister of Labour. It is only fair to this commission to say that the Order in Council providing for the appointment of the commission went further than this letter to the several premiers. I read the portion of it that is material:

The minister further recommends that the said commissioners be instructed and empowered to pursue their investigations at such localities as may appear necessary, in the Dominion of Canada, in the United Kingdom of Great Britain and Ireland, the United States of America, France, Germany, and subject to the approval of the minister, elsewhere on the continent of Europe; also the purpose of the commission shall be that of gathering information when obtained to be carefully compiled, and together with such recommendations as it may seem expedient to the commission to make, published in a suitable report to be at the disposal of the provinces and available for general distribution.

You will notice that the Order in Council did not restrict the commission to the gathering of information merely, but provided for the making of such recommendations as they might see fit. But it also provided that both opinions and recommendations should be published in a suitable report to be at the disposal of the provinces and available

for distribution generally. Then the Government changed the phraseology a little and set forth in the operative part of the commission that:

And we do hereby require and direct our said commissioners to report to our Minister of Labour the result of their investigations, together with the evidence taken before them, and any opinion they may see fit to express thereon.

As I said a moment ago, when the commission was handed to the chairman of the commission in the office of the Minister of Labour, all the members of the commission being present, they were instructed as follows:

Hon. Mr. King presented the chairman with the commission as signed by the Governor and outlined the work of the body. Owing to the limitations which the constitution imposed, the scope of the commission was necessarily confined to that of gathering information which would subsequently be placed at the disposition of the several provinces.

That is the instruction which was given to all the members of the commission and it was in accordance with the letter which was sent out to the various provincial premiers. It was proposed that this commission should gather information only for the benefit of the several provinces. But, as I said a moment ago, the Order in Council also included recommendations and the commission spoke of any opinions that the commissioners might form. But, in view of the letter that the then Minister of Labour wrote to the various provincial premiers, and the verbal instructions that he gave to the commission when in his office, it is apparent that he intended that their recommendations and opinions should be for the benefit of the provinces and not as laying down the basis for any action on the part of this Parliament. It will be clear, I think, Mr. Speaker, that the various provincial premiers understood that the object and work of this commission should be confined to the gathering of information to be sent to the various provinces for their benefit.

The commission was appointed in June, 1910, and reported early in the year 1914. As soon as the report was completed it was sent out to the various provincial premiers: That was, I think, in the month of May, 1914, only a few months before the war broke out. Then, the four volumes of this report were sent to the provincial premiers accompanied by a letter. As soon as the reports were completed we sent them out with this letter dated March 12, 1914:

My Dear Sir,—

You will perhaps recall communications exchanged in December, 1909, between my predecessor as Minister of Labour and yourself, with reference to the advisability of the appointment by the Dominion Government of a Royal Commission "to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education," etc., my predecessor going on to remark: "It is intended that the commission shall be solely for the purpose of gathering information, the information when obtained to be published in a suitable report to be at the disposal of the provinces and available for general distribution." Letters were similarly exchanged on this subject with the Prime Ministers of the other provinces of Canada. None of the replies received objected to the appointment of the commission, and several contained expressions of cordial approval of the proposed course of action.

The Dominion Government appointed a royal commission in June, 1910, and the commission in due course reported. I deemed it well, before bringing the report formally to your attention, to await receipt of the concluding section (part 17), in view particularly of the fact that this part contains a report of the inquiry of the commission in Canada itself. Copies of this part having been received, the four volumes comprising the report are now sent you, and I should be pleased to receive, as soon as may be possible, an expression of your views as to the general nature of the report, and especially concerning the recommendations contained therein. Any suggestion you may be pleased to make will be submitted to my colleagues, and will receive, you may rest assured, careful consideration.

The earlier volumes of the report have been already forwarded to each member of your government and to many of your leading officers.

Yours faithfully,

(Sgd.) T. W. Crothers.

(A similar letter was addressed to the Prime Ministers of each of the other provinces.)

I am now going to read a few of the replies we got. The first is a letter from the secretary of the late Sir J. P. Whitney, which reads:

Toronto, March 13, 1914.

Dear Sir,—I beg to acknowledge receipt of your letter of March 12, addressed to Sir James Whitney in regard to the Commission on Industrial Training and Technical Education.

In the absence of Sir James Whitney, through illness, I have placed your letter in the hands of the Hon. Mr. Foy, who is acting as Prime Minister.

Yours very truly,

(Sgd.) Horace Wallis,

Secretary.

The Honourable T. W. Crothers,
Minister of Labour,
Ottawa.

Having received no further reply from Sir James Whitney, the Hon. Mr. Foy was written to on the 6th of May:

Re Royal Commission on Industrial Training and Technical Education.

Sir,—Referring to the letter addressed by the Minister of Labour to the Prime Minister of Ontario on March 12 last regarding the report of this commission, a copy of which (comprising four volumes) was expressed to the Prime Minister at that time, an acknowledgement from Sir James Whitney's private secretary mentioned that the matter had been referred to yourself as Acting Premier. I am to say that the Minister of Labour will be obliged if, in the event of your having had an opportunity of examining the report in question and the recommendations contained therein, you would give him the benefit of your conclusions. I enclose for your convenience a copy of the letter sent to Sir James Whitney on March 12 last, and I would add that a complete set of the report was forwarded you a few days ago.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) F. A. Acland,

Deputy Minister of Labour.

The Honourable J. J. Foy,
Acting Premier of Ontario,
Toronto, Ont.

That, as I have said, was written on the 6th of May, and we have never received a reply from that day to this. On March 21, 1914, the Prime Minister of Quebec wrote:

The Honourable T. W. Crothers,
Minister of Labour,
Ottawa.

Dear Mr. Crothers,—I have received your letter of the 12th instant, together with the four volumes of the report of the Royal Commission on Industrial Training and Technical Education. I will not fail to read this report with much pleasure.

Yours very truly,
(Sgd.) Lomer Gouin.

On the 6th of May, 1914, my deputy wrote Sir Lomer Gouin:

Re Royal Commission on Industrial Training
and Technical Education.

Sir,—Referring to the exchange of communications between the Minister of Labour and yourself in March last regarding the report of this commission, a copy of which (comprising four volumes) was expressed you at that time, I am to state that in the event of your having had the opportunity of examining the report and the recommendations contained therein, the minister would be obliged if you would give him the benefit of your conclusions.

I have the honour to be, Sir,
Your obedient servant,
(Sgd.) F. A. Acland,
Deputy Minister of Labour.

Sir Lomer Gouin,
Prime Minister of Quebec,
Quebec, P.Q.

And on May 15, Mr. Acland received the following reply from Mr. Taschereau:

Re Royal Commission on Industrial Training
and Technical Education.

F. A. Acland, Esq.,
Deputy Minister of Labour,
Ottawa.

Sir,—Sir Lomer Gouin has referred to me your letter of the 6th instant, in regard to the above matter. I beg to thank you for the four volumes containing the report of the commission, which you have sent me, and I will at an early date take the opportunity of examining the report and the recommendations there contained.

I have the honour to be, Sir,
Your obedient servant,
(Sgd.) L. A. Taschereau.

There has been nothing further from the Government of Quebec, either from the Prime Minister or any other member

of the Cabinet. The next letter is as follows:

Executive Council, Saskatchewan,
Regina, 17th March, 1914.

Dear Sir,—With reference to your letter of the 12th instant to Hon. Walter Scott in regard to the report of the Royal Commission on Industrial Training and Technical Education, I beg to advise you that the Premier is at present absent from Canada and will be away for several weeks. I shall, however, see that your communication is brought to the attention of the other ministers of the cabinet at the earliest possible date.

Yours truly,
(Sgd.) J. N. McLeod,
Private Secretary.

Hon. T. W. Crothers,
Minister of Labour,
Ottawa, Ont.

There was nothing further from that Government. The Government of Alberta wrote:

Department of Railways, Alberta,
Edmonton, March 17, 1914.

Dear Sir,—Your letter of March 12 to the honourable the Premier received. He is in the Old Country at present, but on his return your communication will be placed before him for attention.

I have the honour to be, Sir,
Your obedient servant,
(Sgd.) Norman L. Harvey,
Secretary.

Hon. T. W. Crothers,
Minister of Labour,
Ottawa.

There was nothing further from the Government of Alberta. Then we got the following letter from the Premier of Nova Scotia, which went a little more fully into the matter:

Halifax, 26th March, 1914.

Dear Sir,—I beg to acknowledge the receipt of your letter of the 12th instant, and desire to assure you that your communication and the matter contained therein has received the careful consideration of the Government.

We wish to record our high esteem of the exhaustive and illuminating report recently submitted by the Royal Commission appointed by the Dominion Government "to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education," etc.

We have closely examined the recommendations of this commission and see no indication of federal interference with provincial autonomy in education. If the spirit of administration implied in the recommendations of the commission should dominate any plan of assistance for technical education to the provinces on the part of the Dominion we believe we would be assured perfect provincial control of education as guaranteed under the British North America Act.

We believe that the provision of the proper facilities for technical education is one of the most pressing and important questions of the present time in order that the great mass of our people should fit themselves for enlightened, prosperous and efficient lives.

The "efficiency audit" proposed by the commission as applying to Dominion funds which may be granted to the provinces seems to be right and reasonable and in line with the plan already adopted in the distribution of the special grants for improving agriculture from the Dominion Department of Agriculture to the provinces.

We consider the matter of providing pre-vocational work in the public schools a highly necessary and progressive step and believe that our portion of the proposed special grant of \$350,000 a year from the Dominion would not be found more than sufficient to help in meeting this demand.

In the light of our experience in technical education, covering a period of seven years, we think that our portion of the proposed yearly appropriation of \$3,000,000 a year from the national treasury is no greater than necessary to assist in providing adequate facilities for technical education in towns and rural communities in this province.

The slowly increasing revenues of this province are inadequate to make proper provision for the insistent and growing demands of technical education and we would urge the adoption of the recommendations of the Royal Commission on Technical Education and Industrial Education by yourself and your colleagues and action thereon with the least possible delay.

Yours truly,

(Sgd.) G. H. Murray.

Hon. T. W. Crothers,
Minister of Labour
Ottawa.

On March 31, 1914, we got the following from the Premier of Prince Edward Island:

Premier's Office,
Charlottetown, March 31, 1914.

Dear Sir,—

I beg to acknowledge receipt of your letter of the 12th instant referring to the Report of

the Royal Commission appointed by the Dominion Government to inquire into Technical Education.

Owing to the demand made upon my time at present by the session of the House and other urgent questions, I will not be able to examine the report for some time. When I am able to reach it, I will be very glad to give any suggestions that might possibly be of value.

Faithfully yours,

(Sgd.) J. A. Matheson.

Honourable T. W. Crothers,
Minister of Labour,
Ottawa.

On March 31, 1914, we got the following from the Government of the Province of British Columbia:

The Government of the Province of
British Columbia.
Education Office,
Victoria, March 31, 1914.

Hon. T. W. Crothers,
Minister of Labour,
Ottawa, Ont.

Sir,—I beg to acknowledge receipt of your letter of the 12th instant, addressed to the Honourable the Premier of this province, and in reply to state that I have been very much pleased indeed with the report of the Royal Commission on Industrial Training and Technical Education. While, of course, this Department would be pleased to receive its per capita share of the vote of \$350,000 which the Commission suggests should be distributed each year for ten years by the Dominion Government, yet I feel that British Columbia's share of this grant would not be sufficiently large to materially assist in the initiation of this most important work. Our share on a per capita basis would be about \$20,000. I may add that whether the Dominion Government decides to make the suggested grant or not this Government has already taken steps to inaugurate a system of technical training in this province, the sum of \$96,800 having been voted at the last Session of the House for this purpose.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) H. E. Young,

Minister of Education.

He did not appear to have read the report very carefully, for he got the idea that the proposed grant was \$350,000 instead of \$3,350,000. We drew his attention to that in the following letter:

Ottawa, April 6, 1914.

Sir,—I am to acknowledge your communication addressed under date of the 31st ultimo to the Minister of Labour with reference to the report of the Royal Commission on Industrial Training and Technical Education. The Minister has noted carefully your remarks, but thinks perhaps you had not observed the recommendation on page 36 of the first part of the report, in which the commission recommends that "the sum of three million dollars be provided annually for a period of ten years," etc.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) F. A. Acland,
Deputy Minister of Labour.

The Honourable H. E. Young,
Minister of Education,
Victoria, B.C.

On the 13th of May he replied:

Education Office,
Victoria, May 13, 1914.

F. A. Acland, Esq.,
Deputy Minister of Labour,
Ottawa, Ontario.

Sir,—I am in receipt of your letter of the 6th ultimo, and in reply beg to acquaint you that the recommendation of the Royal Commission on Industrial Training and Technical Education, found on page 36 of the first part of the report, did not escape my attention. I did note that the commission recommends that "the sum of three million dollars be provided annually for a period of ten years." I may add that this recommendation has the full support of the Education Department of British Columbia.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) H. E. Young,
Minister of Education.

Mr. Acland wrote to the Prime Minister of New Brunswick on the 27th of April, as follows:

Ottawa, April 27, 1914.

Sir,—I have the honour, by direction, to call your attention to a communication (copy enclosed) addressed, under date of the 12th ultimo, to the Honourable J. K. Flemming, Prime Minister of New Brunswick, referring to the copy of the report of the Royal Commission on Industrial Training and Technical Education being then expressed by the minister's direction to the Honourable Mr. Flem-

ming. No reply to the minister's communication had been received before Mr. Flemming, as it is understood, was granted leave of absence on account of ill health. A further copy of the report is being mailed you under separate cover, and I am to request that you will kindly have the same receive attention, and will, if possible, furnish the minister with an expression of your views as to the general nature of the report, and especially concerning the recommendations contained therein.

I have the honour to be, Sir,

Your obedient servant,

(Sgd.) F. A. Acland,
Deputy Minister of Labour.

The Acting Prime Minister,
Legislative Buildings,
Fredericton, N.B.

On the 30th of April, 1914, Mr. Acland received the following letter in reply:

Fredericton, N.B., April 30, 1914.

F. A. Acland, Esq.,
Deputy Minister of Labour,
Ottawa, Canada.

Dear Sir,—I have your letter of April 27, in which you enclose a copy of a communication addressed, under date of the 12th ultimo, to the Honourable J. K. Flemming, Prime Minister of New Brunswick, referring to the copy of the report of the Royal Commission on Industrial Training and Technical Education, then about to be expressed to the Honourable Mr. Flemming, and in which you further advise me that a second copy of the report is mailed to me under a separate cover.

As soon as the copy of the report arrives I shall be glad to give it my fullest consideration.

Yours sincerely,

(Sgd.) George Clarke,
Acting Prime Minister of New Brunswick.

April 30, 1914, and not a word further said.

On May 6, 1914, not having had any reply from the Premier of Manitoba, my deputy wrote him as follows:

Dear Sir,—The Honourable Mr. Crothers, Minister of Labour, has requested me to remind you of the letter he addressed you under date of March 12, referring to the report of the Royal Commission on Industrial Training and Technical Education, a copy of which, comprising four volumes, was addressed to you on that date. The minister's letter, a copy of which is enclosed, has perhaps escaped your

attention in the press of public matters, but the minister asks me to say that he would be obliged if you could at your earliest convenience give him the benefit of your views on the subject therein discuss d.

On May 11, 1914, we received the following communication, addressed to the Deputy Minister of Labour:

I have your letter of May 6, also copy of the letter of the Honourable Mr. Crothers of March 12, 1914. The volumes of the report of the Royal Commission were received, but I am willing to admit that I have not read them. While interested in industrial training and technical education, yet I have so many other things to engage my attention that I have not so far had the time to read the report, and consequently cannot give my opinion. I presume, however, that the report is one that deals with the matter in a comprehensive and educational way, and, being made by professional men, would scarcely admit of any review by myself that would be of advantage to the department. I shall read the report, however, at my earliest convenience.

That is the last communication that we have from the Premier of Manitoba. These replies, with the exception of one, do not, I think, manifest any burning desire that the recommendations of this commission should be immediately adopted. I am sorry to say that, with one exception, they do not manifest that interest in the subject which I think its merit demands. It is a very important subject, and it does not appear to interest many people as much as it should. I noticed this afternoon, when the hon. member for Rouville was making a very able and eloquent address on this question and pressing its importance on the House, that he had behind him a mere baker's dozen, by actual count. I am afraid, Mr. Speaker, that I cannot congratulate myself on having secured a larger attendance on this side of the House.

The report about which we have been speaking consists of four large volumes, covering 2,350 pages. It contains much information in great detail; it has probably never yet been read throughout by any one. It recommends that this Government should provide annually the sum of \$3,350,000 during a period of ten years, to be distributed among

the nine provinces on the basis of population, to assist them in establishing a system of technical education and industrial training. It recommends an elaborate scheme for carrying out this work, involving the constitution of a Dominion development conference, a Dominion development council, a Dominion development fund, a provincial development commission, a provincial development council, local urban industrial development boards, and local rural development boards—a scheme most complicated, and, I believe, utterly impracticable of execution. Beyond the receipt of these replies of the Provincial Premiers, no official communication has been received from any one of them. This does not indicate, I think, any enthusiastic desire on their part for the adoption of the recommendations contained in this report. I have personal knowledge that several of the provinces strongly object to the adoption of this scheme. Our people are very jealous of provincial rights. Those of us who come from Ontario know that for 15 or 20 years, the two great political parties in that province were quarrelling over a very small matter of provincial rights. Our people are jealous of provincial rights; especially are they extremely sensitive on the question of education, differences concerning which ever since Confederation have retarded the progress of influences tending and intended to strengthen the bonds of unity, friendship and confidence among the chief races and creeds composing our population, and have caused more heart-burnings and enmities than any others. So that it seems to me that it would be extremely unwise to enter on any national scheme of education such as is recommended in this report until we are quite sure that it contains no provision the carrying out of which might by any possibility arouse jealousies, passions, and discords, so much to be deprecated and avoided. In the several provinces much work of this character has already been done, and I am of the opinion that the details in carrying it forward should

be left to them. We cannot be too careful to guard the rights of the provinces exclusively and clearly assigned them by the constitution.

In nearly all the provinces much good work has already been done in this direction, sometimes by municipalities, sometimes by the provincial government. In the city of Toronto they have just completed a technical school at a cost of \$2,000,000, said to be the finest technical school in Canada. They have already secured sites in the city of Toronto for four branches to be built in the outer parts of the city. In the province of Ontario, under the statutes of 1911 and 1913, there are 34 centres where they are imparting technical education. I am not so familiar with the province of Quebec, but I do know that the Government of Quebec is maintaining two excellent technical schools, one at Quebec city, and one at Montreal. The hon. member for Rouville (Mr. Lemieux) gave us some particulars of the work being done there. There are two or three of these schools in the city of Montreal. A conference of leading representatives of all parts of Canada, who were especially interested in this matter of technical education, was held in Toronto in October last, and at that conference the following resolution was adopted:

It is necessary and expedient that financial assistance be rendered by the Dominion to the separate provinces for the service of technical education, as soon as the Government is freed from the pressing problems of the present war.

Some of these schools were erected and maintained by the municipalities and some by the provinces. I am free to admit that the provinces and the municipalities are perhaps to a certain extent handicapped for want of finances. I feel as keenly as any one can the importance of placing within the reach of every boy or girl in Canada an opportunity of becoming expert in the vocation chosen as a life work; and it is of the utmost importance, not only to the individual but to the nation as a whole, that such opportunity should be afford-

ed the rising generation, not only in respect of cultural education but of technical education as well. I think that the time will come when Canada should aid the provinces in this matter, but I do not think it has arrived yet. I said a few days ago that I thought we should concentrate our efforts to bringing about a successful issue to this war. That is the main thing at the present time. I do not think that we have three or four millions to spend in this manner now. I believe with this conference held in Toronto, that this matter should be allowed to stand until the war is over.

I have here reports from representatives of each of the provinces, except British Columbia, as to the condition of technical education and industrial training in their respective provinces. I shall not read it all, but there are some passages which I wish to place before the House. But before doing so, may I say, and emphatically as I can, that I do not believe in entering into any partnership with any Provincial Government in this country touching this matter of technical education. I believe that if we are to contribute anything to the Provincial Governments we should contribute a certain sum of money, with a general understanding that it is to be expended in this manner, without our entering into any details concerning the expenditure. That may seem unconstitutional, and it may be said that if we pay money we should have inspectors to go into the various schools to ascertain how they are conducted, and have a joint Dominion and Provincial Commission to control the courses of study. I do not believe that is practical and feel that it would lead us into endless difficulties—and we want to avoid difficulties of that kind. We have had difficulties enough in this country over education, and I do not want to do anything that by any possibility would arouse any feeling that would be detrimental to all parts of the country.

When the time comes to make any contributions we should not hand the money over to the municipal or provincial

schools, but make grants to the provinces, the schools to be managed and the money expended by the provinces, without interference on our part. We should give it on faith, with a general understanding that the money is to be used for the purposes intended.

The first quotation I have to make from this report is from Professor Sexton, of Nova Scotia, who has given great attention to this matter, and is an enthusiast in favour of it. Professor Sexton says:

But from the standpoint of expediency, I think it better to go on as at the present till the war is over; then turn to the Dominion Government and perhaps to our Provincial Government for more generous support.

I have here a quotation from the representative of New Brunswick, Mr. Fletcher Peacock:

We want technical education; how is it to be brought about? That is the situation. New Brunswick is trying to lay the foundations for technical education in her public schools. For seven years all teachers attending the Normal Schools have been given primary handwork in plasticine, paper, cardboard, etc., up to and through the fifth grade. In the towns or centres of the provinces manual training and domestic science are carried on through grade eight. Agriculture receives considerable attention in our schools, short courses being given at various centres, and the women's institutes are doing work in domestic science. Evening schools in St. John and Fredericton are doing a little industrial training. The provincial authorities feel that they cannot afford to experiment and they are awaiting results in other provinces before committing themselves to a definite project for technical education.

For Quebec, Dr. Parmelee says:

The municipalities have not taken up this work as Toronto has done, and nearly the whole of the technical work in the province, except that of the Protestant School Commissioners, has been left to the Provincial Government, which carries on those two large schools at its own expense and the present Government is frankly, honestly and repeatedly committed to the policy of building technical schools as fast as the present ones become crowded.

If federal grants are given they will not be sufficient for the whole work; neither will provincial grants, nor the efforts of individual municipalities, but if the growth of this ques-

tion is to be proportioned to the demands upon us in the next few years the work must be done by a long, strong, united effort. As to federal aid, no constitutional reason exists why the provinces should not accept, or even ask for it. The reasons for such aid are those that were advanced when the provinces some years ago asked for increased federal subsidy. If we put forward a demand for a truly national object it would probably be listened to; but if that assistance is given it will have to be given as one takes religion—on faith. Speaking personally, he would rather do any one job himself than have anybody associated with him, provided he could get incidental advice. To put it in another way: The moment you begin to multiply organizations and your limits of control and authority and support are not clearly defined, you get inefficiency within the administration. Therefore if grants are given from the federal chest it must be on the understanding that all the money will be used for technical purposes and nothing else; and the Federal Government may be free to say at any time, "We do not believe you are making the best possible use of this money; we are not administering it, but we criticise its use, and if you do not use it better we will withdraw it." He did not know what view the federal ministers would take on that question, but he knew that they imposed no new conditions when they granted increased subsidies to the different provinces; they simply recognized that they owed a very largely increased debt to the provinces on account of their increased revenue, and they gave the increase. That forms a reasonable precedent, and we might suppose that the money would be given on those terms.

Not, as suggested in these recommendations, that there should be any partnership about it. You could hardly imagine two or three commissions working together for any length of time without having dissensions, and I can see in the adoption of these recommendations the germs of endless trouble.

From Manitoba:

Dr. Fletcher referred to the Manitoba Commission on Technical Education, whose report is now being acted on. Like other provinces they are handicapped by lack of the sinews of war. Some four years ago Winnipeg opened two technical high schools—though manual training high schools would probably be a more fitting term—which can take 1,200 day students. These gave boys an insight into local industries, and girls receive a very thorough course with excellent equipment in textiles; laundry, cookery, etc.

He referred to the practical three year art course for a girl which fits her for earning her living and also prepares her for making a home. Mothers are delighted with this course, and this year 300 girls will enter it. Evening trade and technical classes are crowded, as 40 per cent of the population of Manitoba is in Winnipeg, outside of which city not much industrial training is done. Agriculture is strongly featured in rural schools, but has not made much headway in high schools, chiefly because of the sentiment among the farmers that they can teach their boys all they need to know about farming.

For Saskatchewan, Mr. Blacklock said:

We must break away from the system of education in our elementary and secondary schools which has been for many years educating boys and girls off the farms, and we must direct our energies toward peopling the broad fertile acres of this province with prosperous, happy agriculturists.

The educational and agricultural authorities are lending their energies to this end, and the University is heartily co-operating through its extension work, so that it has become one of the most popular institutions in the province. In the public schools there is a graded course in elementary agriculture, manual training and household science. It is hoped to extend this course to secondary schools, and in the near future have agricultural high schools to prepare students for the more technical University course in agriculture. To assist this work a director of household science and a director of agricultural instruction were recently appointed, who will encourage school gardens, experimental plots, school fairs and simple experiments in household science and manual training.

The report as to Alberta states:

What has been done is based, therefore, on the supposition that the province may have to carry on the work without federal aid, with the hope that if such aid comes the work can be done so much better. Hence the province has started at a moderate pace that it can keep up without outside help. On this basis the scale of grants to rural and urban districts was planned to develop domestic science and manual training. In addition to normal training in these subjects, with art, music and agriculture added, there is a summer school for teachers, attended this summer by over 300 who take the foregoing subjects along with physical training.

There was also a course to strengthen high school teachers. Also, 38 science masters of the high school took a course in the teaching of their subjects, and to improve their ability

in teaching botany and zoology. This practical teaching will be an entering wedge, and they will want to know how to teach classics.

Another step in advance was to form three schools which might be called "vocational agricultural schools" specifically for boys and girls in rural communities, who feel that they are theirs, and attend them. A young boy will come whether he can read or write; he will not go to the regular high school because he knows that the academic standing there will make him feel backward. In those three schools are 400 pupils, one girl to every three boys—parents do not appreciate education for their girls as much as for the boys.

The city of Calgary is to build an Institute of Technology and Art to serve local interests as far as necessary, and also to serve Provincial interests. It will cost \$500,000, with an annual expense of \$50,000 or \$60,000. But before asking public approval of that scheme, it is intended to learn, through the methods named what is happening to the boys and girls so that the proper prescription may be prepared for the patient.

So there is a good deal of very valuable work being done along these lines in the various provinces, sometimes by the provinces themselves, and at other times by the municipalities. I would be very glad, so far as I am concerned, to render any assistance within our power as soon as our finances warrant such a step. Personally I do not think that they do warrant such a step at the present time. The provinces are getting on very well. It is not a matter that you can rush through in a few days, or a few months, or in a year or two; it is a matter of growth. My hon. friend referred to the technical schools in Germany. I wish he could have found some other country to refer to. I do not say that one thing followed the other, but while the Germans were becoming so efficient technically, the finer qualities of their minds and hearts seem to have been paralyzed, so that they were capable of the atrocities of which they have been convicted in Belgium, and which will stamp them with infamy for ages to come. I do not say that these things resulted from technical schools, but they resulted from a system of education of one side of the human being, which left uneducated the finer and nobler qualities of mind and heart.

This resolution calls upon us to give effect to the report of the commission at the earliest possible opportunity, and it refers to the recommendations contained in the report. The commission was appointed for the purpose of getting information for the provinces. It was not admitted by this Parliament that we had anything to do with the matter; on the contrary it was declared that we would have nothing to do with it. The commission was authorized to make any such recommendations, or to express any opinion; they were authorized to gather information, I have said, which is the fact, that the Order in Council, and the commission following it, went further than the letters which were sent to the various Prime Ministers warranted. I think the proper inference was that the recommendations and opinions invited were to be, not the basis of any action by this Parliament, but the basis of action by the various provinces. The provincial governments have said, in substance, that they do not want this; that is the fair inference from the replies received from eight out of the nine. With the exception of Nova Scotia they say: we do not approve of those recommendations, and yet my hon. friend's motion asks us to give effect to them.

Personally I know that several of them do not approve of them; therefore, I think we will have no difficulty in saying that at the present time we should not adopt the motion presented to this House by my hon. friend from Rouville.

The debate was continued by various members. The Honourable Mr. Rogers, Minister of Public Works, also briefly expressed the interest of the Government in the subject, adding the following statement:

"We are giving the question to-day the most careful consideration, and under normal conditions we would be coming down to this House with a recommendation for a large sum to assist technical education in the various provinces. In view of this I trust that my hon. friend will not press his resolution, but that he will accept the statement that the Minister of Labour has made to-day, and the assurance which I add, that this Government acknowledge the principle and that we will at the earliest possible moment lend such assistance as we can in the public interest to the furtherance of the cause of technical education in the provinces of Canada."

The motion was then withdrawn.

CANADIAN LEGISLATION CONCERNING INDUSTRIAL DISPUTES.

The Enactment and Operation of Dominion Statutes Discussed by the Deputy Minister of Labour.

(*The Canadian Law Times*, March, 1916.)

PUBLISHED statements respecting proposed amendments to Dominion laws bearing on industrial disputes have aroused interest in some quarters in the subject of industrial disputes legislation in Canada. Hence, doubtless, the invitation from the Editor of the *Law Times* in response to which the present article is written. It is proposed here to deal with industrial disputes legislation in Canada

as it has developed, rather than with the propositions contained in the draft amending bill which the Minister of Labour is causing to be circulated, save that it should be said that none of the proposed amendments, as printed, suggest any departure from the principles underlying the present Acts.

Two statutes present themselves for consideration, (1) the *Conciliation and*

Labour Act and (2) the *Industrial Disputes Investigation Act, 1907*. The *Conciliation and Labour Act* contains the earliest Dominion legislation concerning industrial disputes. This statute, in its present form, is a consolidation dating from 1906 of two earlier laws, the *Conciliation Act* and the *Railway Disputes Act*.

The *Conciliation Act* was passed in 1900. It provided for the appointment of a Minister and Department of Labour with certain prescribed functions, and for the institution under the supervision of the Minister of a system of conciliation boards for the adjustment of industrial disputes. The statute, in so far as it related to conciliation boards and industrial disputes, proceeded generally on the lines of an English Act. It will be interesting to glance at the conditions in Great Britain producing the law which the Canadian Act follows.

Conciliation committees or boards have, for more than half a century, existed in mining and manufacturing districts of Great Britain, springing up quite naturally and unofficially for the adjustment of the disputes necessarily growing out of an intense industrialism. Selected persons represented the varied interests of a particular industry in a given district,—of textile working or coal mining, for instance, in Lancashire or Yorkshire. The boards assumed in time and in some cases a certain permanence of character, while the chairmanship acquired almost a semi-judicial aspect. When difficulty occurred in filling a chairmanship by agreement the disputing parties fell into the habit of requesting an appointment by the Government. The duty of making such appointments was vested in the Board of Trade, and gradually there was created a situation whereby the Board of Trade found itself in touch with a group of expert adjusters whose success in the work entrusted to them depended on their skill, tact and known integrity rather than on any legal or formal authority. The element of legal compul-

sion was not a factor in the settlement of industrial disputes which came before these conciliation boards.

The machinery of the boards was developed and improved as the years passed. The English Conciliation Act of 1896 confirmed and encouraged the system which had grown up. The work of the conciliation boards aided in the settlement of many trade disputes, and strikes or lockouts were prevented in these cases, but industrial unrest kept pace, perhaps more than kept pace, with industrial development. Some trades did not avail themselves of the methods of conciliation boards and there was in such cases little to hinder the rapid aggravation of small disputes into strikes or lockouts. In some cases also where the boards existed their best efforts were futile and the disputants resorted to the methods of the industrial battlefield. Disastrous and even terrible industrial conflicts recurred from time to time. The necessity of conciliation machinery increased as the question of industrial relations pressed more and more to the front.

Calls on the British Board of Trade for expert adjusters, assessors, etc., in industrial disputes which the disputants could not settle directly, became more frequent, and in 1908 the machinery relating to conciliation boards was further developed for the constitution of a Court of Arbitration. For the purpose of this Court three panels were formed: a chairman's panel, an employers' panel, and a labour panel. By virtue of this new agency, on the application of the parties to an industrial dispute, a Court of Arbitration consisting of three or five members is nominated by the Board of Trade from these panels, the powers of the Court corresponding generally with those which a Conciliation Board had possessed.

Yet a further expansion in Great Britain of the conciliation system was the establishment in 1911 of what was termed an Industrial Council, composed of representatives of employers and employees, with a Chief Industrial Com-

missioner; the Industrial Council was established "for the purpose of considering and of enquiring into matters referred to them affecting trade disputes," etc. Sir George Askwith, K.C., who became Chairman of the Council, had been long a leading figure in the group of expert adjusters from which the Board of Trade had been, on the request of the disputing parties, selecting chairmen of conciliation boards.

It is of interest to note in passing that Sir George Askwith visited Canada in 1912 for the purpose of investigating the nature and operations of the *Industrial Disputes Investigation Act, 1907*, the Dominion statute which was now effective in these matters and the enactment of which by Great Britain was being urged in some quarters as a possible remedy for the disastrous industrial conflicts which then were distracting that country. Apart, however, from certain special legislation limited to the coal mining industry, and consequent on the national coal mining strike of 1912, no further legislation as to industrial disputes was enacted in Great Britain until the outbreak of the war, when a measure was passed not far removed in its general intent from that of the Dominion statute on which Sir George Askwith reported.

Before leaving this aspect of the subject, it may be added that at the close of 1914, 300 conciliation boards or courts were in existence in Great Britain; the same figure had obtained at the end of 1913. British official reports show that despite the efforts and influence of these numerous conciliation agencies, there were 1,497 strikes or lockouts in Great Britain during 1913, with time losses of nearly twelve million working days; for the corresponding year in Canada the number of strikes was 113, with time losses of 1,287,678 days.

Let us return now to the Conciliation Act enacted by Canada in 1900. The statute was obviously designed to promote in Canada the establishment of conciliation boards on the lines of those found in Great Britain. The measure

was destined to remain inoperative in so far as it concerned conciliation boards; no tribunals of this nature were established under its provisions. The Act was not, however, fruitless in its bearing on industrial disputes. Officials of the newly established Department of Labour were required to follow closely the course of industrial disputes, not only for statistical purposes, but from the point of view of public welfare. Offers of mediation were made in serious disputes. The offers were frequently declined and intervention was possible only by consent of both disputants. Where mediation was accepted the Department seems to have acquitted itself creditably and the Deputy Minister of Labour of that time (Mr. W. L. Mackenzie King) established some reputation in the adjustment of industrial disputes. Dominion officials had not previously made efforts in this direction. The work thus accomplished was of some value, but the facilities of the Department were not large and no headway was, as we have seen, made in the development of the conciliation board system whereby local effort and influence might be sometimes effectively utilized for the solution of a particular difficulty.

In 1903 was enacted the *Railway Disputes Act*, a measure applying, as its name suggests, to disputes in industries affecting the railway service. The new statute invested the Minister with a limited power of compulsion with respect to the establishment of conciliation boards. Where a dispute existed between a railway company and its employees, and either party to the dispute (or a municipality concerned therein) asked that the dispute might be referred to a board for adjustment, the Act permitted the establishment of a board without requiring the consent of the other disputant. If, however, the establishment of a board was not requested, no board could be established, and in any event the statute placed no restraint on the right to strike or lockout. This measure remained, on the whole, inac-

tive, only one dispute being referred for adjustment under its provisions down to 1907, when it was practically displaced by new legislation. It is not impossible that the existence of the statute may have exerted sometimes on the parties to a dispute a silent pressure towards an amicable arrangement by direct negotiation, but on this point there is no record.

In 1906 the two measures mentioned were consolidated for the Revised Statutes of Canada and became known as the *Conciliation and Labour Act*.

The year 1907 saw the enactment of the *Industrial Disputes Investigation Act*, the scope of which is aptly indicated by its complete title, "An Act to aid in the prevention and settlement of strikes and lockouts in mines and industries connected with public utilities." Popularly the measure is known as "the Lemieux Act," being named after the Honourable Rodolphe Lemieux, who in his capacity as Minister of Labour (an office held at that time conjointly with the Postmaster-Generalship) piloted the bill through Parliament. The new statute contains the first limitation placed by the Dominion Parliament on the right to engage in strikes or lockouts, the limitation being confined to stated classes of labour. The process of dealing with a dispute entails its reference for attempted adjustment to a Board of Conciliation and Investigation formed on the lines of the ordinary board of arbitration, with a nominee from each of the disputants and a third member, to the chairman, selected if possible by joint agreement; failing a joint agreement as to the chairmanship, the chairman is named by the Minister of Labour. A strike or lockout in the industries indicated is unlawful, under penalty, until the dispute in question has gone before the board.

It will be useful, before discussing the Dominion Act further, to look broadly at the conditions elsewhere as to legislation on this subject. The situation in the United Kingdom has been already

outlined. In the United States, as in the case of Great Britain, the new Canadian law was made the subject of official inquiry. Dr. V. S. Clark, a skilled investigator, visited Canada in 1908 and again in 1909, with a view to ascertaining the adaptability of the statute to the requirements and conditions of the United States. Dr. Clark's reports are valuable treatises on the statute and its aims and achievements, as at the time of enquiry. Similar enquiries into the Canadian Act have been made by various States of the Union. The United States proceeded, however, on other lines, its efforts culminating in what is known as the *Newlands Act* of 1914, which created a Board of Mediation and Conciliation, designed, like the British Industrial Council, for the purpose of promoting industrial peace and not unlike the British Industrial Council in its general method of operation; the jurisdiction of the United States Board of Mediation is, however, severely limited, extending only to disputes involving employees of inter-state railways. Like the British statute, the measure is permissive, not compulsory. The legislation of the States of the Union, when it touches the subject of industrial disputes, has not gone beyond efforts at conciliation and the provision in some cases of carefully devised machinery for that purpose.

A concise statement as to the situation in continental Europe in these matters appears in a special report on legislation respecting industrial disputes issued a year or two ago by the Labour Department of the British Board of Trade:

"Amongst the foreign countries covered by this return," says the report, "it will be observed that in Europe there are nine, the statute books of which comprise legislation specially designed to avert strikes on the part of those employed in public utility services. While varying widely in range and stringency, these laws possess one characteristic in common: the workpeople to whom they relate are in every case placed on a footing different from that of the general body of industrial workers in respect to the right to engage in strikes, this right being either explicitly withheld or else subjected to specific limitations in its exercise.

"Of the nine countries referred to, five have enacted laws absolutely prohibiting workpeople employed in certain public utility services from engaging in strikes. These countries are Russia, Roumania, Holland, Belgium and Italy. In Russia and Roumania, the law covers the whole field of what may be termed public utility services, whether governmental or local. In Belgium, it applies to all persons in the service of the State, including the railways, post office, telegraphs and telephones; in Italy, it applies to all persons in the service either of the State or of a railway company, while in Holland, only those employed on main lines of the railway service are included. Three countries, viz., Spain, Portugal and the Ottoman Empire, have enacted laws applicable to all public utility services, and declaring concerted stoppages of work illegal, unless certain conditions have previously been fulfilled. In Spain, the conditions are that notice of the strike or lockout shall have been given to the authorities, either eight days or five days beforehand, according to the nature of the undertaking, and that such notice be accompanied by a statement of the cause of the strike or lockout. The Portuguese law insists on twelve or eight days' notice being given of the strike or lockout, according to the nature of the undertaking, and requires that such notice be accompanied by a statement of the causes or objects of the strike or lockout. Under the same law, all officials, public servants, or those receiving salaries from the State incur the penalty of dismissal, if they combine to suspend work.

"The last of the nine European countries that call for mention in this connection is France, where the only persons employed in public services who incur legal penalties for participating in strikes are the engine-drivers, guards and brakemen actually in charge of trains, and the outdoor staff of the postal service.

"While attempt to avert strikes and lockouts in public utility services by means of special laws withholding or limiting the exercise of the right to strike are confined to the nine countries just enumerated, there are two countries—Germany and Austria—where, so far as the railway, postal and allied services are concerned, the exercise of such a right on the part of the staff is rendered impossible in practice by the policy pursued by the authorities towards any manifestations of trade union activity among members of these services—a policy based on the assumption that membership of a militant trade union is incompatible with loyalty to the department and with the safety of the State."

The British report contains a further paragraph showing that permanent courts of arbitration "equally representative of the interests of employers and of workpeople," especially for the promotion of industrial peace, exist in Denmark and in the Swiss Canton of Geneva.

There remain the British Dominions. Apart from the Dominion laws now under consideration there is little to be said of Canada. In Ontario and Quebec there are laws providing machinery for conciliation purposes: the machinery is but little used. A more interesting

statute is that of Nova Scotia, dating from 1890 (amended 1900), which, applying to the coal mining industry only, forbids a strike or lockout where one of the disputants calls for a reference of the dispute to arbitration in the manner provided; where there is no request for arbitration there is no restraint on strike or lockout.

South Africa needs but a word. In 1909 the Transvaal enacted a law adapted from the Canadian Statute of 1907, and this measure is understood to have remained effective under the South African Union.

In Australia and New Zealand the situation is more intricate. For twenty years the various Australasian States have shown extraordinary activity in legislation concerning industrial disputes. The writer of an Australian letter contributed so long ago as April 14, 1909, to the *Otago Witness*, one of the leading journals of New Zealand, remarks: "The Commonwealth and States will in a few years be overlain with a web of industrial legislation and judicial decisions which will tax the brain of the future European should he endeavour to unravel it." The period subsequent to the date of this comment has not been less fruitful than earlier years in industrial legislation in Australia, and with this warning before us it will be perhaps wise to abstain from too close an inquiry into the subject. The independent and original character of much of this legislation is perhaps reflected in the view which finds expression in a report issued in July last by the Government of Victoria on "Anti-Strike Legislation":

"The laws in parts of the world outside Australia, excepting perhaps Canada and South Africa, are of little use as a guide, from the fact that conditions from military and other points of view are so different. It is interesting to note that no two laws in Australia, nor, indeed (so far as I can find), in the world, have quite the same provisions against strikes and lockouts. This may be accounted for in part by the different conditions, but it also suggests that anti-strike law has not yet evolved; that it is in its elementary stage; and that each country, as it set about choosing its method, turned down every system already in existence and proceeded to set up a new one of its own."

At another point in his report the writer credits the Canadian Act of 1907 with having inspired not only the Transvaal Act of 1909, as mentioned above, but also the Queensland Act of 1912 and the New Zealand Act of 1913, which, in what are perhaps their chief features, approximate to the Dominion measure.

Of the abundant industrial legislation of Australasia it may be said generally that while numerous statutes were enacted having as their chief aim the elimination of strikes and lockouts, and in many cases (as in New South Wales) expressly prohibiting them, under severe penalties, the strike has by no means disappeared. The Statistician of the Commonwealth of Australia places the number of strikes and lockouts for Australia for 1914 at 334, involving time losses of 942,000 working days, as against 44 disputes only, in the same year, for Canada, with its much larger population, the Canadian disputes entailing time losses of 430,000 days. The comparison is yet more favourable to Canada if it is confined to the State of New South Wales, where alone, in 1914, the strikes numbered 235, with time losses of 727,726 days.

Just why the Dominions and States of the South Seas should have shown so much greater activity in this field of legislation than has been manifested by the Dominion and provinces of Canada must remain a matter of interesting conjecture, but if the number of strikes and lockouts is a criterion of industrial unrest, then the figures quoted do not suggest that the comparative inactivity of Canada has brought a severe penalty.

The Canadian statute of 1907 is then in agreement with the laws of several countries in two important respects: (1) in being applicable to industries connected with public utilities, (2) in declaring that strikes and lockouts may not occur legally in these industries until after efforts at adjustment through official machinery have been made. In some countries, however, the prohibition goes beyond that of the Dominion law and is unconditional. The Dominion statute is

exceptional in being applicable to the mining industry.

It was in 1906 that a prolonged strike in the Galt coal mines of Lethbridge, Alberta, brought about a severe shortage of fuel in southern Alberta and southern Saskatchewan. The Prime Minister of Saskatchewan, the province in which perhaps the difficulties were most acute, asked the aid of the Dominion Government and the then Deputy Minister of Labour, Mr. W. L. Mackenzie King, was despatched to the scene of the dispute, this action being taken under the authority of the *Conciliation and Labour Act*. The efforts of the Deputy Minister and the increasing evidence of the hardships threatening the public combined to bring about a settlement and the threatened fuel famine was prevented. Official reports of the period show that the incident caused special consideration to be given to the subject of industrial disputes legislation with a view particularly to the prevention of strikes or lockouts of such a nature as to jeopardize the public safety. The classes of industry known generally as "public utilities" are, clearly, those with which the public interests are most intimately identified. The term "public utilities" is somewhat loose and its interpretation varies in different countries. In New Zealand, for instance, bakers and slaughtermen (butchers) fall within the category, and from the point of view of the prairie provinces in 1907 there was much to be said for regarding the coal mining industry as a public utility. The interpretation clause of the Canadian Act is of some assistance. The clause declares that "employer" means "any person, company or corporation employing ten or more persons and owning or operating any mining property, agency of transportation or communication, or public service utility, including, except as hereinafter provided, railways, whether operated by steam, electricity or other motive power, steamships, telegraph and telephone lines, gas, electric light, water and power works." It was of course inevitable that coal mines also

were brought in. The statute prohibits under penalty a strike or lockout in any of the industries indicated until after the dispute which is in question shall have been before the Board of Conciliation and Investigation, and it provides for the establishment of a Board of Conciliation and Investigation on the application of either party to a dispute. The composition of a board was explained above.

The Act gives the board the requisite powers for taking evidence, etc. Proceedings are public or private as may seem expedient to the board. The Department pays fees and travelling expenses of board members, witnesses, etc., and for necessary clerical work. If the board by conciliatory effort brings the disputants together and a working agreement results, the dispute manifestly is ended. If this is impossible the board is required to make findings and recommendations showing how in its view a settlement should be made. Provision is made for a minority report. All reports are made public. The theory of the Act is that the board's findings, being based on what is presumed to have been a fair and impartial investigation, will bring an informed public opinion to bear on the matters which have been in dispute, and that either of the disputants who is unreasonable in his attitude will thus be induced to yield a point and accept the recommendations of the board rather than fly in the face of a public opinion which might be expected to sustain the view of the board; acceptance of the findings, however, no matter how urgent the apparent advantage or necessity, is not legally compulsory. Once the board's findings are made public the disputants, unless of course they have voluntarily bound themselves before the board by agreement, are freed from the restraining effect of the statute and the threatened strike or lockout may proceed. Penalties are named for those taking part in strikes or lockouts contrary to the terms of the Act, also for persons who incite, encourage or aid those taking part in

such strikes or lockouts. Clause 57 of the Act aims also at preventing changes in conditions with respect to wages or hours save by mutual consent or until the proposed changes have been before a board. Procedure under the statute is on simple lines, and in practice the effort has been to free the tribunal so far as possible from the formalism of courts of law. Section 4 provides for a Registrar, and on the passage of the Act the Deputy Minister of Labour became by Order-in-Council Registrar of Boards of Conciliation and Investigation. On the constitution of a board the Registrar forwards to the chairman the necessary documents and instructions. Certain provisions of the statute are intended to guard against the establishment of boards for trivial matters, and the practice and experience of the Department are naturally of assistance to this end.

The statute became law on March 22, 1907. It has been once amended (1909), but the amendments have affected only some details of procedure. Statements of proceedings under the Act show that down to the end of the fiscal year 1914-15 there had been 177 disputes in which applications for Boards of Conciliation had been received. Boards were established in 158 cases. In the remaining 19 cases adjustments of the disputes were effected, usually through the agency of the Department, without the aid of a board, though in some cases not until after the procedure for a board was under way. The total number of employees affected by the 177 disputes is placed at 231,426. The railroading and coal mining industries have figured most largely before Boards of Conciliation; street railway employees and longshoremen have also called for many enquiries.

In a great majority of the cases thus dealt with the strike or lockout which threatened was averted, either by positive settlement or by expressed or tacit understanding. During the eight years ended March 31, 1915, there were 19 disputes, in which the threatened strike was not averted. In other words, in about 11 per cent of 177 disputes

brought under the statute no sort of understanding could be arranged between the disputants, who proceeded accordingly, to the last resort of all disputants, a trial of strength, which, the requirements of the law having been met, was no longer illegal. There are few lock-outs in Canadian industrial life, and in the 19 disputes which could not be adjusted the trial of strength involved in each case a strike. Enquiry into the outcome of the 19 strikes in question shows that in the majority of cases settlement was ultimately effected closely, if not wholly, on the lines recommended by the board.

The annual appropriation for the purposes of the statute is about \$25,000, and the amount has generally proved sufficient to meet the expenditures.

A phase of the subject which should not be overlooked is that the machinery of the *Industrial Disputes Investigation Act* is set in motion by one or both of the disputants, or it remains still. A board cannot be established until an application is received from one of the disputing parties, but the non-establishment of a board does not lessen the restraint as to strikes and lockouts.

Reference has been made to the strikes occurring in disputes which had been before boards and had not been adjusted. There has been also, in industries coming under the Act, a considerable number of strikes in disputes which have not gone before a board for investigation. Work ceased in these cases without regard to the Act. Many of the serious coal mining strikes in Western Canada during recent years have occurred in this way.

What, it may be asked, becomes of the penalties prescribed for these apparent infringements of the statute? The reply must be that such cases have seldom gone to the courts. It has not been the policy of the successive Ministers under whose authority the statute has been administered to undertake the enforcement

of these provisions. The parties concerned, or the local authorities, have laid information occasionally, and there have been in all eight or ten judicial decisions. The mining industry has been the chief delinquent in the matter of infringements, and there have been occasional derelictions on the part of the lower grades of transport or shipping labour; in the higher grades of railway labour the Act has been well observed.

The usefulness of the Act is perhaps better determined, in any event, less by the negative results in situations where the parties have, regardless of consequences, stayed deliberately aloof from its influences and operation than by the positive results obtained in situations where the parties concerned have, whether cordially or reluctantly, brought their differences within the scope of the Act. The figures printed above show the very large proportion, 89 per cent. of cases where in disputes thus dealt with the threatened strike has given way to a peaceable arrangement.

A further point to be noted is that, apart from the direct bearing of the Act on disputes in industries connected with mines and public utilities, its machinery is, by sec. 63, made available for industrial disputes of any kind, the consent of each disputant being, however, necessary where the dispute lies outside the stated industries; in such cases the statute becomes purely a measure of conciliation, as was the original Dominion statute of 1900. This feature of the *Industrial Disputes Act* has so far been less active than had been perhaps hoped. Of the 177 disputes brought within the influence of the Act during the eight years ended March 31, 1915, ten were of what may be termed the "outside" classes, and in each case an amicable settlement was effected.

It will be manifest to those who examine the record of the Act that much responsibility falls on the chairman of Boards of Conciliation and Investiga-

tion, who must of necessity be frequently the decisive factor in the efforts made at adjustment. In approximately one-half the total number (158) of boards which have been established the chairman has been appointed by joint agreement; in the remaining cases the chairman has been made by the Minister. The small proportion of disputes going to boards in which the threatened strike was not averted (19 out of 158) would suggest that the chairman, whether appointed by joint agreement or otherwise, have as a rule possessed the tact, skill and breadth of mind necessary for the difficult work of adjusting an industrial dispute.

There are three respects in which it is possible to look forward to a widening sphere of usefulness for the Act, as the sound reason of the principles on which it is based and the simplicity of procedure associated with it come to be more completely recognized by those affected and by the public at large, viz., (1) the disappearance of unlawful strikes and lockouts; (2) an increasing disposition on the part of those concerned in disputes brought before a board to accept the findings of the board; (3) more frequent application of the machinery of the Act to the settlement of disputes in "outside" industries. If the effectiveness of the two statutes under consideration can, in these important respects, be increased, Canada would seem to have come nearest among the nations to the discovery of that legislative alchemy which the industrial world has so long sought, and the reign of industrial peace would be at hand. But it is well that any prediction should be guarded. The factors that make for and against industrial peace, as with peace in the larger world of nations, are many and varied. Human motive is seldom based on reason alone. There

are those who will not be content with what an Ontario politician once described as "cold justice," not at least while there appears a chance of "better terms," whether by an adroit manoeuvre or, sometimes, by rougher methods. Moreover the ancient problems, "What is justice?" "What is truth?" remain substantially unsolved and attempts at solution bring their clashes. There is no industrial millenium within sight, but wise amendments to the legislation under review may be not unreasonably expected to improve the already excellent record made by the statutes in question.

It may be noted, in conclusion, that the present Minister of Labour, Hon. T. W. Crothers, K.C., addressing the members of the Trades and Labour Congress of Canada, assembled in annual convention at Vancouver in September last, expressed publicly his faith in the principles of the *Industrial Disputes Investigation Act, 1907*, and his conviction that the Act had exercised a beneficial influence on industrial conditions in Canada and would continue to do so, though it was none the less desirable that early advantage should be taken of the experience gained in the administration of the measure to endeavour to remedy any weaknesses which had been disclosed in its provisions and to increase its effectiveness generally so far as this might seem to be possible.

F. A. ACLAND.

[With reference to the draft bill prepared by the Minister of Labour amending the statutes discussed in this article, it may be noted that the amending bill has not been, owing to conditions arising out of the war, proceeded with during the present session of Parliament. — Ed. *L. G.*]

EGGS AND THE COST OF LIVING.—WORK OF THE DEPARTMENT OF AGRICULTURE IN IMPROVING METHODS OF MARKETING AND GRADING.

OWING to the high prices of eggs to the consumer, with relatively low prices to the producer, the unsatisfactory quality and the scarcity of this food at times, the Dominion Department of Agriculture has been conducting special investigations and devising methods for improving conditions in the production and marketing of eggs in Canada. A description of this work as undertaken and since carried on was given by Mr. W. A. Brown, of the Poultry Division, in his evidence before the Board of Inquiry into the Cost of Living. The chief cause of this condition was found in the fact that the trade in eggs was carried on with little regard to quality, particularly in the prevailing method of buying by the case count system from the farmer or the local storekeeper who bought from the farmer. Under this system the dealer paid for the eggs according to the number in the case, 30 dozen, etc., and the farmer therefore took all the eggs collected from time to time to the storekeeper without regard to quality, and the storekeeper similarly sold his accumulation of eggs from time to time. But the egg dealers found by experience that a percentage of eggs was always bad, stale, broken or small, and accordingly in quoting prices allowance was made for the anticipated losses according to the season of the year. In the summer when deterioration was great owing to hot weather it was estimated that only 33 per cent of receipts would be good eggs, 40 per cent stale, 17 per cent very stale, 5 per cent dirty and cracked and 5 per cent bad. Some dealers stated that even 10 to 12 per cent would sometimes prove unfit for food. By the time the eggs had been re-sold and shipped through the hands of wholesaler and retailer to the consumer the number of good eggs would

be reduced still further. If the consumer, therefore, paid twice as much per dozen as the producer received it would be accounted for to a great extent by the entire loss of many of the eggs originally marketed and the relegation of many more for baking purposes only. Years ago when eggs were cheap and plentiful the losses involved in this method of handling and the differences in prices were not felt so greatly as in recent years of high prices when, further, owing to the high price of meat, eggs at moderate prices are readily substituted.

On the other hand it was found that in the early spring months when the weather was cool, hens were largely grain fed, and the production was greatest, the eggs marketed were nearly all of good quality. As prices fell rapidly from winter levels, farmers and poultrymen rushed their supplies to market and storekeepers also shipped without delay. There was, therefore, little loss in quality through remaining in warm storehouses, subject to contamination from odours.

It therefore appeared desirable to prevent the great losses in eggs under this system of marketing and to secure the adoption of methods which would ensure: (1) the marketing of the eggs by the producer within a short time after laying; (2) storage in a cool place and prompt shipment by the first buyer; and (3) certainty as to the quality of the eggs sold. Some dealers were already paying for eggs on the "loss off" basis, *i.e.*, the eggs were "candled" as soon as received and prices were paid for stale, cracked or dirty eggs on a lower basis with no payment at all for bad eggs. This provided a penalty for inefficient handling. If, however, the producer and each dealer could be as-

sured that any first class eggs marketed would command a higher price a premium would be placed on care and promptness in handling the eggs from the day they were laid and would also make the increased production of good eggs profitable.

Although eggs are difficult to sample without breaking the shell it has been found possible to examine the contents by holding each egg before a light, such as a kerosene lamp, gas jet, or electric bulb, this operation being called "candling." An egg is semi-transparent when held before a light in a darkened room, and, if carefully rotated, even minor defects can be seen. The condition of the eggs is determined (1) by the size of the air cell, (2) the consistency of the albumen, (3) the colour and mobility of the yolk, and (4) the general transparency of the whole egg. In a recently laid egg the air cell is about the size of a ten cent piece or not more than $\frac{3}{16}$ of an inch in depth. The shell is completely filled when the egg has been just laid and the air cell is the result of evaporation and becomes larger in time and the egg becomes stale unless it is kept in a very cool temperature. In a fresh egg, also, the white is firm and clear, but becomes watery as the egg becomes stale. The yolk in a fresh egg is only dimly visible and swings readily in the albumen as the egg is turned around. When slightly stale, the yolk is quite visible, as it has become high coloured, but is still mobile. Later the yolk becomes heavy and may be stuck to the shell or quite out of place, and when still staler it breaks and mixes with the watery white, the egg being then unfit for food. When the egg has been heated or partly incubated it shows darkened sections which increase as incubation advances until the whole egg becomes black, except the air cell.

A system for grading eggs according to this method of examination has been devised and adopted as a basis for purchasing by the Canadian Produce Association. All eggs are divided into three

classes. "Fresh Gathered," "Storage," and "Cracked and Dirties." Each class is subdivided into grades. Ordinary good cooking eggs in each class are called "No. 1's" and "No. 2's." Better eggs suitable for boiling and frying are also included in "Fresh Gathered" and "Storage" classes as "Extras," while in the "Fresh Gathered" class an additional grade of large, sound, clean and very fresh eggs is included and called "Specials." The following table and description shows the standard in detail:

STANDARDS FOR CANADIAN EGGS.

Fresh Gathered.	Storage.	Cracked and Dirties.
Specials Extras No. 1's No. 2's	Extras No. 1's No. 2's	No. 1's No. 2's

DEFINITIONS OF GRADES IN FRESH GATHERED CLASS.

Specials.—Eggs of uniform size weighing over 24 ounces to the dozen, or over 45 pounds net to the 30-dozen case; absolutely clean; strong and sound in shell; air cell small, not over three-sixteenths of an inch in depth; white of egg to be firm and clear, and yolk dimly visible, free from blood clots.

Extras.—Eggs of good size, weighing at least 24 ounces to the dozen or 45 pounds net to the 30-dozen case; clean; sound in shell; air cell less than three-eighth inch in depth; white of eggs to be firm and yolk only slightly visible.

No. 1's.—Eggs weighing at least 23 ounces to the dozen, or 43 pounds net to the 30-dozen case; clear; sound in shell; air cell less than one-half inch in depth; white of eggs to be reasonably firm; yolk may be quite visible but mobile, not stuck to the shell or seriously out of place; air cell not necessarily stationary.

No. 2's.—Eggs clean; sound in shell; may contain weak watery eggs, and eggs with heavy yolks and all other eggs sound in shell and fit for food.

The three grades in the "Storage Class" and the two grades in the class "Cracked and Dirties" to be defined the same as the corresponding grades in the "Fresh Gathered Class" except that the clauses in the latter class referring to cleanness and soundness are not to apply.

Allowance for deterioration in transit, 10 per cent, but no bad, i.e., eggs should grade at point of delivery 90 per cent of grade named at point of shipment.

To facilitate the prompt marketing of eggs and to increase the supply of good eggs the Live Stock Branch of the Department of Agriculture, in conjunction with the Provincial Departments of Agriculture, has organized Co-opera-

five Egg Circles among farmers and poultry raisers in different parts of the Dominion. Each member puts his number on each egg and delivers them regularly to or has them collected by the Circle. Here they are candled and graded and sold to produce dealers or other customers, and each member is paid according to the number of eggs in each grade in his delivery. The best price is thus obtained for the good eggs, no bad eggs are sold at all, and somewhat stale eggs can be sold for immediate use. Buyers can also rely on the quality of the grade purchased. As dealers have not paid anything for bad eggs and a lower price for inferior eggs, the loss otherwise sustained under the case count system of buying is not passed on to the consumer of the good eggs. As Egg Circles are formed among producers the large quantities of eggs lost through dilatory handling are saved and the quantity of good eggs available for consumption is greatly increased. As the producer is sure of a good price for good eggs he is induced to produce more and better eggs, and the wide margin between the price received by the producer and that paid by the consumer under the old system is reduced. Larger supplies of good eggs are also available for cold storage at the season of plenty and as only the best eggs can be kept from spring, the season of large production, till winter, the season of low production, in satisfactory condition, this is an important factor in determining the price during the winter months. In order to place before the

consuming public the advantages of buying eggs according to grade and of testing eggs by candling before use, demonstrations were given at the larger exhibitions throughout the Dominion by the Poultry Division of the Live Stock Branch of the Department of Agriculture, many articles and illustrations have been published through the press, and the following announcement has been made:

Many simple appliances have been devised for the candling of eggs and, with a view to encouraging the practice of candling among all those concerned in the Canadian egg trade, the Poultry Division of the Live Stock Branch has had prepared for free distribution a large quantity of cardboard candling boxes. These have been made in two types, one suitable for use with the kerosene lamp and one suitable for use with the electric light.

Neither the small amount of trouble required to secure one of these appliances nor the amount of labour entailed in candling, presents any valid reason why the public should be obliged to use or accept bad or incubated eggs. Storekeepers will find it to their advantage to acquire facility in candling, and it is recommended that every housewife should provide herself with one of these simple candling appliances, by the diligent use of which she may safeguard her family from many unpleasant occurrences at the breakfast table.

These appliances may be obtained free upon application to the Live Stock Commissioner, Ottawa.

TRADE UNION REPORTS ON UNEMPLOYMENT.

WITH its issue of December, 1903, the *Labour Gazette* began the publication of a table showing the state of employment in Canada for the month. This table, which was based on the reports of the local correspondents of the *Labour Gazette*, was non-statistical in character, the state of the labour market

at a particular locality being described as fair, active and very active or quiet and very quiet.

With a view to supplementing this information with statistical data, the Department is securing monthly returns from public, philanthropic and commercial employment bureaus, summarized

statements of which are now appearing in the *Labour Gazette*. The returns from commercial employment bureaus are secured through the Immigration Branch of the Department of the Interior, as the superintendent of immigration is authorized by Order-in-Council to require from employment agencies dealing with immigrants such reports of their work as he may deem advisable.

Since the beginning of the year the Department has been attempting to further test the state of the labour market by securing from labour organizations data as to the number of their membership and the number of members unemployed on a given date. The first return of this information dealing with membership and unemployment in trade unions on the last working day in December has been compiled and is presented in tabular form herewith. Persons unemployed on account of trade disputes or disability are not included. As particulars of unemployment are more generally available for those trades in which the loss of time is greatest it seemed probable that an unduly large representation from such seasonal occupations as the building trades would make the percentage arrived at in excess of the true average percentage of unemployed trade unionists throughout the country. It was found possible, however, to secure approximately the same representation of the different trade groups in the returns. The information is far from being complete as the returns cover but slightly over 40 per cent of the total trade union membership. Inferences as to the general state of employment for trade unionists

are necessarily conditioned by such incompleteness, but as this is the first inquiry of the kind undertaken in Canada the figures may not be without interest. It is hoped that further inquiries will be more comprehensive.

Returns from 660 unions having a membership of 56,420, approximately 40 per cent of the total trade union membership of the Dominion, indicate that on the last working day in December 4,519 members or 8.0 per cent were unemployed. Taking the returns by provinces the percentages of unemployment are as follows: Nova Scotia, .18; Prince Edward Island, 3.2; New Brunswick, .74; Quebec, 9.9; Ontario, 8.1; Manitoba, 3.2; Saskatchewan, 7.0; Alberta, 4.3; British Columbia, 14.3. The percentages for the four largest cities may also be of interest: Montreal, 10.6; Toronto, 10.6; Winnipeg, 2.6, and Vancouver, 18.0.

It was to be expected that employment in the building trades would be at a minimum in December. Returns from 113 organizations in the building trades with an aggregate membership of 5,524 show 2,505 members unemployed or 55 per cent of all the unemployment reported. Excluding the building trades from consideration the percentage of unemployment for the whole country falls to 3.9 per cent. The negligible amount of unemployment reported by the metal trades testifies to the abnormal activity therein and the influence of the war on transportation is also shown in the small percentage reported by railway organizations. The returns from the different trade groups are summarized in the following tables:

OCCUPATIONS	Number Reporting		Unemployed	
	Unions	Membership	Members	Percentages
Clothing, Boots and Shoes.....	25	2,139	63	2.9

PRICES, RETAIL AND WHOLESALE, CANADA,
MARCH, 1916.

PRICES were again higher in metals, implements, builders' hardware, some hard woods, drugs and chemicals, beef, pork, mutton, sugar, condiments, textiles, leather and boots, coke and gasoline, but substantial decreases occurred in grains, breadstuffs, dairy products and fruits. Potatoes were again upward, but not so steeply. Eggs were falling considerably.

In retail prices the cost of a list of staple foods fell from \$8.40 to \$8.36, there being decreases in eggs and some meats, with increases in potatoes, butter, bread, beans, evaporated apples and sugar. Rents averaged slightly lower in 60 localities in the Dominion, being slightly higher in Prince Edward Island and Quebec, but lower in Saskatchewan and British Columbia. As compared with March last year retail food prices averaged higher in mutton, pork, lard, eggs, butter, cheese, rice, beans, evaporated apples, sugar, tea, coffee and potatoes, but lower in beef, milk, bread and rolled oats. Fuel and coal oil were practically unchanged, but rent had declined from \$4.22 per week to \$3.96.

In wholesale prices the Department's index number rose to 176.4 for March, as compared with 173.7 in February and 145.4 for March, 1915. The chief increases appeared in the groups: Metals, Implements, Lumber, Miscellaneous Building Materials, and Drugs and Chemicals. Prices were lower in Grains and Fodder, Dairy Products, Fruits and Vegetables. In Textiles, Hides, Leather, Boots and Shoes, and in Fuel and Lighting substantial increases also occurred. As compared with the same month last year prices were lower in Grains and Fodder only, and were higher in all the other groups. As com-

pared with March, 1914, all groups were higher except Fish.

More detailed information as to the prices movement may be seen in the accompanying tables. The table of retail prices shows the prices of some 40 foods at the middle of the month in 60 localities of Canada, having a population of 10,000 or over. The quotations are obtained by the correspondents of the *Labour Gazette* from dealers doing a considerable trade with workingmen. All prices are for delivered goods. The rates for rent are for houses in districts inhabited by workingmen.

Retail Prices.

In meats, mutton and pork showed advances in several localities as result of the high prices of sheep and hogs. All meat prices were upward in some cities in the Maritime Provinces and Quebec, at Toronto, Ont., and at Lethbridge, Alberta, and Fernie, B.C. Live stock prices and the wholesale price of meats had risen considerably in February and were high in March.

Eggs were down in nearly all localities owing to larger supplies with the advance of spring. Butter was up in several localities, chiefly in Ontario. Cheese advanced in eight localities.

Bread prices, owing to the steep advances in flour in February, advanced in Amherst, N.S., Niagara Falls and St. Catharines, Ont., Prince Albert, Sask., and Vancouver, B.C. Later in the month bread advanced also at Hamilton, Ont. Flour declined in a number of cities in sympathy with the wheat market.

Rice and tapioca were higher in several cities. Canned vegetables were higher in Prince Albert, Medicine Hat and Nanaimo, B.C., but were down in

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN

*Coal, wood and coal oil. No allowance is made for the varying extent to which these are used in the different localities and provinces.

Vancouver and Victoria, B.C. Beans and evaporated apples tended downward.

There was a general advance in price of sugar throughout the Dominion in sympathy with the higher market for raw sugar.

Potatoes advanced in a number of cities and were down in only six. Considerable loss through frost was reported in Saskatchewan and Alberta. In British Columbia supplies were plentiful and stocks were being exported to California and Australia. At Kingston, Ont., the price fell on account of the large supplies.

Coal was lower at Prince Albert, Sask., but advanced at Fredericton and Newcastle, N.B., and at Three Rivers, Que. At Newcastle the higher price was reported due to scarcity of cars and higher freight rates. Wood was lower at Victoria, B.C., owing to easier transportation.

Rent advanced at Charlottetown, P. E. I., on account of the scarcity of houses. At St. Hyacinthe, Que., rents were also higher. At Prince Albert, Sask., New Westminster and Vancouver, B.C., rents were lower owing to many houses being vacant.

Wholesale Prices.

Grains and fodder.—Manitoba wheat, No. 1 Northern, had fallen to \$1.05½ per bushel at the end of February and remained on a lower level during March, the highest point being \$1.13½ in the second week. Ontario winter wheat had fallen to 95-97c per bushel, but rose to \$1.00-1.02. Western barley was also lower, having declined to 60c, and by the end of March reached 58c. Ontario barley advanced 1c to 62c-64c per bushel. Western oats had fallen to 37c, but rose to 42½c in March. Ontario oats were also as high as in February at 43-44c. A good demand for oats was reported. Corn declined to 77½c at Toronto, but was firmer at 81½c. Flaxseed rose to \$2.05 a bushel, but fell to

\$1.94. Ontario peas had fallen to \$1.40, but rose again to \$1.60, averaging 10c lower than in February. Rye had fallen to 87-88c at the end of February in sympathy with the other grains, and declined further to 85-86c in March, but rose 1c in the last week. Baled hay was down \$1.00 at Toronto. Bran and shorts advanced \$1.00 per ton at the end of February, but receded again.

Animals and meats.—Choice butcher cattle at Winnipeg had declined to \$7.00-7.25 in February and continued at this level during March except for a short time at the middle of the month when the price was 25c per cwt. higher. At Toronto choice butcher cattle had fallen to \$7.50-8.15, but advanced during March and reached \$7.75-8.75 in the last week. Beef, hindquarters, had fallen in February, but rose \$1.00 in March to \$13.50-14.50. Barrelled beef rose to \$22.00 per barrel at Montreal. The higher grades of veal advanced \$1.00 per cwt. Hogs reached a new high record at Toronto, the price f.o.b. country points being up to \$10.50 per cwt. at the end of the month. Dressed hogs and barrelled pork advanced also. Bacon and hams, however, eased off slightly. Lard was higher at 13¾-14c per lb. Sheep advanced again, reaching \$8.00-9.50, and dressed mutton rose to \$14.00-16.00 per cwt. Dressed lamb was higher at \$19.50-21.00. Fowls were higher at Montreal at 18-19c, and turkeys rose to 25-28c, but averaged slightly lower than in February.

Dairy products.—Finest creamery butter at Montreal eased off from 33¾-34¼c to 33-34c. At Toronto creamery solids averaged lower and dairy prints were down to 25-32c per lb. Cheese eased off at the middle of the month, but recovered to the previous price at 18¾-19c per lb. Fresh eggs at Montreal had fallen to 32c, and by the end of March were down to 27c. New laid eggs at Toronto were down to 26-28c.

Fish.—Fresh halibut rose from 8c to 9c per lb. at the Atlantic coast. The market for dried cod was weak owing to

low prices at Porto Rico. The demand for Portugal and Italy was reported good.

Fruits and vegetables.—Best winter apples were down from \$6.00 to \$5.50 per barrel. Bananas were easier at \$2.00-2.50 per bunch. Messina lemons were down to \$3.00-3.25 per box, and California navel oranges were down to \$2.75-3.25. Currants advanced 1c to 14-15c per lb. At Montreal potatoes were easier at \$1.75 per bag in car lots. New Brunswick potatoes were slightly easier at Toronto. Beans eased off to \$4.40-4.50. Canned vegetables were steady.

Miscellaneous groceries.—Flour declined and was down 70c per barrel for first patents by the middle of the month, being quoted at \$6.50. Winter wheat flour was down 30c to 40c per barrel, choice patents being at \$6.30 per barrel. Oatmeal declined 10c per bag and rolled oats 20c. Tapioca rose to 9-10c per lb. Tea was firmer on the English market. Sugar advanced several times, reaching \$7.31 per cwt. at Toronto at the middle of the month and was still rising. Glucose eased off 10c per cwt. in sympathy with the lower corn market. Pepper was higher at 25-30c per lb.

Textiles.—Wool advanced, Ontario washed rising to 43-46c per lb. Manufacturers withdrew prices on woollen goods, filling orders at prevailing rates on date of receipt. Cotton was comparatively unchanged. Prints averaged slightly higher. Raw silk continued to advance, Japan silk being up 50c per lb., and Italian silk 70c. Later on Japan silk advanced still more. Silk thread, machine, rose to \$9.00 per lb. Demand for silk showed a considerable increase. Jute advanced to 8.05c per lb. at Montreal, and hessians to 12.67c per yard. The market had been very active for some time with a considerable amount of speculative buying. Flax sewing twine rose 1c per lb. in sympathy with the higher price of fibre.

Hides, leather, boots and shoes.—Hides continued higher in price. Tallow rose

1½c per lb. The leather market was rising rapidly as stocks were very scarce and supplies hard to obtain. Sole leather for jobbing rose from 40c to 45c per lb., and slaughter sole rose 2c per lb. The prices of boots were again advanced, men's splits being up 10c and 20c per pair, box calf and kip 10c per pair, and women's dongolas 25c per pair.

Metals and implements.—Pig iron advanced 50c per ton. Iron bar was up 30c per cwt. Boiler plates were higher at \$3.40 per cwt. Wrought iron scrap rose \$1.00 per ton to \$15.00. Steel billets advanced to \$42-45 per ton and steel bar also rose 25c per cwt. Aluminium advanced 2c per lb., reaching 58-60c. Brass and copper were comparatively steady. Lead rose 1c to 9½c per lb. Quicksilver eased off to \$70 a flask, being down to \$225-\$230. Spelter was up to 25c per lb. Solder rose 1c to 2c, being up to 31-32c per lb. Tin advanced from 48c to 56c per lb. Zinc sheets advanced to 31c per lb. Coil chain rose considerably, being up to \$5.35 per cwt. for one-half inch size. Soldering irons advanced steeply, rising from 37c per lb. to 49c.

Fuel and lighting.—Coal averaged slightly lower on the Pacific coast for run of mines. Furnace coke rose to \$3.75 for prompt shipments at Connellsville, but foundry coke eased off from \$4.50 to \$4.00 per ton. Gasoline continued to rise in sympathy with the market for crude oil and reached 31½c per gallon at Toronto in wooden barrels.

Building materials.—The lumber trade continued quiet in Ontario, the usual quietness of the season being increased by severe weather. Trade was also quiet at Montreal. Red oak advanced to \$63.00 per M. and birch to \$35.00. The prohibition of imports of certain woods into the United Kingdom caused some weakness in these markets later. Building paper advanced 4c per roll in sympathy with the market for pulp and paper. Soil pipe rose 3c per foot in sympathy with the iron market. Iron pipe

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS OF COMMODITIES FOR MARCH, 1916, FEBRUARY, 1916,

*Nine commodities off the market, fruits, vegetables, etc.; one line of spelter has been dropped. Revised.

was also up. Lead pipe advanced 2c per lb. Nails rose 20c and 25c per keg. Copper wire averaged $1\frac{1}{2}$ c higher. Iron wire was easier. Lead pipe advanced 10c per cwt. in sympathy with the market for pig lead. Linseed oil eased off 3c per gallon. Turpentine declined to 79c per gallon. Benzine rose 6c per gallon in sympathy with the market for gasoline and crude oil. Paris green came on the market at 40c per lb. as compared with 25c a year ago and 20c before the war. Rosin was lower and declined 1c per lb. Window glass was slightly higher at Toronto, the demand being reduced.

House furnishings.—Tank glass tumblers advanced 2c per dozen in sympathy with the market for glass. Higher prices were expected for crockery. Brooms rose 40c per dozen, the broom corn market being higher.

Drugs and chemicals. — Bleaching powder rose to 9c per lb. Borax powder was up to 14c per lb. in small quantities. Caustic soda rose slightly, again reaching $7\frac{3}{4}$ c per lb. Soda ash rose $\frac{1}{4}$ c per lb.

Miscellaneous.—The market for raw furs showed further advances. Mink rose to \$3.50 per skin and muskrat to 25-30c per skin. Hops were steady. Pulp and paper markets advanced considerably. Sulphite pulp rose to \$100 per ton as compared with \$50 before the war, and later in the month was difficult to obtain. Ground wood pulp also rose to \$16.00-18.00 per ton. Newsprint paper advanced to \$2.50 per cwt. for odd lots. Wrapping paper was up to \$3.75-4.75 per cwt. Raw rubber declined considerably, being down to 69-70c per lb. for Para.

Prices in Other Countries.

The accompanying tables show the latest available returns of currently published index numbers of prices in other countries.

In the United Kingdom the Board of Trade *Labour Gazette* for March reported on retail food prices on March 1, as follows:

Retail prices of food on March 1 were higher than on February 1 by about 1 per cent. Mutton showed an advance of over 3 per cent on the average, but beef showed a comparatively small increase. Flour and bread prices rose about $2\frac{1}{2}$ per cent, as compared with 6 per cent last month. There was an increase of $7\frac{1}{2}$ per cent in the price of granulated sugar, of 4 per cent in the price of margarine, and of 3 per cent in that of cheese. Butter increased slightly on the average, as also did potatoes, while milk, tea and bacon remained practically unchanged in price. Eggs and fish were the only articles for which a decline was recorded, the average percentage changes for these being 12 and 4 respectively.

As compared with March 1, 1915, the general level of prices showed an increase of about 19 per cent. Fish prices rose during the year about 40 per cent on the average, and those of granulated sugar about 30 per cent. The prices of meat, bacon and tea increased about 25 per cent, and of milk, butter, cheese and eggs about 15 to 20 per cent. Bread and flour were dearer than a year ago by 14 per cent and 11 per cent respectively. Margarine showed an advance of 10 per cent, and potatoes 4 per cent.

The index number of wholesale prices of the *Economist*, London, had broken all previous records at the end of January and by the end of February advanced nearly eight points higher in the percentage figure. Meat, flour, sugar, butter, jute, steam coal and copper showed the chief increases, but tin, lead, coffee, wool, soda and indigo were slightly higher, while oils and oilseeds and tallow were lower.

The *Statist*, London, March 11, 1916, continuing Sauerbeck's index number, commented:

Prices continue to advance, and the index number has now reached 127.6. This, compared with 123.6 in January and with 81.2 before the war, showed a rise of 3.2 per cent for the month and of 57.1 per cent since the war began. The greatest rise in the past month has been in animal foods, more particularly in butter. But the advance in prices has been very general, one of the few exceptions being flax, which has fallen heavily. Wool, cotton and a few other things are also somewhat cheaper, but the greater number of commodities have advanced. The rise in vegetable foodstuffs has been only 1.2 per cent; nevertheless, this makes the rise since the war began no less than 91.3 per cent. The total rise in animal food since June, 1914, has been 45 per cent, in sugar, coffee and tea 52.5 per cent, in minerals 54.3 per cent, in textiles 45 per cent, and in sundries 58.9 per cent.

a. July of each year. b. At the first of each year. c. Foods.

In Australia retail prices were slightly lower in December as compared with November, decreases appearing in bread, flour, oatmeal, potatoes, cheese, bacon, ham, beef, pork, and in some mutton, with increases in jam, currants, candles, soap, onions, butter and eggs.

Prices in Germany, at Berlin, in January, were reported on in the British *Labour Gazette* from returns in the Prussian Official Journal *Statistische Korrespondenz*. Some of the prices are maximum prices, beyond which retail dealers cannot charge, some commodities are obtainable only in small quantities, while others are said to be practically unobtainable. As compared with December, prices in January were lower in eggs, peas, beans and lentils, while beef, mutton and veal advanced substantially.

Retail food prices in Italy were higher in January than a month before, as shown by the index number in the journal of the Italian Labour Office. Prices were higher in bread, flour, macaroni, bacon, table oil and milk, but beef was slightly lower.

Prices in Denmark since the outbreak of war have been received by the Danish Statistical Department. Food had risen in Copenhagen 33.4 per cent by February, 1916, the rise being greatest in flour, oatmeal, beef and fish. Coal was up 66.7 per cent, clothing, etc., 33.3 per cent. The average rise for all groups was reported at 24.2 per cent.

In the Netherlands the official index number of retail prices had risen from 150 in December, 1915, and to 153 in January, 1916. The principal changes were in flour, soda and soap.

In Norway the index number of the Norwegian Labour Office had risen to 152 by December, 1915, as compared with 113 in July, 1914. Nearly all commodities included rose considerably during the last three months of 1915.

In the United States the retail food prices index number of the Bureau of Labour Statistics showed no change for

January as compared with December, standing 6 per cent higher than the average for 1915. Meats were slightly higher, while potatoes and onions advanced steeply, but eggs declined 9 per cent.

On wholesale prices in the United States at March 1, *Bradstreet's*, New York, March 11, 1916, reported:

Enormous war demands and record-breaking domestic calls are still the stimulants causing Bradstreet's index number of commodity prices to rise as of March 1 to a point 2 per cent over February 1, and the number is to that extent the highest ever recorded. The advance over March 1, 1915, is 18 per cent, and over July 1, 1914, the gain is 31 per cent. During February eight groups of commodities advanced, while four declined, the latter being breadstuffs, fruits, naval stores and miscellaneous products.

Dun's Review, New York, April 8, 1916, reported on its index number at the first of the month as follows:

Repetition is necessary in discussing the reasons for the further sharp rise in the index number. As in previous months, disproportion between demand and supply continues the outstanding feature, though other factors have contributed to the upturn. The purchasing power of the people, owing to the steady augmentation of wages throughout the country, is much above normal, and in comparatively few instances have the high costs appreciably checked buying. In some quarters, notably in the grain markets, speculation has played a prominent part of late, but the requirements for actual use remain the controlling influence, and in many cases the question of price still seems of secondary consideration with buyers. Pressure to obtain urgently needed supplies is general and premiums are readily offered for prompt shipments; yet, at a time when demands are unprecedented, production is hampered by a shortage of raw materials and of skilled labour, while transporting facilities have proved wholly inadequate. All this has naturally accelerated the rise in prices, which has been so rapid that in conservative circles there is a growing disposition to discourage further advances.

Excepting miscellaneous, every one of the seven divisions into which the index number is divided, for economy of space, touched a higher plane during March. The most striking change was in the clothing total, which went up from \$23,783 to \$24,947, because of the rise in raw cotton, wool and silk, and the enhanced cost of cotton goods, woollen goods and leather. Pronounced strength again prevailed in meats and provisions, as well as in dairy and garden articles and other food, while late in the month breadstuffs recovered a small part of the February decline, owing to reports of damage to winter wheat. The class embracing metals continued its advance on further heavy buying of materials and products, but the miscellaneous total, due to the reaction in some drugs and chemicals, receded slightly for the first time in over a year.

REPORTS OF EMPLOYMENT BUREAUS.

EMPLOYMENT showed an upward tendency in February according to reports received from employment bureaus,—70 commercial,* 8 public and 17 philanthropic. The average number of vacancies notified per day to all these offices was 716.28 as compared with 712.40 in January. The average number of persons placed per day was 352.36, while in January the average was 328.92. Employment for women workers as reported by 13 Young Women's Christian Associations and four Women's Hostels showed a falling off from the level for January, the average number of vacancies notified per day falling from 81.72 in January to 73.37 in February, and the average number of persons placed per day from 15.69 to 12.36. The number of persons who obtained casual employment through the offices of the Salvation Army and other agencies was 878 for the month of February, and the number of casual jobs supplied them was 1,962. Not all the individual returns which appear in the accompanying tables were included

in the above calculations, as in some cases comparisons with the previous month were not available.

FAIR WAGES CONTRACTS, MARCH, 1916.

THE Department of Labour received for insertion in the *Labour Gazette* information relating to three fair wage contracts awarded by the Department of Public Works during March. One of the contracts contained a fair wage schedule, while the other two contained the fair wage clauses providing for the rates of wages generally accepted as current in the locality where the work is to be performed. A statement is added for supplies given by the Post Office Department, subject to the regulations for the Suppression of the Sweating System.

Fair Wages Schedules.

DEPARTMENT OF PUBLIC WORKS.

Construction of freight shed, baggage-room and waiting-room in connection with Government wharf, Belleville, Ont. Name of contractor, Conroy & Hickey, Peterborough, Ont. Date of contract, March 6, 1916. Amount, \$4,700.

Trade or class of labour.	Rate of wages: Not less than the following:
Foreman carpenters.....	40c. per h., 9 hrs. per day.
Carpenters.....	30c. " 9 " "
Blacksmiths.....	30c. " 9 " "
Blacksmiths' helpers.....	20c. " 9 " "
Joiners.....	35c. " 9 " "
Ordinary labourers.....	20c. " 10 " "
Man with 1 horse and cart...	30c. " 10 " "
Man with 2 horses and wagon	40c. " 10 " "

Fair Wages Clauses.

This contract is made subject to the regulations made by Order in Council dated the third day of March, 1906, under and by virtue of the Public Works (Health Act), 1899.

All mechanics, labourers or other persons who perform labour in the construction of the work hereby contracted for shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and, if there is no current rate in such district, then a fair and reasonable rate, and shall not be required to work for longer hours than those fixed by the custom of the trade in the district where the work is carried on, except for the protection of life or property, or in case of other emergencies. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, it shall be determined by the Minister of Labour, whose decision shall be final.

These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payment for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

In the event of default being made in payment of any money owing in respect of wages of any mechanic, labourer or other person employed on the said work, and if a claim therefor is filed in the office of the Minister of Public Works, and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of any moneys at any time payable by His Majesty under said contract, and the amounts so paid shall be deemed payments to the contractor.

The contracts containing the above clauses follow:

DEPARTMENT OF PUBLIC WORKS.

Supply and installation of metallic fittings for record room in examining

warehouse, Montreal, Que. Name of contractor, The Steel Equipment Company, Limited, Ottawa, Ont. Date of contract, March 11, 1916. Amount, \$6,449.

Supply and installation of interior fittings in public building, Fredericton, N.B. Name of contractor, The Berlin Interior Hardwood Company, Limited, Berlin, Ont. Date of contract, March 27, 1916. Amount, \$1,063.

POST OFFICE DEPARTMENT.

During the month of February payments were made by the Post Office Department for the supplies below mentioned, subject to the Regulations for

the Suppression of the Sweating System and the securing of payment to the working men and working women of fair wages and the performance of the work under proper sanitary conditions.

Nature of Orders.	Amount of Orders.
Making metal dating stamps and type and making other hand stamps and brass crown seals.....	\$ 932.19
Making and repairing rubber dating stamps and type; also other stamps.....	88.26
Supplying stamping material and repairing stamping pads.....	723.06
Supplying new mail bags.....	5,839.87
Repairing mail bags.....	3,639.22
Supplying mail bag fittings.....	157.25
Making and repairing miscellaneous articles of postal stores.....	15.60
Making and repairing railway mail clerks' tin travelling boxes; also steel portable letter boxes.....	368.17
Making and supplying letter boxes; also keys for letter boxes.....	315.00
Repairing parcel post hampers.....	55.25
Making and supplying articles of official uniform.....	3,747.74

TRADE DISPUTES DURING MARCH, 1916.

DURING March nine disputes were recorded as having commenced during the month. In these nine disputes 16 firms and 786 employees were involved. Four disputes were carried over from February, and through these nine firms and 377 employees were affected, making a total of 13 disputes recorded as being in existence during March, and by which altogether 25 firms were concerned and 1,163 employees were affected. In the month of March, 1915, six trade disputes commenced, involving 18 firms and 864 employees.

New disputes in March, 1916.—In the following table the disputes beginning

during March are summarized according to trades affected:

TRADES.	No. of disputes.	No. of employees involved.
Mining.....	1	400
Building.....	1	40
Metal.....	3	165
Clothing.....	1	41
Food and tobacco preparation...	1	105
Miscellaneous trades.....	1	10
Unskilled labour.....	1	25
Total.....	9	786

Duration of trade disputes.—The time losses for trade disputes in existence during March are estimated at 11,451 working days as compared with 23,637 working days lost through disputes existing in March, 1915.

Disputes beginning before March.

Four of the trade disputes in existence during March were carried over from February; two of these were considered by the Department to have ended; a settlement was reached in one and in the case of the other no settlement had been reported to the Department at the end of the month. These four disputes are:

Plumbers and steamfitters, Victoria, B.C.—Plumbers and steamfitters at Victoria, B.C., to the number of 33 went on strike on February 16, 1915, the cause being a reduction in wages from \$5 to \$4 per day. No formal settlement of this dispute has been reported, but the information reaching the Department has seemed to show that the dispute no longer affects conditions of employment.

Boilermakers, ironworkers and helpers, Halifax, N.S.—On August 2, 1915, 65 employees of two shipbuilding firms at Halifax, N.S., ceased work owing to their employers refusing to recognize the union and also to have a minimum wage scale fixed. Since that date the number of men on strike has decreased to 28. Although no formal settlement in this case has been reported, the information reaching the Department has seemed to show that the dispute no

longer affects conditions of employment at Halifax.

Carpenters, Montreal, Que.—On February 23, 1916, 294 carpenters employed by the Canadian Vickers, Ltd., ceased work, the cause being a demand on their part for a minimum wage scale. An arrangement was reached March 31 whereby the strike was declared off. The company gave no increase of wages at present, but promised to do its best in that direction on any subsequent contract; the strikers to be taken back as occasion offered.

Printers, Quebec, Que.—A strike of 16 printers in the employ of L'Action Sociale, Ltée, Quebec, Que., was still in existence at the end of March.

Disputes beginning during March.

Coal miners, Bellevue, Alta. — On March 7, 400 coal miners in the employ of the Western Canadian Collieries, Ltd., at Bellevue, Alta., ceased work owing to certain abnormal conditions obtaining in the mines making it impossible for them to earn the minimum wage of \$3 per day. They demanded that the "make-up" clause as provided for in the working agreement be applied, the company to pay the miners the difference between their earnings and the minimum wage. The men returned to work on March 25, the company agreeing to pay the difference between the earnings and the minimum rate.

Plumbers and steamfitters, Hamilton, Ont.—On March 21, 40 plumbers in the employ of four firms, namely, Drake-

Avery Company, Adam Clark, A. Rodgers & Company and A. Saynor, at Hamilton, Ont., ceased work owing to the objection of the firms to a "closed-shop" clause in the working agreement. The dispute was amicably settled on March 31.

Moulders and coremakers, Brantford, Ont.—One hundred and twenty moulders and coremakers in the employ of Pratt and Letchworth Company, Ltd., Brantford, Ont., went on strike on March 3 to enforce their demand for an increase in wages. The men returned to work on March 10 as the result of a compromise arrangement being effected.

Machine operators, Orillia, Ont.—On March 13, 37 machine operators employed at the Fisher Motor Company, Ltd., ceased work owing to a reduction in piece-work rates. This dispute was reported as unsettled at the end of March.

Electrical workers, New Westminster.—On March 17, eight electrical workers, employees of the municipal light department at New Westminster, B.C., ceased work to enforce their demand for increased wages. The strike was ineffective, the places of the strikers being filled and employment conditions were not affected.

Corset makers, Toronto, Ont. — On March 24, 41 corset makers employed

by the Bias Corset Company, Ltd., went on strike, the alleged cause being the objection of the employees to having their working hours increased without remuneration. This strike was unsettled at the end of the month.

Cigar makers, Hamilton, Ont. — On March 15, 105 cigar makers employed by the Harper-Presnail Cigar Company, Ltd., ceased work owing to their demand for increased wages being refused. This dispute was still in existence at the end of March.

Moving picture machine operators, Calgary, Alta.—On March 13, ten moving picture machine operators employed at the Monarch, Empress, Bijou, Regent and Allen theatres, Calgary, Alta., went on strike owing to the refusal of the management of the above theatres to sign wage scale agreement. The management replaced the strikers by returned soldiers who had been training for the work.

Cement workers, Esquimalt, B.C. — On February 29, 25 cement workers in the employ of the contracting firm of Grant, Smith and McDonnell, Ltd., at Esquimalt, B.C., went on strike to enforce their demand for increased wages for overtime and Sunday work. A working arrangement was effected through mediation by the Department of Labour and the dispute was declared settled on March 15.

TABLE OF TRADE DISPUTES IN EXISTENCE DURING MARCH, 1916.

Occupation	Locality	Alleged Cause or Object	Number affected		Date of Commencement	Date of Termination	Method of Settlement	Result
			Firms	Employees				
DISPUTES BEGINNING PRIOR TO MARCH, 1916.								
<i>Building—</i> Plumbers and steamfitters.	Victoria, B.C.....	Reduction in wages....	5	27	Feb. 16, 1915	1916	No formal settlement in this case has been reported, but the information reaching the Department has seemed to show that the dispute no longer affects conditions of labour.	Indefinite.

INDUSTRIAL ACCIDENTS DURING THE MONTH OF MARCH, 1916.

Based on reports of correspondents and on returns from the Board of Railway Commissioners, Departments of Mines of Nova Scotia, Quebec, Ontario, Alberta and British Columbia, the factory inspectors of Ontario and Manitoba, Ontario Railway and Municipal Board, the Building Inspector of Manitoba, and the Saskatchewan Bureau of Labour. Industrial accidents reported in the press are also recorded.

The following is a record of the accidents of the month by industries and groups of trades:

STATEMENT OF ACCIDENTS DURING THE MONTH OF MARCH, 1916, BY INDUSTRIES AND GROUPS OF TRADES.

DURING March, according to the record of industrial accidents maintained by the Department of Labour, 61 workpeople were killed and 332 were seriously injured during the course of their employment. The record for the month of February was 56 killed and 290 injured, while there were 38 killed and 180 injured in March, 1915. A comparison of the March and February records show that there were five more workers killed and 42 more injured in the former month and there were 23 more killed and 152 more injured in March this year than in March a year ago.

Trade or Industry.	Killed.	Injured.	Total.

Sugar refinery employee.	Pt. St. Charles, Que.....	" 22	1	Crushed by falling pulley.
Leather:—				
Belting factory Empl..	Ottawa, Ont.....	" 1	1	Fell down elevator shaft.
Steam Railway Service:—				
Engineer.....	Val Brilliant, Que.....	" 21	1	Head-on collision.
" "	Port Credit, Ont.....	" 23	1	Collision of trains.
Fireman.....	Val Brilliant, Que.....	" 31	1	Head-on collision.
" "	Port Credit, Ont.....	" 23	1	Collision of trains.
Brakeman.....	Falcon, Sask.....	" 1	1	Fell from a car.
" "	Scarboro Jct., Ont.....	" 16	1	Fell from moving train.
" "	Toronto, Ont.....	" 18	1	Struck by a train.
" "	MacDuff, Ont.....	" 30	1	Head-on collision.
" "	Port Credit, Ont.....	" 23	1	Collision of trains.
" "	Whitewater, Man.....	" 13	1	Fell from top of cars.
" "	Belleville, Ont.....	" 14	1	" " "
" "	Oba, Ont.....	" 30	1	Head-on collision.
" "	Sydney, N.S.....	" 29	1	Run over by cars.
Yardman.....	Ottawa, Ont.....	" 17	1	Crushed by a derailed car.
" "	Hawkesbury, Ont.....	" 21	1	Crushed between car.
Gateman.....	St. Pierre aux Liens, Que....	" 18	1	Struck by a locomotive.
Employee.....	M.P. 81.8-Mountain S.D.....	" 3	1	Struck by a locomotive.
Sectionman.....	Winnipeg, Man.....	" 13	1	Struck by a locomotive.
" "	Swansea, Ont.....	" 18	1	Struck by a train.
" "	Point Levis, Que.....	" 13	1	Struck by a locomotive.
" "	Browning, Sask.....	" 28	1	Crushed by cars.
" "	Montrose, Ont.....	" 31	1	Runover by cars.
Lineman (Telegraph D.)	Toronto, Ont.....	" 18	1	Struck by a train.
Electric Railway Service:—				
Superintendent (Electric Interurban Railway).	Kingsville, Ont.....	" 23	1	Electrocuted while coupling cars.
Navigation:—				
Steamer Captain.....	St. John, N.B.....	" 13	1	Drowned—vessel sunk at wharf.
Deckhand.....	Vancouver, B.C.....	" 9	1	Fell from vessel to wharf.
" "	Yarmouth, N.S.....	" 2	1	Fell from wharf.
Miscellaneous Transport:—				
Elevator operator.....	Notre-Dame de Lourdes, Que	" ..	1	Mangled by machinery.
Driver.....	Amprior, Ont.....	" ..	1	Lockjaw—resulting from an injury in head received by a falling piece of lumber.
Miscellaneous skilled trades:				
Oilworks employee.....	Ioco, B.C.....	" 22	1	Fell from a ladder.
Emp. explosive plant...	Parry Sound, Ont.....	" 27	1	Explosion.
Starch works, employee.	Port Credit, Ont.....	" 17	1	Mangled by machinery.
Janitor.....	Calgary, Alta.....	" 5	1	Fell down stairs.
Elevator operator.....	Montreal, Que.....	" 23	1	Crushed by an elevator.
Unskilled Labour:—				
Laborer.....	Portage La Prairie, Man....	" 22	1	Crushed by a falling wall.
" "	Montreal, Que.....	" 18	1	Crushed by an elevator.
" "	Quebec, Que.....	" 14	1	Fell from roof.

CAUSES.

TRADE OR INDUSTRY.

IMMIGRATION—EMIGRATION—COLONISATION.

IN the present article statistics in regard to immigration and emigration are given only for the United States, information respecting the movement of British subjects between the United Kingdom and British North America not having been received.

(2) Movement of Persons other than Citizens of the United States between the United States and British North America.

Immigration to British North America from the United States.—According to the February bulletin of the Bureau of Immigration of the United States Department of Labour, alien residents of the United States to the number of 929 departed to take up permanent residence in British North America during February, as compared with 1,014 in January and 1,150 in February, 1915.

Immigration from British North America to the United States.—During February, 1916, 7,249 persons (not including citizens of the United States) left British North America to take up permanent residence in the United States, as compared with 7,354 in January and 4,756 in February, 1915.

Balance.—It appears from the above that in this movement between the United States and British North

America, the latter had an outward balance of 6,320 in February, 1916, as compared with an outward balance of 6,340 in January, 1916, and 3,606 in February, 1915.

On March 3 the usual renewal of the Dominion order-in-council continuing the prohibition of all classes of artisans and labourers from entering British Columbia was passed. The order-in-council sets out the different ports of entry in British Columbia to which the order shall apply and extends the period of prohibition to September 30, 1916.

(3) Homestead Entries and Land Patents.

Homestead Entries.—In February, 1916, there were 201 homestead entries in Manitoba; 298 in Saskatchewan; 302 in Alberta, and 19 in British Columbia, a total of 820, as compared with 800 in January, 1916, an increase of 20.

Letters Patented.—According to the Department of the Interior's statement of letters patent covering Dominion lands in Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory for the month of February, 1916, the number of patents was 1,921 and the number of acres 313,943.79. These numbers compared with 1,476 and 234,484.84 respectively in the previous month of 1916.

BUILDING PERMITS DURING MARCH, 1916.

THE total value of building permits issued in the municipalities shown in the table on the following page during March amounted to \$1,605,161, as compared with \$879,337 for February and \$1,872,162 for March, 1915, or a total decrease of \$267,001 or about 14.3 per cent from March a year ago. A comparison of the totals for the different

provinces shows the greatest decline to have taken place in Quebec, there being a decrease of \$313,502 or 48 per cent from last year's figures. Nova Scotia, Ontario, Manitoba and Alberta also showed decreases. On the other hand an increase is shown for New Brunswick, Saskatchewan, and especially for British Columbia, where it amounted to \$156,969 or 194 per cent.

BUILDING PERMITS DURING MARCH, 1916.

RECENT INDUSTRIAL AGREEMENT.

Montreal Shippers and Longshoremen.

A WORKING agreement of much importance in the shipping world was effected on March 15 as between various shipping companies of Canada and the Syndicated Longshoremen of the Port of Montreal. The agreement extends from January 1, 1916, to January 1, 1918. The conditions are substantially identical with those established under the Board of Conciliation and Investigation of 1910, the wages, however, having been increased by 5 cents an hour, day and night. The wage rates under the present agreement are 35 cents per hour for day work, 40 cents per hour for night work. The text of the agreement follows:

THIS AGREEMENT entered into this 15th day of March, 1916, at Montreal, between the Allan Line, Black Diamond Line, Cairn Line, Canadian Northern Steamships, Limited, Canadian Pacific Ocean Services, Limited, Crown Line, Cunard Line, Direct Line, Donaldson Line, Furness Line, Head Line, Leyland Line, Manchester Liners, New Zealand Shipping Company, Limited, South African Line, Thomson Line, White Star-Dominion Line, hereinafter called the Companies, and the Syndicated Longshoremen of the Port of Montreal, hereinafter called the Longshoremen, *witnesseth*:

1. That this agreement is entered into and shall continue in full force and effect for two years from the first of January, 1916.

2. That in consideration of the undertakings hereby entered into and obligations assumed by the longshoremen, the companies hereby undertake and agree:

- (a) To deposit forthwith two thousand dollars (\$2,000) with an incorporated trust company in Montreal, as trustees, for a guarantee of the due performance by them of this agreement.
- (b) That the working hours shall be from 7 o'clock a.m. until 12 o'clock a.m., and from 1 o'clock p.m. until 6 o'clock p.m., at the rate of 35 cents per hour for day work; and from 7 o'clock p.m. until 12 o'clock p.m., and from 1 o'clock a.m. until 6 o'clock a.m., at the rate of 40 cents per hour; all other hours, including Sundays, to be paid at double rates. Nitrate cargo and bulk sulphur to be paid at the rate of 50 cents per hour day and night. Grain trimming to be paid at the regular general cargo rates and the running of the grain in the pipes to be stopped while the men go down in the hold to work, two men to stand on deck during that time if necessary. Men ordered out to work during the night and kept waiting after the time called for shall receive half time from the time for which they were called out until discharged or set to work. A night meal to be taken between 11 o'clock p.m. and 1 o'clock a.m., each man to be entitled to one hour, and the ship to supply good meals or pay cost thereof. Coal shovellers on general cargo vessels, 40 cents per hour, day or night. All other labourers, coal, to continue as heretofore under the general cargo schedule.
- (c) That 15 men will constitute a gang for discharging a ship and 16 men for loading, according to

the nature of the cargo and the capacity of the ship.

- (d) To give work to the men signing the personal agreement, herein-after referred to, when available, in preference over men not having so signed.
 - (e) To furnish the men, if requested, the best respirators to protect them while trimming the grain.
 - (f) All the above conditions and schedule of wages to apply to all ocean steamships coming into the Port of Montreal under the companies' jurisdiction.
3. That in consideration of the scales of wages hereby agreed to by the companies and the schedule of working hours and other undertakings hereby entered into, the longshoremen hereby undertake and agree:
- (a) To deposit forthwith two thousand dollars (\$2,000) with an incorporated trust company in Montreal, as trustees, for a guarantee of the due performance by them of this agreement.
 - (b) To supply the necessary men under their jurisdiction to perform the work of longshoremen throughout each season during the term of this agreement.
 - (c) That in addition to the present contract each of the longshoremen will individually sign a personal contract with the companies when commencing to work each season, whereby he will undertake and agree to work in accordance with the present contract until the close of navigation for that season.
 - (d) That the longshoremen will accept and adhere to the scales of wages and schedule of hours herein set forth until January 1, 1918.
4. The companies and the longshoremen hereby consent and agree that the

two deposits of two thousand dollars (\$2,000) each hereinabove referred to, will be paid over to the trustees upon the understanding that the sum so deposited by each of the parties shall be applied by the said trustees in payment, in order of priority of time, of any and all judgments or orders of any Court in the province of Quebec in favour of the other party, but upon the expiration of this agreement each deposit or balance of deposit, with accrued interest, will be returned by the trustees to the party entitled thereto.

5. In view of the representations by the longshoremen that the deposit under the last agreement only returned them three per cent while it was on deposit with the trust company, the companies are willing to undertake to make up any difference so that the longshoremen will get a return of not less than five per cent for any money deposited in trust.

6. That the companies having already recognized the Syndicated Longshoremen of Montreal, the Syndicated Longshoremen shall have the right to appoint a representative on the wharves to be elected at a general meeting of the longshoremen.

In witness whereof the parties have signed:

REVIEWS.

Co-operative Stores.

The Co-operative Store in Canada. Bulletin of the Departments of History and Political and Economic Science in Queen's University, by H. Michell, Kingston, Ontario. January, 1916; 22 pp.

THE true co-operative society is formed for the purpose of joint trading, originates among the weak, it must be carried on in an unselfish spirit, and depends largely for success upon the readiness of the members to foster the spirit of unity and loyalty to the association. The name "co-operative" is quite commonly applied to a purely joint stock enterprise despite the fact that a joint stock company issues its shares to the general public while the co-operative

society sells its shares to its members exclusively. The joint stock company's aim is to earn dividends for shareholders, while in the co-operative association service to members is the main object, and in joint stock companies votes are reckoned according to the stocks held by the individual shareholder, while in a co-operative association the rule is: one member, one vote. The history of co-operation both in Canada and the United States has been a disastrous one. The New World has not felt the need of co-operation to any great extent. The comparatively well-to-do Canadian worker is not greatly interested in saving cents, and he has

found fields for the investment of his savings other than the co-operative society. The great fluidity of the Canadian population has also had a markedly deterrent effect on co-operative enterprise; the fight between the co-operator and the wholesaler in Canada has been bitter and has usually ended in favour of the wholesaler; lastly, neither the Canadian nor the American citizen has really grasped the great fundamental truths and ideals of the co-operative movement. The writer then gives a résumé of the history of the co-operative store in Canada in which he states that "during the last fifty-five years there have been started in various provinces of the Dominion close upon 80 stores, of which nearly 40 have either failed or gone out of business from one cause or another." He traces the movement in Nova Scotia, in Ontario and in the West, and presents some interesting data as to co-operative stores among Italians and co-operation among socialists. The Co-operative Union of Canada, which was formed in 1909 in order to unite the various co-operative societies scattered about the Dominion, had 22 co-operative associations in affiliation with it in November, 1915. The study concludes with the opinion that despite the fairly high mortality of co-operative societies in these troublous times the future is hopeful. "There is undoubtedly a strong current setting, both in the United States and Canada, towards co-operative methods in agriculture, and it may well be that an appreciation of the benefits of working co-operatively in the rural districts will lead towards greater attention being paid to the organization of co-operative stores. It may also be that the enforced economies, that will be our portion after the war, will lead our citizens to pay more attention to the desirability of saving even cents. Again, if Canada receives a great influx of immigrants after the war, it may well

be expected that many will bring their co-operative faith with them; of what may be termed a native co-operative movement in Canada there is little or no hope. The movement, which 70 years ago owed its origin to those 28 inspired flannel weavers of Rochdale, has a great lesson to teach Canada. That we should learn that lesson must be the hope of every student of the co-operative system."

Technical Education.

New Brunswick.—The Annual Report of the Schools of New Brunswick, 1914-15. By the Chief Superintendent of Education. Fredericton, N.B., 1916. 176 pp.

The last annual report of the Chief Superintendent of Education of New Brunswick has some data with regard to technical education in the provinces of New Brunswick and Nova Scotia. It is pointed out that barely a beginning has been made in New Brunswick; the City of St. John has a small evening school in which mechanical drawing and commercial work is being taught. It is stated by one official of New Brunswick that "our province is falling fast behind in this matter, and from every standpoint it would seem that we could not afford to delay action longer." Nova Scotia adopted a definite technical education policy in 1907 and figures are given showing that Nova Scotia has gained a considerable lead over her sister province in this matter. The total expenditure on local schools in Nova Scotia for the year 1914 was \$14,279.69. In addition there was an expenditure of \$11,000 on mining and engineering schools, which had an enrolment of 690. The upkeep of the technical college at Halifax cost in addition \$24,500. The enrolment in the local technical schools of Nova Scotia for the year 1914 is given in the following table:

Laws relating to the employment of women and children were numerous. Minimum wage laws were enacted by Arkansas and Kansas, making 11 States which now have such legislation. Idaho appointed a commission to investigate the subject of minimum wage legislation, and Massachusetts and Washington passed amendments to their laws. The Pennsylvania child labour law requires an attendance at school of eight hours per week for children under 16, such attendance to be between the hours of 8 a.m. and 5 p.m. Arkansas prohibited the employment of children under the age of 14, except during school vacation, and then only in occupations owned or controlled by parents or guardians.

Laws regulating the giving of clearance cards or statements of cause of discharge were enacted in California, Indiana and Oregon, while in California and Nevada the employee was given the right to hear and answer charges brought by spotters before being discharged on their evidence. An important federal law was The Seamen's Act, which made numerous provisions for safety and abolished arrest and imprisonment for desertion. In the field of safety the most detailed legislation was formulated by the Industrial Commission of Wisconsin and the Industrial Boards of New York and Pennsylvania. Other interesting enactments of the year deal with mothers' pensions, housing, convict labour, co-operative associations, vocational education, rural credit loans, credit unions, and social insurance.

Factory Inspection.

Nova Scotia.—Report of the Factories Inspector of the Province of Nova Scotia for the year ended September 30, 1915. Halifax, N.S., 1916. 50 pp.

The leading industrial establishments of the province were of such a nature that they received a considerable impetus on account of the demand for war supplies. Large numbers of new workers were employed and many of the old employees were engaged on new processes and the probability of acci-

dent was therefore much greater than usual. The adjustments necessary to meet the war demand were hurriedly made and the needs of the workers were frequently overlooked. The number of accidents reported during the year was 570, of which 15 were fatal, 232 severe and 323 slight. Since the year 1911 there has been a reduction each year in the number of accidents except in 1913, which was an unusually busy year. Many of these accidents could have been prevented by the adoption of modern methods of accident prevention. A few large companies have organized safety first departments and others are likely to follow in the near future. Most of the large industries also have first aid accommodations and there is a notable increase of first aid cabinets in the smaller establishments. The lack of competent first aid treatment is evidenced by numerous cases of blood poisoning suffered by workers who have received slight injuries.

As to the relation of alcoholism to accidents the inspector states, "the result from years of accident investigation in this province convinces me that both serious and fatal accidents have resulted from drink, and that accidents have been charged to industry that have been really due to liquor." The greatest progress in accident prevention in Nova Scotia has been made during the four and a half years the Workmen's Compensation Act has been in operation. The new act passed in 1915 is likely to compel the maximum efficiency in accident prevention.

In the matter of safety from fires many employers are careless. Exits leading to fire escapes are often blocked and in many cases fire-proof tower stairways are not serviceable because the doors leading to the different floors are not fire-proof and self closing. As to sanitation it is stated that most employers are giving the matter careful attention. In some instances, however, the provision of sanitary conveniences was quite inadequate. As to ventilation most

employers are willing to meet all reasonable demands, but the laws on the subject are not sufficiently specific to compel careless employers to make proper provision. Some improvement has come, however, through the amendment to the Factory Act passed in April, 1915. Many serious accidents occur in the saw

mills of the province, and it is feared that boys under age are frequently employed. Unhealthful industries in which a large number of boys are employed have developed so rapidly within the past few years as to justify an amendment in the labour laws of the province to cover such establishments.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

The following synopsis of recent cases affecting labour are based upon the latest reports of legal proceedings and other legal records of the different provinces of Canada.

QUEBEC CASES.

A WORKMAN was engaged by a dyeing establishment as a fireman, and to do different kinds of work in connection with machinery in regard to which he had no experience and which he was not qualified to operate. He was set to work at a certain machine with which he was unfamiliar, and while engaged at this work his right hand was badly mangled; he became unable to work, and his earning capacity was reduced 50 per cent. His wages were \$9 per week, and he sued his employer asking for the full extent during the time of his total incapacity and an annuity of \$234 for the balance of his lifetime.

The defendant claimed that the plaintiff was employed as a fireman, to act in that capacity, with the exception that if there was not sufficient work he should make himself useful in doing labourer's work; that on the day he met with the accident the business of the establishment was at a standstill, and the employees were all away; that the defendant had given the plaintiff the key, telling him to sweep up the place, etc., and wait there for the defendant until he should come to get the key. Shortly afterwards the defendant sent two other employees to the factory to get certain goods for delivery to customers, and that these employees on arriving at the factory found the plaintiff standing be-

fore a machine which was in motion and which plaintiff had no reason to be working as it required more than one man to run it.

It was pointed out by the judge that the plaintiff, after starting the machine unbidden, endeavoured to pass through the mangle a garment a few yards long which was worthless and which was not intended to be put through the dyeing process. As negligence could not be proven against the defendant the action was dismissed with costs. (*Babashok v. Berman.*)

workmen's Compensation.—Negligence.

Through a workman's disregard of a warning against using an elevator on mill premises that were in course of construction for a flour mills company at Montreal a casualty company failed in an action to recover from the flour mills company \$1,800, which was paid to the widow of John Creegan, the workman who was killed by a fall from an elevator. The trial judge dismissed the casualty company's claim, and the case was inscribed for review. The Court of Review confirmed the previous judgment, and stated that the evidence conclusively proved the workman's death was caused through an act of his own imprudence, and an act committed contrary to a specific warning. On the question of law, however, the court held that the casualty company was correct in taking action against the flour mills company, and its failure was due, as the court below had found, to a want of

prudence on the part of the victim, who knew that the elevator was defective, and had been warned of its condition. (*Maryland Casualty Company v. Dominion Flour Mills Company.*)

ONTARIO CASES.

Negligence.—Injury and Death by Explosion in Works of Steel Company. Negligence of Servants of Hydro-Electric Power Commission of Ontario.—Liability.

Two actions were brought against the Electric Steel and Metals Company, Limited, to recover damages for the death and injuries sustained by two employees of the company, when an explosion took place of the oil switch in the transformer station of the employers, the defendants, the Electric Steel and Metals Company, Limited, at the town of Welland. Both actions were tried together without a jury. It was found by the judge that the explosion occurred through the negligence of the employees of the defendant, the Hydro-Electric Power Commission of Ontario, and that this defendant was liable in damages.

The Commission tried to set aside the action, claiming that as the Commission was discharging its duties in the interest of the public and without profit it could not be made liable for an act of negligence. It was pointed out, however, that by the Power Commission Act, if the Attorney-General does not give consent no action can be brought against the Commission, but in these cases the Attorney-General had given consent and in this consent it was implied that if the Commission should be held liable in the actions judgment could be pronounced against it.

Damages were, therefore, assessed in the case of the death claim at \$1,000, and in the case of the person receiving injuries at \$2,500. (*Howarth v. Electric*

Steel and Metals Company, Limited.) (*Young v. Electric Steel and Metals Company, Limited.*)

Master and Servant.—Injury to Servant.—Negligence.

An action was brought to recover damages for injuries sustained by the plaintiff, while in the defendant's employment, by reason, as he alleged, of the negligence of the defendants.

The plaintiff was employed as a sectionman on a railway in course of construction by the defendants. He and his foreman and two other men were proceeding along the track in a handcar, when they saw an engine coming, and at once, by direction of the foreman, proceeded to unload tools from the handcar and to remove it from the track. The plaintiff got off the car, grabbed a jack which was on the car, tried to move it with one hand and failed, proceeded to use both hands, when the left hand was injured by the jack falling upon it.

The judge informed the jury that, if there was any negligence, it must be in the system the defendants were operating. The jury, in answer to questions, found: (1) that the accident was due to the defendant's negligence; (2) that such negligence was that foreman of handcar should have had instructions to slow down car on approaching curve in track; (3) that the plaintiff could not, by the exercise of reasonable care, have avoided the accident; and they assessed the damages at \$200, for which the plaintiff had judgment.

An appeal was made, and the judge, in delivering judgment of the court, pointed out that there was a total absence of any reasonable evidence proper for the jury on the question of defective system. The sole question must be concerning the order of the foreman. The appeal was allowed and action dismissed with costs. (*Caldarelli v. O'Brien.*)

THE LABOUR GAZETTE

MAY, 1916.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

THE long drawn out conference between the coal operators and coal miners in Pennsylvania, mentioned several times in these pages, came to a favourable close about the end of April, though not before a point of extreme danger had been reached in the case of the workers in the anthracite fields. It was not until May 1 that the points in dispute were arranged, the actual agreement following a day or two later. The fact that the negotiations passed through stages of severe crisis makes it the more satisfactory that an agreement was reached at all, especially in view of the fact that it is the first time in many years in which working agreements in this field have been effected without a disastrous cessation of work. The number of anthracite workers affected is about 176,000, and while the agreement with the bituminous mine workers in the same region was not entirely dependent on the conclusion of the anthracite agreement, there is no doubt the two bodies of workers were almost mutually interested in both agreements, so that the negotiations have affected nearly 400,000 workers, all members of the United Mine Workers of America.

No formal copy of the agreement appears to have been as yet issued, but published statements indicate its general scope. Briefly, the miners secure a recognition of the union, an eight-hour day for day labour, and an increase in

wages based on the old nine-hour day, which will bring into the workers a sum placed by Mr. John White, President of the U.M.W.A., at not less than \$10,000,000 yearly. The settlement is for four years. The new conditions are expected to entail an increased price for domestic coal of not less than 25 cents and (as it is hoped) not more than 50c per ton, an increase which will of course affect equally consumers in Canada and the United States. In connection with this point it is interesting to note that the Federal Trade Commission of the United States has announced that in the event of any further rise in anthracite prices the Commission will take up with the Department of Justice of the United States a searching investigation of the anthracite industry. In some quarters it is still hoped this announcement may tend to prevent increased anthracite prices. In a statement issued to the press at the close of the negotiations by Mr. John P. White, President of the United Mine Workers' Association, appears the following remark as to union recognition: "The miners have given the country a striking demonstration that the just demands of wage earners for improved wages and conditions can be won without strife when the men act together through a strong and responsible organization. The United Mine Workers of America is now recognized as such an organization by this group of financial interests which only a few years ago treated it with scant respect."

PRINTED but unofficial statements as to the terms of settlement include the following clause as that under which grievances arising during the life of the agreement will be arranged: "All grievances referred to the Board of Conciliation shall be heard and a decision rendered within 60 days from the date of reference to the Board; provided that said period may be extended for such time as may be mutually agreed upon by the operators' representative and the mine workers' representative in the district in which said grievance originates. If no decision is reached within 60 days after reference, or within the extension period thereafter, the Board shall submit the case forthwith to the umpire for final decision as provided in the award of the Anthracite Coal Strike Commission." The "Board of Conciliation" here mentioned is that existing since its establishment in 1903 as part of the settlement effected by the Anthracite Coal Strike Commission appointed a few months earlier by Mr. Roosevelt, then President of the United States.

* * *

THE published statements as to the settlement include similarly a section relating to the eight-hour day provision, which, as given out thus unofficially, is as follows:

"When machine mining is done on a day basis, the rates paid shall not be less than the established colliery machine rates paid to the several classes of labour employed April 1, 1916; provided, that in no case shall the rate for machine miner be less than \$3.30 per day; for machine runner, \$2.70 per day; for machine miners' labourer, \$2.34 per day, and for machine runner's helper, \$2.34 per day. It being understood that these rates are agreed to as covering a new requirement and are applicable only to machine mining, subject, neverthe-

less, to three per cent advance under the terms of this agreement.

"An eight hour day means eight hours of actual work for all classes of labour at the usual working place, exclusive of noon time, for six days per week, if the operator desires to work his mines to that extent, excepting on legal holidays. The time required in going to and coming from the place of employment in or about the mine shall not include any part of the day's labour. Drivers shall take their mules from the stables to the usual working place before starting time and shall return them to the stables after quitting time, compensation for such services being included in the day rates established for this class of labour. If, because of breakdowns, repairs or the requirements of transportation or other causes essential to efficient operation, it is found necessary to extend the normal work day of any employee, or any class of employees, the operator may do so at his option, paying for overtime a proportional rate per hour as determined from the rates established under Section 1 hereof."

* * *

THE conference of railroad companies and railroad workers which also has been proceeding for some months at various points in the United States, involving changes of relatively even greater moment to the disputing parties, and in a measure to the public also, than those in the case of the coal mining interests, has not made very rapid progress, and the only fact of importance which has emerged since the matter was last noted last month in these pages is that the negotiations have now been thrown over until the beginning of June. On June 1 a general conference of the committee representing the railroads of the United States will meet in New York, representatives of the four operating brotherhoods, namely, (1) the locomotive engineers, (2) firemen and

enginemen, (3) railroad conductors, and (4) railroad trainmen. It will be remembered that the employees concerned in this case, numbering in all some 400,000 workers, demand substantially an eight-hour day, with overtime pay for all hours worked over eight. The published statements for the railroad companies estimate that the increased cost in wages of the concessions demanded would be not less than, in round figures, \$100,000,000. The Canadian railroad employees of the same classes are of course members of the same international brotherhoods, and both railroad companies and employees are known to be following with the deepest interest the situation developing in the United States. In the meantime Canadian union officials, having regard, as it is understood, to the war conditions prevailing in the Dominion, have refrained from action in the way of pressing at the present time for a decision on this side of the boundary in these difficult matters.

* * *

THE spring months, April and May, are usually severe in industrial disputes, culminating frequently in a series of May Day strikes. While the present issue of the *Labour Gazette* does not technically extend beyond the close of the month of April, it is known at the time of writing that the May Day difficulties in Canada were not this year of a serious nature and no disastrous strikes were reported, the two or three disputes that occurred being short-lived. The most important dispute developing during April was that at the mines of the Acadia Coal Company at Stellarton, N.S., involving somewhat over 1,000 men. Here, after a strike lasting about 20 days, the employees (an official of the Department of Labour mediating) returned to their employment and the dispute was left for adjustment by a Board of Conciliation. A dispute on the part of planing mill employees at St. Romuald d'Etchemin involved nearly 4,000

men; mediation here also effected a settlement and work was resumed at the end of four days. The only other dispute of more than trifling importance was that of cigar makers at London, where about 130 employees began on April 17 a strike which had not been settled at the end of the month.

During the month one dispute was dealt with before a Board established under the Industrial Disputes Investigation Act, that, namely, in the case of the T. H. & B. Railway and its shop employees. A unanimous report was received by the Minister from the Board at the end of the month. While no agreement between the disputing parties could be effected, the fact that the members of the Board had seen their way to a common conclusion seemed to promise hope of an amicable arrangement of the matters in dispute.

* * *

DURING the month of April a Royal Commission, appointed on the recommendation of the Minister of Labour, conducted an inquiry into the conditions in Toronto and Hamilton in industries connected with the production of munitions of war, the Commissioners being His Honour Colin G. Snider, County Judge of Wentworth; Mr. William Inglis, manufacturer, Toronto, and Mr. J. A. McClelland, Montreal, Vice-President of the International Association of Machinists. The Commission began its work in Toronto on April 18, taking evidence for several days and continuing the inquiry at Hamilton. The Minister's object in the appointment of the Commission, it is understood, was the allaying of certain friction of which evidences had been observed as to the conditions prevailing in the case of a number of firms in Toronto and Hamilton engaged in the production of munitions of war and to secure if possible a basis of agreement as between the employing firms in question and the workmen. At the close of the

month it seemed likely that the inquiry would shortly conclude and that the report would be in the Minister's hands early in May.

* * *

THE Department of Labour during the month received from an Australian correspondent a communication which makes an interesting comparison as between conditions in that country and Canada as to industrial disputes. The correspondent, who writes from Melbourne, N.S.W., under date of March 22 and is official adviser to the Council of Employers of Australia, had been examining the reports received by the Council from Canada as to the operation of the Industrial Disputes Investigation Act, 1907, commonly known as the Lemieux Act, and remarks: "My Council note with pleasure the good work being done by your Industrial Act, especially in the restriction of strikes. Australia with its superabundance of labour laws is a land of strikes. In 1915 there were 308 strikes in New South Wales alone." The strike record for Canada, the Department of Labour points out with some satisfaction, was lower than at any other point during the 15 years over which strike statistics in Canada extend, the figure standing at 43, an improvement of one over the figure for 1914, when the record was 44. The favourable situation of Canada in this respect is the more striking when it is remarked that the population of New South Wales is under two millions, less than one-quarter of that of Canada.

* * *

THE opportunities for employment were greater during April than in the previous month, owing to the opening of navigation, greater activity in municipal construction work, the commencement of log driving and opening of sawmills, and a demand which be-

came particularly active towards the end of the month, for agricultural labour. There was some improvement, also, in building operations, chiefly confined, however, to the construction of dwelling houses and farm buildings. There was some dullness in Western coal mines and a number of men were laid off, but in Nova Scotia collieries were very active and short of miners. Unskilled labour on the whole was well employed. A few men in some of the larger cities were out of work, but there was practically no distress and opportunities for employment were increasing day by day. Reports from various agricultural districts indicated that the threatened shortage of farm labour would be overcome and that the requirements of farmers throughout the country would be fairly well met.

* * *

PRICES continued to show a rising tendency in most articles which go to make up the average family budget. Eggs and butter declined and flour was somewhat lower, but beef, veal, mutton, pork, bacon, lard, cheese, rice, beans and potatoes showed slight advances. Rent averaged slightly higher than a year ago, but lower than in 1914. Wholesale prices as indicated by the Department's index number showed an advance. The index number of April stood at 179.1 as compared with 176.4 the previous month and 146.4 for April, 1915.

* * *

THE thirteenth annual contest for prizes offered by Messrs. Hart, Schaffner and Marx, of Chicago, for essays on economic subjects, is now being announced by the committee which is composed of Professor J. Laurence Laughlin, University of Chicago, chairman; Professor J. B. Clark, Columbia University; Professor Henry C. Adams, University of Michigan; Horace White,

Esq., New York City, and Professor Edwin G. Gay, Harvard University. The following list of subjects is suggested:

1. The effect of the European War on Wages and the Activity of Labour Organizations in the United States.
2. Social Insurance.
3. The Practical Working of the Federal Reserve Banking System.
4. The Theory and Practice of a Minimum Wage Law.
5. Emergency Employment.

In addition to these, a list of available subjects proposed in past years is also given and attention is called to the rule that a competitor is not confined to topics proposed in the announcement, although any other subject chosen must first be approved by the committee. A first prize of three hundred dollars and a second prize of two hundred dollars are offered to contestants in Class B, which includes only those who, at the time the papers are sent in, are undergraduates of any American college. A first prize of one thousand dollars and a second prize of five hundred dollars are offered in Class A, which includes any other Americans without restriction. Papers should be sent on or before June 1, 1917, to J. Laurence Laughlin, Esq., Box 172, Faculty Exchange, University of Chicago, Chicago, Illinois.

* * *

CERTAIN alterations and amendments have been made as to the industries covered by the Workmen's Compensation Act of Ontario. A circular has just been issued by the Workmen's Compensation Board of Ontario, which gives the following as the chief changes going into effect in 1916: rearrangement of the classification of the iron industries; uniting the building trades into one class; separation of the manufacture of explosives from other industries; some

rearrangement in the classification of the chemical, paint manufacturing, wood working, textile, clothing, concrete work, road making, bridge building and canal construction industries; withdrawal of the operation of theatres and moving pictures; withdrawal of the operation of passenger or freight elevators not in industries in Schedule I or Schedule II; addition of window cleaning where not less than six workmen are usually employed; addition of a number of other industries not heretofore specifically mentioned though understood to be covered by the general provisions of the Act, including robbing, bark peeling, manufacture of abrasives, torpedoes, fuses, cartridges and chewing gum, glazing, and construction of dry docks, piers, wharves or breakwaters; removal of the number limit exclusion from machine shops, cabinet shops and tinsmith shops; placing the less than six number limit exclusion upon cutting, hewing, piling or hauling logs, wood or bark, logging, and upon bark peeling by hand; placing the less than four number limit exclusion upon the building and repairing operations which were added by Regulation 53; increasing the number limit exclusion upon operations carried on by farmers from less than four workmen to less than six workmen other than farm labourers; and providing that in applying the number limit exclusion to telephone business the switchboard operators shall not be reckoned as workmen.

AT the time of writing it appears that the new Workmen's Compensation Acts of the provinces of Manitoba and British Columbia will likely be passed during the present sessions in which case four compensation laws will have been enacted in Canada in a period of three years, the Nova Scotia Act having been passed in 1915 (but not yet brought into operation) and the Ontario law in the previous year. The framers of the Nova Scotia Act copied the Ontario measure

in all important details, the schedules of compensation being exactly the same and the two laws being administered on the Commission plan. The proposed statutes of Manitoba and British Columbia are practically identical with the other two statutes in regard to scales of compensation and plan of administration but differ in that they both make specific provision for medical assistance. The Manitoba Act states that medical attendance rendered necessary by accidents and not exceeding \$100 shall be paid by the Board while the British Columbia law gives the Board authority to furnish such medical, surgical and hospital treatment, transportation, nursing, medicines, crutches and apparatus including artificial members as the Board may deem reasonably necessary at the time of injury and during the disablement. The Ontario and Nova Scotia statutes do not contain any similar provisions although in a section added to the Ontario law last year the Board is authorized to provide special surgical treatment in cases where in the judgment of the Board it is the only means of avoiding heavy payments on accounts of permanent incapacity. The British Columbia law differs markedly from the other three statutes in that the waiting period is three days exclusive of any holiday upon which the workman would not have worked in the usual course of his employment. In the Nova Scotia and Ontario Acts and in the measure proposed in Manitoba, compensation is not paid, unless the workman is disabled for at least seven days. The British precedent on this point is seven days while in the German and Swiss laws the waiting period is three days. In the States of California, Massachusetts and New York the waiting period is fourteen days, but it is noteworthy that in the State of Washington neighbouring to British Columbia there is no waiting period. There is an important difference between the Act proposed in Manitoba and the legislation

of the other three provinces, in that the latter have adopted the plan of exclusive State-administrated insurance, the funds required for the purpose of the Act being provided by assessment of the employers while in Manitoba it is proposed that the accident fund shall be provided by contributions from insurance companies and underwriters insuring employers and by employers carrying their own insurance. On this point the British Columbia Committee of Investigation on Workmen's Compensation laws appointed in September, 1915, to investigate the operations of Workmen's Compensation laws in the United States and Canada states — "After considering the information and evidence submitted, and endeavouring to give due weight to the advantages and disadvantages of the different methods of handling this matter of insurance, the Committee is unanimously of the opinion that the system proposed by the Bill to the complete exclusion of casualty insurance companies is by far the best adapted to meet the requirements in this Province." The proposed Manitoba Act also differs from the other three measures in that compensation is not provided for industrial diseases. The Ontario, Nova Scotia and British Columbia Acts provide for industrial diseases on the same basis as accidents, each of these statutes having the same schedule of industrial diseases.

* * *

THE Government of the Province of Manitoba has appointed a Fair Wage Board, to draw up a schedule of wages to be paid those engaged in the erection or repairing of government buildings. The Board is composed of Mr. A. Davidson representing the Builders' Exchange and Mr. George Armstrong representing the Building Trades Council, together with Mr. S. C. Oxtou, the Deputy Minister of Public Works, who acts as Chairman.

INDUSTRIAL CONDITIONS DURING APRIL, 1916.**GENERAL SUMMARY.**

INDUSTRIAL conditions during April showed considerable improvement over those of the previous month. The opening of navigation, log driving, and the commencement of operations in saw-mills, the usual spring civic undertakings and the active demand for agricultural labour, all afforded opportunities for employment which absorbed practically most of the idle labour throughout the country. In fact in a great many places a shortage of help was reported. Building operations improved to some extent, but in large part were confined to the erection of dwelling houses, remodelling and repairs. There was a fair amount of building going on in rural districts in the West, but comparatively little activity in the cities.

Agricultural operations at the end of the month were beginning to be active, though during the greater part of the month in practically all parts of the country little seeding was done owing to continued wet weather and the poor condition of the soil. The situation in regard to agricultural labour was improving, and in many districts it was expected that the demand for farm labour would be fairly well met. Fishing showed some improvement on the Atlantic, but was quiet on the Pacific coast. Lumbering showed active conditions with the commencement of the drives and the starting of sawmills. Coal mining continued active in Nova Scotia fields, but was not so busy in Alberta. The Fernie and Nanaimo districts were fairly active, but other British Columbia fields showed a slackening in operations. Metal mining continued very active in all districts. Manufacturing in most lines showed no falling off from the activity of the previous month. There was if anything an improvement

in railroad construction. Transportation with the opening of navigation showed exceptional activity in both rail and water traffic.

In wholesale prices the Department's index number stood at 179.1 for April as compared with 176.4 for March, 146.4 for April last year, and 136.7 and 136.0 in 1914 and 1913. Advances during the month occurred in grains and fodder, animals and meats, fruits and vegetables, miscellaneous groceries, woollens, hides and tallow, iron and steel, implements, building materials, and raw furs. Dairy products were down, and a steep decline in quicksilver lowered the average for metals. As compared with April, 1915, prices were higher in all the groups except grains and fodder. As compared with April, 1914, all groups were higher except fish. In retail prices the cost of a list of staple foods stood at \$8.34 in April as compared with \$8.36 in March, \$7.79 in April, 1915, and \$7.50 in April, 1914. Flour was lower, also eggs and butter. Beef, veal, mutton, pork, bacon, lard, old cheese, rice, beans and potatoes showed slight advances. Rent advanced slightly in New Brunswick. As compared with April, 1915, all commodities were higher except milk, bread, flour and rolled oats. Rent averaged slightly higher than a year ago, but lower than in 1914.

Changes in Wages and Hours of Labour.

A number of changes in wages were reported to the Department during April, and in all cases the changes brought about increases in wages and in some cases a reduction of working hours as well. Increases in wages were granted during April to some ferry employees at Dartmouth, N.S. Under the new

scale the captains will be increased from \$70 to \$80 per month; mates from \$55 to \$65 per month; deckhands from \$10.50 to \$12 per week; lady ticket sellers and collectors from \$6.25 to \$6.75 per week. Overtime work is to be paid at the rate of salary earned on the basis of a nine-hour day of six days per week. At Halifax, N.S., painters, paperhangers and decorators, to the number of 60, were granted an increase of $2\frac{1}{2}$ cents per hour, and their working hours reduced from nine to eight per day. The former rate was $37\frac{1}{2}$ cents per hour. Surface and underground labour at the collieries of the Nova Scotia Steel and Coal Company at Sydney Mines, who on November 1, 1915, received an increase of 5 cents per day, received a like increase on April 1, 1915. At Truro, N.S., trackmen and roundhouse-men engaged on the Canadian Government Railways received an advance in pay of 5 and 10 cents per day respectively.

Custom tailors of fifteen different houses in Montreal, Que., received an increase which raised their wages from about \$10 per week to \$14 and \$15 per week. The piece rate for coats was advanced from \$3.50 to \$4.30, with a proportionate advance for vests and pants. At Berlin a large tannery voluntarily raised the wages of its employees \$1 per week.

At Brockville painters in the employ of the Canada Carriage Company received an increase in wages during April. Fifty freight checkers and porters at Hamilton were granted an increase on April 15. Freight handlers were advanced from 17 to 20 cents per hour, door checkers from 18 to 21 cents per hour, and checkers from \$50 to \$65 per month. At the same place and on the same date 50 porters and freight handlers in the employ of the Grand Trunk Railway Company were granted an increase of $3\frac{1}{2}$ cents per hour, rate of pay being increased from $17\frac{1}{2}$ to 21 cents an hour. At Hamilton, also, 50 railroad porters and checkers in the employ of the Toronto, Hamilton and Buffalo Railroad were granted a $2\frac{1}{2}$ cent

per hour advance, to take effect April 15. Eighty-nine railroad section foremen and men in the same company received increases, taking effect on April 1, the wages of sectionmen being advanced from \$1.75 to \$1.90 per day and section foremen were given \$5 per month increase. At London freight and car truckers in the employ of the Grand Trunk Railway Company were granted an increase from 18 cents to 20 cents an hour. City teamsters had their wages increased from \$5 to \$5.50 per day. Teamsters at Niagara Falls could not be obtained for 45 cents an hour, and the rate was increased to 50 cents. Freight handlers on the Grand Trunk Railway at Niagara Falls, to the number of 22, received an increase of $1\frac{1}{2}$ cents per hour, bringing the rate from $18\frac{1}{2}$ to 20 cents per hour. At Ottawa the Printing Pressmen and Assistants Union and the employing printers signed a two-year agreement, to remain in force from April 17, 1916, to September 2, 1918. The general changes over the old agreement just expired are increased rates of \$3 per week for feeders and assistants and \$2 per week for pressmen; overtime prices being also advanced. Fourteen conductors and motormen of the St. Thomas street railway had their wages increased from \$13.20 to \$15 per week, the change becoming effective on April 15. On April 1, 585 sectionmen in the employ of the Michigan Central Railroad had their wages increased from \$11.35 to \$12.35 per week. The increase was voluntary on the part of the company. Employees of a cordage factory at Welland were given a general increase in wages during April.

Agriculture.

The late spring and unfavourable weather prevented farmers getting on the land in practically all agricultural districts throughout the country, delayed seeding operations, and lessened the amount of employment available for farm help. Towards the end of the month, however, with better weather,

seeding was progressing favourably and farm help was becoming more actively engaged. The situation also with regard to the number of men likely to be secured was also improved, and at the end of the month the prospects for a good supply of farm help were brighter than in the month previous. Wages offered as a general thing were high and considerably above the average of former years. The situation in regard to the scarcity of farm help was also improved in many districts owing to numbers of soldiers taking advantage of the permission granted them by the military authorities to engage in the work of ploughing and seeding.

In Nova Scotia farming districts seeding operations were delayed by wet weather. An active demand was reported in most localities for farm help, with a scarcity existing in a number of districts. New Brunswick districts reported better weather and seeding operations were fairly active. At Moncton it was reported that farm help was difficult to obtain and that operations were likely to be restricted to a certain extent from this cause. In Quebec reports indicated no serious scarcity of farm labour.

In most farming districts in Ontario there was an active demand for farm help, which it was expected would be fairly well met. Seeding, which in other years has been finished at the end of April, this year was only just commencing at that time. From Belleville a great demand for farm help was reported, and at Brockville farmers were preparing for seeding and finding it difficult to secure farm help. Wages being paid ran from \$30 to \$50 per month with board and for married men with families as high as \$40 per month with free house, garden, fuel and milk. Brantford reported farmers busy seeding, with a shortage of help. At a number of places soldiers took part in seeding operations. Arrangements were also being made in some parts by which boys attending the public schools who were considered qualified for high school en-

trance were to be given an opportunity for doing farm work in lieu of passing the entrance examination on the certificate of the farmers by whom they were employed that their work had been satisfactorily performed. In the Hamilton district practically no seeding operations were being done, the land being wet and soggy. A scarcity of farm help was reported in this district and high wages were being offered. Single experienced farm hands were offered from \$30 to \$40 per month, including board and washing, and experienced married men \$350 to \$400 per year, including free house, fuel, milk, fruit and vegetables. The local immigration office at this point during 1915 placed over 1,200 men on farms.

In Western districts seeding in many parts was under way, though considerably later than last year. At Brandon it was reported that a falling off from the heavy crop of last year was expected owing to the lack of ploughing last fall, the lateness of the present season and shortage of labour. Winnipeg also reported seeding operations late, though no difficulty was being experienced in getting men for the work. In Saskatchewan the farm labour problem was believed to have been effectively met. According to information given out by the Provincial Bureau of Labour the shortage of farm hands in that province had been overcome. The bureau established offices at different points in Saskatchewan and other provinces and secured over 5,000 farm hands. In the Regina district seeding was commenced about the last week in April. At Saskatoon there was no unreasonable shortage of farm labour, and it was not expected that the land would be idle from lack of available men. The large number of men coming from the lumber camps, as well as a number of soldiers, assisted in seeding operations. Wages at this point went down to about the normal figure of \$40 per month. Moose Jaw reported farm labour scarce, with wages ranging from \$40 to \$55 per month until the harvest. In Alberta seeding was report-

ed well under way in most districts, and farmers were having little difficulty in securing the necessary help.

An exceptionally late season was also reported from districts in British Columbia where farming and fruit growing operations were from two weeks to a month later than in most other years. Over 800 men were sent from Vancouver to Saskatchewan and a number of others went to Alberta and Manitoba. Several hundred men were also sent out from Victoria at wages ranging from \$35 to \$45 per month with board. A special rate of one cent per mile for the transportation of this farm help was made by the railways.

Fishing.

Fishing operations showed an improvement over those of march. At Yarmouth, N.S., fine weather set in about the first of the month and a number of schooners landed some good fares. Vessels had commenced to come out of winter quarters and were getting ready for fishing early in May. At Sydney fishermen were awaiting the departure of drift ice in order to commence herring fishing. Some good catches of gaspe-reaux were reported from New Brunswick ports. Fishing on the Great Lakes had not reached any proportions, though fishermen were fairly busy making preparations for the season. At Port Arthur a few tugs took out men and supplies to the various fishing grounds.

On the Pacific coast fishing was fairly quiet. At Prince Rupert the industry revived a little, but there were not enough fish being delivered to meet the demand and high prices prevailed. The trouble between American fishing vessels and fishermen, which was not completely settled, was affecting the situation. At New Westminster fishing was reported poor, although the usual number of licenses were taken out. During the last two weeks of the month many cannery employees left for Northern British Columbia to work in the salmon canneries during the coming fishing sea-

son. The whaling company at Victoria will operate three whaling stations this season and a number of employees left to commence operations. From Vancouver it was reported that halibut fishermen, through their union, had made a new agreement with the fishing companies. There were practically no changes in wages, but some improvements in conditions were arranged.

Lumbering.

With the opening up of the streams in most districts throughout the country, log driving and the commencement of operations in the sawmills furnished considerable activity in lumbering. Nova Scotia districts reported the commencement of sawing and from a number of points large shipments of deals were made. At Fredericton, N.B., the drives absorbed a large quantity of labour, while the starting of mills and work on the booms created a considerable amount of employment. At Newcastle there was activity in river driving, and from St. John it was reported that all drives on the Upper St. John river had been successful and that operators were experiencing little trouble. In this district drivers were being paid somewhat higher wages than last year owing to the scarcity of men. Last season wages ranged from \$2.25 to \$2.50, and this year operators were paying from \$2.50 to \$3 per day, and in some cases more for stream drivers. In Quebec districts driving was in progress under favourable conditions. Wages were reported the same as last year, namely, from \$2 to \$2.50 per day. Sherbrooke reported fairly active conditions. Ontario lumbering districts were also busy with stream driving, and in some localities mills were running. At Prince, Albert, Sask., river drivers were bringing down logs and mills were about to commence operations. In British Columbia fairly active conditions were reported. At New Westminster lumbering operations were being carried on to capacity and shingle mills were all busy. Logging

camps were in active operation and wages showed a slight tendency to increase, especially in the woods. From Vancouver it was reported that the demand for men for the lumber camps was steady and mills were commencing to run full time. Victoria also reported improved conditions with the prospect of exceptional activity if tonnage could be obtained. Nanaimo reported sawmills all over the district working steadily and logging camps in full operation. Prince Rupert reported the industry was opening up in the surrounding district and on Queen Charlotte Islands. Three mills had started operations on the islands and other mills were expected to start later.

Mining.

Coal mining continued active in the Sydney district, with a good demand. There was a shortage of skilled labour and the coal carrying fleets of the larger companies were considerably reduced. At Stellarton coal mining for the first part of the month was normal, but a wage difference at the mines of the Acadia Company caused the suspension of operations and a scarcity of coal. The Intercolonial Company continued to increase its output slightly.

At Lethbridge, Alta., coal mining was slack and more men were laid off. Fernie reported conditions satisfactory, the mines were working fairly regularly, and the demand for coal was good. In lignite fields east of Fernie, however, operations were quieter. At Nanaimo, also, there was a slackening in demand for coal, resulting in short time in most of the mines in the district, though city mines worked full time.

Very active conditions continued in metal mining. In New Brunswick the Dorchester copper mines, which were shut down about three years ago, were expected to resume mining operations; several men were employed, and machinery was being installed. In the Sherbrooke, Que., districts, mining was

active, considerable iron ore being taken out. At Cobalt the high price of silver was being reflected in increased activity at the mines in more speed in development and in equipment to obtain a higher extraction of silver in the milling of ores and a number of companies were putting in improved appliances. In the gold camps conditions were active, particularly in connection with the newer properties. Considerable building was being done at Timmins.

In British Columbia metal mining continued busier than for some years and helped very materially to reduce the number of unemployed in Vancouver. The smelter at Trail was running steadily and treated more ore than ever before in its history. Indications pointed to a season of great activity in the Ainsworth mining districts. At Alice Arm, north of Prince Rupert, there was an active demand for labour and some 200 men were already at work in the district.

Manufacturing.

Manufacturing in the chief industrial districts of Canada was on the whole active. The large steel works at Sydney and Sydney Mines were producing to capacity and opportunities for employment in connection with these establishments were expected to be largely increased by the re-opening of the limestone quarries of these companies in Newfoundland. These operations were expected to take upwards of 450 men, and in addition several hundred men were expected to be employed in the limestone quarries at Marble Mountain during the season. At Amherst woollen mills which had been closed for over two years were re-opened and gave employment to a number of hands. Truro reported all industries operating full time and a good demand for labour. New Brunswick and Quebec industrial centres also reported most industries working steadily. Montreal reported foundrymen and textile manufacturers fairly busy.

In the chief industrial centres in Ontario manufacturing continued active. At Berlin there was a shortage of female help in shirt and collar factories, whitewear factories and shoe factories. Men were wanted in shoe factories, trunk and furniture factories. Machinists were also in demand. Some factories were working overtime, and tanneries, foundries, button, shirt and collar and whitewear factories, felt, rope and clothing factories were very busy. Brockville reported unusual activity in iron and brass manufacturing, also in carriage, wagon and motor car factories. At Niagara Falls 19 of the principal manufacturing establishments reported they were busy or very busy, six of these establishments were advertising for help and several others also increased their staffs. Additions to a number of plants were in course of erection or contemplated. At Hamilton iron and steel trades and shoe factories were busy. There was a demand for machinists, moulders and shoemakers. Cotton and knitting factories were busy and planning extensions. Peterborough reported factories, foundries and machine shops very active, with a shortage of skilled workmen in most lines of factory work. At Woodstock piano and organ manufacturers reported business very good, and there was a demand for men in all branches of this trade. Sleigh and wagon manufacturers also reported an improvement in business, with a demand for blacksmiths and machine men. Furniture factories reported business good. Manufacturing establishments at Galt were very busy, some establishments working overtime. At Chatham factories were active, with a shortage of men in many lines; several factories advertised for men, but were unable to get the number required. St. Thomas reported manufacturing industries fairly well employed, shoe factories being particularly busy. Owen Sound, Hamilton, Brantford and other localities also reported active conditions.

Western factories at a number of points were busy. Medicine Hat report-

ed flour mills very active, also brick plants and rolling mills. At New Westminster local industries were busy, especially those manufacturing boxes of various kinds.

Railway Construction.

With the opening up of spring some increase of activity in railway construction was noticeable in parts of Canada. Work on lines under construction in the provinces of Alberta and British Columbia was continued, and in parts of Eastern Canada improvements and repairs increased the opportunities of employment for railway construction labour.

At Halifax work on the ocean terminals showed good progress and a large force of labourers and mechanics were employed. In New Brunswick work upon the substructure of the new steel bridge to be erected by the Provincial Government over the Petitcodiac river was in progress and supplied work for a large number of men. The resumption of work along the whole line of the new Welland ship canal from Allsburg to Port Weller was drawing labourers and men of many different skilled trades from a large area with a marked effect upon the state of employment. Work was commenced on the Toronto, Hamilton and Buffalo Railway extension from Dunnville to Port Maitland. In various other parts of Canada additional numbers of men were taken on by the railway companies for maintenance and repair work.

General Transport.

By the end of the month navigation was open on practically all inland waters and as a result conditions in general transport showed a marked activity both in railway and water traffic. The shipment of grain to the head of the lakes rendered railways very busy, and the loading of grain from the elevators and transport by water created active conditions and afforded on vessels and docks

considerable employment to large numbers of men.

At Sydney, owing to heavy drift ice and unfavourable winds, the navigation season opened up much later than last year. The freight congestion which lasted most of the winter was easing off and was expected to be lifted as soon as shipping became active. At Newcastle passenger steamers were running on the Miramichi river since April 13. Westville reported railway traffic busy, and at Fredericton, N.B., there was a steady increase in railway and steamboat traffic, freight shipments being reported very heavy for the time of the year. Montreal reported railways busy and showing excellent returns from week to week. Buoy laying on the St. Lawrence was finished, the Lachine canal was open and river and lake boats were plying regularly. Both by water and rail a good business was expected during the coming season. It was believed that many boats of types long since discarded would re-appear to make up the shortage of tonnage which had occurred as the result of many lake boats going into the ocean trade and it was expected that as many as 40 or 50 vessels would be available to carry grain from Montreal this season.

At St. Thomas the railways reported traffic brisk and employees busy. The Wabash increased its locomotive power and the number of its train crews. The Pere Marquette and Michigan Central railways were also busy. Brockville reported railway traffic brisk. The Grand Trunk Railway Company found it difficult to secure a sufficient number of men for the traffic department. At Hamilton navigation was opened and steamship lines commenced running steamers between Hamilton and Toronto. Chatham reported railways busy, with a shortage of cars and a difficulty in handling freight. Galt reported traffic very heavy on all lines operating through the city. At Peterborough railways were finding it hard to get men and were congested with freight. Navi-

gation opened at Owen Sound at the end of the month and all available tonnage was expected to be fully employed, with the possibility of a shortage owing to a number of lake vessels operating on the Atlantic. At Port Arthur navigation opened during the last ten days of the month and freight boats were busy loading grain at the elevators. Railways were busy bringing down last year's grain from the West.

Railway conditions in the West were active, and on the Pacific coast preparations for the fishing and whaling season and activity in lumbering and mining improved both railway and water transportation.

The Trades.

Building. — With the advance of spring there was an improvement in building in many parts of Canada and building trades were somewhat better employed than in the previous month.

Metal.—Metal trades for the most part were very active.

Woodworking. — Woodworkers were fairly well employed, there being an improvement in the business of piano and organ factories and in wagon and furniture factories.

Printing.—Printers continued fairly active in most localities.

Textile.—Textile trades were very active in some districts and fairly well engaged in others.

Clothing.—Garment workers in some large establishments were busy and fairly active generally. Boot and shoe workers were busy.

Food and tobacco preparation. — Cigarmakers and tobacco workers were fairly active in some localities, but dull

in others. Trades engaged in food preparation were busy.

Leather.—Leather workers were fairly busy and tannery employees well engaged.

Transport.—The opening of navigation in the St. Lawrence and inland waters created active conditions for employees engaged in transportation, both on vessels and docks, and on railways. Active conditions were reported from practically all over the country.

Unskilled.—There was little in the way of unemployment amongst unskilled labour, the opening of navigation, increased railway traffic, the commencement of the usual spring civic undertakings and the active demand for farm labour and mill hands absorbing practically all idle workers.

Canadian Trade.

The total imports of merchandise for consumption in Canada for March, 1916, amounted to \$62,565,988, compared with \$40,858,179 in March, 1915, an increase of \$21,707,809. Domestic exports of merchandise for March, 1916, amounted to \$88,414,238, as compared with \$45,118,922 for March, 1915, an increase of \$43,295,316. Increases in the exports of the products of the mine, animals and their produce, agriculture, manufactures and miscellaneous merchandise are shown, while decreases are shown in the fisheries and the products of the forest.

The following table gives the latest official summary of Canadian foreign trade:

IMPORTS AND EXPORTS, MARCH, 1916.

Imports entered for consumption.	March.		Exports. (Domestic.)	March.	
	1915	1916		1915	1916
Dutiable goods.....	\$23,751,511	\$34,780,853	Mines.....	\$5,997,010	\$8,004,843
Free goods.....	16,659,873	27,253,752	The Fisheries.....	2,065,564	2,054,493
			The Forest.....	3,440,941	3,247,691
			Animals and their products...	5,476,249	8,626,681
			Agriculture.....	12,438,145	17,852,426
			Manufactures.....	15,600,790	47,013,766
			Miscellaneous.....	100,223	1,614,338
Total.....	\$40,411,384	\$62,034,605	Total Merchandise.....	\$45,118,922	\$88,414,238
Coin and bullion.....	\$ 446,795	531,383	Coin and bullion.....		
Grand total.....	\$40,858,179	\$62,565,988	Grand Total Exports....	\$45,118,922	\$88,414,238
Duty collected.....	\$8,557,853	\$12,171,978			

The following are the returns of Canadian bank clearing houses for April, 1916, with increase or decrease over April, 1915:

Locality.	April, 1916.	April, 1915.	Changes.	
Halifax.....	\$ 9,015,268	7,643,167	+	1,372,101
St. John.....	6,698,503	6,261,978	+	436,525
Montreal.....	269,945,748	199,617,220	+	70,328,528
Quebec.....	14,467,260	11,981,412	+	3,206,308
Brantford.....	2,615,687	2,086,265	+	529,422

Canadian revenue for the month of March, 1916, amounted to \$16,899,-859.17, as compared with \$11,641,970.18 for March, 1915, an increase of \$5,257,-888.99. The expenditure on capital account for March, 1916, was \$25,467,-658.10, compared with \$10,227,184.60 for March, 1915. The expenditure for March, 1916, comprised \$1,435,361.34 for public works, including railways and canals, and \$24,032,296.76 for war purposes.

The bank statement for March, 1916,

showed the paid-up capital of the chartered banks of Canada to be \$112,-815,581, as compared with \$114,216,719 for the month of February, 1916. Deposits payable on demand for March amounted to \$389,165,388, compared with \$389,825,667 for February, 1916. Notes in circulation for March amounted to \$114,804,604, as compared with \$113,-528,237 in February. Loans to cities, towns, municipalities and school districts during March amounted to \$38,-649,462, as compared with \$35,149,915 during February, 1916.

REPORTS OF LOCAL CORRESPONDENTS.

NOVA SCOTIA.

Amherst.

Labour conditions showed some improvement over those of last month. The re-opening of the woollen mills in Amherst on the first of the month (after being closed for the last two years on account of financial difficulties) gave

employment to about fifty hands, and this number it was expected would be greatly increased during the next five months.

Wholesale and retail trade was also somewhat better than during the previous month.

Building was quiet and practically confined to repair work.

Halifax.

Labour conditions, with few exceptions, were very brisk during April. There was a scarcity of labour in practically all branches of industry, and with the opening of spring the demand for help in many lines was greater than the supply.

There was considerable activity in building and construction. Work closed down during the winter months has been resumed, and excavating for many new buildings promised steady work during the summer months.

Work on the Ocean Terminals showed good progress. A large force of labourers and mechanics were employed, to be further augmented as weather conditions improve.

Sydney.

Labour conditions continued active over the entire district, and in the larger industries the need for unskilled labour was seriously felt. With the approach of the summer season labour will be better employed in its own class, although there is no present prospect of a revival of the building and allied trades. The activity in Sydney has made a demand for houses and the better class of these are drawing higher rentals.

Owing to heavy drift-ice and unfavourable winds the navigation season opened much later than last year.

The steel industry continued brisk, and the Sydney steel plant had a good month. The Sydney Mines steel plant operated to its full capacity.

The coal industry continued active with a good demand. Besides a shortage of unskilled labour the coal carrying fleets of the larger companies have been considerably reduced. Outputs therefore were expected to be less this year.

The freight congestion that lasted most of the winter was easing off, and will be lifted just as soon as shipping becomes active. Outdoor trades were still quiet.

Truro.

All branches of labour were well employed and there was a good demand for farm and other help. Industries operated full time, and railway operation work continued brisk.

The outlook for building operations was not good, but carpenters were busy at repair and other jobs.

Extensive spring lumber cuts were begun all over the district.

Westville.

The demand for labour continued, and, especially in the case of unskilled labour, exceeded the supply.

Railway traffic was extremely busy. During the latter part of the month the heavy congestion of freight became somewhat relieved.

The lumbering industry, especially in the shipping of deals, reported a heavy month's business. Deals were in great demand, and commanded a high price.

Coal mining conditions, for the first part of the month, remained about normal, but wage difference affecting men of the Acadia Coal Company's plants at Stellarton caused a complete suspension of operations by that company, with a consequent scarcity of coal. The Intercolonial Coal Mining Company continued to increase its output slightly, and was raising over 600 tons per day.

PRINCE EDWARD ISLAND.**Charlottetown.**

All trades were fairly busy. Carpenters were well employed. Machinists, brick-masons, paperhangers and painters were getting busy, and the outlook for the season was good.

NEW BRUNSWICK.**Fredericton.**

Industrial conditions during April generally showed an improvement over the preceding month, and were quite as

good as usual for the season of the year. A favorable feature was the exceptionally fine weather which prevailed, enabling outside work to be advantageously carried on. There was little unemployment in any line, while unskilled labour was finding various avenues for activity which were lacking during the winter months. Painters, decorators and paper-hangers were busily engaged with the usual spring rush. The lumber drivers have taken a good many men, while the starting of the lumber mills and work around the booms has created a large amount of employment.

There was a steady increase in railroad and steamboat transportation, freight shipments being very heavy for the time of year. Many schooners were in port with anthracite from the United States, and this commodity during the coming year will be much higher in price than in previous seasons.

Moncton.

The very active conditions existing in railway circles, more particularly the operating branch, in machine shops, in the manufactories of woollen goods and caps, and in the biscuit factory, showed no diminution in April and were considerably supplemented by the revival of activity in other fields of labour which are naturally dormant during the winter season.

Building trades, which were fairly busy during the winter, showed a considerable increase in activity. Public building, which featured so largely last season, will be much smaller this year, though several large contracts remain to be completed. Considerable private building was projected. Commercial conditions continued good. Retail trade was reported in excess of last year, and wholesale trade very satisfactory.

Newcastle

There was a marked improvement in the labour market during April. There was no unemployment of any kind, due

to the opening of work for the outside building trades as well as the opening of navigation and stream driving. With the opening of the lumber mills in the course of a few weeks there was a probability that there would be a great scarcity of unskilled labour.

Among the works planned for the coming summer is an extension of the sewerage system by the corporation of Newcastle.

Navigation on the Miramichi opened on April 13, but only passenger steamers were running.

St. John.

The labour market improved during April, and was far in advance of the corresponding month of last year. The building trades were dull during the first of the month, but later several jobs were started.

Reconstruction work was started on two buildings which were damaged by fire during the winter.

Several of the mills have started sawing, giving employment to a large number of men.

The customs revenue of the district of St. John show large gains every month. For the month of March, 1916, as compared with the same period last year the figures show an increase of \$42,505.96 in favour of March, 1916.

The inland revenue receipts for the month of March, 1916, show an increase of \$11,136 as compared with the same period of last year.

QUEBEC.

Hull.

Labour conditions have been improving with the advance of the season. The sawmills have not yet started operations, and the owners will experience some difficulty in finding men to do the work, almost all the unskilled labourers being already employed. Farmers will also have to pay higher wages for farm hands, as labour will be very scarce.

Several gangs have started for the driving operations, at wages ranging from \$40 to \$50 per month.

Business in general was better than last year by about 20 per cent.

Montreal.

April concluded with navigation just getting into full swing, and the Italian liner Bayern within a few hours' journey of Montreal where she was the first arrival from the sea for the season. Although the shortage of tonnage over the work is still acute it is stated that there will be as many as 40 or 50 vessels from Italy to carry grain from Montreal this season.

Boot and shoe manufacturers were fairly well employed in April. Extensive building operations are not planned this year, and as a result business in structural material, builders' hardware, tools, etc., has been light, but there has been an average country trade. Manufacturers of paints and oils claim they have to work night and day to keep up with orders, although their prices have been raised.

General foundrymen were only fairly busy. Local manufacturers of gloves have advanced prices. Owing to supplies being shut off from European sources the domestic manufacture of finer grades of leather gloves is being greatly developed and extended.

In dry goods the volume of sorting orders has been a feature. The Easter trade in the city was good. The Montreal Cotton Company, manufacturer of white and dyed goods, has withdrawn a good many lines altogether and raised prices on others from 5 to 7½ per cent.

Soap makers in some cases have been obliged to decline orders on account of the scarcity of materials. Lumbermen were getting busier because of heavy buying from the United States, and the demand for boxes. The hat business has been good this spring.

The vice-president and general manager of the Canadian Consolidated Rubber Company, Limited, stated at the

annual meeting on April 4 that the directors had found it necessary to reopen the Granby footwear factory, which had been non-operative for two years, as the requirements of the new export department threatened to over-tax the mills operating before. He stated the volume of business done in 1915 to be 20.43 per cent greater than in 1914. The sale of automobile tires was principally responsible for the increase.

Great interest is being taken here in the work of the Shawinigan Electro-Metals, Limited, a subsidiary of the Shawinigan Water and Power Company, which started to manufacture metallic magnesium last summer. Its output has been enlarged lately to from 8 to 10 tons a month, and the plant's annual output now has a value of a million dollars, cheap power available permitting a good profit.

The annual moving on May 1 and the week preceding it this year gave every cartage and express company in the city all the work it could possibly do. Orders had to be given in some cases days ahead in order to be sure of having a team when wanted. City florists did a large business at Easter, more than for years before.

The National Brick Company at La Prairie reports business 50 per cent better than last year.

Owing to the large number of young men who have gone to the war there is a scarcity of clerical help in banking and insurance institutions. Many young ladies are being employed in their places.

To reduce expenses a committee is considering the needs in every civic department so that notice can be given by the controllers to those whose services will not be needed after 1916. Half a million dollars were voted on April 26 for street cleaning purposes, more than \$400,000 of it being for sprinkling and sweeping, the balance being for wages. There is a sum of two million dollars available for paving streets and laying new sidewalks this season. Outremont will spend \$161,000 for this year's works.

The customs receipts for April of \$2,-740,188 broke all records of a month's receipts. The inland revenue receipts were \$900,000, the largest for any April. On the Montreal Stock Exchange April was the most active month since the war started.

Montreal.

(*Woman correspondent.*)

Labour conditions have remained unchanged during the past month and were more favourable on the whole than in April, 1915.

Women have been employed regularly by the day, and those engaged in domestic service had ready employment. The usual dearth of reliable domestic servants was shown of late when 40 applications were received by the Protestant Directorate of Female Immigration for the 18 candidates available. On April 26 the first group of domestic servants brought out by this body arrived in Montreal; they were 40 in number, some going on to Toronto.

During the month nurses have been busy. The city membership has been much reduced, as 50 of the associates are on active service.

Unemployment in Montreal has diminished since last year as shown by the report for the first three months of 1915-1916 of the Meurling Refuge. In 1915, 60,167 homeless men were sheltered in that period, while this year the figure was 21,032, a decrease of 66 per cent. Likewise the free municipal labour bureau had only 2,044 applicants during the first quarter of 1916, as against 3,986 in 1915.

In the month ending April 15 the new confidential exchange of the Charity Organization Society answered 1,197 inquiries and gave notice of 1,268 families in want. During March the organization had to care for 669 families; 44 men found employment, and 44 were provided with hospital and sanatorium treatment.

Special attention has been given of late by the Local Council of Women to the question of milk stations. A new station is likely to be established in the northern section of the city near the corner of Mount Royal and Papineau avenues. The half yearly report of the station conducted by the Local Council showed satisfactory work, as did also the one of the University Settlement. The directing committee of these various stations, as well as those under the direction of la Fédération Nationale St-Jean Baptiste, are now engaged in preparing for the summer's work. Owing to the appeal made by la Fédération at the time of the recent municipal elections, it is hoped that a grant will be voted by the Board of Control in proportion to the ever-increasing demands of this work.

The committee of l'Assistance par le Travail of the Fédération Nationale St-Jean Baptiste has given the result of the work done from November 15 to March 22. During this period there were 280 applicants; a sum of \$663.50 was given in wages for 1,327 days' work. Situations found for applicants numbered 51. Among the applicants for work 100 were married women unable to leave their homes except at certain hours; 52 had never been obliged to earn their own living; 72 were anxious to better their circumstances.

The various branches of the Factory Workers Association have held exhibits of the work done by the members who profited by the various classes held during the winter. Thirty-one classes are kept up by the various associations of la Fédération; their usefulness is proved by the large attendance, which numbers about 1,000. In order to be able to extend their work the directing committee of the association has approached the Catholic School Commission and hopes that in the future they will be given a grant towards these evening classes which do so much in enabling working girls to acquire technical and domestic training.

At the annual meeting of the Women's Canadian Club, held on April 29, it was decided that a women's war register be inaugurated. The object is to obtain the names of all women who are willing to take up work in order to replace the men who have enlisted for military service. Classes will be formed so that each woman may receive a preliminary training before being called upon in case of necessity.

Quebec.

The month has been a good one for labour. A large number of building permits were issued, most of them for repairs to or the construction of dwelling houses. Whilst no very costly or large buildings were provided for, in the aggregate permits foot up to a large amount, and taken in connection with the works resumed on buildings that were stopped during the winter months, made it busy for all of the building trades. The fitting out of boats and vessels for the navigation season has also made it busy for a number of trades.

Sherbrooke.

The labour market was still active, as all the factories were very busy, both with regular and special lines. There were considerable new buildings going on and some factories were making additions to their plants. The labour market continued active as men were scarce.

Mining was active, considerable chrome iron being mined.

Sorel.

Labour was more actively employed than during the previous month, and the same month in 1915.

There was great activity in the building trades, more men than usual being employed.

The various industrial and manufacturing establishments were busy.

St. Hyacinthe.

The general condition of the labour market during April was very good. There was no unemployment. Skilled workmen have been scarce and the demand much exceeded the supply. The supply of unskilled labour was also less than the demand, on account of many men of that class enlisting in the various regiments being formed.

The building trades were actively employed. All the local industries were active.

The city has started large public works, giving employment to a very large number of unskilled labourers, and a shortage of men of that class was feared.

Business, wholesale and retail, was very satisfactory. Banks reported a good month.

There was a large harvest of maple sugar and syrup, but prices were high. Spring work will soon commence and a heavy demand for farm labour is anticipated.

St. John's and Iberville.

Labour conditions during April were very satisfactory. Unskilled labour was in good demand. All the local factories worked full time with complete staffs. The city employed quite a number of men cleaning the streets and building sewers and sidewalks.

There was much new building and repair work going on, so that there was no unemployment among the building trades.

There was much activity in the harbour as navigation on the canal is to open on May 1.

Three Rivers.

The labour market was a little more active during April than in March, although there was still some unemployment, especially among labourers.

All factories worked full time.

Navigation between Quebec, Three Rivers and Montreal opened during the last week of April after the use of ice breakers.

Customs receipts for Three Rivers and outports for March amounted to \$56,843.

ONTARIO.

Belleville.

Some improvement was noticed in the labour situation over that of the preceding months.

Whilst in the city the prospects for building operations were by no means extensive a number of residences and some small buildings will be erected. There was in the city a considerable demand for unskilled labourers. There was a great demand for farm help.

Owing to the wet season but little work was done towards spring sowing. Dairying is going on quite extensively, and the cheese factories in this vicinity were all in operation.

At Delora and other places in the northern part of Hastings county there was some activity in mining operations.

Berlin.

Labour conditions in Berlin and Waterloo for April were about the same as last month and considerably better than for the same month last year. There was quite a shortage of female labour in shirt and collar factories, whitewear factories and button factories, as well as in some shoe factories. Men were wanted in shoe factories, trunk and furniture factories. Machinists were in demand at the Dominion Tire Factory. In fact there was quite a shortage of help in most factories. Outside labour was well employed. Carpenters and bricklayers were starting on again, and paperhangers and painters were working overtime. Quite a number of factories were working overtime. Office and fixture, felt, robe and clothing and cloak factories, also wholesale sausage factories, were very busy.

The building outlook was fair. Two factories and eight houses will be built, while several new houses were going up in various parts of the city.

Wages were going up in tanneries and furniture factories, and one large tannery voluntarily raised the wages of all its employees \$1.00 per week, and other employers were also expected to increase wages, especially where unskilled labour is employed. Farmers were also hard hit and wages paid this year have been far better than in former years.

Wholesale and retail trade was good.

Customs returns for March were \$69,581.53, an increase of \$19,410.64 over the same month last year.

Brantford.

Labour was active, especially in manufacturing lines. The majority of manufacturers were working overtime.

Paris.—Textile trades and labour in general were very active.

Burford.—Textile trades were busy.

Brockville.

During April all classes of labour were fully employed. The supply was not equal to the demand.

Unusual activity prevailed in the steel, iron and brass trades, also the carriage and wagon and motor car trade.

Railway traffic was brisk. The Grand Trunk Railway have found it difficult to secure sufficient men for the traffic department.

The customs returns for the first three months of 1916 exceeds the first quarter of 1915 by over \$17,000, and the month of April, 1916, was the largest in many years.

Manufacturing was unusually brisk in most lines.

Chatham.

Labour conditions showed a slight improvement over those of March, building trades being particularly active mostly on remodelling and repair work.

Railroads were busy. Owing to a shortage of cars considerable outgoing freight was held up.

Manufacturers were active with a shortage of men in many lines. Many firms advertised for men, but as the same conditions prevailed throughout the western district were unable to obtain the required number.

Merchants reported trade in excess of the corresponding month of 1915 and money circulating more freely.

Cobalt.

The record high market for silver, 69 cents, was being reflected in increased activity at the mines in the way of more speed in development and in the installation of contrivances and equipment to bring about a higher extraction of silver in the milling of ores. The McKinley Darragh Mining Company is installing a 150-ton oil flotation plant in connection with the present mill, and the Buffalo Mines Company is installing a 600-ton daily capacity flotation plant to treat the tailings on the old dump. The tailings, which were from the cyanide mill, left approximately 5 ounces to the ton in silver in the tailings, and this is to be re-treated by the new flotation process, which, it is expected, will add at least 4,000,000 ounces to the ore reserves of the company.

In the gold camp the same activity prevailed, principally in connection with the newer properties. Considerable building was going on in Timmins.

Galt.

There were very few, if any, unemployed during April, and there were no signs of distress such as were evident in the corresponding month last year. Everybody seemed to have plenty to do and to be enjoying prosperity.

Mechanics and labourers of all kinds were daily advertised for.

Employees of the local newspaper were put on full time after working short hours for a year.

Railway traffic has been very heavy on all lines operating in the city.

Customs returns were almost double what they were a year ago.

A new industry for the manufacture of electrical appliances is about to be established in Preston, and will employ quite a few hands.

The big machine shops were still working double shifts and overtime in some departments. Shoe factories were working overtime in some departments, while in others they were not quite so busy. The big textile works were very busy, working overtime nightly.

On the whole the outlook for the future was very bright and there was no cause for complaint anywhere in the city.

Guelph.

Labour conditions during April showed little change as compared with the preceding month. There was practically no unemployment, both skilled and unskilled workers being well employed. Merchants complained of the difficulty of securing young men clerks, and female workers were in demand for factories.

Building trades showed quite an improvement over last month.

Wholesale and retail merchants reported trade good.

Customs returns for March totalled \$35,350.85, an increase of \$10,479.09 over the corresponding month of last year.

Hamilton.

Labour conditions during April were very good in all lines of manufacturing, especially in the iron and steel trades and in shoe manufacturing. Skilled and unskilled labour was scarce, with a demand for machinists, moulders, shoemakers, screw operators, paperhangers, also teamsters and labourers.

While there is not as much of the large class of building this year, there is more than usual of the medium and small

dwelling houses, and the number of building permits being issued in the aggregate equal those of the same period last year.

All the cotton and knitting factories in the city were very busy and contemplating extensions.

The Toronto-Hamilton Highway Commission are starting re-construction on the roadbed with about 300 men.

Navigation being open, the Canadian Steamship Lines started the steamship *Macassa* on April 8 on its daily run between Hamilton and Toronto, the vessel carrying its full capacity of freight. The Inland Lines have also started.

Inland revenue returns for this part of Hamilton for March amounted to \$120,670.46, an increase of \$45,718.28 over the corresponding period a year ago, and the largest in the history of the local office.

Customs collections for the fiscal year ended March 31 amounted to \$4,665,286.54, an increase of more than two million dollars over the previous year and \$1,200,000 better than the best previous year, 1912-13.

Union sheet metal workers, painters, paperhangers and decorators, carpenters and joiners, and machinists were asking increased wages and other concessions.

Kingston.

General labour conditions in April remained unchanged. Unskilled workers were still very much in demand, and there was a great call for machinists of all kinds. The larger factories were actively engaged. There were very little outside operations, but it was expected that the month of May would see a change in this respect.

A large number of men were being employed by the corporation on the different streets, work having been commenced a month earlier this year owing to the expected shortage of men.

Inland revenue receipts for March totalled \$12,716.71.

Customs receipts at the local office for March totalled \$36,364.98, an in-

crease of \$13,596.70 over the same month of last year.

The statement of exports from Kingston for the first three months of the present calendar year show a total of \$488,607.89, an increase of \$354,362.04.

The textile mills were actively engaged. Lumber and saw mills were also very busy with quite a lot of work ahead of them. In fact all industries were very active, with prospects of a very bright season.

London.

Labour generally was more fully employed than at any time for the past two years, and much better than one year ago. In the building trades very little was being done, but all surplus help was absorbed into other lines. Factories and foundries generally were very busy. Street cleaning gave employment to a large number and the city had a force at work constructing curbs and gutters. Houses were being removed so as to commence work on a new technical school, to cost about \$75,000.

Niagara Falls.

A great increase of industrial activity marked the month of April. Satisfactory conditions prevailed in all occupations, and unemployment practically disappeared.

All agricultural work was very actively carried on. Men were in demand. Peach buds wintered well. San Jose scale was reported to be prevalent.

Allanburg.—Work was resumed on this section of the new Welland ship canal.

Port Colborne.—The plant of the American Furnace Company (smelter) was closed down for a week during the re-lining of the furnaces. The Canada Cement Company re-commenced work in its quarries and the cement plant itself was about to re-open. Inland navigation opened on April 17.

Welland.—A new factory building for a manufacturing company was being

erected. The Empire cotton mills commenced running nights and employed many extra persons. The cordage plant has run night and day since November and will continue to do so if labour is available. Extensions were made to the street railway. There was an urgent demand for workingmen's dwellings.

Orillia.

There was an active demand for almost all kinds of labour. Manufacturing was brisk. Building promises to be better than was expected. Retail business was good.

Mill operations have been resumed in neighbouring lumbering villages.

Ottawa.

With a demand for farm labour, some improvement in building operations and the annual spring increase in the demand for unskilled workmen, the labour situation in Ottawa during April was more promising than in March. Transportation workers, including street railway employees, were more fully employed; painters, decorators and upholsterers were busy, and conditions in the tailoring and auxiliary trades were improved, while leather workers, iron workers and several other trades were still busy on war contracts.

The printing trades, particularly bookbinders, were somewhat slacker, two of the largest local plants adopting short time temporarily. The building trades were slightly better, but the improvement was regarded as of short duration. On the whole, the situation was one of comparatively little work, but with few men idle.

Members of Canadian trades unions who are on active service form a problem for a number of unions in the matter of sick benefits, as with the large number enlisted a big percentage of wounded members would automatically raise an important financial question in view of the fact that the unions are loyally paying the dues of these absent

members. The local plumbers and steamfitters' union has joined with the other locals in Canada in considering the matter.

The Master Horseshoers' Association of Ontario, at its fifth annual convention held in Ottawa, discussed the advisability of seeking legislation to compel all horseshoers to secure certificates from an examining board. Toronto was chosen for the next convention.

Local shoemakers (cobblers) have increased repair prices 15 per cent.

Owen Sound.

Factories were increasing outputs and running full time; all available labour was fully employed. Building was quiet in the city, though some rural contracts were let.

Shortage in skilled labour has affected the printing and iron trades in several instances.

Navigation was opened at the end of the month. All available tonnage was expected to be fully employed, with the possibility of a shortage owing to a number of lake vessels doing service on the Atlantic.

Peterborough.

Labour conditions showed some improvement during April. There was a good demand and wages were better than for the same time last year.

Building trades showed some improvement for the first time in about a year. Three manufacturing concerns were making additions to their plant, and these with a few dwellings have made considerable work for building trades. Factories, foundries and machine shops were particularly active, with a shortage of skilled workers in most lines of factory work.

Port Arthur and Fort William

Labour conditions were a little better than the conditions obtaining in March, owing to the fact that during the last

ten days of the month navigation has opened for the year and freight boats were busy loading up at the overcharged elevators and all railways were busy bringing in last year's grain crop from the West.

The opening of navigation always causes commercial activity, and all foundries and repair shops in the two cities were kept busy in fitting out and making repairs to the fleet of boats calling at these ports, while the increased traffic on the railway caused great activity in the repair, machine and blacksmith shops.

During the month arrangements were made with the Port Arthur City Council to establish a new sawmill on the lake front. A lease has been granted the company on the condition that the mill will be run and an average of 100 men employed. The agreement has been signed and a start made in installing the machinery.

At Fort William a new elevator has been started, in the construction of which some 90 men have been employed this month on foundation work.

At Port Arthur the agreement with the City Council for a new elevator has been signed, and it was expected that a start on the construction of same would soon commence, but no start was made in April. According to the agreement the capacity of the new elevator is to be 1,000,000 bushels, the elevator to be completed and ready to receive grain by September, 1917.

At the Western Dry Docks, Port Arthur, a start on the construction of two new boats was commenced April 24.

Sault Ste. Marie.

The new power canal to be commenced next month will give employment to a large number of men. Quite a few building permits were being taken out, indicating an improvement in the building trades.

Stratford.

Labour of all kinds was fully employed during April, factories, foundries, machine shops and woollen mills were very busy. There was a shortage of skilled workers in some lines.

The building trades were active, a large number of dwellings and other structures being in course of erection.

Real estate was becoming active, quite a few properties changing hands.

March customs returns for the port of Stratford were \$28,166.07, an increase over March, 1915, of \$2,030.82.

Inland revenue returns for the month totalled \$5,835.40.

Wholesale and retail dealers reported more business than during the same month last year.

Manufacturing conditions were active, far better than during the same month of 1915.

Mitchell.—The Mitchell woollen mills are building a large addition to their factory, which will mean an increase in their staff of workers.

St. Mary's.—The Council has decided to erect a woven wire swing bridge with strong cables and abutments over Trout creek on St. George street.

St. Catharines.

Labour conditions during April were quite satisfactory. Building trades were improved, following the usual trend at this season.

Construction work on the new Welland ship canal was resumed.

Thorold.—Labour generally was well employed.

Pt. Dalhousie.—Labour conditions continued active.

Merritton.—Additions to several plants were being constructed.

St. Thomas.

Labour was generally well employed during April. The building trades were quiet, but a revival of business was in evidence with the advent of warm wea-

ther. The prospects were not bright for a busy summer in building trades circles in the city, but workers expect to be very well employed in the country. In a general way the month compared favourably with the previous month and was decidedly better than the corresponding month of last year. The supply of labour was not equal to the demand in either skilled or unskilled branches.

The local railroads reported traffic brisk and employees were busy. The Wabash Railway increased its locomotive power considerably, necessitating an increase in the number of train crews. The Pere Marquette and Michigan Central railways were also busy and were in need of men for train service.

Arrangements were made whereby soldiers who wished to do so could go to the country to assist in seeding. A number took advantage of the offer.

Wholesale trade was fair; retail trade rather quiet.

Manufacturing industries were fairly well employed during April. Shoe workers were particularly busy.

Toronto.

Labour of all classes with the exception of some of those engaged in the building trades was well employed during April, and a scarcity of skilled labour in some lines prevailed. There was a marked improvement in building activity, a large number of contracts, mainly for residences, having been given out, and a steady decrease in the number of the unemployed, many builders' labourers, carpenters and bricklayers being given work.

The opening of navigation was attended with a considerable shortage of labour, sailors and others engaged in water transportation being much in demand.

The City Council has appropriated \$100,000 as a contribution towards the deficit of \$320,000 in the amount required for the construction of the Tor-

onto-Hamilton highway, and work on the road has been resumed.

Customs revenue at Toronto for the fiscal year ending March 31 amounted to \$22,335,812, an increase over last year of \$6,514,386, and over two millions in excess of the receipts for 1913, the highest previous record.

Toronto.

(Woman correspondent.)

Conditions affecting female factory labour changed but slightly during April. The Easter season meant extra night work and long hours in some departments, such as whitewear, millinery, dressmaking, and some of this overtime was still continuing. The lack of experienced operators was just as great as last month.

Box factories were exceptionally busy, as were soap, candy, biscuit factories, Imperial Extract Company and laundries.

At the Remington employment bureau 100 stenographers have registered during the month and have all been placed. The Underwood employment bureau reported a demand greater than the supply, with a slight improvement in wages, although they were not quite so good as before the war. The medium or second class stenographers were said to be especially in demand.

At the Bell Telephone Company the waiting list was very short and most of the girls whose names were on the list had other positions. In January an average of one girl a day was being engaged; in April it has been two a day.

After a very busy winter nurses have been well employed during the month. Only 13 were registered in at the end of the month.

Business in the shoe industry was much better than at the same time last year. In the past ten months there has been no unemployment among women in this trade and manufacturers were look-

ing for help in the stitching department.

The fifty-fifth annual meeting of the Ontario Educational Association met in Toronto during Easter week, with an attendance of about 1,600. This year's sessions were considered the most educative and informative in the history of the association. A large board of directors were appointed, who are to consider the union of the Ontario Educational Association and the Ontario Teachers' Alliance. A change has been made in the proposed superannuation act, by which the length of time has been reduced from 40 to 30 years.

A bill presented to the Provincial Legislature to have all medical inspection under the Department of Public Health, was left standing for another year. It is believed that such a measure will prevent overlapping at present existing because of the two staffs of nurses, under the Board of Education and the Department of Health, and will also decrease the amount of money necessary for proper medical inspection.

The power to inspect properties in the evening when necessary was lately granted the Department of Public Health. This is desirable in such cases as bakeries, picture theatres, etc.

Windsor.

There was a fair demand for labour, especially in manufacturing lines, with a sufficient supply, but little demand for building tradesmen, many of whom found employment out of town.

There was a great demand for workingmen's houses here and it was almost impossible to find an empty house. A number of real estate firms were constructing houses in various parts of the city.

Woodstock.

All local labour was fully employed, and there was a scarcity of men in practically all trades.

Manufacturers of organs and pianos reported business very good, especially

in instruments of medium grades. There was a demand for men in practically all branches of this trade, especially for action-makers, cabinet-makers and tuners.

Manufacturers of wagons and sleighs reported an improvement in business. The chief local factory has begun a ten-hour day instead of eight hours. There was a demand for blacksmiths and machine men.

In the furniture trade business was fair. The local factory was utilizing all the men it could secure.

The building trades were not very brisk, but there was promise of a good season.

Employing painters stated it was impossible to secure enough men. Some complained they had been compelled to lose several contracts on this account.

Business generally was very good, and money was fairly plentiful.

MANITOBA.

Brandon.

The labour market during April showed great improvement over the preceding month, and also over the condition prevailing a year ago.

Though no exceptional industrial activity was apparent, the demand for labour was good.

For the past two seasons the supply of farm labour at this season has exceeded the demand and wages have been at a low ebb; the reverse was the case this spring. The surplus of farm labourers has vanished, and it was considered doubtful if the demand could be met, while wages were at a higher level than for several years.

Permits have been taken out for several buildings, and though no building boom was expected, so great has been the enlistment of building tradesmen, that practically all those remaining were working steadily.

Seeding was well under way, though considerably later than last year. It was considered doubtful if such a large

acreage could be cropped as no ploughing was done last fall, and owing to heavy snows and shortage of labour it will be impossible to put in all the crop in time.

The Vacant Lot Cultivation Association has been very active this year, and has increased its membership considerably. A large number of lots were under cultivation.

Winnipeg.

Industrial conditions generally were satisfactory. Those engaged in the building trades were no busier than in March. Engineering trades were fairly well employed. Unskilled labour was very well employed.

Weather conditions were responsible for the considerable delay in commencing seeding operations in the agricultural districts of the province.

No difficulty will be experienced in obtaining sufficient labour when seeding operations begin. A fairly large number of soldiers have been granted permission to assist the farmers, and a number have already left the city to carry out that object.

Winnipeg.

(Woman correspondent.)

Female labour has been well employed during April. In the stores the advent of Easter provided employment during the first three weeks to many of the temporary hands. The number employed was keeping up well as the month closed, though slightly decreased since Easter.

The scarcity of girls for domestic work has become a more acute problem than heretofore. The city bureau has been securing one daily to take work as against 12 to 14 positions being offered daily. Foreign girls who are usually prepared to take domestic positions have been able to secure store work. Many girls who have been doing domestic work have increased their effi-

ciency by the night classes and business girls' classes and are securing positions in stores and offices. Families who show consideration for their employees usually succeed in securing help if wages offered are good, but inconsiderate employers offering low pay cannot secure domestic help at all.

Factory employment was keeping up well. Girls were being sought for glove and clothing factories, but in some cases wages offered were low, being as little as \$4 per week, for inexperienced help and \$5 being paid to experienced help.

Retail clerks, milliners and dress-makers were well employed; telephone girls were more in number in the various exchanges than a year ago. Stenographers were in demand increasingly, while additional girls were taking men's places in office and store work almost daily.

Nurses have been well employed. Cases have been longer, and while the registry list has averaged 12 during the month, the names have been on for a brief period. Graduating classes from both the General and St. Boniface hospitals will make a difference no doubt in the waiting list when the spring examination results are known.

Third class Normal classes have just graduated 153 teachers in the province, thus providing an ample supply of qualified teachers, notwithstanding the fact that of these groups the men are practically all in khaki.

The question of the Salvation Army's scheme to bring out 5,000 war widows and ten thousand children to Canada has caused much discussion in social service circles as well as newspaper comment. The rigorous climate of Canada compared with that of England, the separation from relatives and friends, the prospect of entirely new environment and possibly new class of labour, as well as the probability of poor wages, are the principal objections being offered to the scheme.

The number of unemployed girls was very small, and consists mainly of young

girls without experience and foreign girls.

SASKATCHEWAN.

Moose Jaw.

April showed some improvement in labour conditions. In anticipation of an early spring preparations were made to begin work on the farms, and in the city painters and decorators had a considerable amount of work. Bricklayers and carpenters to a considerable number, with their corresponding helpers, have also found employment.

A considerable amount of building was planned in the farming districts and carpenters were expected to soon be in demand.

The heavy snowfall of the past winter left the ground heavily saturated with moisture and this has delayed spring work on the land. The season opened late, and in consequence very little work had been done. Seeding operations were practically only commencing at the end of the month. There will be very little spring ploughing done and this will mean a reduction in the amount of crop that can be put in. Farm labour was scarce and wages run from \$40 to \$55 per month until harvest.

Prince Albert.

A slight improvement in labour conditions over last month was noticed as a number of men have left the city in preparation for the bringing in of logs for the sawmills, which anticipate an active season.

Men engaged in fishing on the lakes north of here have now returned and report a fair season during the winter.

Lumbering is again to the fore as being the chief industry hereabouts. There has been a large cut of timber and the mills expect to be busy. River drivers were on their way to bring down the logs as the ice was out of the North Saskatchewan.

Regina.

Labour was well employed, especially unskilled labour. The supply was about equal to the demand, with some men still walking about, but most of these were mechanics who it was expected would be employed shortly.

Railway traffic was fairly brisk, considerable grain being moved to the head of the lakes owing to the opening of navigation.

According to information given out by the Provincial Bureau of Labour, the shortage of farm hands has been overcome. The bureau had offices at the Pacific coast, Regina, Saskatoon and Moose Jaw, and secured over 5,000 farm hands from the different offices and the military authorities. The several military units have supplied about 2,000 men who have got furlough for seeding and the other offices supplied the other 3,000. The average rate of wages is about \$45 per month.

Mostly all the farmers commenced seeding during the past week of the month. The season is very backward, and the land has been very slow in drying up, which has made seeding late. The weather has been very cold, with heavy frosts at night.

Regina was visited by floods during the month, which damaged many homes and caused considerable suffering amongst the working classes.

Saskatoon.

There threatened to be a shortage of farm labour, but a large number of men came down from the lumber woods and a number of soldiers went out on the farms through seeding. This has resulted in steadying the prices offered for farm labour. Wages offered dropped to practically a normal figure of \$40 per month.

There was a fair demand for unskilled labour, both in the city and country.

The railroads took on additional track men. There was some building activity,

but mostly in the nature of alterations and repairs.

Retail business in the city continued good and business as a whole seemed to show a normal healthy activity.

Seeding was in full swing. The season was late, but heavy snow during the winter insures a normal amount of moisture in the soil.

There was no unreasonable labour shortage at present, and it was not expected that land would be idle to any extent from lack of available labour.

ALBERTA.

Calgary.

There was a fair demand for outdoor labour, and particularly for agricultural labourers. Although seeding operations were in full swing there has never appeared to be any scarcity of labour for this work. The weather being favourable, good progress has been made. Farmers have been assisted by a large number of soldiers who were granted leave for seeding operations. There was little improvement in the building trades.

The City Council passed appropriations providing for water mains and street car extensions. This work is now being carried out.

Flour mills were active, also harness and saddlery firms.

Coal mines of the district were active.

The Associated Charities gave relief to 74 British families and 11 foreign families to date this month.

Edmonton.

Labour conditions during April have shown a slight improvement over the previous month, owing to the demand for help in the country.

While there was a considerable number of foreigners unemployed, the number of English-speaking people seeking work was few as compared with the month previous. The opportunities of employment in the city as far as male

help was concerned did not improve any over the past two months. On the other hand female help of all classes was well employed, and the demand for domestic help was greater than the supply. As a consequence the wages offered were slightly higher.

Wholesalers reported country sales as satisfactory.

Seeding operations were well under way at the close of the month and farmers were having no difficulty in securing the necessary help.

Lethbridge.

Labour conditions were very steady. There was a good demand for farm help with an adequate supply. At the end of the month the supply of labour was greater than the demand, but this condition was not expected to continue for long once farming operations were fully under way.

Coal mining was quieter and more men were being laid off.

There was a great demand for female help on the farms and for waitresses in hotels and restaurants.

Shipments of grain continued. There was also a great deal of grain threshed.

Customs figures for March were \$21,236.31, as against \$8,334.80.

Farmers throughout the district were all very busy seeding. The average was expected to be less than that of last year.

Medicine Hat.

Industrial conditions during April were fairly good, showing an improvement over the previous month. There was a scarcity of unskilled labour and farm help. The latter situation has been relieved somewhat by a large number of the soldiers getting a month's leave to help with the spring seeding.

Business, wholesale and retail, was reported very good, considerably better than for the same month last year.

Flour mills reported a good month's work, but with a slight falling off. One

mill dropped to one shift instead of the usual double shift.

There was exceptional activity in brick plants, large orders coming in from all parts of the province. One plant which had been closed for the past year opened up again and a good year's business was in sight.

Spring seeding was reported to be well advanced. Many are seeding on a large scale this year. Potatoes in large quantities were being shipped to Eastern points. Large shipments of butter were also being made to British Columbia.

The rolling mills at Redcliff were busy and increasing the volume of business almost daily. In order to keep up with orders the staff will be doubled and run in two shifts.

BRITISH COLUMBIA.

Fernie.

During April there was an increased demand for labour in the lumbering industry and also for unskilled labour, while conditions throughout the District were considerable more favourable than during the same period last year.

The local mining industry in the immediate vicinity of Fernie continued to give fairly steady employment and there was no decrease in the amount of coke manufactured. In the lumbering industry activity was steadily increasing, mills were opening up and large shipments of rough lumber were being transported. In other localities where the severity of the winter made it difficult to carry on logging operations, these were being carried on unhampered. Operations have again commenced on the Provincial Government trunk roads through the district and several gangs of men were engaged on this work. The numbers employed on the railroads in connection with renewals and repairs of right-of-way have been considerably increased, there having been two extra gangs of 20 men each placed at work on the service division as trackmen. The

City of Fernie has also employed a small number of men preparatory to commencing street improvements in the city.

Greater commercial activity was noticeable, there being an increase in freight shipments, which however, was mostly due to the greater demand for lumber. These activities were also responsible for increased imports.

Nanaimo.

There was hardly any change in the labour situation with respect to outside labour generally, but some of the mines in the district lost several days during the month.

There has been a slackening up in the demand for coal, resulting in short time in most of the mines in the district. The mines in the city, however, were still working full time.

Nelson.

Labour conditions during April showed improvement over the previous month. There were very few idle men, as there was quite a demand for lumber and a number of the mills were starting up again. There was quite a boom in building at Trail, and the building trades were finding steady employment.

The smelter at Trail was still running to its full capacity and treating more ore than ever before.

Indications point to a season of great activity in the Answorth mining district. Announcement has been made that the old Kaslo stamping work will shortly be converted into a plant for the treatment of Kootenay lead, zinc and copper ores. The Slocan mines were running full force. The Slocan Star mine, which had been shut down on account of shortage of water, started again to its full capacity.

New Westminster.

Labour conditions showed considerable improvement during April, owing largely to the reduction in the number

of unemployed, a considerable number of whom took advantage of the reduced fares to the Prairie Provinces for the seeding, while others enlisted.

There was nothing doing in the building trades, and very little activity elsewhere, except in the lumber trade, which was flourishing.

The city finances were not in a condition to warrant much outlay on civic improvements. A tax sale was being considered as well as an increase of 2 mills in the rate of taxation for the current year.

Factories were busy, especially those manufacturing boxes of various sorts.

Prince Rupert.

As during the previous months, there was little demand for workmen and surplus labour moved to other points. However, there were few idle men in the city as skilled labour that remained received considerable employment. There was a demand from mining camps and from some lumbering districts for unskilled labour, but otherwise conditions were unchanged.

There was a noticeable increase in passenger traffic from the southern part of the province to Alaskan ports.

During the month the City Council were successful in disposing of \$1,600,000 worth of bonds to an American firm.

There was a call for men to go to Alice Arm mining camp, where it was reported that over 200 men were employed.

The lumbering industry was opening up in the surrounding districts and on Queen Charlotte Islands. Three mills have started operations on the islands and several other mills will start later. Ocean Falls pulp mills were preparing for a busy season; 250 men were employed, and it was expected that many more would be employed as the season advanced.

Vancouver.

Labour conditions generally showed an improvement over March and were better than at the same time last year. This was partly due to a demand for men from some of the interior parts of the province and partly to many men having enlisted, while a large number have left the city.

The Provincial Government has announced its intention to pass a by-law providing for a compulsory weekly half-holiday for retail stores. Store keepers and clerks have been asked to decide which day would be most suitable. Wednesday and Saturday have been discussed. The latter is the most popular with the clerks and with a large number of the storekeepers, including some of the big departmental establishments.

City labourers who had been on half time for a year have been placed on full time. This has necessitated a reduction of the number employed.

The Board of License Commissioners has been requested by the Trades and Labour Council to abolish the employment of Orientals in hotels. This has been protested by the Chinese and Japanese consuls. No decision has yet been made.

Street railwaymen have requested the Provincial Government to pass legislation enforcing the six day week for workmen in that industry. An amendment to the Tramways Act providing for this has been introduced by the Government.

The customs receipts of the port of Vancouver for the fiscal year ending March 31 were \$4,766,239.45, as compared with \$5,146,896.89 the previous year.

Potatoes have been exported from here in considerable quantities during the past winter to Eastern Canada, California and Australia. This still continues.

Among certain employers of labour there has been some demand for the abolition of the order-in-council pro-

hibiting workmen from entering British Columbia from foreign countries.
